We have on our farm forty head of cattle, eight horses, about thirty pigs, three ducks, some chickens and six cats. One of the horses is named Maude. We have had her ever since I can remember. She is a trotting horse. Maude is ten years old. Papa used to drive her up town in the morning and take us to school. When we used to tell papa we were going to be late it seemed as if she would go faster. One morning papa timed her when we were going to school and she went in seven minutes. I do not believe papa would take $1,000 for her now. —Rose.

CITY GIRLS LIKE THE COUNTRY.

Dear Little Friends:—I am a little girl ten years old and my sister is eight. We also have a little brother four years old. We were born in Chicago but now live on a farm of forty acres, and we like it very much.

We have a school right across the way. I am in the sixth grade and my sister is in the fourth. We have thirty pupils altogether and we like our teacher very much.

We are just starting to farm. It is just a year ago the fourth of January that we moved to the farm. I think we will get used to the country, for it is very nice here. We are only two and a half miles from town. We have four cows and a baby calf, one horse and five pigs. Maybe you think that isn't a very big start, but in a year's time what can you expect?

Our papa and mamma are very good to us and we have lots of fun. Perhaps I shall write to the Young Folks again some time. —Lillian.

TAKES TRIP TO FAIR.

Dear Young Folks:—I have been reading your stories for a long time and I think it is my turn to write. My father and mother took me to California this fall. We were gone from home seven weeks. We stayed with an aunt and uncle near Los Angeles. We went to San Diego. The fair was nice. We went to an ostrich farm and I had my picture taken driving an ostrich. On our way home we stopped at the Grand Canon.

—Vira.

Don't Wear a Truss

BROOKS' APPLIANCE, the modern scientific invention, the wonderful new discovery that relieves rupture will be sent on trial. No obnoxious springs or pads. Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. **Sent on trial to prove it.** Protected by U. S. patents. Catalogue and measure blanks mailed free. Send name and address today.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Wisconsin Farmer, Madison, Wis.

7623 Ladies' Waist.—Cut in sizes 34 to 44 inches bust measure. All the new materials are soft and such a waist as this is ideal for them. It is quite full in both front and back, with plain center front, and with side front closing. The high neck has a high collar with turnover edge. The sleeves are long and are full from the shoulder. They are finished with an ornamental cuff.

7587 Boys' Blouse.—Cut in sizes 4, 6, 8, 10, 12, 14 and 16 years. Very mannish in style, this blouse is long enough to tuck into the trousers and may have the lower edge left plain and straight or gathered on a tape or an elastic. The front closing may be in coat style or with a band and the neck may have a permanent soft collar or a band.

7601 Ladies' Waist.—Cut in sizes 34 to 44 inches bust measure. The new full effect is shown in this waist. The material is gathered in both front and back along the shoulder seams, and the front closing is in surplice style with shaped shawl collar. The sleeves fit the arm and end at the wrist.

6409 Children's Dress.—Cut in sizes 2, 4, 6 and 8 years. Linen, serge or pique can be used to make this dress with the trimming of plain or striped material. The dress closes at the right side of the front. The sleeves may be long or short.

7631 Boys' Trousers.—Cut in sizes 4, 6, 8, 10 and 12 years. These plain trousers are the kind that small boys wear on all occasions. They have the straight edge at the knee and are fitted by short darts on the hips, running from the edge to the pockets. The fronts are closed with a fly in the larger sizes and with a seam in the small.

6460 Children's Sacque Apron.—Cut in sizes 2, 4, 6, 8, 10 and 12 years. This apron is high in the neck, where there is a small, flat collar and has long sleeves, ending in a band at the wrist. The front is plain and the closing is placed in the center of the back.

7633 Ladies' Dress.—Cut in sizes 34 to 42 inches bust measure. The blouse of this attractive dress closes far over at the side of the front. The open neck shows a small shield and has a handsome square collar tapering to narrow bands in front. The skirt is a one-piece gathered model, joined to the waist beneath a wide, shirred girdle of contrasting material.

7609 Girls' Dress.—Cut in sizes 4, 6, 8, 10 and 12 years. This pretty frock is slipped on over the head, the neck being cut down in front to make the opening large enough. The front is in panel form and the sides and back are plain, held in by a loose belt. A flat collar finishes the neck and turnback cuffs edge the short sleeves.

7617 Girl's Dress.—Cut in sizes 2, 4, 6 and 8 years. This little frock is made with an overjacket which ends at the belt with plain or scalloped edge. At the neck is a turnover collar and a turnback cuff finishes the sleeves, when short, although a plain band is used for the full length. The skirt is quite long and is pleated all around with plain panel in front.

7608 Ladies' Morning Set.—Cut in sizes 34 to 42 inches bust measure. This set offers a novelty in the morning dress. It has a Middy blouse made on the usual lines, but in one piece, without shoulder seams. The skirt has four gores with a width of 2⅝ yards at the lower edge in the medium size. The cap is gathered with revers band in front.

Price of any of these patterns is 10 cents each.

International Sunday School Lesson

Lesson for March 5, 1916
(By E. O. SELLERS, Acting Director of Sunday School Course.)

THE DEATH OF STEPHEN.

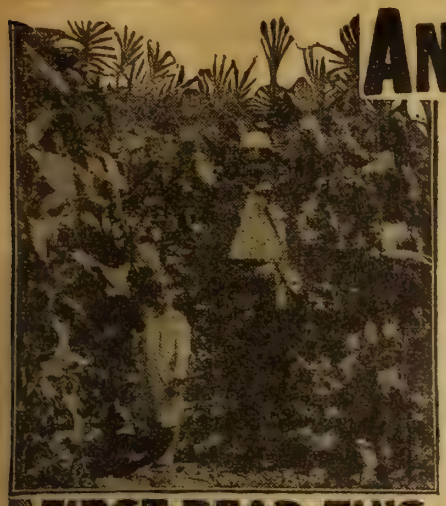
LESSON TEXT—Acts 7:1-8:3.

GOLDEN TEXT—Be thou faithful unto death and I will give thee the crown of life.—Rev. 2:10.

This lesson closely follows that of last Sunday. There are some battles of life that are not fought with fists or weapons. The boy who holds his temper is more manly than the one who goes into a fight simply to win. Paul tells us how and what to fight (Eph. 6:11, 12). We must show the scholars clearly the two great battles Stephen fought and the victory he won as described in today's lesson. The charges made against Stephen were made by "false witnesses." This does not mean men who invented false words, but men who took isolated statements, distorted them and by innuendo used them for their own ends. Stephen was charged with three things: (a) Blasphemy against God (6:11-13), (b) That he had said Jesus would return and destroy the temple (6:14), (c) That he claimed that Jesus would destroy or abrogate the law (6:14). This great passage of Scripture is so profound and so closely connected that we hesitate in trying to separate it into divisions or sections. We much prefer to note the logical argument and presentation Stephen, the Spirit-anointed deacon, made to the Sanhedrin.

I. Stephen's Defense. Stephen was a Grecianized Jew, whose name means "a crown." He answered the charges of these foreign accusers, made before the Sanhedrin, seriatim. His point of contact was to respectfully remind the council that he was an orthodox Jewish believer and worshiper (v. 2). He called the council "Men, brethren and fathers." They were common believers and all were standing before the God-appointed leaders of Israel. Stephen in his reply showed that he reverenced God and God's prophet Moses, thereby answering the first charge (v. 11), and while he reverenced the temple he showed that it was not essential to worship (7:47:49). This last was in answer to their second charge (6-14). In answer to their third charge Stephen then turned upon his enemies and by direct and indirect charges he convicted them of certain facts. Indirectly, by skillful fepetition of Jewish history, and a review of the prophets, he discloses the vacillation and sinfulness of God's chosen people (23, 29). Directly he accuses these leaders of having been subservient to certain customs as being superior to the law they professed to obey. Stephen's accusers were, as we have seen, from without Jerusalem (6:9, 10), and his first battle was concerning the truth about Jesus. His second great battle, and one of his ultimate victory, was with these avowed enemies of Jesus (6:11-8:3).

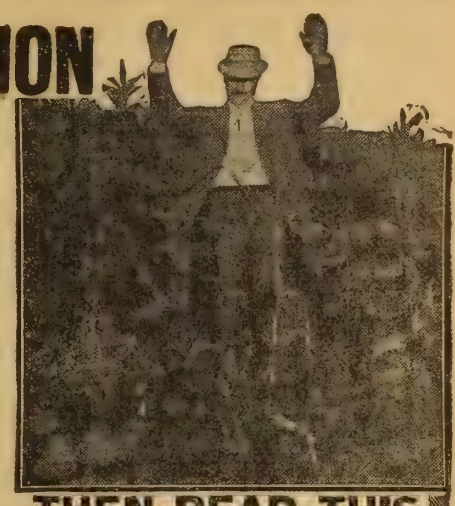
II. Stephen's Death. The real contest of this occasion was Satan vs. the Holy Spirit. Stephen put to rout these men from the foreign synagogue, hence the Jewish authorities determined to take hold of the problem themselves and put a stop to this Christian teaching. Stephen's sudden application of the Scripture to his judges caused intense anger. He preached the word of God in the demonstration of the Holy Spirit, and such preaching always either produces conviction of sin, or else arouses anger at the preacher. These men could not deny the truth of his accusation; they, therefore, turned upon him in anger. Being "full of the Holy Spirit" is an abiding condition and inevitably involves a conflict with Satan. It led



AN EXTRA SPECIAL PROPOSITION

ON 10,000 NEW GALLOWAY No. 8 SPREADERS

FROM *NOW* TILL SEEDING TIME



This extra offer is made with the idea of getting **ten or more Genuine Galloway Spreaders** in every township in the **next few weeks!** One Galloway No. 8 always sells from one to a dozen more! I make this new special offer to get **10,000 advertising spreaders distributed quickly,** which will build up an **enormous** amount of summer and fall sales.
I sell on terms **to suit you. Six** different selling plans, including **one year** to pay **installment** plan, **note** settlement, **half cash, half note, bank deposit** or cash, at prices so **low** you cannot afford to do without a manure spreader. **We sell direct,** at **less** than **wholesale,** from **factory to farm** at the **actual** cost of labor, **actual** cost of material and only **one** small profit, based on **tremendous output.**

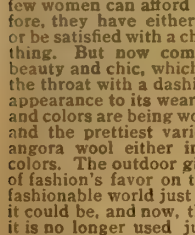
PRICES LOWER ON SPREADERS NOW

Get in on this **special distribution advertising offer** from **now** until seeding time. At the end of twelve months, if the Galloway Spreader **has not paid for itself,** if you have hauled out a **hundred loads** of manure or more, and it has not proven everything I say for it, I agree to take it back, pay freight both ways and **return your money,** no matter on which plan you buy. Could I make this offer if I was not sure of my ground? Every sale backed by a **$25,000 bank bond**—an **additional guarantee** to you!

FIRST READ THIS

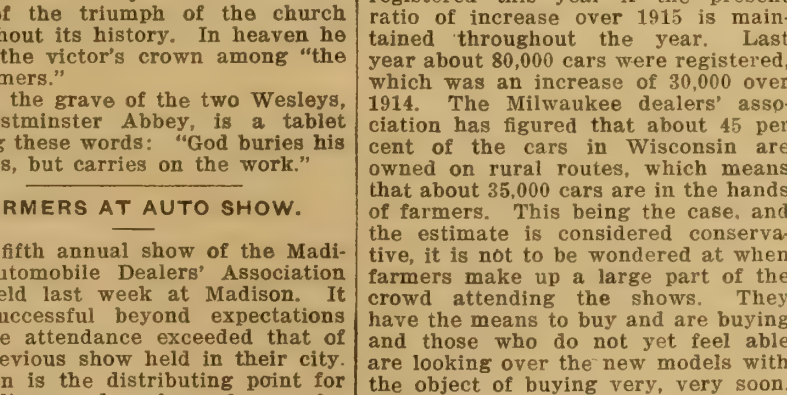
MANURED! I wish you could have seen this field year before last and the poor crop on it! Here is an actual photograph of a corn crop grown in the fall of 1915 after an experiment by using an application of manure. The other photograph shows part of the identical field taken the same day, but that part of the field was **not manured.** The increased crop of corn from this field amounted to over $17 per acre where manured! Figure it out on 20 or 40 acres or **on your own field**

NEW 1916 BOOK FREE



Get this big, new catalog A postal gets it. 250 pages. Printed in four colors. It tells how to handle manure with the least labor—how Galloway made spreaders famous—how a run-out, unproductive farm was turned into a "gold mine" crop producer—how to build a manure pit to preserve fertility—how to increase your corn crop from $10 to $15 per acre—how a Galloway spreader will pay for itself in one year by increasing crop profits and leave money to put in the bank in the fall—how we save you $25 to $45 on a spreader—how Galloway, right from the farm, a few years ago started and built up a $2,000,000 industry by selling direct from factory to farm—how with a 20-lb. steel and malleable feed mechanism we accomplish the same results as others do with 400 pounds of brittle gray iron—how a Galloway spreader handles easier with two horses than other spreaders with three and often four.

New steel beater and wide spreading V-rake pulverizes and tears manure to shreds. Worth $15.00 on any spreader; costs you nothing extra on Galloway. Over 50,000 in use. Invincible, Irresistible patented roller feed. This great exclusive feature on the Galloway Spreader is what makes it superior to all others. It's a secret of our light draft, because the perfect mechanical principle used here is **exactly** the same principle as moving a house on rollers. This feature alone is worth $25 on any spreader. Exclusive on the Galloway, but costs you nothing extra. Don't buy a spreader of any make or kind until you have tried a genuine Galloway at our risk without obligating yourself before trying.



Patented automatic stop, uniform clean-out **push-board,** Worth $10 on any spreader. Exclusive but costs you nothing extra on the Galloway. Spreaders shipped from Waterloo, Kansas City, Council Bluffs, St. Paul and Chicago.

New overlasting, pressed steel unbreakable tongue, worth $5 more on any spreader. No extra charge on the Galloway.

8-18

30 DAYS FIELD TRIAL AND RETURNABLE TO US WITHIN ONE YEAR IF NOT PERFECTLY SATISFIED

Remember we manufacture this spreader in **our own factories** and sell it **direct** to you from **factory to farm.** This spreader should **not** be compared or confused with other low-priced spreaders that **do not have** the special exclusive patented features and genuine merit (backed up by tens of thousands of **Galloway** spreader users) that is found in the **Galloway. Beware** of cheap, absolutely worthless imitations of the **genuine Galloway. Beware** of imitations at any price. Get a **genuine Galloway** and you will be **safe.**

THEN READ THIS

NOT MANURED! This picture was made on the same day as the opposite photograph. It is in the same field but not manured. It had been cropped to death! This field was in exactly the same condition as the other field, planted the same day, cultivated the same way, grown from the same seed, by the same man, but was **not manured.** A Galloway manure spreader will positively pay for itself in one year if you have a hundred loads or more to haul—and leave you money besides! Read our special 1916 proposition in this ad. and the complete story of this experiment in the new 1916 big catalog.

OTHER 1916 FEATURES—IMPROVEMENTS

In addition to our exclusive patented roller feed, automatic stop, uniform clean-out, push-board, the everlasting beater and V-Rake, we have many other valuable features, including pressed steel tongue; double chain direct drive from rear wheels; endless apron with force feed; frame work of channel steel, trussed like a steel bridge; cut under front wheels, short turning; extra light draft; two horses will do with this spreader what it takes three or four to do with other spreaders; seat folds forward out of the way when loading; 60 to 70 bushels capacity but so constructed that manure can be piled 18 to 20 inches above the top of the box and the spreader will successfully handle it.

This Season's Novelty!

Stylish Angora Style Wool Scarf

You Want One? Read This!

Send us 75 cents only, and get The Housewife for One Year (regular 50 cents) and this Dollar Scarf.

A $1.50 VALUE FOR JUST HALF!

AT LAST fashion has been kind to the women of small means. She has given the scarf, the novelty of the season, to those who cannot afford furs. Comparatively few women can afford really good furs, therefore, they have either had to go without them or be satisfied with a cheap imitation of the real thing. But now comes the scarf, a thing of beauty and chic, which can be wound around the throat with a dashing air lending a smart appearance to its wearer. Scarfs of all kinds and colors are being worn but the most popular and the prettiest variety is the one made of angora wool either in pure white or dainty colors. The outdoor girl first brought the light of fashion's favor on the scarf and showed the fashionable world just how pretty and practical it could be, and now, that cold weather is here it is no longer used just as a pretty piece of decoration, but as a serviceable piece of milady's wardrobe. These scarfs are very warm and easily cleaned, with these two characteristics they are destined to remain immensely popular. The scarf we offer is made of fine wool, angora style and measures 56 inches long by 7 inches wide, it may be obtained in different colors. Each scarf has striped ends of harmonizing colors and is finished with a self fringe. Kindly state color desired when ordering.

Remember, all you need to do to get this Scarf, is to subscribe for The Housewife for a year and remit 75 cents only for both Housewife and Scarf. The regular rate of The Housewife is 50 cents—the usual cost of the Scarf is $1.00.

WE OFFER BOTH FOR 75 CENTS!

Remit by P. O. Money Order or Registered Letter to

THE HOUSEWIFE, 30 IRVING PLACE, NEW YORK

Stephen to look up and not about him, and in his house of testing he saw a wonderful vision of heaven—"The glory of God and of Jesus standing." Let us accept the testimony of this dying man as a literal fact. This sight strengthened him for his suffering and for his witnessing. Death had no more terror for Stephen and he was faithful and steadfast to the end.

III. Stephen's Burial. These men overreached themselves, for persecution simply scattered those who gave the Christian testimony a wider and a more effective hearing (11:19-21). This force of circumstances thrust the early church forth from Jerusalem. Now, after a period of perhaps five or seven years, we see the beginning of the literal fulfillment of the Pentecostal program (Acts. 1:8). During this storm of persecution the apostles remained at their posts in Jerusalem.

Saul's rage knew no bounds, and not content with disputations in the synagogues, he persecuted the church, sparing neither sex nor age (8:1-3).

Stephen's success was in his personal life and his unswerving testimony.

Stephen's victory has been a first fruit of the triumph of the church throughout its history. In heaven he wears the victor's crown among "the overcomers."

Over the grave of the two Wesleys, in Westminster Abbey, is a tablet bearing these words: "God buries his workers, but carries on the work."

FARMERS AT AUTO SHOW.

The fifth annual show of the Madison Automobile Dealers' Association was held last week at Madison. It was successful beyond expectations and the attendance exceeded that of any previous show held in their city. Madison is the distributing point for many lines and makes of cars for southern Wisconsin and the dealers reported satisfactory business and prospects for the biggest business this year that they have ever enjoyed.

The outstanding feature of the show was the great interest shown by the farmers and country folk in the displays. The show lasted only two days, but on each day a large percentage of the visitors were farmers who were interested in the new models and wished to look them all over before they placed their orders this spring. Thousands of Wisconsin farmers who have never owned a car are going to buy this spring. Cheese prices are high, which has increased the size of the monthly milk and cream checks. There is every indication for a fine crop season ahead. The live stock and dairy cattle markets are improving and with a good year to their credit the farmers are in a position to become interested in automobiles. This fact was evident at the Madison show where they inspected the higher as well as medium-priced cars and looked around as the man with the means to buy the car he likes best looks around. The Madison show is largely a southern Wisconsin show and the attendance from the country was very pleasing to the dealers. The show was not like the large shows in Milwaukee and Chicago. Every dealer and agent held his display in his own show rooms and the visitors were transported by auto bus, free of charge, from show room to show room. It is a splendid way to conduct a show in a small city and one which other cities of the state can easily imitate, as nothing stimulates interest more than the yearly displays.

Wisconsin is now registering automobiles at a faster pace than ever before and the secretary of state predicts that at least 120,000 cars will be registered this year if the present ratio of increase over 1915 is maintained throughout the year. Last year about 80,000 cars were registered, which was an increase of 30,000 over 1914. The Milwaukee dealers' association has figured that about 45 per cent of the cars in Wisconsin are owned on rural routes, which means that about 35,000 cars are in the hands of farmers. This being the case, and the estimate is considered conservative, it is not to be wondered at when farmers make up a large part of the crowd attending the shows. They have the means to buy and are buying and those who do not yet feel able are looking over the new models with the object of buying very, very soon. The farmer has learned that the automobile annihilates time between his farm and town and once he has one he wonders how he ever got along without it.

VEGETABLE OYSTERS—ASPARAGUS BEETS.

Two delicious vegetables, little known—easily grown. Oysters either stewed or fried taste exactly like the real—and much healthier. Must be eaten to be appreciated. Asparagus beets are finest greens ever seen; ready in 60 days and continue all the season. Don't miss these splendid vegetables. Large Packet of each for one dime, or 3 of each (and a 25c Present) also Catalog and Premium List for 25c. Name this paper. Address, A. D. COOK, Seedsman, Hyde Park, N. Y.—Adv.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Blindness.

I have a five-year-old colt that by all appearances is going blind. One eye is blind now I think or there is a scum over it. Can you give me any advice on what to do for him?

You do not say what you think might be a possible cause of the trouble with your horse's eyes. These troubles are usually brought on by some constitutional disturbance or some local irritation which leads to serious trouble. You should have a competent veterinarian give this animal a thorough examination to determine the cause of the trouble.

Sore Teats.

Please give me some advice on what to do with some of my cows. They are in good condition and are about six or seven years old but each has a sore teat. It is badly swollen but is not hard. It is difficult to milk and only gives a very fine stream. Have put lard on but it doesn't do any good.

It is very possible your cows have frozen their teats during the cold weather. Gentleness when milking is advisable and the use of carbolized vaseline after milking. The teat that comes in contact with the cold ground or floor is often the one that is affected.

Split Tooth.

I have a six-year-old mare that has a first double tooth on the upper jaw split. There is a bunch on the outside of the jaw. Would it be best to pull this tooth or would it be better to bore through the jaw and drive it out? Would it injure the mare?

Whenever a tooth is causing the animal considerable inconvenience it is advisable to have it removed. A split tooth is often troublesome. It is best to remove a tooth by simple extraction with the forceps, but sometimes this cannot be done. The best means to remove this tooth will surely be used by an experienced operator and you should leave it to him if you know him to be a man in whom you can place confidence.

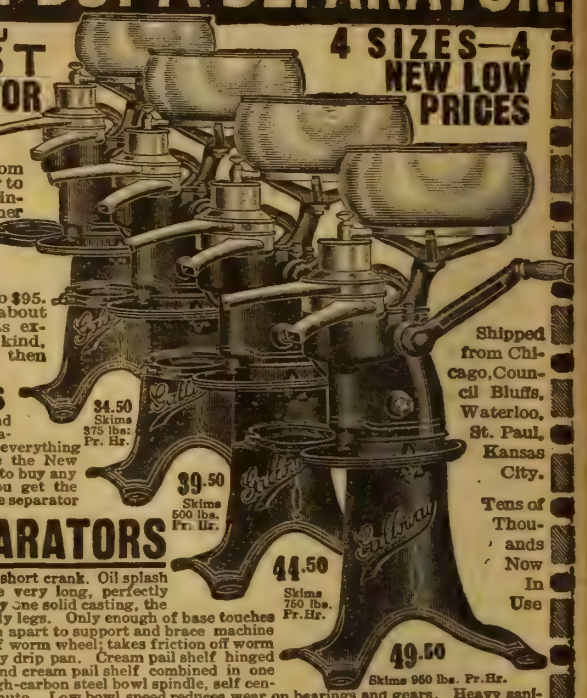
STOP! DON'T BUY A SEPARATOR!

UNTIL YOU FIRST READ THIS NEW BOOK OF SEPARATOR FACTS! From now until grass I am going to make a new special proposition on 10,000 of our new Galloway Sanitary Cream Separators. One sold in a neighborhood sells another; in many cases from six to a dozen—in some cases as high as twenty-five. In order to get more of these new wonderful Sanitary Cream Separators introduced over as much territory as possible to build up summer and fall sales, I am making this unusual proposition in addition to the already low prices quoted.

4 SIZES—4 NEW LOW PRICES

PRICES LOWER---SAVE $25.00 TO $50.00 NOW

The separator I sell I claim is equal, if not better, than separators that sell from $75 to $95. My customers say it is positively away ahead of them. They make statements about it that are so strong and positive that if I would make them you would think I was exaggerating, but all I want you to do before you buy a cream separator of any make, kind, or at any price, is to first get my catalog, read over the separator department in it; then try one for ninety days, which is 180 times, before you have to decide to keep it.



Shipped from Chicago, Council Bluffs, Waterloo, St. Paul, Kansas City.

Tens of Thousands Now In Use

90 DAYS' TRIAL---5 NEW SELLING PLANS

I sell my separators on your choice of five open, fair and square plans and guarantee them for ten years against defective workmanship and material and back up every sale with a $25,000 bank bond. You have everything to win and nothing to lose. It's only fair to yourself to investigate the New Galloway Sanitary Bath-in-Oil Cream Separator before you decide to buy any other kind. I will leave it entirely to you to be the judge after you get the catalog, read over the plans, select the one you want and then try the separator

GALLOWAY SANITARY SEPARATORS

Big, roomy, seamless, pressed steel supply tank. High crank shaft, short crank. Oil splash lubrication. High carbon steel gear shafts. Gear shaft bearings are very long, perfectly fitted. Both gear shafts, and both bowl spindle bearings supported by one solid casting, the gear case. The base, a strong, substantial pedestal, no spindly, wobbly legs. Only enough of base touches the floor to give the machine a good firm footing. Feet just far enough apart to support and brace machine perfectly from every direction. Helical drive gear offsets side thrust of worm wheel; takes friction off worm wheel shaft bearings. Large worm wheel. Open sanitary base; sanitary drip pan. Cream pail shelf hinged so it can be raised and lowered, not pushed back and forth. Bowl, vise and cream pail shelf combined in one piece. Strong, sanitary bowl, discs, not fastened together. Heavy, high-carbon steel bowl spindle, self centering neck bearing. Low speed of crank, only 50 revolutions per minute. Low bowl speed reduces wear on bearings and gears. Heavy sanitary tinware. Sit right down and drop me a postal today and I will send you my big 4-color 250 page book free.

WM. GALLOWAY President

THE WILLIAM GALLOWAY CO., 33 GALLOWAY STA., WATERLOO, IOWA

The Cream Separator Manufacturing Specialists.

PILLING CATTLE INSTRUMENTS

A necessity for every farmer. Practical, reliable, easy to use. No veterinary experience required. Used and endorsed by leading live stock raisers and milk producers. Manufactured by the largest firm of its kind in the world—backed by 100 years' experience.

CASE NO. 3

This oak case contains the following "Easy to Use" Pilling instruments:

Injection Syringe	$2.50	Teat Opener	.75
Bloat Trocar	1.50	Garget Outfit	4.00
Animal Soap	.25	Fever Thermometer	2.00
Milk Fever Outfit	3.00	Sinus, or general syringe	1.25
Two Bandages	.50	One oak-polished case	1.00
Three Lead Probes	.75		
Two Milk Tubes	1.00		
Teat Dilator	1.00		
Teat Slitter	1.50		

$21 VALUE, complete with "Easy to Use" directions for $15 Prepaid

CASE NO. 2

Containing $3.00 milk fever outfit and 8 other "Easy to Use" cattle instruments needed by every dairyman, complete in polished oak case.

$15 VALUE, complete with "Easy to Use" directions for $10 Prepaid

Sniffles in Pigs.

I have some pigs about four months old that have some kind of a nose disease. They start to sneeze at first, then their noses shorten up and enlarge and twist to one side. They also lose in flesh. Is there any cure for this disease? I use dip, but it does not seem to stop the trouble.

Your pigs are troubled with what is commonly called sniffles. This trouble is found in pigs quite frequently. The best treatment is just to play a game of hope. However, it is always advisable to clean up the premises thoroughly and separate the affected pigs from the well ones.

Frozen Teats.

I have a cow that came in five days ago and has two bad teats, the back ones. Just on the end of the teats there is a white spot with a black circle around it. She has much pain when I milk her. Please tell me the cause and what to use for it. She is in good health and about six or seven years old. She dropped her calf at night and as I was not present I thought maybe they had become frozen as it freezes in my barn when 25 or 30 below zero.

This trouble is quite common in cows at this time of the year. Just be patient with the animal and handle her teats as easily as possible while milking. A little carbolized vaseline applied to the affected parts after milking will help keep the parts soft. The teats will probably be all right after the dead frozen tissue has been cast off.

Lame Driving Mare.

I have a sorrel driving mare, six years old, that has gone lame on one hind foot. The trouble is in the hip. I have had a doctor examine her and he said she sprained the muscles or ligaments in her hip. She has been lame for about six months. She has been running in pasture, but does not get any better. I have blistered her but it did not relieve her. What treatment would you suggest?

Since you have had a veterinarian to examine your mare and advise treatment and still got no results it would be folly for one who has not seen her to diagnose and prescribe treatment. The trouble is of a chronic nature by now and would undoubtedly prove very resistant to treatment. It might pay you to have some other veterinarian make a thorough examination of the animal.

Vaccination.

How long after vaccination can a hog be shipped into another herd and not give cholera?

It is presumed you are making inquiry regarding the simultaneous method of vaccination. In most instances it is safe to place a simultaneously treated hog with other hogs that have not been vaccinated after fifteen days following such treatment. It is better to wait twenty-one or even thirty days before placing it among non-immune hogs. When the hog has had the single treatment, or serum alone, it may be placed immediately with the herd that has not received treatment.

Wound.

Please tell me what is the matter with my hog. He has a sore on his side that is about an inch and a half across and perfectly round. It extends out from his body about half an inch and the smaller part is next to his body. It is running blood and looks some like a carbuncle. I have never seen anything like it on a hog before. He is fat enough to eat and in good shape every other way and I would like to know if he is fit to eat, and what to do for him.

This is probably only a wound of some kind. However, it may be a small new growth or tumor which sometimes occurs on the skin of swine. In either case the probabilities are that it is purely a local condition and that the meat is as fit as any other hog. Cleansing it with a strong solution of some good antiseptic will be found beneficial.

Abortion in Mares.

Can you give me any reason why mares lose their colts? Last season I bred four mares and got two colts. One mare lost her colt at about six months. The other we did not see, but was almost sure she was with foal. This season I have bred five and they have all lost their colts. Four of the mares carried them six months and the other about four. If you can give me any light on this I will be very glad. I have been raising horses for twenty-five years and never had anything like this happen before. Tell me if it would be advisable to breed these mares again or not.

Your mares are troubled with abortion, either infectious or non-infectious. It is hard to say just what is causing the trouble. It may come from some irritant being eaten which causes an inflammatory condition of the urinary or genital organs. It may come, also, from overwork or lack of exercise. It seems more probable, however, that your mares are troubled with abortion of infectious nature. This may have gotten into your herd by breeding your mares to a stallion which has had intercourse with an affected mare. It would be best for you to have a competent veterinarian look into this trouble thoroughly and find out if possible the real source of the trouble and he could possibly advise you how to overcome the difficulty.

Raised Without Milk!

Her name is "Daisy" and her owner, W. A. Riddle, of Chapin, Iowa, raised her on Blatchford's Calf Meal, which costs less than half as much as milk.

Blatchford's Calf Meal

A useful preventive of scouring. Calves raised "The Blatchford's Way" are heavier, bigger-boned and healthier. Known as the complete milk substitute since the year 1875. Sold by your dealer or direct from the manufacturer.

Blatchford's Pig Meal insures rapid, sturdy growth of young pigs at weaning time. Prevents setback.

See Actual Figures—based on results—that show you how to increase your calf profits. Write today.

Blatchford Calf Meal Factory, Dept. 63 Waukegan, Illinois

Cash paid to the implement dealer permits him to pay cash to the manufacturer. The manufacturer may then buy on cash basis and the system thus established should save the farmer money in the end.

Gathered by Representatives of The Wisconsin Farmer

The Atwater Duroc Herd.

THE writer recently spent a very pleasant day at the beautiful country home of L. F. Atwater, near Bangor, Wis., where he had the pleasure of inspecting one of the best Duroc herds in the country. The breeding of Durocs is first and foremost on this farm. The farming operation is in charge of Mr. Atwater's son while L. F. devotes his time to the hogs and his show yard winning and public sales of the past, demonstrates the fact that he is some "hog man." The feature of the Durocs and the hog that has helped to put this breeder on the map, is Lee's Defender. The writer is familiar with most of the Duroc herds in the West and when one hears the breeders of Iowa and South Dakota talking about Lee's Defender, as a sire, it must be conceded that he has something more than a local reputation. We were not disappointed in this hog when we saw him. He has been used heavily and does not look like he did when he won his several championships, yet he has that masculinity and individuality so pronounced that one has only to look at him to be convinced that he is a successful sire. He is siring the big kind with the arched backs that breeders are so anxious to get. They have good bone, short pasterns and feet suitable to carry their weight. Mr. Atwater will have a herd out this fall, sired by Lee's Defender, that will cause some competitor worry. Prince Illustrator, the boar that was shown and used so successfully in this herd and has been sold to the Tilney Farms, St. James, Minn. When Mr. Atwater priced this boar to Mr. Crowley, who is manager of the above farms, he priced him at what he was worth to him as a sire and did not expect to sell him, but as Mr. Crowley was after the best, a few dollars did not stop him, consequently $700 was paid for Prince Illustration and a spring gilt. We have never seen this boar, but the fact that he won championship honors at Milwaukee and his get on the Atwater farm will convince anyone that he is a boar of merit. His sire, Illustrator 2d, is, in our estimation one of the best, if not the best sire in the state of Nebraska, and the Tilney Farms are to be congratulated on the purchase of this boar. We advocate "family breeding" that is, get a good brood sow and keep her and the daughters as part of your herd. At some future date we will take for example the best sow in the Atwater herd and show what she has done for her owner. Four spring boars are being offered for sale at this time. Two of them are good enough for pure-bred herds. One is by Regulator he by Reed's Top Col., out of a Lee's Defender dam, the other one by Lee's Defender, out of a daughter of the noted Golden Model 2d. Here are two good buys for someone. Write for prices and please mention The Wisconsin Farmer.—Adv.

Incubators by Express.

YOU can now have an incubator delivered to you by express instead of waiting for days and weeks while the machine is coming by freight. Should you decide that you would like to set an incubator in a few days, don't give up the idea for fear it would require a couple of weeks to get the machine. Drop a card to the X-Ray Incubator Company, Dept. 42, Des Moines, Iowa, and receive free a copy of the handsome X-Ray book. This book aside from being a catalog, contains a world of useful new ideas pertaining to poultry raising. You'll find it a handy book to have around the house. Get a copy of this valuable book and if you're in a hurry you can have your incubator in a ccuple of days after you send your order. The X-Ray Company is the first to offer their customers this unusual service, and this quick delivery is made at their own expense. There is no extra charge. The quick delivery is not the only attractive feature about the X-Ray machine. It has become wonderfully popular during the last few years owing to its many convenient features. The incubator makes a hatch on a single gallon of oil and one filling of the lamp. There are no trays of eggs to lift—no lamps to fill. Read the X-Ray advertisement which appears in this issue and by all means send for a copy of the X-Ray Book No. 42. Mention The Homestead when writing and you will get an immediate reply. See advertisement on page 24.—Adv.

Cushman Engines Save Horses and Binder.

CUSHMAN engines will not only do all regular farm work, but during harvesting time they can be easily attached to any binder and will drive the sickle and all the machinery, so that one team of horses can furnish all the pulling power necessary for an eight-foot binder in heavy grain. In a wet harvest, like the last one, a large percentage of the crop otherwise lost can be saved, because the Cushman engine keeps the sickle going even when the bull wheel slips. The Cushman engines have a throttle governor and perfect balance, and a water cooling system prevents overheating. The four-horse-power machine weighs 190 pounds and only 167 pounds when stripped for binder. Farmers say that a binder will last several years longer with a Cushman engine attachment. You can get a free book telling all about Cushman engines by mentioning the advertisement on page 26 and addressing Cushman Motor Works, 855 North 21st St., Lincoln, Neb.—Adv.

Morley Co. Offer Good Percherons.

WITH this issue of The Wisconsin Farmer, R. A. Morley Co., Baraboo, Wis., start their advertisement offering for sale some very choice Percheron stallions and a few Short-horn bulls. The best colt they are offering is a June yearling—June 1, 1914. He is a dark gray, wide and well ribbed with an excellent back. He has a good, flat bone and with care will make a great stallion at maturity. His sire, imported Josias, has been a consistent show yard winner and is a proven sire. This young stallion is well worth all the money asked for him and it will pay stallion buyers to get in touch with the owners. The stallion at the head of the Morley stud is Nicholas K. and there are several good prospects among the colts sired by this stallion. Nicholas K is a half brother to the stallion, Eugene, that was used and sold in the dispersion sale of that good breeder, James G. Boyd for $1,400. This stallion is one of those big, rugged fellows, what we call the "Dutchman's kind." He is now seven years old and inasmuch as the present owners have so many young things by him, they will consider a trade for another stallion. They will be glad to show you colts by this horse to prove that he is a proven sire. It will be to your interest to communicate with the Morley Co., relative to the Percherons they are offering. They are in thrifty condition and the prices are attractive. Don't forget that they are also offering some young bulls from heavy milking dams. Write at once and please mention The Wisconsin Farmer. See page 37.—Adv.

The Corn Planter With a Shaft Drive.

JANESVILLE corn planters are said to be the only ones with a shaft drive, which explains their great simplicity of construction and ease in handling. It greatly reduces the number of parts and eliminates much of the danger of breakage. Another feature is the sight feed, by means of which you can see the hill as the seed drops and can change the feed to two, three or four kernels without stopping the team. It also has a commercial fertilizer and a cowpea attachment if desired. You would find the book offered in their advertisement on page 8, very interesting. It tells all about this improved corn planter, as well as the rest of the old Janesville line of farm implements, which have been giving satisfaction for nearly sixty years now. In writing address Janesville Machine Co., 41 Center St., Janesville, Wis. Mention of this paper will be appreciated. —Adv.

Manley's Ayrshires and Hampshires.

SOME Ayrshire bulls are advertised on page 38 by E. N. Manley & Son, Lyons, Neb. These bulls are from the best families, having high producing ancestry, are mostly white in color, large for their age, with plenty of bone and substance. One is a two-year-old grandson of the grand champion at the Panama-Pacific Exposition. Manley & Son also breed Hampshire hogs, and are offering some hogs sired by the World's Fair prize-winning boar, Gen. Tipton Again, that was grand champion, as well as the get of Farmer's King, reserve senior champion and Messenger Boy Jr., first-prize junior yearling. The Manley Hampshires won $1,270 in premium money at the San Francisco Show, the largest sum ever won by a Hampshire exhibitor and the hogs they are offering are all closely related to their show animals. Write them your wants, mentioning The Wisconsin Farmer.—Adv.

Taber Non-Shrinkable Silo.

THIS non-shrinkable silo is the result of a special gum preparation, which is simply heated and applied with a brush, the same as ordinary paint, making a silo lining which renders the silo acid and moisture proof. This special composition is used in all Taber lined silos and the Taber Lumber Co. consider it the leading feature of their product, as this simple lining process retains all the juices within the silage and prevents moisture and carbonic acid gas from penetrating the walls, which has caused many silos to swell and shrink, thus leaving the hoops loose so the silo may blow down. The Taber lining overcomes this trouble and is practically everlasting. Their advertisement appears in this issue on page 22. We suggest you write the Taber Lumber Co., Dept. D, Keokuk, Iowa, for their 1916 catalog and terms to agents.—Adv.

Seed Quality the First Consideration.

NO matter how good the season is or how great care you put on your garden, it will not be a success unless the seeds you plant are dependable. Northrup, King & Co.'s seeds have won the reputation of being absolutely dependable. They put quality first and if you follow the instructions on every package they will certainly produce well for you. Their thirty-second annual catalog, containing 168 pages of seed wisdom, will give you reliable information on how to plan your garden and farm crops. It will be mailed free if you will write today to Northrup, King & Co., Seedsmen, Hennepin Ave., at First St., Minneapolis, Minn., and mention their advertisement on page 15.—Adv.

Lincoln Model-Stubbs & Hyzer.

WHEN Lincoln Model won first as a senior yearling at the Sioux City Interstate Fair he was an outstanding show boar, but at that time the owner did not have many pigs sired by him. Before this boar was sold to Stubbs & Hyzer, Mr. Burton bred several sows to him and we will say that the best sows today in the Burton herd are by Lincoln Model. Mr. Burton has often expressed the desire to get this boar back and we know that a good price has been offered for him, but what was Mr. Burton's loss was the present owners' gain. Lincoln Model has many good points. He has an ideal head and ear, and we don't know of a three-year-old boar that is as smooth. He has an excellent, strong back, shows no tendency to go down on the pastern and taken in all, we consider him a very desirable boar. The owners have several fine fall litters by him and a number of good sows are bred to him for spring farrow. These gentlemen are also using a young boar that is choicely bred. He is sired by Missouri Model Top, a boar that has been a grand champion three times and his dam is a daughter of Golden Model 31st, a boar that is rated high as a sire. These breeders have recently purchaser a sow bred to Educator. This boar is the best son of the immortal Ohio Chief now in service today and if Stubbs & Hyzer have good success with the litter, they should have something great to offer the breeders of Wisconsin next spring. There has been many inquiries for bred Durocs and in view of this fact, the above mentioned breeders are offering fifteen spring gilts for sale. They are bred for April and May farrow and many of them to Lincoln Model. They are being priced for quick sale. Get your order in early and in writing for prices please mention The Wisconsin Farmer. See page 39.—Adv.

A Boon to Potato Growers.

IF you are interested in potato raising you should also be interested in the Aspinwall potato planter—the machine that will plant from five to eight acres of potatoes in one day and, what's more important, will plant them right. It opens the furrow, drops any sized seed, covers it up in the best shape, marks the next row, and, if you wish, sows in fertilizer—all at one operation. A corn, pea and bean attachment can be furnished with it, if desired. It is made by the oldest and largest makers of potato machinery in the world. Sixty thousand are in use and giving satisfaction everywhere. For free booklet address Aspinwall Mfg. Co., 457 Sabin St., Jackson, Mich., and kindly refer to their advertisement on page 16.—Adv.

Saving Engine Power.

YOU can save waste power in your engine, no matter whether in your automobile or tractor, by equipping it with Leak-Proof piston rings—the rings insure perfect compression, that never lose their fit or bearing, that will not score the cylinders and last as long as the engine. They keep the oil out of the cylinders, preventing carbon accumulations and dirty spark plugs. They are made in all sizes and easily installed. If your dealer doesn't keep them you should send his name to McQuay-Norris Mfg. Co., and also ask for their free booklet "To Have and To Hold Power' that tells all about compression and what it means to you. Address them 2820 Locust St., St. Louis, Mo., and kindly mention their advertisement on page 19.—Adv.

Triple Wall Silos Are Guaranteed.

THE triple wall silos, with felt lining, made by the Independent Silo Co., and advertised on page 23, are guaranteed not to collapse. They are shipped on approval and will be found air tight and practically frost proof. They have no hoops to tighten and are a permanent addition to your farm building equipment that will stand up under any tests. If you are considering putting up a silo you should write today for free catalog to Independent Silo Co., 2330 University Ave., St. Paul, Minn., and mention this paper.—Adv.

A Perfect Harrow.

THERE are 100,000 Pounder's Corn King harrows in use and without exception they are giving satisfaction. They are self-clearing and self-adjusting and are said to outwear two ordinary harrows. They are absolutely guaranteed and any user will tell you that they are an ideal farm implement. For further information address G. H. Pounder, 7 E. St., Ft. Atkinson, Wis. Mention of the advertisement on page 14 will be appreciated.—Adv.

From a Satisfied Customer.

ON page 25 is a letter from one user of Queen incubators, telling of his remarkable success with them and recommending them to others. This is only a sample of many such letters which the makers receive. They say that the Queen is built to run without trouble and to get the highest possible percentage of hatches. If you will write to the Queen Incubator Co., 153 Bryan Ave., Lincoln, Neb., and ask for their free book they will be glad to send it to you. Please mention this paper when writing.—Adv.

Fewacres Farm Jerseys.

ONE of Wisconsin's most unique farms is that of Fredrick D. Underwood, Wauwatosa, Wis. Mr. Underwood is now president of the Erie railroad, but when a boy lived in Wauwatosa. A few years ago he purchased about 100 acres of land at the outskirts of Wauwatosa and has established one of the finest farms in the state. His Jersey herd now numbers about sixty animals which will be increased to 100 in the near future. The herd is headed by the richly bred bull, Brookhill Financial Count, a grandson of the great bull, Golden Fern's Lad. His dam is a granddaughter of the $10,000 bull, Imp. Flying Fox. She is a daughter of the cow, Financial Countess, that made 795 pounds of fat in a year, equivalent to 983 pounds of 80 per cent butter. This bull, therefore, combines the blood of the three great bulls, Financial Count, Imp. Flying Fox and Golden Fern's Lad. Register of merit work is continually being done and the cows are making some exceptionally creditable records. Among those now on test are Irene's Cherry, that as a two year old has given forty-seven pounds of milk per testing 5.73 per cent fat. She has made 272 pounds of fat in four months and is still giving forty pounds of milk per day. This is a wonderful two-year-old record. Fern's Ducky Dimple gave fifty-seven pounds of milk per day in official test. Fern's Bonnie Lucile has given fifty-two pounds of milk per day and is now making sixty pounds of fat per month. L. K.'s Blossom B. is making from fifty-five to sixty pounds of fat per month and is increasing. Among the cows that have already finished their records are Distinction Oxford Belle that made 687 pounds of butter as a four year old. Fern's Gypsy Queen made 567 pounds butter as a junior four year old, Fen's Iceland Queen made 510 pounds butter, Golden Fern's Jane made 573 pounds butter. Considering the fact that this herd has been established but two years it is an exceptionally creditable showing Many of the cows in the herd will weigh from 1,000 to 1,100 pounds. Care has been taken to select cows of good type with well-developed udders and teats and from proven lines of breeding. The majority of the females are of Loretta D., Nobles of Oakland, Golden Fern and Jacoba Irene lines of breeding. A young bull of Raleigh breeding has recently been added to the herd. Every precaution for the health of the cattle has been taken. The barns are models of sanitation and are kept scrupulously clean. At the present time they are offering some fine young bulls for sale from heavy producing cows. These bulls are of good, straight conformation—good type and well grown. For charted pedigrees, pictures and further information in regard to these animals write to the above address. See page 37.—Adv.

Hoag's Guernseys.

A VERY choice yearling bull is advertised for sale on page 37 by W. E. Hoag, Oakfield, Wis. He was sired by Golden Hero of Bierntown by Imp. Golden Hero of Etnary by Imp. Golden Hero. Imp. Golden Hero of Etnary sired the noted bull, Holden 4th. Golden Hero of Bierntown is out of Imp. Goodwill of the Grain, a daughter of Governor of the Chene. The dam of the bull offered for sale is a daughter of Imp. Dandy of La Hogue by Galaxy's Sequel. From this short description of the breeding it will be seen that the young bull comes from the best of blood lines from both his sire and dam. He is well built, well grown and a show bull.—Adv.

Roller Mills That Last a Lifetime.

IF you buy a Howell roller feed mill you get a machine that is guaranteed for a lifetime. It has no burrs or stones to wear out and is said to grind a wagon load of feed for ten cents. It does not heat the feed and will grind graham and rye flour as well as feed. It is a fast worker and requires little power. Howell roller feed mills are made in thirteen sizes and among them is a size just suited to your needs. In replying to their advertisement on page 18, write for Catalog D. and address R. R. Howell & Co., Minneapolis, Minn. Mention of The Wisconsin Farmer will be appreciated.—Adv.

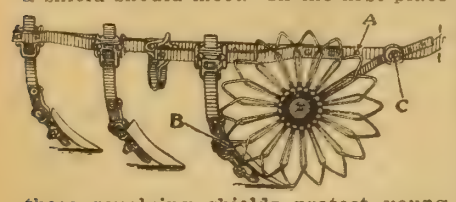
A New Fence Book.

A GREAT many of our readers have already sent for the fine new catalog issued by the Brown Fence & Wire Co., of Cleveland, Ohio. This concern has been in business for thirty-three years and in that time has built up an enormous business among over 400,000 farmers. If you are in need of fence or gates for any purpose, you will do well to send a post card to this company for their 1916 catalog, which is just off the press. It contains eighty pages, shows over 150 different styles of fences and gates, quotes prices direct

from factory to you, freight prepaid. Simply address the Brown Fence & Wire Co., Dept. 35, Cleveland, Ohio. Mention this paper and catalog will come to you by return mail. See page 2.—Adv.

A Unique Cultivator Shield.

AMONG the interesting, modern devices used in cultivating corn, the Daisy revolving cultivator shield is prominent. Ordinarily we think of a cultivator shield as simply a thin sheet of metal, and oblong in shape. It trails along between the corn row and the shovels to fend off the dirt from covering the young corn. Daisy shields are made on an entirely different principle. They are circular in shape and travel over the ground by revolving just as a wheel does. These shields are made entirely of heavy wire (see illustratioon) arranged in loops. The whole shield revolves on a short axle from which it is attached to the cultivator beam. This shield was designed by a practical farmer, familiar through years of experience with all the requirements that a shield should meet. In the first place



these revolving shields protect young corn better in the plowing. Clods are thrown away from the corn row and cannot fall on the hills. The Daisy Shields protect the corn equally well at any speed the cultivator can travel, something the old-style shield cannot do. The makers assert that these shields enable the user to plow corn "first time over" just as fast as is possible with well-grown corn. The open spaces in Daisy shields allow fine dirt to pass right through them. This is an advantage as this dirt covers and chokes small weeds about the hills. The value of Daisy shields has been established in actual service on hundreds of farms. They fit any standard make of cultivator, have nothing about them to wear out and should give many years' service. Farmers who buy new plows should insist on their being equipped with Daisy shields. The Munson Mfg. Co. is a responsible firm with a reputation for fair dealing. They will be glad to furnish full information about Daisy shields to anyone who will address them at Winterset, Iowa. See page 17.—Adv.

Get These Hog House Plans.

THERE is a closer connection between hog profits and hog house construction than many farmers realize. Hog health is, to a large extent, dependent on sanitary surroundings and proper sanitation requires plenty of sunshine. Any farmer who is interested in learning about the most improved methods of hog house construction should take advantage of the offer of Shrauger & Johnson, Atlantic, Iowa, makers of "Chief Sunshine" windows, in their advertisement on page 18, and get the four sets of hog house plans which they offer to send free on request. They give in detail the designs which will be best adapted to your purpose. At the same time you should ask for their steel products catalog, telling all about their "Chief" side wall windows, steel cupolas, etc. Address Shrauger & Johnson, 300 Walnut St., Atlantic, Iowa, and kindly mention this paper.—Adv.

A Permanent Rigid Wood Silo.

GUARANTEED for twenty years, but lasts a lifetime" is the claim made for Wood Tire silos, which are said to cure and preserve silage perfectly. They have a double wall, the inner one being constructed of California redwood. A hollow space between protects the silage from freezing. They are shipped in sections and are easy to construct, without any hoops to get loose and no guy wires. A postal card to the makers will bring full information, together with what others who have used them think of them. Agents are wanted in any unassigned territory. When writing address Wood Tire Silo Co., 7 Clark St., Sheboygan Falls, Wis., and kindly refer to their advertisement on page 23.—Adv.

Harness and Collars That Wear.

SCOTCH KNOCKER harness is made of the same material that is used for artillery harness in the European war, because of its strength and durability. It does not crack and is not affected by sweat or rain. Scotch Knocker harness is made by the reliable Minnesota Harness Factory which has solved the collar problem for hundreds of our readers with its Scotch Knocker collars, that fit the horse's neck perfectly, do not gall or chafe, and wear to beat the band. You can get a book giving prices and full information about these splendid Scotch Knocker products by writing Minnesota Harness Factory, Inc., 106 Second St., Winona, Minn., and mentioning their advertisement on page 8.—Adv.

Two Fine Books.

IF you want unprejudiced information about present-day silage feeding and silo construction by people who do not sell silos you cannot get it better than by sending 10 cents in postage or coin for the 264-page book "Modern Silage Methods" offered by the Silver Mfg. Co. in their advertisement on page 23. It tells all there is to know on these subjects and is a handbook of silage wisdom. At the same time if you will ask for it, they will send you free a booklet entitled "Silo Filler Logic" telling about Silver's "Ohio" silo fillers that are used with perfect satisfaction on many grain-belt farms. Address The Silver Mfg. Co., 312 Broadway, Salem, Ohio., and kindly mention this paper.—Adv.

Watson & Will's Holsteins.

THE Holstein herd of Watson & Will, Menomonie Falls, Wis., consists of over sixty head or registered animals. The herd was founded some twenty-five years ago and by careful selection of the right type of animals they have developed a large herd of heavy-producing individuals. A greater part of the foundation stock was of Johanna breeding which has long been noted as a high-producing strain. In recent years the Duchess Ormsby strain has been largely followed. One bull recently used was Homestead Masterpiece Ormsby, which has six A. R. O. daughters with creditable records. He was sired by a son of Pietertje Hengerveld Paul De Kol and traces twice more to this same bull. He also traces twice to Duchess Ormsby 3d, the highest record daughter of Duchess Ormsby. Another bull recently used was Sir Ormsby Hengerveld De Kol 3d, a half brother to the former world's record cow, Pietertje Maid Ormsby. He traces twice to Gem Pietertje Hengerveld Paul De Kol and to Duchess Ormsby. Sir Ormsby Hengerveld De Kol 3d has sixteen A. R. O. daughters, six of which average close to twenty-three pounds of butter in seven days. One of these, Bonair Beechwood Ormsby, recently made 26.76 pounds butter, Bonair Belle Ormsby made 23.85 pounds butter, Akkrummer Jessie 2d made 22.20. The bull now at the head of the herd is Maplecrest De Kol Friend, a very richly bred bull. His sire, Friend Hengerveld De Kol Butter Boy, has twenty A. R. O. daughters, three above thirty pounds butter in seven days and over 12,000 pounds of butter in a year. Banistine Belle De Kol gave 27,404 pounds of milk and 1,322 pounds butter in a year. The dam of this bull is a twenty-one-pound daughter of Pontiac Aaggie Korndyke, that has thirty-five A. R. O. daughters, two above thirty pounds. Maplecrest De Kol Friend is a very richly-bred bull and great things are expected of his daughters. At the present time they are offering several of his sons for sale out of Duchess Ormsby and Johanna bred cows. These are well grown and several are ready for immediate service. For further information write to the above address. See page 37.—Adv.

Quality Paint Costs Less.

THE makers of Hickory paint offer to prove to you that it costs less for each job than cheaper paints by furnishing you a quotation for your next painting job. In their advertisement on page 31, they cite the case of Mr. Atkinson, of Superior, Wis., who saved money by buying Hickory paint from his local dealer instead of sending away for some cheaper kind. Hickory paint is guaranteed and contains no acids or other impurities, but holds its oil for years, protecting the woodwork perfectly. If you will write to Kelley-How-Thomson Co., Duluth, Minn., mentioning this paper, they will send you their free color cards and Paint Talk book.—Adv.

McGill's Holsteins.

REGISTERED Holstein bulls of serviceable age are advertised for sale on page 37 by W. D. McGill, Menomonee Falls, Wis. These were sired by Sir Johanna Aaltje Korndyke 103734, a richly bred Johanna bull. He is a son of Dr. Johanna Korndyke, a grandson of Korndyke Wayne Paul De Kol and Johanna Colantha Sarcastic Lad. His dam is a granddaughter of Sir Johanna De Kol, the sire of the forty-pound cow, Johanna De Kol Van Beers. The dams of the bulls offered for sale are A. R. O. and untested cows of Duchess Ormsby and other equally good breeding. For extended pedigrees, pictures and prices of these young bulls write to the above address.—Adv.

"Easy to Use" Cattle Instruments.

LIVE stock raisers will find great interest in the advertisement of Pilling's cattle instruments on page 34. They are made by the largest firm of its kind in the world and are backed by a century of experience in the treatment of cattle for all kinds of diseases. No veterinary experience is required for their successful use and they are endorsed and used by leading live stock men and dairymen everywhere. Their book "Easy-to-Use Cattle Instruments" will be sent you free on request to G. P. Pilling & Son Co., 2318 Arch St., Philadelphia, Pa., if you will mention this paper when writing.—Adv.

A Splendid Buggy for Only $39.25.

NO more interesting buggy book has ever been printed than the one which H. C. Phelps, president of the Ohio Carriage Mfg. Co., is offering to send free in his advertisement on page 14. It describes all their immense line of split hickory buggies and gives prices. Many of our readers will be surprised that the prices on these light running, easy-riding and long-lasting vehicles runs as low as $39.25. For further information write for the big booklet to H. C. Phelps, Pres., The Ohio Mfg. Co., Station 187, Columbus, Ohio, and kindly mention this paper.—Adv.

Why Be Without a Separator?

THERE is not much excuse for being without a cream separator when you can get one like the New Butterfly machine that is shipped on thirty days' trial and guaranteed a lifetime for only $2 down and a year's time to pay the balance. At that rate you can pay for your machine out of your extra profit and have a good balance left to your credit besides. The New Butterfly machines are made in various sizes and have many special features which make them highly satisfactory in operation. After reading the advertisement on page 22 you can write for further information to Albaugh-Dover Co., 2158 Marshall Blvd., Chicago, Ill., and it will be sent you free if you will mention this paper.—Adv.

Anderson's Holsteins.

TEN registered Holstein cows and heifers are advertised for sale on page 37 by A. M. Anderson, Whitewater, Wis. They are good type, well-marked animals in good, healthy, thrifty condition. The cows are heavy producers and have A. R. O. records from sixteen to 21.89 pounds of butter in seven days. Two of the heifers are daughters of the thirty-five-pound bull, Sir Pontiac Chief and six of the cows are bred to him. He is a very richly bred bull, being a son of the great cow, Pontiac De Nijlander, that has never been beaten for production at three, four and five years old for either milk or butter in either seven or thirty-day test. As a three year old she made 30.11 pounds butter and 587 pounds milk in seven days and 123.8 pounds butter and 2,522.20 pounds milk in thirty days. As a four year old she made 32.73 pounds butter and 613.30 pounds milk in seven days and 135.31 pounds butter, 2,632 pounds milk in thirty days. As a five year old she made 35.43 pounds butter 750.20 pounds milk in seven days and 144.60 pounds butter, 3,090.60 pounds milk in thirty days. It will be seen that she averaged over 100 pounds of milk per day for thirty days. She is a daughter of Pontiac Apollo, that has thirty-five A. R. O. daughters, twelve from twenty to thirty-five pounds butter in seven days. She is a granddaughter of the great bull, Hengerveld De Kol, that has 116 A. R. O. daughters, thirty-one with records from twenty-five to thirty-three pounds butter. Sir Pontiac Chief was sired by Ypsiland Sir Korndyke De Kol by Sir Korndyke Manor De Kol, that has forty-four A. R. O. daughters, three with records above thirty pounds. The cows bred to Sir Pontiac Chief are, therefore, carrying very well bred and valuable calves, and our readers should look these over when buying cattle. For extended pedigree and further information write to the above address.—Adv.

Absolutely Reliable Seed Corn.

EVERY farmer konws that this is a year when he has to be especially careful in selecting his seed corn. There is a great scarcity of really good seed and next year's crop depends on getting seed that will show a high percentage of germination. The seed sold by the Iowa Corn Growers' Seed Co., Essex, Iowa, is grown under the best possible conditions. It will grow, mature and yield in northern Iowa, South Dakota, Illinois, Nebraska, southern Minnesota and Wisconsin. It is carefully selected and is pure bred, hand picked, butted and tipped and tests 94 per cent or better. Every bushel sold has their guarantee and is subject to your approval. If not satisfactory it can be returned any time within twelve days and your money will be cheerfully refunded. If you want more information write today for free seed corn booklet and samples, addressing Iowa Corn Growers' Seed Co., Essex, Page county, Iowa, as noted in their advertisement on page 16.—Adv.

Holt's Holsteins.

FRANK HOLT & SON, Pleasant Prairie, Wis., are devoting their 400-acre farm to raising live stock. Their farm is located eight miles from Kenosha and three miles from Pleasant Prairie. Holstein cattle have been bred for twenty-five years and a very creditable herd has meen developed. Among the cows are a twenty-three-pound ten year old which tested 4.10 per cent fat. Another made 20.39 pounds butter as a junior two year old testing 4.12 per cent fat. A junior four year old made 22.17 pounds butter. She is a granddaughter of King of the Pontiacs. At the present time they are offering yearling bulls and younger from the above cows, as well as from untested cows. These are being offered at very reasonable prices. For extended pedigrees, pictures, etc., write to the above address. See page 37.—Adv.

Have You a Kalamazoo Catalog?

IN the new Kalamazoo stove and range catalog you will find 500 beautiful styles of stoves and ranges fully described, illustrated and priced at figures that will surprise you if you have not already investigated them. Kalamazoo stoves and ranges are sold on thirty days' trial, 360 days' approval test and for cash or easy payments. They are fully guaranteed. In writing ask for catalog No. 432 and address Kalamazoo Stove Co., Kalmazoo, Mich. Please mention their advertisement on page 31 when writing.—Adv.

Does Your Wagon Need Repairing?

YOU will find any kind of wagon wheel described and the price given in the Electric Wheel Co.'s catalog, mentioned in their advertisement on page 17. High or low wheel, steel or wood, wide or narrow tires are given, together with a price list of all other wagon parts. Their book is illustrated in colors and will be mailed you free on request to Electric Wheel Co., 65 Elm Street, Quincy, Ill. When writing mention of this paper will be appreciated.—Adv.

"K" Hand Power Stump Puller.

THE "K" stump pullers are operated entirely by hand and require no digging and no horses. They are made of Krupp forged steel and are fully guaranteed. They will pull large a surprising amount of land in a single day at low expense. For special free book on land clearing, together with prices, etc., address W. J. Fitzpatrick, Box B, 182 Fifth St., San Francisco, Cal., and kindly mention the advertisement on page 18.—Adv.

Make Barn Cleaning a Snap.

CLEANING out the barn! Every farmer knows the work and time that means when done in the old-fashioned way. But with a Louden litter carrier it's altogether different. A boy with a Louden Emancipator carrier on a Louden track can clean out a barn in almost no time and do it thoroughly with hardly any effort at all. One of these pieces of Louden barn equipment will carry a ton safely and it can be operated by a small boy. They are built in four styles, suitable for any sized barn and at a wide range of prices. You should drop a postal card for further free information about this and other kinds of Louden barn equipment mentioned in their advertisement on page 22. Address The Louden Machinery Co., 1703 Court St., Fairfield, Iowa, and kindly mention this paper.—Adv.

A Tube Bag for Every Automobilist.

IF you own an automobile you will be interested in the offer of the makers of Firestone tires—the kind with the red side walls and the black tread on page 11. They are offering to send you free, for the name of your dealer and the kind of tires you are using, a fine, rubberized tube bag. When writing you should also ask for their free book, "Care and Repair of Tires No. 17," which will tell you facts that every motorist should know about the saving of tires and how to increase your tire mileage. Addres Firestone Tire & Rubber Co., Akron, Ohio, and be sure to mention this paper when accepting this liberal proposition.—Adv.

Learn About the "Apex" Way.

TWO books of special value to any farmer going to buy fencing are offerd free in the advertisment of the Janesville Barb Wire Co., on page 2. They are entitled "The Apex Way" and "Apex Steel Drive Posts." They tell you about a fence that fits any land—level or hilly and that keeps its shape and good appearance. "Apex" steel posts save the work of digging post holes and last forever. It will pay you to write to Janesville Barb Wire Co., 533 Franklin St., Janesville, Wis., for these books. When doing so reference to this paper will be appreciated.—Adv.

Save the Price of an Auto.

CHICAGO steel fence posts protect your cattle because they will ground lightning. They also save money because they will last a lifetime without repair and save the work of digging holes. They are made from the same material as was used in old black wire, which means they will never wear out. The makers offer to tell you how they will save you the price of an automobile if you will address Chicago Steel Post Co., Dept. J, Continental and Commercial Bank Bldg., Chicago, Ill. See the advertisement on page 2. When writing please mention this paper.—Adv.

Better and Cheaper Than Milk.

ON page 34 is shown the picture of a calf raised by W. A. Riddle, Chapin, Iowa, on Blatchford's calf meal, at half the expense that milk would have cost. Calves raised in this way are said to be heavier, healthier and bigger-boned than those raised on milk. Blatchford's calf meal has been known as a complete milk substitute since 1875. If you want more proof of its economy and value, shown by actual figures, write today to Blatchford's Calf Meal Factory, Dept. 63, Waukegan, Ill. and please mention The Wisconsin Farmer.—Adv.

The Hercules Book is a Good One.

THE Hercules book on stump pulling is filled with interesting pictures showing how others have settled the land-clearing problem economically and efficiently. It shows how you can make waste stump land prove the most productive part of your farm. If you will address the Hercules Mfg. Co., 159 Twenty-fourth St., Centerviille, Iowa, and mention their advertisement on 14, they will send this book to you free and make you a special money-saving proposition that will interest you.—Adv.

FEWACRES FARM - - - **Wauwatosa, Wis.**
FREDRICH D. UNDERWOOD, Prop. A. M. SERSTAD, Supt. Cattle.

NEWS OF THE SALE RING

Lybrand's Percheron Sale.

Probably the largest crowd that ever attended a Percheron horse sale in the state of Wisconsin was on hand at the dispersion sale of the Percheron stud owned by the late R. C. Lybrand, Richland Center, which took place February 21st. In the death of Mr. Lybrand the state lost a man who, through his untiring efforts, has done untold good for the Percheron industry in Wisconsin and the large crowd in attendance demonstrated the fact that his efforts were appreciated by his fellow breeders and farmers. The offering could have been in better condition, especially the younger things, and no doubt they would have brought more money, however they were in fine condition for the buyer. The top of the stallion offering was $600, that amount being paid for Antoine, an eleven-year-old stallion that stood at the head of the stud. He was purchased by John M. Faber and should do a great amount of good for his new owner. The top of the mare offering was $410 paid by C. R. Thompson, Richland Center for the six-year-old mare, Mora. She is typical of the breed and a proven brood mare and was indeed a good buy at that figure. Professor Fuller, representing the University Farm, made what we consider the best buy in the sale, when he secured an outstanding two-year-old gray mare, number 25 in the catalog, for $400. This mare has a great future and with proper care she would make a creditable showing in the three-year-old class at any state fair this fall. S. F. Guttenstein, Milwaukee, Wis., secured several of the bargains. We follow with a complete report. Col. Carey M. Jones sold the offering in his usual satisfactory manner.

Antoine, June 1, 1904; Jno. M. Faber, Twin Bluffs, Wis. $600
Corondo, March 26, 1914; S. F. Guttenstein, Milwaukee, Wis. 145
Martel, April 9, 1914; Frank Roelke, Dane, Wis. 140

37 head ..... $8,910; average $240.80

Currie's Hampshire Sale.

Mr. R. L. Currie, the veteran breeder of Hampshire swine of Viola, Wis., held his closing-out sale February 23d. One hundred head were cataloged which included his old sows as well as many pigs that were too young to bring their real value. The offering was not in high condition, in fact hardly fat enough to look well in a sale ring at the same time the buyers got the benefit and can feel satisfied that they will get good results from the bred sows. Mr. Currie has purchased from the best breeders in the county and he sold some great brood sows. A. M. Laird, a prominent breeder from Prairie du Chien made several good buys. H. A. Bush, Fond du Lac, Wis., purchased some of the best ones to add to his good herd. J. A. Watson, Farmington, Minn., was a help to the sale and to himself as he selected some of the best gilts. Col. Chas. W. O'Neill, Bridgeport, Wis., sold the offering and worked hard for the success of the sale. Many of the gilts were sold in bunches at an average of around $20 and we list the individuals selling for $30 or over. We might say, however, that Mr. Currie still has some good sows with spring litters that he is pricing well worth the money, for quick sale. Here is an opportunity for some man to get into the Hampshire game with a small amount of capital.

1. H. A. Bush, Fond du Lac, Wis. $52.00
2. H. A. Bush 40.00
3. A. M. Laird, Prairie du Chien, Wis. 40.00
4. A. M. Laird 41.50
5. A. M. Laird 44.50
6. A. M. Laird 53.00
7. A. M. Laird 37.50
8. A. C. Damon, Viola, Wis. 40.00
9. S. A. Simmins, Viola, Wis. 37.50
10. S. A. Simmons 42.50
1. E. F. Groves, Viola, Wis. 35.00
12. E. F. Grorves 37.00
13. E. F. Groves 35.00
14. E. F. Groves 36.00
15. S. A. Simmons 30.00
16. Guy Morrison, Viola, Wis. 38.00
17. Geo. Blakeley, Viola, Wis. 40.00
18. Geo. Blakeley 55.00
19. J. A. Watson, Farmington, Minn. 35.00
20. J. A. Watson 35.00
21. Wm. Risen, Viola, Wis. 39.00
22. Wm. Risen 38.00
23. J. L. Erwin, Bloomington, Wis. 31.00
24. S. F. Beighley, Viola, Wis. 54.00
25. W. H. Carpenter, Viola, Wis. 36.00

Purebred Registered

HOLSTEIN CATTLE

To the farmer of judgment, seeking more profit and satisfaction in milk production, a comparison of the actual records of the pure-bred Holstein-Friesian breed with others, is an object lesson in economical investment. The ten largest records of the "Black-and-White" cows average 1,007 pounds butterfat and 25,897 pounds of milk. The nearest competitive breed produced 947 pounds butterfat and 18,120 pounds of milk. One good pure-bred Registered Holstein will produce as much as two ordinary cows, saving proportionately on feed, housing and care. Investigate the big "Black-and-White."

Send for **FREE** *Illustrated Descriptive Booklet.*

The Holstein-Friesian Association of America
F. Houghton, Sec'y, Box 113, Brattleboro, Vt

Upland Farms, Walworth, Wis.

E. E. Ayer, Prop. **J. H. Travis, Manager**

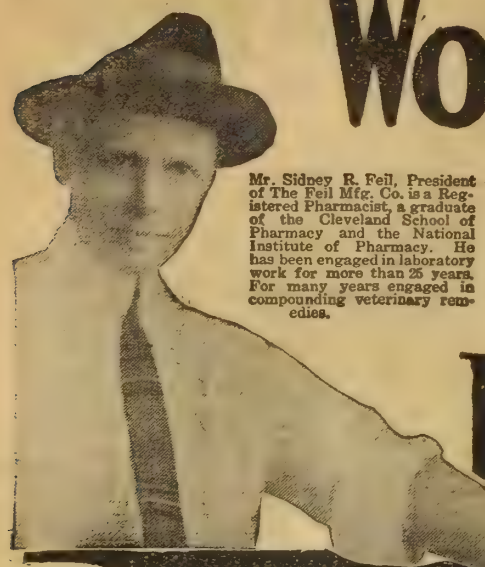
Worms and Indigestion Cause 90% of Live Stock Losses



Mr. Sidney R. Feil, President of The Feil Mfg. Co. is a Registered Pharmacist, a graduate of the Cleveland School of Pharmacy and the National Institute of Pharmacy. He has been engaged in laboratory work for more than 25 years. For many years engaged in compounding veterinary remedies.

"Besides ridding my hogs of worms, I know SAL-VET has saved me bushels of grain." A. H. Evans, Wingate, Ind.

"I have not lost a single sheep since feeding SAL-VET." — Jno. E. Templin, Blanchester, Ohio.

Do you know that 90% of all your live stock losses are caused by indigestion and **worms?** That's what the Dept. of Agriculture says in one of its bulletins. It is estimated that the live stock losses during the past year were $100,000,000 and that $90,000,000 of this was probably due to worms and indigestion. Both conditions are preventable. Right now the thieving, blood-sucking parasites are at work in your farm animals. They kill off your pigs and lambs. They stunt the growth of many animals. They lessen resistance to contagious diseases. They keep stock gaunt and thin. They steal hundreds of dollars in stock profits from you every year. Get rid of these dangerous thieves! Clean them out of your herd! You can do it without risking a penny. I'll show you how — I'll prove it at my risk. I'll rid your stock of worms. I'll do it or no pay. Read my remarkable offer to feed your stock SAL-VET 60 days before you pay. I don't ask a cent of money in advance—just the coupon.

Thousands Write Like This

"I have used SAL-VET for about two years, within which time I have not lost a single hog. Have fattened 74 head of May pigs that we sold December 10th, and which averaged 207 lbs. each. They took SAL-VET every day and never stopped growing. We cannot say enough for the merit of SAL-VET."

—F. R. Dalrymple, Carthage, Indiana.

More Proof from a SAL-VET User

"Before I commenced feeding "SAL-VET" my hogs were poor, run-down and without appetites. I was advised by neighbors several times to stop feeding them my high-priced corn, and to sell them for any price, however small. But instead of doing this, as a last hope, I tried SAL-VET. The change in these hogs is simply wonderful. I will never allow any of my stock to be without "SAL-VET" in the future."

Chas. Dunlap, Hudson, Ind.

The Great WORM Destroyer

The Great Live Stock Conditioner

SAL-VET is the simple wonder-working remedy that rids all farm animals of their greatest enemy—worms. It destroys these deadly pests without bother or trouble to you. It is the medicated salt which contains no antimony. Stock eat just as much as their condition needs and **doctor themselves.** Unlike other worm remedies SAL-VET requires no dosing—no drenching—no starving. Let me furnish you a 60 days supply for your stock at my risk. I don't ask a single cent of pay in advance. I want you to see with your own eyes how the dull-eyed, thin, scrawny, rough-coated, worm-infested animals in your herds will improve when fed SAL-VET, which destroys the blood-sucking parasites that drag them down in weight, health and vitality. The old appetite will return — the digestion will improve — they will put on flesh better, gain faster and grow into profits for you. SAL-VET is not only the best stock remedy on the market but the cheapest. Costs only one-twelfth of a cent a day for each hog or sheep and one-third of a cent for each horse or head of cattle.

"SAL-VET is doing good work; since feeding it to my cows, my cream test has increased five points."

—N. O. Johnson, Palmer, Minn.

"One my hors was full worms. fed him SAL VET and it e pelled them Since then, he ha been taking o flesh at a wonderf rate, and has kept i good condition."

Wm. Ross, Rt. No. 1, Greenfield, Michigan

Send No Money — Just The Coupon

Just fill out the coupon — tell me how many head of stock you have and I will supply you enough SAL-VET to last all your stock 60 days; you pay the freight charges when it arrives and feed it according to directions. If SAL-VET does not do what I claim and you make a specific report in 60 days, I'll cancel the charge; you won't owe me a penny. Address

"My horses were badly infested with worms; SAL-VET cleaned them out."—A. G. Tuma, Rural Carrier No. 2, Shawano, Wis.

"SAL-VET is giving splendid satisfaction. Have not had a sick sheep or lamb on the farm since we began to feed SAL-VET last spring." — Oak Lawn Farm, S. F. Speerstra & Sons, Props., Whitehall, Wis.

"For destroying worms in horses, SAL-VET is surely the wonder of the age."—James Brada, Sawyer, Wis.

"I have tried every known remedy for animals, to rid them of worms and get them in good condition, but have never found anything equaling SAL-VET—it certainly does the work."—Albert Tweet, R. 5, Box 80, Mondovi, Wis.

"My colts were full of worms. Some one recommended that I feed them maple ash and tobacco, which I did, but it did not interfere with the worms at all. But when I started to feed SAL-VET, they passed worms in great quantities. My colts now look 100% better and so do the older horses."—Lud Jacob Zenk, Elkhart Lake, Wis.

"Several people in the neighborhood lost hogs with cholera, but mine are as healthy and fat as can be. I have been feeding SAL-VET to these hogs; also to my other stock. Every animal is in much better condition than before feeding SAL-VET."—John Wilmot, Phillips, Wis.

"SAL-VET is all right for young pigs; I shall never again attempt to raise pigs without it."—Arthur Miller, Greenwood, Wis.

Look For This Label

on Sal-Vet packages. Don't buy "Sal" this or "Sal" that. Get the original, genuine Sal-Vet prepared only by The Feil Manufacturing Co., Chemists, Cleveland, Ohio.

Don't be deceived by imitations.

PAIGE

The Standard of Value and Quality

The Best Quality is the Best Economy

The price of the seven-passenger Fairfield "Six-46". is $1295.

We decided upon that price simply because we found it was the lowest possible price for which we can manufacture, sell and guarantee genuine Paige Quality in a seven-passenger six-cylinder car. That, you know, is Supreme and Unchallenged Quality.

Because $1295 is the lowest possible price for which we can manufacture and sell a car of the beauty, sturdiness, luxurious comfort and elegant equipment of the Fairfield "Six-46"—a car of such tremendous POWER, flexibility and unfailing willingness to "go through" any road conditions traversable by a motor car:

Because $1295 is the lowest possible price for which we can sell such a nationally endorsed car with Paige Prestige, Paige National Confidence and the Paige-Detroit Motor Car Company behind it.

That price—$1295—represents, we believe, the maximum of luxury, service, safety and economy in a seven-passenger Six.

What applies to the Fairfield also applies to the five-passenger Fleetwood "Six-38" ($1050).

We don't Guess that Paige Cars will "Stand Up." WE KNOW IT. And the American people KNOW it.

We will not consent to risk Paige reputation by trying any radical and purely experimental theories in Paige cars. We insist that a season's driving is the proof that any engineering innovation is practical.

Paige Cars are modern to the minute, but every Paige Feature has been proved scientifically sound.

Paige Cars are produced by EVOLUTION—not REVOLUTION.

Do you believe an experimental motor car is a sound investment?

One more point as to Paige prices—$1295 for the Fairfield and $1050 for the Fleetwood. Look farther than the purchase price when you buy your motor car. Look ahead and figure what your operating cost and your repair bills will be.

Look ahead and figure what your car will be worth at the end of a year's driving. Look around you and see how many of your friends began by buying cheaper cars and now realize that only Quality is real economy.

For your own protection—a Paige.

Seven-Passenger Fairfield "Six-46"—$1295.

Five-Passenger Fleetwood "Six-38"—$1050.

N. B. The cost of labor and materials has increased enormously. How long we shall be able to keep Paige Prices so low we cannot prophesy. Further, the demand for Paige cars is already overwhelming. For your own protection we urge you to order NOW.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

WAR AND FARM MACHINERY.

NOTHING that I have read in connection with the war has interested me more than a statement made by an American correspondent with the Russian army tending to show that the real reason why the Russian peasants are so eager to fight the Germans is because the Germans have been sending agricultural machinery into Russia. At first thought it would appear as though there could not possibly be any connection between farm machinery and war, yet let me give the words of the war correspondent as I find them in one of our current magazines. He is quoting a high Russian officer, who declares there is great patriotism among the Russian soldiers today, saying:

> The Russian peasants are very patriotic; they hate the Germans. You see, most of the agricultural machinery comes from Germany and this machinery does the work of many men, driving the peasants into the factories at Petrograd and Moscow and Riga and Odessa. Then the Germans flood Russia with cheap goods which undersell Russian products; that causes our factories to shut down and throws thousands out of work. Wherever in Russia they have no feeling against the Germans, we tell them these things.

What an unspeakably useless, unnecessary tragedy is here expressed; hundreds of thousands of men pitted against each other in bloody, deadly conflict for no other reason than that a progressive people have invented and are manufacturing machinery to make wheat fields and oat fields more productive and profitable! Is there any patriotism in a war waged over such an issue? Is there any principle worth making the great sacrifice of life for here, in the fetish antagonism of a blind people to something which will advance living standards, increase human efficiency and liberate a peasant race now held in almost slavish abjection by men willing to keep them in bondage through prejudice against machine labor? If Germany is to be warred against for no other reason than because it sends reapers and binders into Russia, can we hope to keep the United States free from war's entanglements when our agricultural machinery goes around the world in such great quantities?

When I read the words set forth above I closed the magazine, my mind reverting to a description I had read of the scene when Cyrus Hall McCormick tried out his first reaper, against the scoffs and jeers and jibes of those who feared that machinery would displace human labor and that the death knell of the farm hand would be sounded by the new invention. It was back in 1832 when McCormick, after many years of experimenting, was ready to give his machine a public tryout. Let me picture the scene as I find it described in the book I read several years ago and which I have looked up, because the war correspondent's words recalled the instance to my mind:

> Fully 100 people were present; several political leaders of local fame, farmers, professors, laborers and a group of negroes who frolicked and shouted in uncomprehending joy.
>
> At the start it appeared as though this new contraption of a machine, which was unlike anything else that human eyes had ever seen, was to prove a grotesque failure. The field was hilly and the reaper jolted and slewed so violently that John Ruff, the owner of the field, made a loud protest.
>
> "Here, this won't do," he shouted. "Stop your horses. You are rattling the heads off my wheat."
>
> This was a hard blow to the young farmer-inventor. Several laborers, who were openly hostile to the machine as their rival in the labor market, began to jeer with great satisfaction. "It's a humbug," said one. "Give me the old cradle, boys," said another. These men were hardened and bent and calloused with the drudgery of harvesting. They worked twelve and fourteen hours a day for less than a nickel an hour. But they were as resentful toward a reaper as the drivers of stage coaches were to railroads, or as the hackmen of today are toward automobiles.

Such were the disadvantages against which Cyrus McCormick tried out his first reaper, a machine which has revolutionized farming, enriched the American farmer and sent American products around the world. Is not history repeating itself when the peasants of Russia, seeing no further than their noses, obsessed with a blind prejudice against farm machinery, put every obstacle (even to their own life-blood) in the way of the advance of farm machinery? The poor drudges of the Virginia wheat fields of eighty years ago did not go to war to stop McCormick and his reaper, but they did everything else in their power to perpetuate an obsolete farming system (in which brawn played the chief part, brains being secondary) the doom of which was sounded the day McCormick successfully cut six acres of oats in an afternoon, the first time in all history that such a feat had been accomplished.

I am not taking sides in the present war; I am holding myself to strict neutrality, as the president advised us all early in the struggle. But I want to say that any war which has no greater principle at stake than prejudice against farm machinery is so useless, inexcusable, barbaric and un-Christianlike as to stand condemned in the eyes of every man. If wars must be fought (and, I hope and pray, never again) let there be some greater principle at stake than slavish, abject, blind prejudice against that which breaks the shackles of agricultural bondage and makes a people more progressive, more prosperous, more contented, better and bigger in every way.

THE GASOLINE SITUATION.

THE price of gasoline continues to occupy public attention. Selling now, at most filling stations in town, at 22 to 25 cents a gallon, it is freely predicted the price will touch 30 and perhaps 40 cents before the rise ends.

I am glad to see that there is no apparent intention of letting the matter drop in congress. The author of the resolution calling for an investigation of the "gasoline trust" (Hon. C. C. Dowell) writes me that he proposes to push the matter and not let it die a quiet death, as so many such things do in congress. In the meantime, another member of congress has introduced a bill which, while it has little or no chance of ever becoming a law, shows how public sentiment is being aroused. This bill proposes that the manufacturer of gasoline shall pay a tax of $1 per gallon on all his product sold at a price above 15 cents per gallon. The proposed tax would fall on the original seller of the gasoline and would mean that no manufacturer could ask more than 15 cents for the fluid when sold to the dealer. "I believe fifty to seventy-five men in this house have told me they would vote for such a bill," says the author. They probably will never have the opportunity to do so, but the report is interesting, as it shows what support may be counted on for Congressman Dowell's resolution to investigate gasoline prices and see if there is an illegal combine in restraint of trade, under the Sherman anti-trust law.

In the meantime it becomes quite apparent to me that the greatest hope of permanent relief lies in the discovery of some substitute for gasoline or cheaper distillate. Already there are rumors of several. It may be that we will have the war to thank for such a substitute, just as we undoubtedly have it to blame for the present high prices. It is reported that the Germans have discovered a practical fuel for motor cars in alcohol, or rather a distillation with a spirituous base. If the Germans can do this the Americans can, too, as the discoveries of dye and other products, since the war cut off the foreign imports, have shown. Another report is that the Germans have turned to the big soda beds and secured a gas which today is driving many of the motor cars of the empire. These may be mere idle rumors, but they give us a ray of hope. Should gasoline reach a prohibitive price, we may safely rely on some inventive genius, either in Germany or the United States, announcing a discovery or invention which will give us relief. Necessity is the mother of most inventions, and the limit of human ingenuity in this respect has not been reached.

I do not make any claim to being a motor expert, and cannot vouch for the practicability of the following, but it interests me nevertheless, and I will pass it on to you. It is what a well-known gasoline-engine manufacturer says of the situation and the way in which it may be met, in the emergency:

> If they keep on hiking the price of gasoline, pretty soon some substitute is going to step in and leave the oil men with the bag to hold. But you do not have to wait for a substitute. If you drive a motor car or run a stationary engine and the price of gasoline is beginning to pinch you, just mix 20 to 50 per cent kerosene with the gasoline. I've done it and it works just about as well, so I don't see why others can't do it, too. If it doesn't seem to work well, let a little water in the air intake of the carburetor. If you get too much it will stop; not enough will cause pounding. However, it's a fact that even at much higher prices than today gasoline and kerosene would still be the cheapest engine power.

I had heard that one of our largest engine-manufacturing concerns was working along the lines indicated in the paragraph I have just quoted, so I wrote to them. It seems that the report was wrong, however, in so far as the experiments apply to automobile engines, for they reply that they have converted all of their product of stationary and marine engines into designs which will enable them to use lower and cheaper grades of distillates. In my opinion, this is just the beginning, and if the gasoline situation becomes too serious the motor manufacturers will likewise endeavor to use cheaper distillates and eventually to secure a gasoline substitute which will be within the reach of all of our purses.

ADVICE TO A FARM BOY.

I AM in receipt of a letter from a young farm boy which interests me as much as any letter I ever received. I am going to answer it just as I would speak to my own son. Here is the letter:

> We have been taking your good paper ever since I can remember anything, and we are very much interested in your good, sound advice to young men. I have been reading so many of your articles I thought perhaps, even though you are a busy man, you might help me to decide a difficult problem.
>
> I am the only child of a fond and indulgent father and mother, and, while I have been reared on a farm, I have been surrounded with every convenience and luxury known to modern life. I will be nineteen next August, and since I was seven years old I have been continually in school. I will graduate from an accredited high school next June and my father has given me the choice of three things: A four-year course in mechanical engineering at the state college, a two-year course in a good school of technology, a course in agriculture at the state college and the management of his 260-acre farm when the course is completed. Now I am not particularly interested in farming. My whole ambition all my life has been along mechanical lines, and the way I look at it now I would be a misfit at anything else. I am not especially fond of hard work, but I think I could work hard if the occasion demanded it.

If that boy were mine, and the conditions were such as he represents them to be, I would not hesitate a minute, but would tell him to set about without delay to perfect himself in the work which appeals most to him and to which he seems best adapted. In this case, it is undoubtedly not farming, but mechanics. I would qualify my advice in this particular case by recommending that the boy take the four-year course in mechanical engineering at the state college, rather than the two-year course at the school of technology. Why? First, because he will be associated with his kind, boys from the farm, and not thrown among perfect strangers. Second, because he will find out at the state college that farming offers as many good opportunities to the mechanically inclined today as any other profession, and he will have a ready opportunity to change from the mechanical to the agricultural course, without losing too many credits, if time opens his eyes to the advantages of farming over purely mechanical pursuits.

I hope that nothing I shall ever write will lure any boy or girl away from the farm. The success of farming operations depends upon son succeeding father, daughter succeeding mother, resulting in a race of farmers with generations of inbred pride in the work. Farming that is the result of city men hearing and answering the call of the land, until they can get on their feet again, either financially or physically, to be abandoned at the first city opportunity, will never make this country rich or strong or great. Farming is a profession to hand down from father to son, in my opinion the greatest and most honorable profession there is.

But we must no more enchain boys and girls to the farm, against their will, than we would confine them behind stone walls and iron bars in order to make them think as we do. There is a rebellion of the mind as powerful as any revolt of the body. Unless we put our whole heart and soul into our work we will not succeed. We may get along for a time, but neither our peace nor our prosperity will be lasting. In this case, the boy frankly admits that he is not particularly interested in farming, that his ambition is all along mechanical lines. Let him follow his natural bent, so guided and directed by his father and mother that he shall not make any serious mistake, with every opportunity given him to develop, to show his powers and abilities, to do the work in which he puts his whole heart and soul.

I am neither a prophet nor the son of a prophet, but I believe in this particular case, long before the four-year course in mechanical engineering at the state college is at an end, this boy (being bright, well-schooled and ambitious) will see that the farm offers as many opportunities for his mechanical ability as the city. I believe this boy will be saved to the farm yet, but if this is brought about it must be on his own volition, not by any arbitrary act or advice of either his parents or me. I shall watch his career with interest. He has the right stuff in him; of that I feel sure from the manly, honest tone of his letter to me.

Use of Fertilizer in Wisconsin.

MR. HENRY G. BELL, agronomist of the soil improvement committee of the National Fertilizer Association, recently visited Wisconsin and had a good deal to say concerning Wisconsin's opportunity to improve crop yields. If Wisconsin will properly care for its soil the state has a wonderful agricultural future. Mr. Bell calls attention to the fact that in 1910 Wisconsin produced 182,000,000 bushels of money crops, consisting chiefly of wheat, corn, oats, barley, rye and potatoes. He also shows us that with these millions of bushels and millions of tons of produce going out of the state year by year, there is going an ever-increasing quantity of the constituents of plant food—namely, nitrogen, phosphoric acid and potash. This continual draft is upsetting the balance of the plant food which is circulating among the tiny particles of soil, and although nature is doing her part by letting loose more and more of that great store of potential food, which the chemist has revealed as existing in the soil, still there is an ever-increasing shortage in the available supply of those materials which make for largest crops of best quality.

But the question arises, how shall a man know what to do to make his farm productive? Mr. Bell says that some agricultural writers try to enshroud this query in mystery. But he assures us fertilizers have been manufactured since 1842, and that Germany used 8,000,000 tons in 1910. Some of our eastern states with worn-out soil are producing more potatoes to the acre than western states where the soil is rich. Eastern states are even giving better potato yields than some sections of Wisconsin where potatoes are a virgin soil crop. If we would examine the reports of yields per acre on grains and truck farms in Europe, where the land has been farmed for a thousand years, we would certainly be surprised. In Maine, in the year 1910, according to Mr. Bell, 80,000 tons of fertilizer were used. It must have been a paying proposition or the orders would not have been increased to 140,000 in 1915. We are amazed at times that the German empire, cut off from the world food supply, is able to defy the other nations of the earth. Mr. Bell shows how this is due to right handling of the soil, right management of plant food, the wise use of stock manures and the judicious use of available plant food or fertilizers.

Asked directly for suggestions for the betterment of Wisconsin farmers, Mr. Bell said:

1. "Clear the decks"—is the command when battleships prepare for action. Everybody knows that this command means to get everything in order for most effective work. The spirit of this order is my first suggestion. Drain your soil, rotate your crops so that a legume may be grown upon the land as often as desired. Keep up the stock of humus in the soil. Apply lime sufficiently often and in sufficient quantities to keep your soil sweet. Give your soils proper tillage to insure good circulation of air in the soil.

2. Manage your plant food so as to keep up the desirable supply and balance of available plant food constituents. You wouldn't think of turning your high record Holsteins out on oat stubble pasture alone, and expect them to keep up their record. You weigh up the carbohydrate and protein-carrying feeds in just the right proportions every day, and you get the greatest profits from your cows. Your crops are just as responsible as your cows. Balance up their nitrogen, phosphoric acid and potash, and your money crops will show the profit. But you ask how shall we do this? My answer constitutes my other suggesstion.

3. Balancing plant food. There are three sources of plant food—nitrogen from legumes; nitrogen, phosphoric acid and potash, from farm manure, and the same plant food constituents from fertilizers. The general crops of the farm have their disinctive food requirements, as follows:

Nitrogen—Hay, much; grain, fair supply, roots, fair supply.

Phosphoric Acid—Hay, small amount; grain, much; roots, fair supply.

Potash—Hay, fair supply; grain, fair supply; roots, much.

The farmer can balance his plant food from the three sources named above. It is hard to say definitely just how much nitrogen is fixed per acre per annum, by the common legumes grown upon our farms, because actual experimentation has not so far revealed this amount. Indications are that under favorable soil conditions this amount varies from twenty-five to seventy-five pounds per acre per annum. Average farm manure returns about ten to fifteen pounds nitrogen, five to nine pounds phosphoric acid and nine to fourteen pounds potash per ton. With these facts in hand, then, can you not estimate how much plant food you have returned to your soil in this year's rotation and manuring?

When it comes to fertilizers, you have definite guaranteed analyses to go by. You have the per cent of nitrogen, phosphoric acid and potash. Now, as to just what to use on your soil, for your different crops, neither I nor any other man can tell you. I can tell you what others have done with profit—both experiment stations and actual farmers. To state this as concisely as possible you will find on page fourteen of the booklet on Science and the Soil, the amounts and range of analyses which have been used with profit on various types of soils with common farm crops.

Our suggestion then is for you to choose your fertilizer of an analysis to make up for the weakness of your soils and to meet the special requirements of your crops. Fertilize part of the crop and compare it at harvest time with the unfertilized. Compare the yields and the quality of crop from both parts.

This question of crop feeding is one of great importance to farmers who are producing selected seed. An increase of 10 per cent to 20 per cent in the amount of your corn that will grade "seed corn" pays handsomely with seed corn at $4 to $5 per bushel.

Wisconsin has done great things—she can and will do immensely greater things. You can double your yields of corn and wheat and oats in many sections and greatly improve the general quality of your cereals and potatoes by proper food balancing.

Wisconsin to Produce More Beef.

FROM the interest already shown by Wisconsin farm boys in the baby beef contest, which will be conducted this year by the Wisconsin Live Stock Breeders' Association, it is apparent that it will be up to every expectation. Its purpose is to develop among the farm boys knowledge, experience and interest in the production of baby beef and the entries are already being filed according to the plans which were set forth in detail in The Wisconsin Farmer February 24th. Eight county or district fairs are co-operating in the contest which opened March 1st, and no entries will be accepted after April 15th. The contest is open to any boy of twenty years or under in the state who will take a steer or heifer calf of any breed, pure bred, grade or cross bred, that was dropped on or after September 1, 1915. The prizes will be awarded according to gain.

Mr. J. C. Robinson, of Evansville, an experienced beef cattle man, has consented to act as field man for the association and will work during the summer with the boys entered in the contest. He will act as an adviser and any question the boys wish answered relative to feeding or any other problem will be answered by him free of charge. He will also travel in the counties where county fairs have taken hold of the contest and aid the boys in every way possible to secure the greatest gain with their beeves. No restrictions on feeding have been placed by the rules. The idea is to produce the best beef at the lowest cost, and the boys may feed as they choose and receive advice from anyone they wish. The result will be that not only the boys but fathers also will get much information on feeding and finishing a beef animal.

The Janesville, Richland Center, Lancaster, Mineral Point, Lodi and Baraboo fairs have joined with the association, and the Elkhorn and La Crosse fairs are expected to join. The boys in these counties will show their stock at these fairs and the three winners are required to show at the state round-up at Madison, November 22d-23d, when prizes ranging from $50 down will be awarded. Boys beaten at the county fair are also eligible to compete at Madison as well as any boy in any county in the state, whether or not the county fair has co-operated. The animals will be sold at Madison for beef and all transportation expenses will be guaranteed. Full details may be secured by writing Ray Raker, assistant secretary, Madison, Wis.

Surely Wisconsin should produce more beef with its ideal climate, fine pastures, close markets and the abundance of corn, corn silage, small grains, clovers, grasses and alfalfa that are produced here. This contest is expected to increase beef interest and show the profit in beef production in Wisconsin. Baby beef is a well-bred, highly finished steer or heifer, twelve to fifteen months old, in prime market condition, weighing about 1,000 pounds, and the association has started this baby beef contest for the reason that considerable skill in feeding is required.

Baby beef production has become popular for several reasons. Baby beeves make quicker and more satisfactory gains; they yield smaller cuts, now demanded by consumers; less capital is required to get into the cattle business where baby beef is produced and money can be turned quickly; more breeding stock can be carried on the farm producing baby beef; it makes beef making a farm process where the animals are bred, grown and fattened on the farm, eliminating the uncertainty of cattle feeding as usually practiced.

The making of baby beef may be looked upon as a very special line. In order to make the highest gains and the greatest net profits it requires not only a knowledge of the breeding and selection of calves, but the skill of a good cattle feeder. However, it is growing to be an extensive branch of the cattle business, and authorities, both stockmen and packers, predict that profitable beef production is rapidly narrowing down to baby beef.

In the production of baby beef type is of the greatest importance, young animals having a tendency to grow rather than to fatten. To consume large amounts of feed and make good use of it, a calf must be compact, low down and blocky; and must have a deep, thick body and well sprung ribs. These points indicate feeding capacity and early maturity. Quality is another essential in a good baby beef; it is indicated by a "breedy," medium sized head, fine bone and soft, pliable skin. There is but one source of this proper baby beef type, and that is the blood of a pure-bred, blocky, early maturing beef bull. Such sires are easily found in Wisconsin.

One other important necessity is high feeding. Failure will surely result if a calf is not pushed. The market pays the highest prices for well-finished baby beeves, but it will not tolerate a poorly finished one. The calf must be kept gaining continuously and should never be allowed to lose its calf fat. Calf fat is the cheapest fat, the easiest to gain, and hardest to replace.

Another Boost For the Silo and Alfalfa.

IT HAS been repeated often that a silo will pay for itself in two or three seasons, but this statement promises to be more than substantiated in the farm management report which is to be announced in Wisconsin some time in April. This report will show that a silo will pay for itself in a single year, this conclusion having been drawn from the examination of the reports of some 650 farmers who were entered in the 1915 farm management contest under the direction of the college of agriculture. These farmers kept an accurate account of all receipts and expenses during the year; figured the operating capital, labor income, etc., and the forthcoming report of the results of the year's contest will show these principal items:

1. That the operating capital on the farm is a big factor—even more so than the fixed capital.
2. That the number and quality of cows has a strong bearing on the income from the farm as a whole.
3. That enough is lost each year on farms without silos to pay for a good silo once a year.
4. That alfalfa is one of the best forage crops in Wisconsin. In nearly every county the labor income was several hundred dollars greater per farm with five acres or more of alfalfa than the farm with five acres or less of alfalfa.

From these conclusions drawn from a compilation of the reports from these 650 farms it appears that every farmer who hasn't a silo should begin immediately reading the advertisements and catalogs with the idea of having one ready to receive the 1916 crop. What farmer can afford to be without one if the waste due to lack of a silo is great enough, if prevented, to pay for a new silo every year? Under this basis of figuring the silo would pay for itself the first year, and after that the saving of this waste would increase the annual profits to the value of the silo or more. Alfalfa is now grown in every county in the state, and reports this spring indicate that it is continuing to grow in favor as a feed and that the acreage will be greatly enlarged this year.

First County Swine Breeders' Association in Wisconsin.

THE Grant County Poland China Breeders' Association, which was organized at a meeting recently at Lancaster is the first association of its kind in Wisconsin. The honor, therefore, of forming the first community organization of swine breeders in the state goes to the Grant county Poland China breeders.

Chris Kartman, of Cassville, was elected president; F. M. Morehouse, of Lancaster, vice president; Burley Dobson, of Lancaster, secretary; and Rolla Rich, of Lancaster, treasurer. The board of directors is composed of J. C. Hendricks, of Hazel Green; C. S. Flesh, of Mount Hope, and W. F. Ackerman, of Glen Haven.

The organization of this association is the cue for swine breeders in other counties of the state to band themselves together for the benefit of their breed in general and themselves in particular. Wisconsin now has about 115 community breeders' organizations, all except four of which are dairy organizations. As we noted above this is the first county swine breeders' association, and its organization should be followed by the lovers of other breeds in Grant county and by breeders in every other county in Wisconsin.

The new association starts out with twenty charter members and immediately launched several propositions which will undoubtedly rebound to its credit. The annual dues were placed at $1 a year, and what the dairy organizations in other communities have done for the dairymen in those communities the Grant County Poland China Breeders' Association expects to do for the Poland China breeders of Grant county.

The association immediately set plants going for three association swine sales a year. It was decided to hold two annual bred-sow sales in the spring and one annual boar sale in the fall, probably in August or September. These sales will be held, in all probability, at Lancaster.

It was also decided to get behind a pig-feeding contest in co-operation with the Grant County Fair, and $300 will be given away in prizes to the boys who take a pen of three grade barrows and during an allotted time make the best gain at the least expense. As the state fair, in its boys and girls' department, has offered large premiums at the 1916 fair for similar contests, it is believed

this contest will develop considerable interest among the boys, and, of course, it will be of inestimable value to them.

Grant county has the reputation of shipping more hogs than any other county in the country. The breeders are alive and active and The Wisconsin Farmer expects much good to come from this organization, and trusts it will lead other county swine men to get together in an association of this nature.

Wisconsin Seed the Best.

MR. G. B. MORTIMER, of the Wisconsin station, has written an interesting article for the Wisconsin Bankers' Farm Bulletin under the heading, "How to Secure Seed Grain." He advocates the use of the Wisconsin improved varieties, believing they are the best yielders. He says they excel because they have been bred for Wisconsin conditions. Mr. Mortimer takes the position that the best grains for seed purposes are those which are home grown, preferably on the farmer's own ground, providing proper attention has been given to selection. Such seeds have developed a liking for soil conditions, and, according to Mr. Mortimer's idea, will generally do better than those imported from long distances. It becomes necessary, however, to purchase other seed quite frequently, and Mr. Mortimer urges the Wisconsin farmer to insist upon Wisconsin-grown seed. Further, he advises getting it as near at home as possible. He suggests a telephone conversation around the neighborhood asking for the seed needed. One advantage of buying seed locally is that personal inspection is possible.

In order to keep seed grain as free as possible from mixture Mr. Mortimer recommends the following precautions:

1. Cleaning of the drill or seeder before sowing a different variety.
2. Cleaning of all grain sacks before filling by turning inside out and thoroughly shaking.
3. Cleaning of fanning-mill.
4. Discarding first few bushels of seed that come from the separator.
5. Feeding horses ground oats during seeding time.
6. Storing seed so as to be rat and mouse proof.
7. Thoroughly cleaning the grain binder before starting to cut a new variety.

In discussing the question of varieties of small grains and corn in Wisconsin, Mr. Mortimer says:

Turkey Red wheat is the leading hard winter wheat of the world. Pedigree No. 2 of this variety has been selected and bred for wheat growers of Wisconsin. It is a hardy, high yielding wheat of good quality. Those interested in spring wheat will do well to secure Marquis, one of the more recently introduced varieties. In yield and earliness it is superior to other spring wheats. It has excellent bread-making qualities.

Wisconsin Pedigree Oderbrucker barley speaks for itself. It is known the world over. It has never yet suffered defeat at any of the great grain shows when placed in competition with other varieties. Being stiff strawed it does not really lodge in the field. Its uniformity in maturing produces plump grain of the very best quality. Be sure to get the Improved Oderbrucker for the highest yielding barley.

There are improved varieties of oats to meet all oat growing conditions in the state. At present Wisconsin Wonder-Pedigree No. 1 holds the record for high yields, especially upon the heavier soils. Swedish Select, Pedigree No. 5, is another one of the best yielders and also does well on the heavy and medium soils. Sixty Day, Pedigree No. 6, is desirable for sandier soils on account of its earliness.

Wisconsin is one of the three leading rye producing states. The improved pedigreed varieties of winter rye outyield the common varieties by five to ten bushels an acre. Call for Wisconsin pedigree winter rye.

There is an improved variety of corn for every portion of the state. Silver King, Wisconsin No. 7, bred primarily for the southern half of the state is the great favorite, with the leading corn growers of that section. Golden Glow, Wisconsin No. 12, bred for central Wisconsin is the best dent corn to be had for this portion of the state. Earliness and high yielding qualities have created a large acreage for this variety. Early Yellow Dent, Wisconsin No. 8, is excellent for both central and north central Wisconsin. For the extreme northern portions, improved Smut Nosed Flint will give good results.

Too Much Scale in Draft Horses.

A WRITER in the London Live Stock Journal calls attention to the fact that there is a tendency on the part of a few present-day judges to place a big, overgrown drafter in front of a smaller but more correct type, although the latter may have the weightiest set of limbs, thereby giving rise to the question whether the craze for size can be pursued with safety. In this case the Shire horse is under consideration but presumably what this writer has to say applies alike to all draft breeds. Mere size or weight is not always indicative of true character as applied to Shires, especially if it is obtained at the expense of feet and legs.

This writer goes on to say that it is more difficult to find a horse standing seventeen and a half hands as proportionate as one two or three inches lower, and when it comes to actual labor the tall animal, he points out, is the first to show signs of wear. It is true that a good big horse is better than a good little one within reasonable limits. Nevertheless among Shire horses it is certain that the biggest stallions have not proved themselves the most successful sires. Continuing, this writer says:

At some shows specimens have found favor which were decidedly leggy, with such length of body as to make them look shallow at the flank and short in the rib, which is not quite the type to propagate, as they cannot stand the strain when backing a load like those of the strong-loined and muscular type. Therefore, it may be asked whether the back and loin should not be taken more into consideration when judging as well as the "feet, joints and feather," notwithstanding that it is said "the top can change, the bottoms never." If the top changes, or appears to change, it is through being loaded up with fat, which hides a lot of defects, and that of a slack loin in particular. A short-ribbed and shallow colt grows into a horse with the same defects, but they are less obvious in a fat than in a lean animal.

By paying more attention to the top it is not suggested that the bottoms should be neglected or that palpable defects in feet, joints or limbs should be passed over. As regards the feet of Shire horses they get better each year, this being to a great extent due to the fact that the feet of colts are not neglected till the animals are worked, as they used to be.

There is little danger of size being overemphasized by American breeders for the simple reason that the feeding of draft horses, particularly draft colts, has not yet become an art on this continent. Somewhere along the line we are tempted to economize in the use of grain, with the result that many well-bred animals from imported foundation stock fall short in the matter of scale. It will be generations before American breeders will need to be warned not to get their drafters too big.

Wisconsin Potato Institutes.

EXPERIENCE has shown that the Wisconsin counties which are showing the greatest strides in potato growing are those which have concentrated on a few select market varieties. Such counties as Oneida, Waupaca, Langlade and others, which several years ago began this work of standardizing the crop, have set an example for other communities, and to push work further a series of special institutes has been planned for this month.

Adams, Marquette, Waushara and Portage counties have been chosen for this work, and ten institutes will be conducted in these four counties by Mr. J. W. Hicks, of Prentice, president of the Wisconsin Potato Growers' Association, as follows:

Arkdale, Adams county, March 21st.
Grandmarsh, Adams county, March 22d.
Endeavor, Marquette county, March 23d.
Westfield, Marquette county, March 24th.
Coloma, Waushara county, March 27th.
Bancroft, Portage county, March 28th.
Wild Rose, Waushara county, March 29th.
Plover, Portage county, March 30th.
Amherst, Portage county, March 31st.

These four counties are all good potato-producing counties, but it is believed that by selecting and growing a few select market varieties, such as Early Ohios, Green Mountains, Rural New Yorkers and Triumphs, which are especially suited to these communities, that better prices will prevail through securing a better market and that larger yields will be secured. Mr. Hicks, who as a potato grower himself, is thoroughly competent, and the potato farmers who can attend any of these meetings will find it worth while and to their advantage. These institutes will be devoted entirely to potatoes, and Mr. Hicks will point out the value of standardization as well as cultural methods for improving the yield, etc. Some splendid potatoes have been grown in all these counties in the past, but not enough attention has been given to the varieties most suited to local conditions, and then too many varieties have been grown. This all has a bearing upon the market and the price the farmer receives, as Mr. Hicks will explain.

Those Brood Sows.

THE annual loss of pigs throughout the country is appalling when an actual census is taken and all losses are counted, not including therein losses due to cholera. Practically 50 per cent of the pigs born die before they are a week old. Three-fourths of this loss can unquestionably be traced to improper feeding of the pregnant sows and one-fourth to unfavorable weather conditions. Most sows are fed too much fattening food and not enough bone and muscle-producing nutrients. This is a matter that has been discussed a thousand times and the only excuse for referring to it again is that so many farmers continue to disregard the feeding problem, and as a result their pig crops are small.

Take a sow that is fed nothing but corn, kafir or milo, and she is almost certain to farrow weak, fine-boned pigs of low vitality. This is especially true of yearling sows. A gilt is not full grown at the time she is bred. Thus while she is carrying her litter she must not only supply food for growth of the developing fetus, but also for her own body, which makes the tax on her system greater than on that of a mature sow. Now corn and similar feeds, while splendid for fattening purposes, are not suited for producing growth. A ration capable of inducing normal growth must contain a certain amount of protein and mineral matter, and there is no use denying it or of making light of it. Bone and muscle cannot be manufactured from starch and sugar by the hog or any other animal for that matter, and corn contains an exceedingly large percentage of starch.

Once more, therefore, we urge our readers to feed their brood sows intelligently—that is, supply them with enough protein to perform the functions nature demands. Make liberal use of good alfalfa hay if you have it and limit the corn ration to one and a quarter pounds a day per hundred pounds of hog fed. If the sow weighs 230 pounds give her a little less than three pounds of corn a day and all the alfalfa hay she will eat. On such a ration—a cheap one too—a young sow will not only develop her own body, but she will also farrow a strong, vigorous litter of pigs. In absence of alfalfa hay supplement the corn with tankage, oil meal, middlings or something of that sort. Proper proportions are as follows: Ten pounds corn and one pound high-grade tankage; half corn and half shorts; forty pounds corn, thirty pounds middlings, thirty pounds ground oats; fifty pounds corn, forty pounds wheat, ten pounds oil meal; sixty pounds corn and ten pounds oil meal.

Give the sows enough of any one of these rations to keep them in strong breeding condition and you will save a lot more pigs than if you fill them up on corn.

An Early-Maturing Nurse Crop Desirable.

NATURE abhors barrenness. If the land does not produce economic crops it at once runs riot with weeds. Indeed, from the standpoint of crop production weed vegetation is better than no vegetation, but more and more we are coming to believe in the plan of utilizing every field throughout the entire growing season.

This end is attained in the case of cereal crops by using these as a nurse crop along with legumes and grasses. True it is that clover seed is high in price, involving a considerable cost in seeding down. It is also true that frequent failures result from efforts to get a stand of clover and grass. In the latter case this may frequently be traced to rankness of growth in the nurse crop as well as to its late maturity. For this reason those who are meeting with the greatest degree of success in getting a stand of clover and grass are more and more resorting to the use of early-maturing varieties of grain.

Those who have winter wheat to use as a nurse crop are especially fortunate. It matures early and the soil is not dried out to a harmful degree by the time it is ready to harvest. Certain varieties of early oats may be used to great advantage and nearly all varieties of barley are early maturing. A gain of ten days or two weeks in shortening the season may make the difference between success and failure of the new seeding.

There is also some advantage in seeding the nurse crop lightly. By this we mean that better results are usually obtained from eight or nine pecks of seed grain per acre than the customary three bushels, viewing the matter from the standpoint of the success of grass and clover. Then there is the matter of early sowing which should not be lost sight of. True it is that we do not have much control over this factor because the average man is eager to get on the land just as soon as it is dry enough to till. However, let it be remembered that a few days' gain at the beginning of the season will show up plainly at harvest time and our chief aim should be to get the crop in so that it will be ready to harvest at the earliest possible date.

Rape Pasture Valuable.

NOTHING has been more thoroughly established in connection with economical production of pork than the fact that pastures are an invaluable aid for this purpose. It is impossible to produce pork profitably by exclusive dry lot feeding. During the greater part of the life of the hog he should take care of himself, and this he can do to best advantage in a productive pasture. Nothing is more valuable for this purpose than alfalfa, sweet clover and the common clovers.

Comparatively few farmers are provided with legume pastures for their hogs, and it takes time to establish a good alfalfa pasture, especially on farms where this crop has never been grown before. Rape is a splendid substitute for alfalfa; in fact, in localities where the rainfall is plentiful it is considered by many to be next in value to alfalfa for pasture purposes.

To use rape economically it should be seeded in small patches at intervals of two or three weeks. Then when the first field has been pastured off the second will be ready to turn into, and finally the third. After that the first field can be used again and so on through the season.

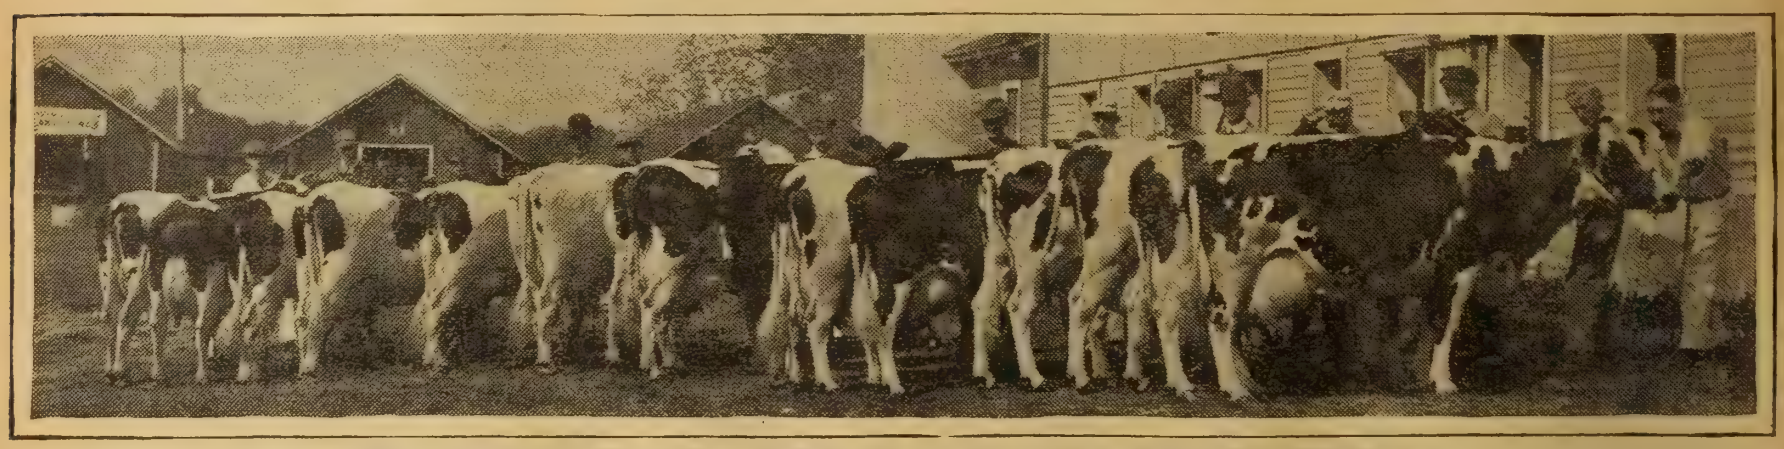
When rape is seeded alone, five pounds of seed should be sown per acre either broadcast or in rows—less being required for the latter method. In the drier sections the row method is preferred to broadcast seeding, because it makes it possible to cultivate the field and thus conserve moisture. Hogs should not be turned into a rape field till the crop stands about ten inches high.

For best results hogs should always be fed some grain while on pasture, even if alfalfa is available. While weanling pigs can make a living on rape or alfalfa pasture without grain, gains made on pasture alone are more expensive than when the green succulent feed is supplemented with corn or a grain mixture. Growing pigs should be given about two and a half to three pounds of grain per 100 pounds live weight per day when on pastures, and if the pasture is rape, alfalfa or clover, corn alone with perhaps a small amount of oats will give excellent results, high priced concentrates being not needed, as these forage crops will supply needed protein for the pigs. When blue grass and timothy pastures are employed, some concentrate should be fed with the corn, otherwise the pigs will not obtain enough protein to make profitable gains.

A good hog pasture not only materially reduces the cost of pork production, but it also keeps the pigs in a more healthful and vigorous condition, thus reducing the chances of loss from disease.

State Holstein-Friesian Meeting.

Wisconsin Breeders of the Black and White Dairy Cattle Exchange Experiences at State Convention Held Last Week in the City of Watertown.



FINE SHOWING IN THE AGED HOLSTEIN COW CLASS AT WISCONSIN STATE FAIR IN 1915.

HOLSTEIN enthusiasm in Wisconsin never ran higher than it did last week at the annual convention of the Wisconsin Holstein-Friesian Breeders' Association, which was held at Watertown, Jefferson county. The attendance was not so large as at Neenah last year, but what was lost in numbers was more than made up in interest and enthusiasm and if those breeders present continue during the coming year the enthusiasm for the association with which they were imbued at the Watertown meeting the year 1916 should prove a record breaker for the organization.

There were about 150 breeders present and all parts of the state were represented. The convention opened on Wednesday evening with a banquet at which 100 breeders were present and continued through Thursday, the afternoon session of that day bringing out the largest and the most enthusiastic attendance.

Several important matters were inaugurated at the business session which should prove of immense value to the great Holstein interests of the state. Important among these was the step taken to employ a field man who shall be paid a salary and who shall also act as secretary. This man will devote his entire time to the work of the association and in the interests of the Holstein breeders and if the plan is carried into effect, as it is probable it will be, the state association will have a sort of promotion publicity agent. It was the consensus of opinion that such a hired field man and secretary could be of invaluable service to the breeders and the association and a committee consisting of J. P. Riordan, of Mayville; Herbert Schroeder, of West Bend, and F. B. Fries, of Richland Center, was named to work out a plan for employing such a man and to secure the necessary funds for his salary and expenses. This committee is to report some time in May when a special meeting of the association will be called to receive the report and perfect plans for employing such a field worker.

Another important action was that looking forward toward the proper representation of Wisconsin Holstein interests at the meeting of the national association at Detroit in June. There are 1,200 members of the national association living in Wisconsin, and, as this is the second Holstein state in the Union, it was thought time that Wisconsin was receiving more recognition from the national association. The plan is to send a delegation to the national meeting with as many proxies as it can obtain and a committee composed of S. A. Baird, of Waukesha; Sidney Jones, of Watertown, and James Torrey, of Kenosha, was named to perfect the arrangements and secure the proxies. It is hoped to secure at least 1,000 proxies for the use of this committee and with the large delegation of Wisconsin breeders which will attend personally the association would be in a position to demand recognition. As there will be some expense in securing these proxies it was decided to ask the members to contribute to a fund for this purpose, the funds in the treasury of the association not being sufficient. During the meeting a subscription paper was circulated and about $75 was donated. Those who wish to contribute and did not have the opportunity at Watertown can mail their subscriptions to either of the three members of the proxy committee.

A WELL-MARKED HOLSTEIN YOUNGSTER OF PROMISE.

The convention also passed resolutions touching on the oleomargarine fight now in congress and supporting the National Dairy Union in its fight; another relative to guaranteeing the correctness of registration papers, production records, etc. Another resolution expressed the bereavement of the members of the association over the death of Dr. Henry Favill, a fellow member and breeder, who had planned to attend the convention and deliver an address.

The annual election resulted in the selection of R. J. Schaeffer, of Appleton, as president after J. P. Riordan, who has been acting president because of the illness of Pres. W. J. Gillette, of Rosendale, had declined to serve because of press of private business. Fred Pabst, of the Pabst stock farms at Oconomowoc, was chosen vice president; Chris Schroeder, of Racine, secretary, and F. J. Bristol, of Oakfield, treasurer. Mr. Riordan was elected a member of the directory board as well as S. E. Jones, of Watertown. The nominating committee consisted of L. E. Wiese, S. E. Jones and W. L. Baird.

The resolutions, which were presented by a committee consisting of H. F. Schroeder, F. H. Everson and R. J. Schaeffer were adopted as they were presented. The resolution relative to the oleomargarine fight follows:

Whereas there is a systematic effort being made by the oleomargarine interests to repeal the federal law governing the manufacture and sale of oleomargarine and to pass a law that will permit oleomargarine to be colored in semblance of yellow butter and which would permit oleomargarine to sell and be served to the consumer as butter;

Be it Resolved, that we, the members of the Wisconsin Holstein-Friesian Breeders' Association in convention March 2d, at Watertown, urge that the congressmen of Wisconsin use all honorable means to defeat any bill that may be introduced in congress favoring the manufacture and sale of oleo-

WELL-BRED HOLSTEIN HEIFER OF GOOD CONFORMATION.

THE PAIL-FILLING TYPE OF HOLSTEIN COW.

margarine and to the detriment of butter;

Be it Further Resolved that we support the National Dairy Union in its efforts to secure a square deal for butter.

Relative to the employment of a field man the following resolution was adopted:

Whereas, owing to the present dormant condition of our association we believe new life and vigor can be brought about by placing in the field some good, salaried man whose duty shall be to make this association a live issue, therefore;

Be it Resolved, that the president appoint a committee of three to devise plans to raise necessary funds and develop plans for this representative to work under; said committee to report to the secretary some time in May and a special meeting to consider this matter be called.

The appointment of the proxy committee, mentioned above, followed the adoption of the following resolutions:

Whereas, we feel a necessity of combined effort on the part of members of the national association in furthering the interests of Wisconsin breeders, therefore;

Be it Resolved, that the president appoint a committee of three to take immediate action on securing as many proxies as possible, these proxies to be presented by a delegation of this organization;

Further Be it Resolved, that in order to finance this resolution a subscription list be passed at this meeting to raise funds.

The presentation and adoption of these three resolutions followed a stirring appeal by Mr. Riordan, acting president, in the president's annual address. Mr. Riordan, filled with enthusiasm for the association, pleaded for more unity and interest; a greater association; better recognition of the Wisconsin breeders in national work, etc. During his address William Everson, the veteran breeder at Lake Mills, occupied the chair.

Mr. Riordan pointed out that there is a great work for the association and that he does not believe it is accomplishing as much as it should. He talked plainly and with the view of arousing new interest and enthusiasm. With 2,000 breeders of pure-bred Holsteins in Wisconsin and an investment of probably $40,000,000 in stock he said this state, second to New York in numbers but to his mind first in quality and in the character of its breeders, should lead the world. Then he told of his experience at the Chicago convention where there were six Wisconsin votes and where 500 Wisconsin proxies were in the hands of eastern delegates, to use as they choose, either for or against Wisconsin. He urged that a concerted effort be made to keep these proxies in the hands of Wisconsin delegates and predicted that a delegation with a thousand proxies that goes to Detroit will be in a position to hold up at the annual meeting the greatness of Wisconsin in the Holstein world.

Mr. Riordan said that in his belief the employment of a salaried field man and secretary was absolutely necessary if the association is to grow and the breed interests be advanced in keeping with Wisconsin's position. There are two important things in breeding—First, produce the cows and second, after doing this get into position to realize the reward that is due. Wisconsin is already producing the cows and Mr. Riordan said that now is the time to begin to reap the reward, and that a field man, hired for that purpose, can do much to promote the breed and the interests of the breeders. Just how the money is to be raised to finance this project he said would have to be worked out by the committee, but it is probable it will be raised by subscription among the breeders. "Such a man will be on the job day and night looking after our interests," he said. "To my mind the mission of this association is to be on the guard continually to protect our interests, and this man would be the guiding hand. He will see that Wisconsin never has her nose rubbed in the ground; he will guard us against obnoxious legislation, etc. There is a great work for us and if we don't do it we are blinding ourselves to our advantages."

Mr. Riordan also started quite a discussion on the action of the national registry associations in refusing to guarantee certificates of registration, A. R. O. records, etc., since the Iowa Supreme Court record held the American Percheron Society liable for damages because of fraud registrations. A buyer who found he had been defrauded sued the seller who was insolvent and then in turn sued the registration society and got damages from the society. Since then Mr. Riordan said the registration societies have been printing a little box on the face of the certificates, etc., that "it is the belief that the statements, etc., are true." "To my mind this is merely telling the breeder that he has no assurance his papers are absolutely correct," he said. "For one I am against it and I'm willing to go down into my own pocket and help pay any losses to the association and the registry if they will stand back of every certificate." This statement was greeted by prolonged applause which expressed the sentiment of the Wisconsin breeders and afterwards the following resolution was adopted without a dissenting vote:

Whereas, our national directors have seen fit to deface our registration papers with printed notices which really amount to making them null and void except as to the veracity and honesty of the breeder, therefore;

Be it Resolved, that this association resents this action and would favor the national association backng up their registration papers, and:

Be it Further Resolved that a committee of one be appointed to get in touch with other state organizations and learn their view on this matter.

F. H. Everson, of Lake Mills, was named the committee of one to confer with other state associations.

D. D. Aitkins, of Flint, Mich., president of the National Holstein-Friesian Association, was one of the interesting speakers of the convention and spoke on Holstein conditions in general. He closed with a special invitation to the Wisconsin breeders to attend the national gathering in Detroit and assured them fine entertainment and a splendid convention.

Mr. Aitkins defended the action of the national board relative to the registration certificate matter, and said that no association today assumes this liability. He explained how the "little reading box" described by Mr. Riordan happened to be inserted, but he did not change the view of the convention that the association should back up every certificate. He said the Holstein industry owes a great obligation to Wisconsin which has turned out many splendid breeders, including many notable individuals, and took occasion to praise the life and work of Dr. H. D. Favill, whose place on the program at the convention he filled.

No one has anything on the Holstein breeder, he said, and it is his belief the character of the breeder is going to have a greater bearing in the future than in the past. To his mind there is no limit to the production of a Holstein and he fears to even prophesy what will be the record a year hence for fear that he will place the limit too low. He pleaded for greater encouragement to the young breeder. "Start the boys right by giving them the benefit of our experience" was

(Concluded on page 35.)

Studebaker

SERIES 17 FOUR

$875

More Value for *Every* Dollar of the Price

This NEW Series 17 Studebaker 4-cylinder model is the GREAT 4-cylinder value of the year—a car that offers the discerning buyer MORE visible, tangible, PROVABLE value for every dollar of the price than any other 4-cylinder car on the market.

And the price of $875 is possible only by reason of Studebaker's unexcelled manufacturing facilities, GREAT financial resources, long years of manufacturing experience and LARGELY increased volume.

No man can safely invest a dollar in any car without FIRST seeing this new SERIES 17 Studebaker. Write for handsome catalog—and have your local dealer demonstrate the car.

STUDEBAKER

South Bend, Ind. Detroit, Mich. Walkerville, Ont.

GRANDFATHER
Never Dreamed of a

GATE like this

He got along with a set of "Bars" hewed from poles cut in the woods. Neither the "Bars" nor the board gates that followed them were really effective, as any vicious or determined animal could get through. Nothing gets by the

Peerless Self-Raising Gate

as it is of heavier than ordinary construction. The big, heavy 1⅝-inch tubing frames filled with a close woven fabric of all No. 9 wire makes a combination that stands the hardest kind of usage. Cross bars are 6 inches apart with 3-inch spaces between line wires at the bottom. Every wire of the filling is carefully tied to the frame.

The Self-Raising feature makes it extra handy, as it springs up when unlatched and swings over snow, ice, grass and rubbish. No shoveling or digging ice and snow in the winter time.

Every part of the Peerless Gate is heavily galvanized by the electro process, making it rust proof. No paint to wash or wear off in a year or two. Galvanizing looks better and lasts ten times as long as paint.

You should have our complete catalogue describing this gate, as well as Peerless Hog, Field, Poultry and Lawn Fencing, showing a hundred styles of fences and gates. Before you put up a rod of fence or a single gate you should know about the Peerless line. Learn about the efficiency of the Peerless one-piece cross-bar, the Peerless patented non-slip knot and our special Galvanized Open Hearth Steel Wire. Peerless Fence is easy to buy, easy to erect, looks good and gives long service. Send for that Free Catalogue.

CURRENT EVENTS

PRESIDENT WILSON and congress have been at loggerheads the past week over foreign affairs. The president is firmly insistent on the rights of America to travel unrestricted and unquestioned on the high seas, notwithstanding Germany's warning that after March first she would attack and sink armed merchantmen, with the fact quite evident, but not explicitly stated, that even the presence of American citizens on such vessels would not save them from destruction. Sentiment in congress until the close of last week was undoubtedly in favor of a middle ground, American citizens to be warned of the danger of ocean travel and advised to keep off the armed merchantmen of nations now engaged in war. President Wilson argued that by not backing him up congress was causing Germany to believe that the president does not represent public sentiment, thus greatly weakening the force of his protests in the Lusitania case and every other one in which international law or the rights of humanity have been ignored or violated on the ocean. The matter bade fair to drag along for weeks, but the president precipitated a crisis by demanding that congress take positive action on the resolution introduced by Senator Gore, of Oklahoma, warning Americans off of armed ships. He declared that the passage of such a resolution was antagonistic to American principles and rights, the defeat of such a resolution would be support of him and evidence to Germany that he does indeed represent public sentiment. After much wrangling and arguing, positive action was postponed in the house but the senate went on record in support of the president, after one of the most striking nonpartisan debates in its history, the vote being 3 to 1 in favor of the president's policy.

THE fiercest and most deadly fighting of the year and a half of the European war was in progress last week, when a third of a million Germans stormed the French fortress of Verdun. The battle lasted longer than did the battle of the Marne, over a year ago, likewise fought out on French soil, which was of a week's duration. Verdun is the strongest fortress in France and has been strengthened for the past few months in anticipation of just such an attack as the Germans waged against it, led by the kaiser himself and his son, the crown prince. While the press dispatches are conflicting, the Germans do not seem to have been completely successful. They captured some of the outlying forts and posts, at a terrific cost in men, but the main fortress and town were still in possession of the French at last reports. The Germans are said to have taken no heed of human life, sacrificing men by the scores of thousands in the herculean attempt to win a victory. One report says the Teutons were mowed down in solid formation, so that the dead bodies remained erect, there being no place for them to fall. However the battle may develop, the loss of life is already the heaviest of any struggle in the war.

OCEAN travel continues to be extremely perilous, notwithstanding Germany's pledge to the United States that "liners will not be sunk without warning by our submarines and without safety of the lives of noncombatants, provided that the liners do not try to escape or offer resistance." Mines continue to imperil the safety of ships and the lives of travelers. One day recently no less than four British ships were sunk by mines, with a heavy loss of life. The principal ship to meet this disaster was the liner, Maloja, with 200 on board, which struck a mine near the shores of Dover and sunk within twenty minutes, with the loss of over 100 lives. A vessel which went to the rescue struck another mine and went to the bottom in short order. In this case, as in most maritime disasters, a large percentage of those who were killed were women and children, the terrific explosion of the mine literally blowing many children to pieces. In view of all the tragedies of the ocean, those who travel across the seas are either foolhardy or impelled to make the journey by the most urgent of necessities.

PRESIDENT WILSON outlined his views on the war and America's part therein, both directly and indirectly, in a speech delivered before the Gridiron Club (an organization of newspaper men) a few nights ago. He told his hearers that America ought to keep out of the European war "at the sacrifice of everything except this single thing upon which her character and her history are founded, her sense of humanity and justice." Among other things the president said: "I would be just as much ashamed to be rash as I would to be a coward. Valor is self-respecting. Valor is circumspect. Valor strikes only when it is right to strike. Valor withholds itself from all small implications and entanglements and waits for the great opportunity when the sword will flash as if it carried the light of heaven upon its blade."

LORD KITCHENER, minister of war, urged the utmost economy upon all loyal Britons in a speech delivered last week inaugurating a national savings campaign. He said: "We want just as many men as we can get as soldiers. We are bound to take all the men that can possibly be spared from industry, agriculture and commerce. We cannot produce all our ordinary peace time requirements. Either the population must go short on many things or the army must go short of munitions and other indispensable things. Are civilians prepared to let their brothers in the trenches endure hardships while they are not ready to make small sacrifices of harder work, increased effort and increased economy?" England is rapidly waking up to the fact that the war will be won by the home folks co-operating with the soldiers in the trenches, and not by the latter alone and unaided. Lloyd George has the munition factories working efficiently now, but this does not suffice; England must prepare for the day when production in all lines will be cut down and thus the national economy campaign just launched.

GERMANY, in a formal note presented by Count von Bernstorff to Secretary Lansing, reiterates assurances regarding the future conduct of submarine warfare given in the Lusitania case. The note declares those assurances have not been modified by the memorandum setting forth its intention to treat armed merchantmen of the entente allies as auxiliary cruisers, and attempts to justify the issuance of the memorandum by presenting evidence and assertions designed to prove that the British government has instructed merchantmen to use their armament for purposes of attack in violation of assurances given to the United States. Later, it was said at the state department, while the United States stood unalterably for the right of merchant ships to carry guns for defense, it was not now and never had been contending that Americans could travel with immunity on ships having orders to act offensively.

HENRY JAMES, one of America's best-known novelists, died last week in England, where he had made his residence for many years past. About a year ago Mr. James took the oath of allegiance to the British crown in order to show his sympathy and support of the government in the war, he having left his native land and taken up his residence in England, where his work was better appreciated, years ago. Mr. James was a master of literary style. His best-known novels are "The Portrait of a Lady," "What Maisie Knew," "The Bostonians" and "The Awkward Age." He was born in New York almost seventy-three years ago.

Testing Wisconsin Seed Corn.

Every Ear Which Is Selected For Planting in This State This Year Should Be Tested to Determine Germinating Qualities.

EVERY ear of seed corn that is planted in Wisconsin this spring should be tested. The season of 1915 was unfavorable for seed corn production and the farmer who takes a chance by planting seed from those ears that look all right may have occasion to regret later in the summer that he did not test every ear to determine its germinating qualities. An ear may look good and still not be good. So the only sure way is to conduct a germination test. If this has not already been done this is a good month to do so, before the spring work starts in earnest. Considerable 1914 corn will be used this year in Wisconsin for seed, and it is just as important that this be tested as the 1915 corn as it may have lost considerable of its vitality during the past year.

Three of the most important factors in securing a good yield of corn are selection, the curing and the testing of the seed. Most of the seed at this time has been selected and cured so this article deals only with the important factor of testing, as every kernel that goes into the ground must produce if the farmer is to get the maximum yield for his labors.

This is an old question with many of our readers but hundreds of them will be testing for the first time this year, and consequently it is new to them. It is not difficult to make the test, and if you don't have a tester or do not care to buy one make one by using a shallow box and sawdust. There are many testers on the market which are cheap and satisfactory, and many devices have been recommended, all of which have their advantages. In a circular just issued by the agricultural extension service of the Wisconsin College of Agriculture the question of testing has been taken up at length and copies of this may be secured free on application. This circular was prepared by R. A. Moore and J. J. Garland, of the experiment association, and is very timely and interesting. It also contains some very valuable information on selection and curing as well as testing, and every farmer should secure a copy.

Only the most nearly perfect seed ears, having kernels of uniform width and other desirable characteristics should be saved for seed. These ears should be selected from the storeroom and laid out on the floor or on tables to be convenient for the test. It is a good plan to number each ear, which can be done by fixing a number to the butt by the use of a nail. In this way there is no danger of getting the ears mixed during the test.

Before describing the methods best to use Mr. Moore and Mr. Garland point out in their circular that these results may be expected from testing:

Increases yield.

Enables growers to discard weak germinating and dead ears. (Each dead ear planted means a loss of at least $3 or $4.)

No matter how well corn has been cured, a general test by taking one or two kernels from a hundred or even more ears in different parts of the room will prove good insurance. (Corn can be tested in February or March before spring work begins.)

If general duplicated tests are not practically perfect, ear tests will save loss and disappointment. (Strong, vigorous germinating kernels will not rot so quickly after planting if weather conditions are unfavorable.)

The common square box tester, often called the sawdust box tester, has been found to be one of the best at the experiment station. A box thirty inches wide, five feet long and four inches deep can be made by any farmer of soft ¾ or one-inch pine boards, and will test 240 ears at one time or from 2½ to 3 bushels of seed. It may be smaller if preferred. A couple of coats of paint will prevent warping and make it a permanent box, although this is not necessary. This box should then be filled with sawdust to the depth of two inches and packed smoothly with a trowel or brick. On a piece of unbleached muslin mark off 2½-inch squares with an indelible pencil which, when marked, dampened and laid over the sawdust, all is ready for placing the kernels in these squares. By marking the cloth ten squares wide and numbering only the outside rows the number of any inside row can be easily determined.

Take six ears from ear number No. 1 and put them in square No. 1; six from ear No. 2 for square No. 2, etc., until all squares are filled. Take out two kernels near the butt, two near the center and two near the tip, and in "prying out" take care not to "pry out" between the kernels but between the rows, as "prying out" between kernels may injure the germ. Place all kernels in their place germ side up with the tips all pointing the same way. When the squares are filled place a tightly woven moistened cloth over the kernels. Spread a cloth larger than the box over this muslin cover and fill the box with sawdust, which has been moistened. Then the test is ready.

This box should be kept in a room with a temperature of from fifty-five to seventy-five degrees, and if tilted a little, by placing a brick under one end with the tips tilting downward the roots will grow in one direction and the stems the other. In from five to six days the top cloths and sawdust may be removed, taking care not to move the sprouted kernels and the tester will then learn which ears have germinated. Only those ears which have six vigorous sprouted kernels in the germination box should be saved. All others should be discarded, and by comparing the number of the square to the number on the ear it is easily determined which ears are not good.

The rag doll tester has also come into very general use. If properly handled it gives splendid results. This may be made by taking a piece of muslin or sheeting, ten inches wide by five feet long, which should be ruled off in twenty squares, 2¼ inches square. The numbering of the squares and ears is the same as in the sawdust box test. When all these squares are filled it can be rolled up, beginning at either end and soaked in a bucket of lukewarm water from six to twelve hours. Then pour off the water and let the roll drain by placing it on a piece of wood placed in the bucket for this purpose. Cover the pail and keep it in a heated living room for five or six days, when it may be unrolled and the results of the test ascertained. The one disadvantage to this test is that the rolls are likely to become dry if not carefully examined each day and moistened. The same examination as advised in the sawdust box test should then be made, and any ear, the six kernels of which do not produce strong, vigorous sprouts, should be rejected from the seed corn.

Another device, more suitable for determining the average germination of a large amount of seed, is the plate test. Here two plates are used. Not more than fifty kernels are spread upon a moistened flannel laid on the plate; then covered and a moistened flannel and an inverted plate. In six days this will show the germinating qualities. If three kernels in a plate fail to sprout then it is better to test each individual ear by the individual ear method. This individual method is the only sure way that the weak and dead seed ears can be discovered.

Some farmers have other methods of their own. Of course, any method of determining the germinating power is of value so long as the farmer knows that every ear he selects for planting is going to produce the results desired.

This should be the year when farmers of this state will discard unprofitable fruit trees—trees which have been carrying disease and furnishing fruit which was poor when ripe and absolutely unfit for storage for winter markets.

KING
EIGHT CYLINDER

40-45 H.P.
MODEL D
$1150
5 Passenger
Touring

Will more than meet the rigorous requirements of Farm Service, and in addition give a riding luxury and coach style surpassed by no foreign car

PIONEER of its class, the King occupies the unique position of being purchased "in spite of" its moderate price, as well as because of it.

Those who would willingly pay more than is asked for the King find the necessity gone when confronted with this car's remarkable performance and luxury.

"Challenger" Model E embodies improvements and refinements in eight cylinder construction which could be offered only by a Company that has had its "Eights" in operation all over America and in thirty foreign lands for over a year, there being *more* King eight cylinder cars in owners' hands than *any* other make save one. Aluminum pistons of special King design, the latest advance in automobile engineering, are a feature of this car. They increase engine power and resist carbon.

The new Model E is offered to the public after months of the roughest handling, the trials extending from the hilly coal regions of Pennsylvania to the blizzard-swept mountain passes of Colorado. It has conquered every variety of road-way and extreme of climate, under the fault-hunting eyes of our engineer corps.

In congested city traffic the King Eight will creep along in "high," and, when an opening comes dart away with locomotive speed at the movement of a finger. Sudden hills are taken with a hum instead of a throb and with scarcely ever a change of gears. Simplicity and ease of operation make it the ideal car for women who drive, and its extreme economy in fuel, oil and tires is only another proof of high engine efficiency.

Will you be content with *less* than a King?

"Corsair" Roadster Model, $1350. *Sedan "All-Weather" Car, $1900.*

KING MOTOR CAR COMPANY, DETROIT, MICHIGAN

What Standardization Means to Motor Car Buyers

IT means VALUE. Just to the extent that a car is standardized does the buyer's dollar approach the maximum of purchasing power.

Standardization means definite, proved quality, known manufacturing costs and reduced selling costs.

Of the million autos that will be sold in 1916, 75% will be standardized cars selling for less than $1000.00 each. This remarkable American achievement is the direct result of standardization.

Finally the upholstery has been standardized by the almost universal adoption of

DU PONT FABRIKOID
REG U S PAT OFF

MOTOR QUALITY

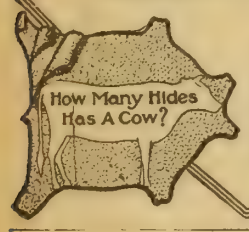
40% of all 1915 cars sold were upholstered in this proved, guaranteed material and in 1916 the total will be at least 60%.

Fabrikoid is the only standardized automobile upholstery. It wears better than coated splits (commonly sold as "genuine leather") and has the artistic appearance and luxurious comfort of the best leather.

Rayntite Fabrikoid for tops, single or double texture, is guaranteed one year against leaking, but made to last the life of the car.

To get the most for your money, buy a standardized car

Du Pont Fabrikoid Co.
Wilmington, Delaware



Craftsman Fabrikoid, the artistic upholstery material for furniture and home decoration is sold by leading department stores.

Eureka Potato Planter

For Large or Small Growers, 1 or 2 rows

Opens furrow, drops seed any distance or depth required, puts on fertilizer (if wanted), covers up, marks next row. Accurate, automatic and dependable. Operated by one man. Furrow is opened directly under axle and seed is dropped in plain sight of operator. Made of steel and malleable iron, assuring long life and few repairs. In stock near you.

It does not injure seed

In And Around Wisconsin.

F. E. Mohr, of Marathon, has purchased and taken possession of the Commonwealth Creamery at Reedsburg, Sauk county.

The creamery at Almena, Barron county, which has been under the management of Charles Kaemmer for sixteen years, has been sold to Richard Becker and Richard Bender.

E. R. Jones, secretary of the state drainage association, has been made chairman of the drainage committee of the American Society of Agricultural Engineers. E. M. Chandler, of Burbank, Wisconsin, has been detailed to special drainage work.

The annual report of the co-operative creamery at Downsville, Dunn county, shows that last year 750,000 pounds of butter were made and that $224,290 was paid out to the farmers in that vicinity for butter fat. T. B. Denning was chosen president for the coming year and C. N. Whinnery secretary and manager.

Beginning with this spring all growers of pure-bred seed grains who wish to sell their seeds under the auspices of the Wisconsin Agricultural Experiment Association must treat their grains for smut every three years. Those who wish to have their names in the association's pure-bred seed list next year must treat their grains for smut this spring.

The January report of the co-operative creamery at Milltown, Polk county, shows that the average cream test was 23.74 per cent and the milk test 3.8 per cent. During the month 26,381 pounds of butter were made from 21,680 pounds of fat, with an overrun of 21.22 per cent.

C. G. Wilcox, of De Pere, a former member of the state fair board, has resigned as president of the Brown County Fair because of the press of other business. Elmer Hall, of Green Bay, was chosen to succeed him.

Judge Martin L. Lueck, of Beaver Dam, formerly vice president of the Dodge County Fair Association, has been chosen president again to succeed James E. Malone, who died recently. A. W. Wilcox, of Horicon, was elected vice president.

The Stevens Point Poultry Association has decided to install a new system of collapsible cooping and the officers have been instructed to cooperate with the Portage County Fair in the purchase. The 1917 show will be held January 10th-12th. The association is now incorporated and will hereafter receive state aid. Officers chosen for this year are: President, Dr. W. W. Gregory; vice president, J. J. Normington; secretary-treasurer, F. J. Blood; superintendent, M. C. Burkle. Directors, R. K. McDonald, A. E. Bourn, Geo. Bos, E. P. Trautmann, Geo. Worden, M. E. Bruce and F. D Reynolds

The committee named to revise the premium list for the Central Wisconsin Fair, at Marshfield, has completed its work. The changes increase the premiums between $200 and $300. In the cattle department the increase is about 20 per cent over last year. Extra premiums on Holsteins, Guernseys and Jerseys have been substituted for Victorias. Merinos, Cheviots, Rambouillets and Delaines have been dropped from the sheep lists as not adaptable to local conditions. The prizes in the grain departments were increased 50 cents.

William Kalinouski, of Baldwin, sends us the 1915 report of the co-operative creamery at Baldwin, St. Croix county, which shows that during the year $263,733 was paid to the farmers for 871,488 pounds of fat. Butter made was 1,049,323 pounds, with an average overrun of 20.39 per cent. The average cream tests was 24.48 per cent for the year.

The Barron County Guernsey Breeders' Association, at their annual meeting held recently at Barron, elected William Bartlett, of Barron, president for the coming year; William Halvorson, of Rice Lake, first vice president; Arthur E. Coe, of Barron, secretary, and Archie Nelson, of Barron, treasurer. The association decided to hold a separate summer picnic and meeting in June at the farm of President Bartlett, and Frank D. Otis, C. O. Heldstab and Mr. Nelson were appointed a committee on arrangements.

The Wisconsin Experiment Station Farm has sold a flock of pure-bred Shropshire ewes, bred at the farm, to the Oklahoma College of Agriculture. These will be used as foundation stock.

The 1916 price of binder twine manufactured at the state prison plant at Waupun has been fixed at 8¼ cents per pound in car lots, which is the same as Minnesota, a cent lower than Kansas and ¾ of a cent lower than Michigan. The price list follows:

Sisal	500 ft. to the lb.	8¾c per lb.
Standard	500 ft. to the lb.	8¾c per lb.
Climax	600 ft. to the lb.	11½c per lb.
Premium	650 ft. to the lb.	12½c per lb.

These prices are f. o. b. cars Waupun or Chester, Wisconsin.

Terms—If paid before November 1st the following deductions will be allowed:

2,000 and less than 10,000 lbs.	⅛c a lb.
10,000 and less than 20,000 lbs.	¼c a lb.
20,000 or carloads	½c a lb.

Alvin Hall and brother, of Clinton, Illinois, who recently purchased 160 acres in section 23, range 7, town of Knowlton, have built a good substantial fence, using oak posts, woven wire, with barbed wire on top around one forty and expect to put 500 Angora goats on this forty in April to clear the land. As this method of clearing is an innovation in this part of the country the experiment will be watched with considerable interest. Mr. Hall will purchase the goats in Omaha.

The Wisconsin Farmer is in receipt of a letter from Frederic Cranefield, secretary of the Wisconsin State Horticultural Society. The society this year is offering a copy of its annual report for 1915 free to any resident of Wisconsin. The report is valuable for reference, containing lists of fruit, ornamental trees and shrubbery suitable for planting in Wisconsin, also formulas for spraying mixtures and eighteen valuable papers and discussions on different horticultural topics. Those who wish a copy of this valuable book should apply by postal or by letter to Frederic Cranefield, secretary, Madison, Wisconsin.

SHOWING INTEREST IN TRACTORS, FARM AND HOME WEEK AT MADISON, WISCONSIN.

EVERY COUNTY SHOULD ORGANIZE.

Only twenty Wisconsin counties have thus far stayed out of the pure-bred seed grain organization.

Service of the Implement Dealer.

What Is Expected of the Dealer and Why He Should Have Reasonable Compensation---By Hugh M. Craig.

WHEN I used to live down on the farm and go to town for some piece of farm equipment our vision of the implement dealer was confined to a man who had omething to sell that we wanted and e was going to get all it was worth, nd it was necessary for the head of he house to go along and do the dick- ring.

The sale usually wound up by the ealer making a satisfactory price, lenty of time in the terms, and al- ays used the slogan, "Satisfaction uaranteed."

Those two last words have helped reak many a dealer's back and bend, not actually break, more than one anufacturer's. These two words ave caused more unnecessary ex- ense in the implement business than ny other couplet that could be oined. The usual warranty behind ny standard brand of farm imple- ent, for instance, reads in substance ke this, "The articles are separately arranted only against breakage aused by manifest defects of material r workmanship and no claim shall be ade or allowed after a reasonable est of any of the implements pur- hased on account of not performing he work for which the implement as manufactured."

The "Satisfaction Guaranteed" was ust about all of the service we as armers saw and whatever else the arm equipment dealer was doing in he way of service for us as a class as totally unknown. Our main idea as to get the machine home and put t to work and if it didn't satisfy us e laid it aside, making a trivial ex- use and many times were unjust nough to buy elsewhere.

However, in late years tremendous trides have been made in the retail nd of the business. The cost of do- ng business has been preached from ne end of the country to the other nd every single item of income and utgo has been carefully tabulated by he better class of dealers. These ifferent expense items and their auses have been given careful atten- ion and today the careful and effi- ient dealer knows beforehand what n average amount of business will ave to bear in the way of service ex- ense.

These services rendered the trade re costly and are paid by the buyer t the end. No one disputes the sound usiness principle of giving value re- eived by the merchant, but there is limit to all things and especially so hen a no-limit service means an limination of the one who attempts o supply it.

What are some of the visible and in- isible services rendered by the ealer to his community and custom- rs? First, of course, there is the alue of his investment as a going usiness to the town, the fact that he elps pay taxes and in many ways elps keep up the town which in it- elf is no easy task. One of the ways o measure the value of the small own to the country home is to think hat would happen to farm values if ll small towns were abolished.

He boosts every conceivable thing hich has the ultimate benefit of agri- ulture and his customer as its object.

The reputable dealer orders twelve nonths ahead of time the implement e is to sell, besides carrying large tocks of implements over from one eason to the other. He has estab- ished credit relations with nearly all he manufacturing concerns in the ountry and can get in the quickest ossible time any article for the farm ou may want. He displays at his lace of business all models of ma- hines salable in his community so he farmer may see with his own eyes ust what he is buying and when the eal is closed the farmer takes out he article ready to go into the field nd perform its work.

The next big service the dealer ren- ers to his customer is entirely finan- ial in nature. The implement dealer, s a class, has constituted one of the heapest agencies for farmer loans ver known in this country. Each ealer has been a loan agency all to imself and if the amount of money oaned by dealers to farmers was to be lumped together into one sum it would annually run into millions of dollars upon which the farmer has not paid 1 cent of interest. Taken from a purely philanthropic standpoint, this system is perhaps a success, but from a business standpoint it is an abso- lute failure.

It is not at all uncommon for a re- tailer to carry as high as $15,000 to $20,000 in open accounts on his books from spring until late fall and winter. This is a service chargeable against his business at the rate of 6 to 7 per cent, equalling $900 to $1,000 annually. Yet competition is so keen in the re- tail implement field the dealer has at- tempted to absorb this service along with practically all the fluctuations in the market prices of his goods from year to year. Could there be any higher service possible than first-class banking privileges furnished free of charge?

In too many communities and in too many cases the dealer has a long, ex- pensive wait for his cash. When you stop to consider that he is the market- ing channel of nearly $200,000,000 worth of farm equipment annually it doesn't take a very long wait for free time to run into a considerable amount of money. Contrast this state of affairs with the dealer's customer, the farmer, who sells all his goods for cash and the only time he has to wait for it is while he is waiting for the market price to adjust itself to suit. Even so, the farmer can always find a cash value for his produce, while the dealer is unable to borrow a penny on an open account, and some time the same is true on good farmers' notes.

This is the service little known out- side the business has for its in- ception a necessity in the early days of development in this country, and has lingered in the business because of competition and precedent. How- ever, the time has come when neces- sity is forcing less and less of this kind of dealer-banking, as the farmers are fast becoming more prosperous than the dealers and the farmers' own terms of sale are being more general- ly followed by those dealers who mean to stay in the business. These terms appear on the bottom of any public sale bill:

All sums under $10, cash.
Sums over that amount must be set- tled by good bankable note drawing 6 per cent.
No goods to be taken away until set- tled for with clerk of sale.

This is right and proper. It is good business and the retail dealer would do well to copy this good business practice from his farmer customers and use for his sales slogan "Farmers' Terms Go Here." When this practice becomes universal one of the most ex- pensive elements of the business will be eliminated and the farmer will be the first to get the benefit.

The services the farmer actually sees and makes use of each time he buys an article of any size are such as having the article set up in run- ning order, and, in some instances, having it delivered to his farm. Also the use of experts from the dealer or manufacturer to start the machine, as well as the use of all the facilities thereafter to keep it up to its highest efficiency.

The implement dealer also gives away much free labor. There are con- stant demands made for repair work on old machinery, adjustments on new machines and not a small amount of expense can be charged to work done on new machines which are in the hands of the farmer and for which there has been no definite settlement agreed upon between the dealer and the farmer. This general work is charged for in many cases, while in others the materials only are charged and paid for.

Keeping stocks of repairs is another big service rendered by the dealer and he will also make the hardest kind of efforts to get repairs for any machine whether new, old or obsolete.

The implement dealer invariably has out in the hands of his customers at least one pair of pump tongs, a set of fence stretchers, special tools for pump work, windmill rope, etc., all loaned with good grace by the dealer, and are of real importance and saving

Wisconsin Farm Tractors

It is just as important to know the pedigree and quali- ties of a tractor as of a horse. Who builds it? What experience has the firm had in *practical* tractor work? What records have the firm's products made? Are they built right? Do they stand the "Drive" of hard work?

Then what are the pedigree and qualities of Eagle Tractors?

The Eagle Tractor is not an assembled machine, but is manufactured in our own factory. This Tractor is the outgrowth of practical work with years of tractor and gas engine building experience by men who are famil- iar with Wisconsin farms and farm conditions.

The motor, a vital part of any tractor, is the famous **Eagle Two-cylinder Valve-in-the-Head Motor,** known in all Wisconsin as the engine that "runs like a steam engine." It is the motor that made such a wonderful record in Eagle Portable Engines. That, in itself, is a guarantee that Eagle Tractors have smooth and abun- dant power for both

All-around Belt And Tractor Work

The Eagle Tractor is built to do heavy and light work, quickly and economically, yet it sells at a price within reach of every farmer.

It is safe--it is simple--every part is easily accessible. In a word, it is built to be operated and taken care of by the average busy farmer. An Eagle Tractor is chuck full of life and develops an abundant flow of smooth power, yet it is as easily controlled as a well- broken horse.

It is light weight, yet strong and correctly balanced. Eagle means built right, built to meet a need success- fully, not built to meet a price, yet the price is rea- sonable. The Eagle reputation and Eagle experi- ence in farm power are behind every Eagle Tractor.

Investigate the **Eagle Gas Tractor** *before you buy. It costs nothing to learn all about it. Write us today. We shall gladly send you complete information.*

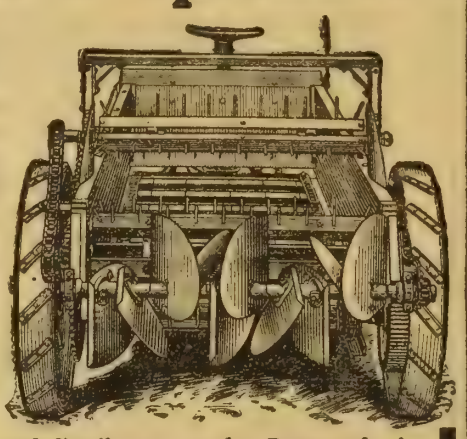
Can I Afford a Spreader?

Will It Pay on My Farm?

Government reports show the average loss of manurial value on farms is over $100 annually. This is caused by leaching and firing in piles and by uneven field spreading by fork or otherwise.

Stop this waste. Get *all* the fertility value from your manure. You can do this with the



NEW IDEA Registered U.S. Pat. Off.

the spreader that pulverizes finely and distributes evenly. It pays for itself in a year. The reliable, guaranteed **NEW IDEA** is good all the way through. Instead of gears it is drawn by quiet chains which last for years. Chain conveyor brings every mite of manure to where double cylinders insure thorough pulverization. Our patented steel revolving distributor spreads it 7 ft., across three corn rows. The spread goes beyond the wagon tracks so you do not have to drive over spread manure.

This machine is only 43 inches at highest point and can be easily loaded. Owing to the absence of gears and the fact that the wheels track it is of light draft and two horses can easily pull it. Built like a wagon box, strongly braced at all points. Unconditionally guaranteed for one year and indefinitely guaranteed against breakage from defective material or workmanship.

Write for Valuable Book FREE

Let us give you a copy of "Helping Mother Nature." The best book on manuring ever written. Not a catalog but a book of real value. You get it for nothing. *Ask the New Idea Dealer* or write us for a copy. Absolutely FREE.

NEW IDEA SPREADER CO.
"Spreader Specialists"
225 First Street Coldwater, Ohio

to the customer on account of being more or less special in nature and usable only now and then.

All this service is furnished freely and with the best of intentions by the dealer, and there is a good reason for it. By far the large majority of farm equipment dealers have been farmers themselves at one time in their lives or actually own and operate farms of their own at the present time. This makes them particularly sympathetic to the needs of their customers and a real friendliness exists between them which is peculiar to but few other businesses.

Thus we find a business carrying a service in many instances all out of proportion to the amount of sales involved. Whether this condition is found in the implement business or in any other business it takes a high order of business training and judgment to make an ultimate success of the venture. New dealers come into the ranks from farming and these men find a highly developed business conducted on narrow margins and competition so keen that only the very best dealers survive.

Anyone can see with the business so highly developed on the basis of service to the customer there must be some expense incurred and the question naturally arises, "Who pays for it?" and also "Isn't it possible to reduce it and give the consumer the benefit?" This question answers itself as we will see shortly. The profit asked on any article is based not alone on its actual value, the mode of selling, as well as many other factors involved but also on how many times the capital can be turned each year. Suppose the capital is turned once in two years, once in one year or a number of times during a year, a marked difference is noted in the margin of profit asked in each case.

If the farmers are going to ask of the dealer every conceivable kind of service and not pay for this service as they get it this excess expense must go into the price of the goods. If the farmer must have all this service and the dealer wants to still give it he has but one way to still get a narrow margin of profit and remain in business, and that is by turning his capital more frequently every year. The faster capital is revolved annually the more service burden it will carry even when the margin of profit is less. Also the difference between what is really necessary service and what is not service, but simply unnecessary expense becomes very marked and is easily distinguishable. In other words, we must hurry up the cash from the time the original investment is made in the material and labor and is returned from the farmer to the dealer and thence to the manufacturer.

For instance, the coal dealer has a car of coal or lime shipped him on short-time terms. Upon its arrival he phones many of his farmer customers the car is in and if they will shovel the coal into their wagons direct from the car they will save so much per ton. He can make this proposition because the farmer gets the coal with the minimum amount of service and saves the dealer the expense of handling the coal. The transaction is a simple one, so much coal from the mine to the dealer in a car, and from the car to the farmer for his stove.

However, the mechanical equipment of a farm is so varied, manufactured at so many different sources, each machine carries individual problems unrelated to any other machine, and added to all this is the rapid progress of improvements demanded by the American farmer to place the machines and equipment he uses at the very top of practical efficiency, both as to mechanical perfection and quick service. This precludes any thought of any other means of distribution except through the medium of the retail dealer; and looking at this question entirely from the viewpoint of the farmer, I feel if we are to retain a semblance of the present service and still get our farm equipment at a lower price we should do our part to speed up the turning of the investment made in this equipment.

We say "money talks." If so, why not use more of it when we buy implements? We say our note is as good as the cash. If so, why don't we keep our agreements more promptly? We boast an account against us is as good as the wheat. If so, why do we let our cash lay in the bank awaiting the semiannual interest dividend of 1½ to 2 per cent when the same money if used as cash when buying farm equipment would bring three times as much?

The actual hardship in the business is the failure of the customer, through negligence and carelessness, to make good his promises to pay either when the account is merely on the books or in a note. The dealer counts on discounting his bills at certain periods of the year because so and so owes him and will make payment in time for him (the dealer) to pay his bills due the manufacturer. But, unfortunately, the customer is holding his produce for a satisfactory market quotation or some other reason which forces the dealer to borrow. The customer could save more than the bank rate of interest if he were to finance his purchases through the bank rather than through the dealer and besides get the saving in the first price of his purchases.

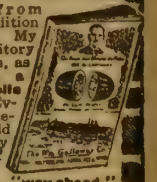
These services, as well as the complexity of detail surrounding the buying, selling and using of farm equipment need a dealer to handle them. This business has always needed the dealer and it always will. Some one farmer may be able to buy some one implement now and then and not need any element of service whatever, but sooner or later this same person will find the dealer is his only salvation and help and his value to him will more than overcome temporary advantages secured through other channels. Just as some one in town now and then makes it a practice to go direct to the farm for a few eggs, vegetables, etc., but these same people would be the last to want to see the local merchants discontinue to serve the community.

The farm equipment dealer is beset with problems of all kinds and is successfully solving them as fast as he can get to them and to him belongs the credit of giving more service in proportion to his investment in the business than any one other class of merchants doing business with the farming public today.

PRICES CHOPPED

10000 NEW 1916 GALLOWAY SANITARY CREAM SEPARATORS

Special Proposition from Now till Grass—in addition to my new low prices. My way of opening new territory and making further sales, as one separator sold in a neighborhood always sells from one to twenty-five more. Every customer boosts—their statements coming from my lips would be called "exaggeration." Every Galloway Separator is equal to if not better than other separators selling for $75 to $95.---users say "way ahead." I only ask one thing—before you buy a separator of any make, kind or at any price, get my big book—pick out the separator you want, try it 90 days—180 times—at my expense. If you decide to keep it (you don't have to) I'll give you the choice of 5 open, fair and square selling plans and guarantee my separator for 10 years against defective workmanship and materiall A $25,000 bank bond backs every sale!



NOTE THIS BUILT-IN QUALITY

Heavy, high carbon steel gear shafts and bowl spindle; extra long bearings; strong, sanitary bowl, discs not fastened together; oil bath lubrication; big, roomy, seamless, pressed steel supply tank; both gear shafts and both spindle bearings supported by one solid casting; heavy sanitary tinware; low bowl speed reduces wear on bearings and gears. No raw, sharp edges in the bowl to cut up the globules of butter fat.

Handsomely printed, beautifully illustrated in four colors. Tells all about my new 1916 Sanitary Cream Separators, how I build them; gives my 4 new low prices on 4 good sizes, also my 6 easy selling plans, cash or terms, etc. I'll also send my special proposition on 10,000 Galloway Sanitary Cream Separators. Drop me a postal today. Separators shipped from Waterloo, Kansas City, Council Bluffs, St. Paul or Chicago.

Girl Wins In Pork Contest.

Edith Penno, of Grafton, North Dakota, Makes a Splendid Record With Litter of Twelve Yorkshires Which She Fed.

A PORK production contest open to boys and girls ten to eighteen years of age who would raise a litter of pigs was conducted in North Dakota in 1915 for the third time. The awards were made on the basis of the largest gains in the shortest time and at the least cost. Four hundred and fifteen dollars in cash and three pigs were offered as prizes.

Edith Penno, of Grafton, won the contest by securing a return of 54¼ cents per day above the feed cost. Her litter of twelve Yorkshires weighed 2,593 pounds at 193 days old and used up $50.92 worth of feed. She fed largely barley, screenings, skim milk and pasture. The prices charged for the feeds were: Barley, 52 cents; corn, 54 cents; oats, 32 cents; shorts, $20; screenings, $10; skim milk, 25 cents per 100 pounds; pasture, .3 cent per hog per day and corn hogged down $8 per acre. The hogs were valued at 6 cents a pound.

Kenneth Wood, of Arvilla, won second place with a litter of twelve Berkshires that at 209 days old weighed 2,655 pounds. The feed cost was $65.11, leaving a daily return of 45 cents per day above feed cost.

Emile Clairmont, of Walhalla, secured the greatest weight of litter. His twelve pigs weighed 3,080 pounds at 201 days old. His feed cost was large, amounting to $115.80, leaving a return of 34¼ cents a day above the feed cost. This gave him sixth place in the contest.

The average weight of the 232 hogs in the twenty-four prize-winning litters was 197 1-3 pounds at the average age of 208 days. These results were secured both with and without corn. The average weight secured in 1914 was 210 pounds at 218 days old. The average return per day per litter above feed cost in the 1914 contest was 39 cents against 30 cents this year. The higher cost of feeds and the smaller use of corn apparently accounts for this difference.

The purpose of Thomas P. Cooper, director of the North Dakota Experiment Station, in starting and conducting these contests has been to develop a greater interest in pork production. The contestants in trying for the prizes would make demonstrations in economical pork production in all parts of the state. The contestants are from year to year paying more attention to economical production through the use of feeds that might not otherwise be of value, or of but small value, as screenings, and through combining these feeds with those that are more expensive. A great deal of attention has also been given to the best manner of feeding, as grinding and soaking the feed.

The boys and girls have demonstrated in this contest that pigs farrowed early in April and fed on pasture supplemented with grains and skim milk can be made to reach a weight of 200 pounds in seven months and at a profit. The pigs have returned about twice the market price of the feeds used. The boys and girls through these contests have demonstrated the possibilities in pork production as well as how to secure them.

STOCKMEN MEET AT MARSHFIELD.

At a meeting of the Central Wisconsin Live Stock Breeders' Association, held at Marshfield recently, it was decided to hold the third semiannual sale about May 10th. Final arrangements were also made for financing the new sale and show pavilion erected on the fair grounds at Marshfield. This is nearing completion. It will be the largest and best equipped barn in the state and many say the best in the United States. The barn is 150 feet in diameter and will contain 178 patent stalls with concrete mangers, floor and gutter. There will be steel box stalls, enough to accommodate about seventy head of cattle. An office and sleeping rooms for attendants of cattle are also provided. The seating capacity of this barn is over 1,000. The cost when completed, which will be by April 25th, will be $6,500. E. E. Butters, Marshfield; W. W. Clark, Grand Rapids; C. H. Imig, Junction City, were appointed to make arrangements for the sale, which they plan to make a two and perhaps a three-day affair, depending on the amount of stock that is consigned. The two sales held last spring were said to be the equal of any sales held in the state. It is expected to make the coming sale even more of a success by selecting a bunch of stock that is strictly high class in every way. We expect to handle the sale in a way that will be a credit to the state at large, as well as the community and the Central Wisconsin Live Stock Breeders' Association that stands back of it.

GUERNSEY MEN ORGANIZE.

The first annual meeting of the Langlade County Guernsey Breeders' Association was held at the court house at Antigo on Saturday, February 26th. The business meeting was followed by a short program. Officers for the ensuing year were elected as follows: President, Gus Schroeder, Bolling; vice president, Chas. Lade, Polar; secretary-treasurer, Peter Krier, Antigo. Executive committee, with above officers: Anton Follstad, Elcho; Fred Swenson, Antigo. During the past year the number of Guernsey sires in the county has practically doubled. Several farmers have purchased pure-bred females. The thirteen members in the association own eleven pure-bred sires, twenty-three pure-bred females and 155 grade females. Over 100 Guernsey cows are enrolled in the cow-testing association for the coming year. An effort will be made to double the present membership.

STEVENS POINT FAIR ASSOCIATION.

The Stevens Point Fair Association has elected the following officers: President, I. S. Hull; vice president, E. H. Rothman; secretary, Meehan Pfiffner; treasurer, C. S. Orthman. The 1916 fair will be held September 12th, 13th, 14th and 15th.

John Deere Grain Binder

With All Steel Quick Turn Tongue Truck

THE Better Binder—The first binder to be equipped with a practical all-steel quick-turn tongue truck. The advantages are:

1st—Truck turns machine faster than team turns. This saves time in turning, square corners are made, and full swaths taken at the turns.

2nd—Stub tongue is all steel, hot riveted—no breaking, splitting or rotting. All steel eveners.

The binder that is noted for its light draft, sure cutting, elevating and tying.

Write for free booklet, "The Better Binder."

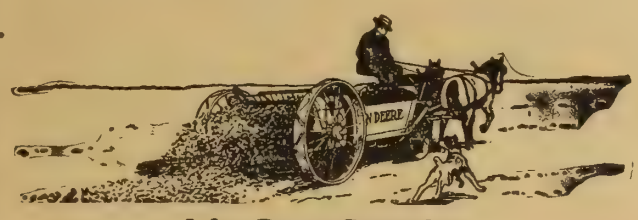
John Deere Disc Harrow

The Flexible Spring Pressure Disc

MODEL B—the only disc that cuts at even depth its entire width. It has a patented spring pressure lever. With this lever, pressure can be regulated at inner ends of gangs to cut out dead furrows or disc ridges without burying the harrow.

The Model "B" does not crowd toward the bottom on hillsides or in overlapping. The gangs are independent of each other and can be given the proper angle to work right under such conditions.

Write for free booklet, "Bigger Crops from Better Seed Beds."



John Deere Spreader

The Spreader with the Beater on the Axle

ONLY hip high to the top. Wheels out of way when loading. Mounting the beater on the axle is patented. Write for Spreader booklet.

Three exclusive John Deere Spreader features:

[1] Beater on the axle—nothing else like it. [1]

[2] Revolving Rake—load moving back to beater revolves the rake. Draft actually less. Even spread certain—no bunching. [2]

[3] Ball Bearing Eccentric Apron Drive—requires no attention. Performs wonders in the working of the spreader. [3]

John Deere Plows for Light Tractors

High and Level Lift

PRACTICAL—the right size for the average farm. Work with any standard tractor. Controlled by the man on the tractor.

Pull the rope and all bottoms raise high and level. Another pull lets them down. Plows do not clog or gather trash on the turn.

Extra beam and bottom, readily attached, increases regular two bottom plow to three, or regular three bottom to four, as desired.

Equipped with Quick Detachable Shares—save 80% time changing shares. Write for free booklet.

Dain System Side Rake

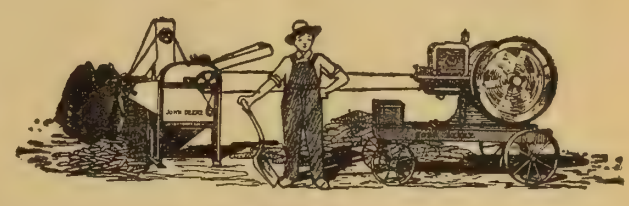
The Left Hand Rake

THE tool that is revolutionizing hay making. Left hand instead of right—follows the mower closely, places hay upon clean stubble and puts it in medium size windrows with bulk of leaves inside and majority of stems outside.

This means uniform curing and leaves don't dry up and fall off. They cure in the shade.

Hay is air-cured, not sun-scorched, retains its color, nutrition, feeding value and sells for more money.

Write for free booklet describing the Dain System of Air Curing Hay.



R. & V. Engines

Dependable Farm Power

"R & V" Triumph—always develops rated horse power—made in 1, 1½, 2½, 4, 6, 8, 10, 12, 16 and 20 H.P. sizes, stationary and portable.

Easily started; perfect speed control (speed can be varied 40 per cent without stopping engine). Complies with insurance regulations. Hopper cooled—a simple, efficient system that does not require long pipes and numerous fittings.

High grade throughout. Inspect the extra guard ring over piston pin to prevent possibility of scoring cylinder. Ask about the "R & V" oscillating magneto. Write for free booklet.

John Deere Dealers Everywhere

Better Farm Implements and How to Use Them

BOOK FREE—168 page reference book—tells all about a complete line of farm implements and how to adjust and use many of them. A practical encyclopedia of farm implements. Worth dollars. Describes and illustrates: Plows for Light Tractors; Steel and Chilled Walking and Riding Plows; Disc Plows; Cultivators; Spring Tooth and Spike Tooth Harrows; Lister Plows and Cultivators; Disc Harrows; Alfalfa and Beet Tools; Farm and Mountain Wagons; Teaming Gears; Manure Spreaders; Inside Cup and Portable Grain Elevators; Corn Shellers; Hay Loaders, Stackers, Sweep Rakes, Mowers, Self-Dump Sulky and Side Delivery Rakes; Hay Presses; Kaffir Headers; Grain Drills and Seeders; Grain Binders; Corn Binders; Gasoline Engines. This book sent free to every one who states what special implements he is interested in and asks for Package No. X-64.

JOHN DEERE MOLINE, ILL. THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

John Deere, Moline, Illinois

Alfalfa

ALFALFA, SWEET CLOVER, SUDAN AND BILLION $ GRASS

A quartette invincible. The first two made possible to grow and flourish on every farm in the United States, owing to Salzer's hardy ironclad strains—the last two growing 60 tons hay richer than Timothy in 10 weeks time on 10 acres!

OATS, WHEAT, SPELTS, BARLEY

A quartette of giants! Great money makers! Bred to health, stooling qualities, stiff, strong straw, big yields—all registered pedigree varieties endorsed by Agricultural Stations.

SALZER'S NORTHERN GROWN SEED CORN

High grade, high testing Wisconsin and Minnesota grown Seed Corn. The kinds that will surely ripen in 1916. We have lots and lots of it. Write us.

Fruit and Garden

EVERGREENS FOR SHELTER BELTS.

Every stock farmer needs the protection of evergreen belts about his cattle yards, and it is good economy to provide them. When the January winds are blowing cattle exposed to their blasts suffer severely, and it is a costly suffering. The more exposure, the more feed required to maintain animal heat. Men who have had opportunity for observation know that the temperature inside a heavy belt of conifers is several degrees higher during cold snaps than it is on the outside. It is possible to calculate, with considerable accuracy, the extra amount of feed needed for every five degrees of cold, so it is within bounds to say that shelter is equivalent to feed.

It is a pitiable sight, with the mercury below zero and a northwest wind blowing, to see stock, with humped backs, shivering in unprotected yards. And it is a debatable question whether the cattle or their owner is most to be pitied. For as fast as they are losing flesh he is losing cash. Fifty per cent of this loss is unnecessary, for a wise outlay of a little capital and labor at the outset will stop it. Compared to the losses which come through neglect to provide shelter, the cost of the shelter is very small.

If your stockyards occupy a space six by six rods, plant four rows of evergreens along the north and west sides. More would be better, but even four rows of stocky, well-grown trees will tangle the breezes very successfully. One hundred trees will do it, and if you buy twice transplanted stock about two feet tall you will have trees which transplant with little risk, and after the first season will make an annual growth of eighteen inches on the average. You should plant them seven or eight feet apart, with rows the same distance, and break joints. At the end of eight years your trees will average ten feet in height, and the side branches will have filled up the spaces. At that time it will be a good windbreak, and getting appreciably better each year.

The whole cost, compared to the value received, will be only a trifle. The first cost of the trees ought not to exceed $10, and the planting and care for the first year the same amount. Cultivation for two years more $5 per year. Then mulch heavily with straw and they will need no more attention. The cost of your shelter belt when it becomes useful will only be $40. But make a liberal allowance and say it costs an even $50. That will allow something for the rental value of the land it covers.

Consider what it does for you if you have from twenty to fifty head of cattle or more. In the first place the snowdrifts are held back from the yard, so that you have the full use of it. Then, every animal that ranges your yards will require $2 worth less of feed for the winter. And the extra comfort you enjoy in your work about the yard and barn might perhaps be stated in precise terms of dollars and cents. Your shelter belt will be worth to you, for each and every year, the full amount of its cost.

It is important to consider well as to the variety of tree you use for this work. The Scotch pine will grow very rapidly and will reach the protective stage quickly, but it will not make as close and as lasting shelter as the spruce. So, in the long run, the white spruce or the red cedar will be more satisfactory than any of the pine family.

GROWING ASPARAGUS.

To the Editor:—I will tell you how we grow asparagus. I do not agree with the majority of growers when it comes to growing this crop on a large scale. As a general rule they will tell you to plant four to six feet by eighteen inches to two feet. This is all right, but I do not like to have single rows. By planting two rows in a bed you will save half the work cultivating the furrows and the weeder will do better work on a wide bed. Weeding is one of the big items when it comes to growing this crop on a commercial scale. We can take care of ten acres all through the cutting season with one man and a horse and keep the beds perfectly clean without any hand work till up to the middle of August, when we have to get down on our knees and pull the weeds by hand.

Now, almost all the directions will tell you to disk or plow the beds after the last cutting. We would not think of doing this, since you will spoil all of three or four days' cutting which will amount to $15 or $25 per acre. Also, they will tell you to start cutting the first or second season after planting. This is like putting a two-year-old horse into harness. By the time he is old enough to do hard work he will be crippled. We begin cutting the fourth or fifth year. If the fourth year cut only until the middle of June.

As to soil, most growers claim that light, sandy soil is the best. We tried this on a four-acre patch nine years ago and 60 per cent of the plants are dead, while on black, sandy loam, in a bed over fifty-five years old, the yield was good up to eight years ago. The main thing is dry, well-drained land.

We grow white only, as our market is 15 to 25 per cent better on the white than on the green. We have the Argenteuil, Ragend Ciant and Brunswick varieties. So far the Argenteuil seems to be the best. You will hear a great deal of praise for the Columbian White, but I would advise to go slow on this, because it is neither white nor green, but a dirty, smutty color.

I will add how I got badly fooled. Six or eight years ago I went down to southwest Texas—planning this for different farmers—from Houston to Brownsville. I was under the impression they would be able to compete with California, but now since they send me samples I was surprised to see the poor, small stalks—nothing larger than a pipe stem. Such stuff could not be sold in our market. When it comes to growing fine, large grass Oregon will beat all. My relatives live near Portland. I have been out to see them several times and the first thing that struck me was the large grass, but they can't grow this for market, as the price is too small—2¾ cents per pound. Grain and hay would pay us better at that price. The last twenty years we have figured on 16 cents to 20 cents per pound, which gives from $400 to $500 per acre. When it comes to dollars and cents I'll stay at home. Old Wisconsin is good enough for me.

When it comes to book farming this has done more damage to us than benefit. Our last experiment was a $1,000 irrigating plant, which never paid the expense for lubricating oil.

Another thing: If you will read Professor Haximer's book on how to grow asparagus you will see he tells you to be sure to plant it deep enough, as the plants will raise a quarter of an inch every year. According to his idea, when we plowed out the fifty-five-year-old bed the plants should have been ten to twelve inches above the ground. C. A. Schulpius.

Milwaukee Co., Wisconsin.

POWELL'S WONDERFUL POLE BEANS.

A distinct creation. Everlasting bearers. Positively three times as productive as any other. Stringless, tender, rich, buttery, delicious. Best Novelty introduced in 50 years. Results of Testing the Cows.

How the System Has Worked Out in Langlade County the Past Year---By F. G. Swoboda, County Agricultural Agent.

CHAS. SCHOTTE, on Route 5, has the distinction of owning the champion butter cow in the Langlade Cow-Testing Association for 1915. Mr. Schotte's cow, a grade Jersey seven years old, produced during the year 8,424 pounds of milk and 466.3 pounds of butter fat. Her gross returns for butter fat were $131.40, cost of feed $38.68 and profit $92.34. Mr. Schotte is one of the most enthusiastic members of the association. He unhesitatingly credits this cow's splendid production to the better care and feed given her because he belonged to the association. He is making his dairy herd a study and dairying a real business. He admits, like many other members, that in the past his cows have not done as well as they might have because of lack of proper attention. He has been using a pure-bred Jersey sire for a number of years, but that, he says, was only a start toward dairy success.

Henry Ings gave Mr. Schotte a mighty close rub for first honors, his grade Jersey producing 453.2 pounds of fat from 7,150 pounds of milk. Her feed bill was $36.88 and net profit $88.48 with returns for $1 worth of feed $3.39.

	High herds	Low herds	Difference favor High herds
Average milk production	6220 lbs.	4817 lbs.	1403 lbs.
Average fat production	287.3 lbs.	206.6 lbs.	80.7 lbs.
Average cost of feed	$34.12	$28.57	$ 5.55
Average net profits	$46.44	$28.57	$17.87

Mr. Ings' herd is a splendid illustration of what good care will do toward bringing up production. In 1914 his herd average was 294 pounds of butter fat at a feed cost of $35.90. The next year his herd production went to 325 pounds of butter fat, an increase of thirty-one pounds, while the feed expense only went up 17 cents to $36.07. Mr. Ings credits this to the fact that during the past year he was able to give his herd all the attention they required.

Third high cow was a fourteen-year-old Jersey owned by Harry Guenthner. She produced 8,556 pounds of milk, 429.7 pounds of butter fat and a net profit of $59.44 at a feed cost of $47.11. Out of the ten highest cows eight are Jerseys and two are Holsteins. Jersey men have a right to feel proud of the showing of their breed for aside from the large proportion in the ten high cows list, Jerseys ranked well all through.

Honors for high-producing herd go to Harry Guenthner on his Jerseys, with an average butter fat production of 381 pounds, with an average milk yield of 7,656 pounds. The average feed cost for the herd was $44.75 and the average net profit $61.92. This herd is clearly an exemplification of the value of good breeding combined with good feeding. While this herd had the highest feed bill, it also produced the highest net profit. In contrast the herd with the lowest feed bill had the lowest average production of butter fat.

TEN HIGH COWS.

Owner and breed	No.	Age	Mos. in milk	Per cent fat	Lbs. milk	Lbs. fat	Gross Ret.	Cost of feed	Profit	Net for $1 feed
Chas. Scotte, Gr. Jer.	8	7	10½	5.59	8424	466.3	$131.4	$38.68	$92.34	$3.38
H. Ings, Gr. Jer.	6	6	11	6.33	7150	453.2	125.36	36.88	88.48	3.39
H. Guenthner, Gr. Jer.	1	14	11	5.02	8556	429.7	106.55	47.11	59.44	2.26
H. Guenthner, Gr. Jer.	5	5	11	5.23	8143	426.1	123.22	47.11	76.11	2.61

J. Guenthner, Gr. Jer.	1	8	11½	4.93	7530	375.1	107.30	43.10	65.20	2.51
Wm. Rusch, Gr. Hols.	4	6	10½	4.83	7535	364.1	110.36	31.78	78.58	3.47
E. Quinlan, Reg. Jer.	8	4	11½	5.6	6494	364.2	101.50	45.07	56.43	2.25
E. Quinlan, Gr. Jer.	6	6	8½	4.46	7952	355.0	97.41	44.56	52.86	2.18
Chas. Lade, Gr. Jer.	2		10	5.48	6435	353.2	99.52	30.11	69.41	3.90

Between the fifteen high herds and the fifteen low herds are afforded some interesting comparisons. They become more strikingly apparent when presented in tabular form:

It is worth while to note that while the difference in feed cost between the high herds and the low herds was only $5.55 higher for the high-producing herds, the latter showed an average profit of $17.87 above the low herds.

As often stated, the dairy cow is the Wisconsin farmer's most dependable source of income. The cow-testing movement is the surest avenue toward the expense of testing. For years he has been using a pure-bred dairy sire. He boasts of two silos on his farm and each year stores away an abundance of clover hay of good quality, also other choice roughage. His animal feed bill for concentrates is always of good proportions. Deducting $1.05 per cow, the cost of membership, this man made a clear gain of $8.58 per cow on his twenty-cow herd. Four pounds of butter fat at market price pays the expense of testing for a cow for a year. The average increase of the ten herds was 27.2, leaving a gain of 23.2 pounds above the expense of testing.

Fifty-four cows were sold before the year closed because their records showed them to be either boarders or very low producers. About a half dozen others showed up as losers when the year's records were summarized and others together with many low profit producers still left at the end of the year have received their sentence to the butcher.

Aside from the drawing of the line between the profitable cows and the boarders or near boarders, the greater interest the cow-testing association is fostering in better dairy methods is the big thing to be credited to it in Langlade county. The enthusiasm for testing which cannot be stimulated from the road is spreading over the line fence. The publication of the monthly forty-pound list and at the end of the year the full report of the year's work are raising the standard of the dairy cow in the county.

A survey of the farmers in the association shows that all but five of the members either owned or used pure-bred sires. All but four farmers had silos and two of these four bought silage from the local pea canning factory. Twenty-one out of thirty-five farmers in the association fed a balanced ration.

placing it on a business basis where it should be. The fact that the second year's work sent sixty out of 500 cows, or about 12 per cent, to the butcher and this clearly out of herds which are considerably above the average reveals that at least 1,000 cows are being kept in the county that are money losers. In all probability, the number is nearer 2,000 for the majority of the herds in the association were either grades or grades and pure breds, while there are still many herds in the county the offspring of low-grade and scrub sires.

You Men Who Have Pipes

Discarded and forgotten pipes—inactive, retired, "out-of-commission" pipes—pipes you've *tried* to smoke and *couldn't* smoke—*you men try Tuxedo.*

You can smoke a pipe—every man can—but you *can't* smoke any kind of Tobacco without making your tongue rebel and your throat get angry. Put the blame where it belongs—the pipe was innocent—the tobacco was the guilty party.

Give your pipe another chance—fill it with fresh Tuxedo, packed firmly but not hard; smoke slowly; and you'll go into permanent partnership with Tuxedo. One week's trial and you'll know why so many men have forsaken all smokes except Tuxedo.

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Tuxedo is a good hearted, gentle, quiet, soft-voiced tobacco—it's as genial as a sunny day and as comforting as a raise in salary—no "fighting spirit" in it anywhere to muss up your tongue—or fuss up your throat—as "bite-less" as a baby.

That's because the rich, mellow leaf is first aged in wood from 3 to 5 years and *then* it's treated by the famous original "Tuxedo Process"—*that* takes every particle of bite and irritation out of tobacco.

MR. A. M. ROSE
Judge of the Circuit Court of Illinois
"Tuxedo tobacco is pleasantly mild, yet has a fragrance that is most satisfying. I enjoy Tuxedo more than any tobacco I've ever smoked."

A. M. Rose,

Tuxedo has plenty of imitators—but there *can't* be another tobacco like Tuxedo, because no other can be made by the secret "Tuxedo Process."

Try Tuxedo *this* week.

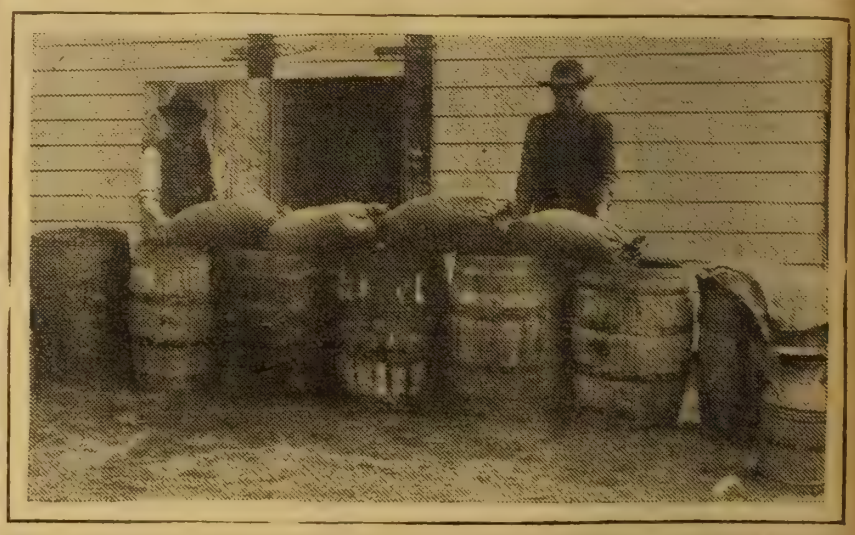
Fight Grain Smuts and Blights.

Methods of Control Suggested by R. E. Vaughn and A. G. Johnson, of the Wisconsin College of Agriculture.

GRAIN smuts and blights were unusually severe in 1915 owing largely to the cool, wet season. The seed, then, that will be sowed the coming spring will have an abundance of smut spores or "germs" under the hulls, in the furrows and even inside the kernels. This statement applies particularly to oats smut and barley smut, but certain other wide-spread diseases, such as the leaf stripe disease of barley, come in the same class.

If such seed is sown without first killing the spores loss from smut is sure to occur. Such losses in Wisconsin in the past caused a reduction of one-third or one-half of the crop and unless prevented will be heavy this year.



SEED GRAIN IN THE SACKS READY TO BE DIPPED IN A FORMALIN SOLUTION TO KILL SMUT.

The formalin seed treatment is the best and most effective for general use on the farm. It has the decided advantage over the hot-water treatment in being easily applied. The cost is also extremely low, 14 to 15 cents a pound (pint), if purchased in quantities of five gallons or more. Farmers may buy together and reduce the cost.

The formalin treatment is not a "cure all" and can never take the place of strong seed and good preparation of the soil. Treated seed will also rot in cold ground the same as untreated seed. In other words, seed treatment is a thing to be added to good seed and culture. If the variety and soil are satisfactory you cannot afford to neglect formalin seed treatment. The diseases controlled are: Stinking smut of wheat, covered smut and loose smut of oats and covered smut of barley. Furthermore, when the seed is treated with the two-hour soaking as in process No. 1 the loose smut and leaf stripe disease of barley are also practically eliminated. Unfortunately, the loose smut of wheat, blotch disease or blight of barley and leaf and stem rusts of various grains cannot be controlled by the formalin treatment. Rusts cannot be killed by any kind of seed treatment.

The solution used is made up as follows: One pint formalin (formaldehyde 40 per cent); temperature about 60 degrees Fahrenheit in thirty to thirty-five gallons of water. The processes may be more or less varied, but these given have been found by experiments to be best suited to Wisconsin conditions. Barrels or tanks are not injured by the formalin and may be used for holding the solution when soaking or dipping the seed. The solution may be used several times, but preferably not more than four or five times.

Always run the seed through a good fanning mill before any treatment is given. This will remove many of the blighted kernels, the spore balls, much of the free loose smut spores and dirt.

2. Avoid freezing the wet grain; to

(Concluded on page 33.)

SHOWING THE EFFECT OF SMUT IN OATS.

How Boys Grew Prize Corn.

Minnesota Contestants Give Wisconsin Farmer Readers Result of Their Experiences in Growing Corn.

IT IS time to give serious consideration to corn here in Wisconsin. Seed is to be chosen and tested and The Wisconsin Farmer believes that many of its readers will profit by experiences of some of the boys who took part in the Minnesota state corn contest last year and were prize winners. Several of these boys have written us and sent their pictures. The letters which are given below are written by the boys themselves and relate their practical experiences in corn growing in 1915.

Used Prize Corn as Seed.

To the Editor:—Herewith find a photograph of myself and a little account of my experience in raising my acre of corn.

In raising corn I think the seed is of first importance. The seed I used was taken from ten ears I won first on at a grain show held in Warren, Minnesota, a year ago, and other select ears, equally as good, to make up enough seed to plant my acre. The ground was an extra good piece of ground I had corn on the year before,

LE ROY PETERSON.
Eleven years of age and a corn grower.

so I did not use any more fertilizer on it, but on account of cornstalks on it I double-disked it before I plowed it and it was plowed good six inches deep. Then it was disked again three times and dragged twice with a smoothing harrow. I planted my corn on the 22d day of May and dragged it twice before it came up. After it got large enough to cultivate it was gone through twice with shovels on the cultivator and twice with surface cultivator. We had some very heavy rains, but I always waited to cultivate until the ground was dry enough to work good. I hand-hoed around the hills and pulled all the weeds out. It was in bloom and tassel the first week in August. The corn ripened fairly good for this season.

I like my contest work and hope other boys and girls like myself will take up such work.

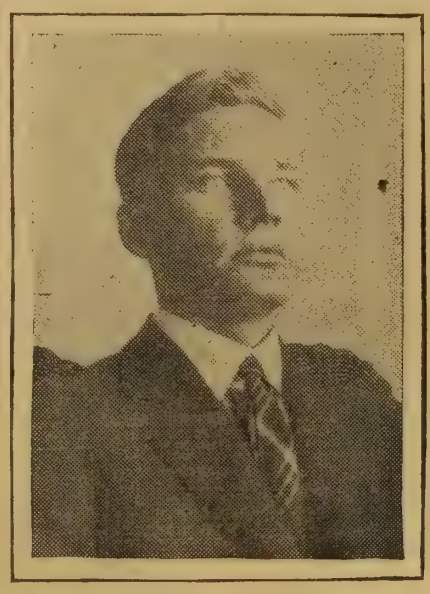
Warren, Minn. Leroy Peterson.

How I Grew My Acre of Corn.

To the Editor:—Last winter Mr. L. A. Henke got some of us boys interested in the acre yield contest.

I had a piece of land which was a little larger than the required acre. This land had been used for a barn site for about fifteen years, and for small grains for a few years. The last three years it had been used for potatoes. The land slopes slightly towards a lake, and this gives it good drainage but not enough to cause erosion. It is also protected on three sides by a grove of trees.

The corn I planted I bought from one of my neighbors who has been



ANTON HUSETH.
Raised nearly ninety bushels of corn to the acre.

growing "Rustler White Dent" for eight years with good results. The germination test of my corn was 99 per cent.

I planted the corn on the 18th of May. As soon as the corn appeared above the ground I began to cultivate it. This I did every week for seven weeks. I also hoed around each hill six times. When the corn was two feet in height I thinned each hill down to two stalks per hill. By August 1st the corn was nearly nine feet in height, and each stalk bore two good-sized ears.

As soon as the corn was mature Mr. Henke came and picked the corn on every row and weighed it. The yield was 89.6 bushels of good corn. About one-half of this corn can be used for seed. The cost of growing my acre is 22c per bushel.

I am entirely satisfied with my acre yield, but hope to do better this year.

Anthon Huseth.

Elbow Lake, Minn.

How I Raised My Acre of Corn.

To the Editor:—I chose a well-drained piece of land that raised a good crop of potatoes in 1914. It is a heavy clay loam, clay subsoil. It was

FLOYD C. BEMIS.
Overcame bad corn season and got state fair trip.

given twelve loads of barnyard manure, using a spreader. Was plowed seven inches deep in the spring, disked and harrowed several times to kill weeds as well as get the soil in fine shape. Corn was planted May 22d, marking one way three feet and four inches and planting with a hand planter twenty-eight inches in the row. It was harrowed twice after planting. When corn was four inches high it was thinned to three plants in the hill, leaving a perfect stand. It was then cultivated, afterward hoeing in the row, in all five cultivations and two hoeings. When laid by, corn was six feet high.

About the seed: I used Rustler White Dent, ear tested, so that I was sure it would all grow strong. There was not a weed to be seen and the soil was in very good shape, but owing to the very severe climatic conditions all through the growing season the corn did not act as well-bred corn ought to act. It grew too much to stalk and did not start to form ears until too late for them to mature. On the fourth of October, when frost came, it was just starting to dent, so in going through the moisture test there was a large shrinkage. In a normal season, with the stand I had and the number of ears, I am sure that I would have had a much larger yield of mature corn. The seed I used has been grown here for a number of years and has always got ripe before. I am going to try it again next year and by using the experience I have gained this year, and with better climatic conditions, I shall hope for a larger yield. It has been very interesting work for me and I look forward to a very pleasant as well as profitable trip to the Minnesota State Fair in 1916 as a reward for my labor.

Floyd C. Bemis.

Long Prairie, Minn.

Buying and selling seed grain is a business that calls for the highest degree of honesty and intelligence. For in spite of all the laws which may be enacted to protect the purchaser the seed business will always be one in which the character of the seller is one of the most important factors.

Anyone can grow ordinary grain, but only those of us who are careful should attempt to grow seed grain.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

AX ONLY CURE FOR FOWL CHOLERA.

There is no satisfactory treatment for fowl cholera, says Dr. C. C. Lipp, veterinarian at the South Dakota State College. He says much good may be done by destroying the sick fowls just as soon as the first symptoms become evident. Their carcasses should be burned and the poultry houses and yards thoroughly disinfected, using compound cresol, seven tablespoonfuls per gallon of water. Care should be taken so that the solution reaches every crack and corner of the house, dropping boards and scratch sheds, otherwise the disease will continue unabated. After thorough disinfection the entire inside of the house must be whitewashed.

A weak solution of permanganate of potash kept constantly before the fowls may assist in controlling the disease. This solution is made by adding one teaspoonful of the crystals of permanganate of potash to one quart of water, stirring occasionally so as to get all the drug in solution. A small quantity of this solution is to be added to the drinking water, enough to tint it the color of red ink. Compound sulphocarbolates given in a mash feed or drinking water at the rate of one-half grain per fowl per day, also assists in the control of the disease.

Efficient prevention and control depend almost entirely on prompt and thorough disinfection, cremation of dead fowls and the use of intestinal antiseptics in the drinking water, as outlined in the foregoing. Do not depend on the cure.

Cause of fowl cholera. This disease is caused by a specific germ that enters the fowls with food and drink. Fr m three to five days are usually required before the first symptoms make their appearance. Sick fowls scatter the germs in immense numbers in their droppings, which easily contaminate feed and water supply and in this way spread very rapidly.

Symptoms:—The first symptoms are loss of appetite and increased thirst. The sick fowls do not follow the other members of the flock, but stand about with ruffled feathers and drooping tail. A profuse diarrhea soon develops. The discharges are white at first and later become greenish and streaked with blood. The head is dull in appearance and the comb and wattles become purple in color and sometimes even black. The disease practically always results in death. Sometimes fowls die in a few hours without showing any symptoms. Fowl cholera often spreads very rapidly through the flock and may reduce it 50 per cent or more in a comparatively short time.

POULTRY MONEY ENOUGH FOR FOOD AND CLOTHES.

To the Editor:—In my estimation, poultry raising is an occupation suited to both old and young. It has done much for me. It has, to a great extent, been the means of supporting my home in that it has supplied the table with meat and eggs, besides buying the groceries and much of the clothing for a family of six. Last year I raised 150 chicks and did not use an incubator. I had the best luck with the chicks, as I lost but a few, and these were killed by the mother hen. I seldom lose a chick after it is hatched.

The pullets from last year's hatch I kept and many of those that were hatched in the months of February and March have been laying since the middle of September. The cockerels that were hatched in these months were sold when weighing two pounds, for which I received 23 cents per pound. Those hatched later in the season were kept to supply the table.

I raise the Barred Rocks and I think they are the best breed that I can get for an all-purpose farm fowl. They have proved to be good layers and grow to a size that makes them a desirable table fowl as well as for selling on the market.

My henhouse is not an expensive one, being built of rough lumber. The front faces the east in order to let in all the sunshine possible. My brood coops are made portable so that they can be removed from platforms beneath and frequently cleaned. I think I owe much of my success in raising poultry to keeping everything in connection with the poultry house and brood coops dry and sanitary. My poultry have free range, which I think is another advantage in chicken raising. When selecting eggs for hatching I select those obtained from the best layers of my flock and make the nests of the sitters warm and comfortable, the latter being especially important when setting hens early in the season. I gather the eggs from the nests soon after they are laid in order to prevent them from chilling when the weather is cold. I never put more than fifteen eggs under each hen early in the season and I never have any trouble in securing a good hatch. The chicks are kept growing from the very start by good feeding and housing.

I never feed young chicks for a day and night after hatching, and their first feed is scant—just a few dry bread crumbs—increasing the amount after the first few days. I give them plenty of clean water from the beginning. When the chicks are two weeks old I begin feeding chopped corn and wheat three or four times daily and push them on as fast as possible to maturity.

I consider the main reason of my "good luck" in chicken raising is owing to the fact that I was raised on a farm and love to work among chickens. I would advise every woman or girl going into the chicken business to get the best breed possible to begin with. My beginning with the Barred Rocks was with only one setting of eggs, which cost me $1.50, and at the present time my flock numbers 100 pullets and hens, besides eight cockerels. This spring my intention is to purchase an incubator, my idea being to set several hens at the same time and divide the chicks among the hens and allow them to do the brooding, as I think this would be less trouble than operating a brooder.

Mrs. Rosie Lowery.
Johnson Co., Illinois.

DISTINGUISHING THE SEX OF GEESE.

To the Editor:—Both the Embden and Toulouse geese can easily be raised without water to swim in. All they need is plenty of water to drink. The Toulouse weighs the heaviest and yields the most feathers. I do not know what breed she refers to when she mentions the gray dry-land geese unless it be the Toulouse, as the only other breed of gray geese I know of is the Gray African, which is not very common.

Experienced geese raisers can distinguish the sex of geese by the looks of the head and by their call. In my opinion, the only way an amateur can distinguish the difference is by observing the abdomen of the goose. After a gosling is almost grown you will notice the abdomen is elongated and hangs down between the legs. In stooping down and looking at it from the front, if you notice that the abdomen has a crease in it, seeming to divide it in two folds, you may be certain that it is a gander. The abdomen of the goose is not creased, but hangs in one distinct fold. In this way a person ought to have no trouble in

Tells why chicks die

E. J. Reefer, poultry expert, 4483 Farmer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

telling one from the other—that is, if I have succeeded in giving a clear explanation.

After two years of age a goose is better for breeding, as the eggs do not hatch so well at one year.

Morton, Ill. Mrs. E. A. Moore.

WANTS A HOMEMADE BROODER.

To the Editor:—Would like some of your readers' opinions on homemade chick brooders, as I would like very much to make one this spring. I would, in fact, rather buy one of the best, but do not feel able this spring and I think I would rather have a homemade one than some of the cheap ones. I have a good incubator lamp and planned on buying a thermometer. My plan so far was to take a box of a couple of thicknesses, with paper in between, and a glass, hinged top, with holes at the top for ventilation. Then I intended to put a piece of stovepipe up through the middle for the lamp chimney to extend through. I do not know whether I have the right idea or not. Of course. I intended to have a large exercising room and I was thinking of hanging over the door leading to the exercising room a cloth to keep out the draft. What do you think of my plan? What are some of your readers' plans for homemade brooders? I hope to see this discussed in your paper soon. W. S.

CORN IN THE RATION.

To the Editor:—I feed my hens twice a day with a mixture of corn, oats and wheat in a deep litter. I feed larger quantities of corn as the weather grows colder. My birds have green food three times a week and a dry mash, composed of three parts bran, one part middlings, one part cornmeal, and one-fourth part beef-scrap, is left before them at all times.

I believe in the open-air system of housing, in places where the winters aren't too cold, but in extremely cold climates I would prefer the King system of ventilation in a closed house.

I keep my houses and yards free from lice and mites by whitewashing every spring and using some disinfectant once every two weeks.

I have never had any trouble with roup. I keep my birds from catching cold, which is the first stage of roup.

J. Pierce Martiny.

Sauk Co., Wis.

A HOMEMADE BROODER.

To the Editor:—I would like to get a plan for a successful homemade brooder, which would hold about 100 chicks, and to use oil lamp or lantern. If any of your readers can give such a plan please ask them to answer through the poultry columns of the paper.

F. C. Bratley.

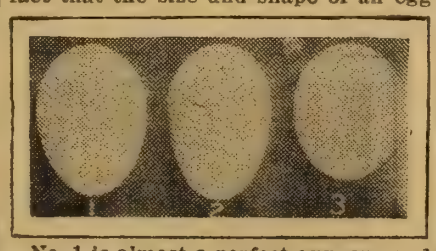
Adams Co., Wis.

KNOW THE HEN BY HER EGG.

To the Editor:—Much has been said about high records made by hens in the egg-laying contests as well as records made by hens in the yards of poultry breeders. The number of eggs produced is not all that should be considered, for an egg to be of value should be of good size and shape, and be covered with a sound, smooth shell.

It is indeed very fortunate for the poultry industry that hens' eggs are all so near the same size. The eggs of the different breeds in a recent contest varied in weight from 2.03 ounces to 2.29 ounces, while the hens themselves averaged in weight from 3.12 pounds to 6.36 pounds, and, strange as it may seem, the hens whose eggs averaged 2.03 ounces averaged 5.75 pounds, while the ones whose eggs averaged 2.29 ounces averaged only 3.40 pounds each. In fact, we find that the size of the hen has little or no influence on the size of an egg. A four-pound hen will lay an egg the same size as an eight-pound hen.

After studying the poultry business from every angle, one recognizes the fact that the size and shape of an egg



No. 1 is almost a perfect egg, one and one-half times as long as it is thick and weighs two and one-sixth ounces.
No. 2 is too long for the width.
No. 3 is too short and round.
High producers usually lay eggs shaped like No. 1.

is the one thing all breeders can work for, for it is the only thing in common with all breeds and varieties.

In poultry shows the breeders of the various breeds and varieties cannot enter a free-for-all competition on size, shape, color, comb, earlobes, shanks, or any other characteristic, for they are not the same with different breeds, but the size and shape of all eggs should be the same. Therefore, this is one of the most important points to be considered in breeding.

An ideal egg should be an oblong oval, slightly tapering from one end to the other and should weigh 2 1-6 ounces, or 26 ounces to the dozen. Egg markets require them to weigh at least 24 ounces to the dozen. Eggs of this size and shape are the correct size to fill the standard egg case filler, and if incubated will give better results than where various sizes and shapes are incubated together. The old idea that round eggs hatch pullets and the long eggs hatch cockerels is incorrect, for a hen lays uniformly shaped eggs regularly which hatch approximately an equal number of cockerels and pullets.

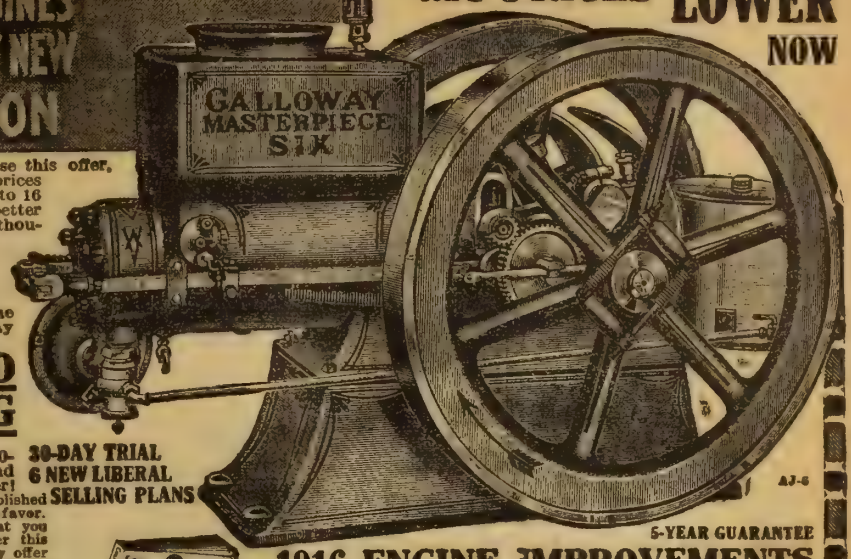
Nothing can be told from the size and shape of an egg whether it is fertile or infertile, or whether it would hatch a cockerel or a pullet, but the shape of an egg is a characteristic which is transmitted to the offspring. Therefore, use as breeders only the hens which produce eggs of correct size and shape.

C. T. Patterson.

Before anyone may pose as a breeder of live stock he must be a successful feeder. He must learn to feed well before he can model and fashion animals that will conform to the type and style which is embodied in the best models.

10,000 GALLOWAY ENGINES IN 90 DAYS! MY NEW SPECIAL PROPOSITION

MY PRICES LOWER NOW



is ready for you today. I want you to get it because this offer, in connection with my new lower than ever 1916 prices on Galloway Masterpiece engines from 1¾ h. p. to 16 h. p., will **save you money.** You can't buy a better engine than the Galloway Masterpiece. Tens of thousands of Galloway Masterpiece engine users have said so themselves! I build this engine right here in Waterloo in **my own factories** and build it **so good** that when it goes out into the hands of a customer, one Masterpiece engine sells from **one** to a **dozen** more. **Galloway Engines** sweep the whole communities like **wildfire.** That's why I say

WAIT! DON'T DO A THING

until you have seen this wonderful new 1916, 250-page book that tells all about Galloway engines and I explain my special advertising distribution offer! If you answered all the engine advertisements ever published you would not find an offer fairer, squarer or more in your favor. You owe it to your pocket-book and the satisfaction that you demand in the operation of the engine you buy to answer this advertisement and learn the particulars of this new 90-day offer to distribute **10,000 more Galloway Masterpiece** engines from 1 3-4 h. p. to 16 h. p.! I know these **10,000** engines **will speak** for **themselves** and **multiply** my **sales** this year! The great Galloway chain of factories is running **day** and **night.** We are turning out more engines than ever and the reason is that we are building this engine **so good,** from such a highly perfected design, **of such good materials** and by such thoroughly skilled workmen that every Galloway **Masterpiece** sells one or more wherever introduced! Six liberal selling plans, cash or terms. **Write today** for proposition.

30-DAY TRIAL
6 NEW LIBERAL SELLING PLANS

5-YEAR GUARANTEE

1916 ENGINE IMPROVEMENTS

Our 1916 model is a **mechanical masterpiece**—a master stroke in engine design—built by master engine builders. Materials superior in quality—skilled workmanship—standardized—develops **away above** rated power. Bearings adjustable—no lost motion. Special Economy carburetor (worth $15 more on any engine, but costs nothing extra on a Galloway)—cuts down fuel bills—uses any fuel—perfect vaporizer—valves-in-head—two-ball governor—large fly wheel—perfect balance—big bore—long stroke—heavy weight. Lubricating system works winter or summer—magneto never misses fire—100% efficient—easy starter—no cranking—needs no batteries—independent of weather, hot or cold, wet or dry.

Get a **genuine Galloway,** then you won't be disappointed as thousands of its users have testified. Galloway is the **pioneer manufacturer** of gasoline engines in the United States who sells direct to the consumer—from factory to farm. There are many imitators at many prices! All I ask you to do is try our engine beside theirs on the same job, under the same conditions; just compare the engines **point** for **point, size** for **size,** bore, stroke, weight and low speed, which means easy running, satisfaction, economy. Just make these comparisons and you will get the facts which will prove to you that Galloway is still giving more power for less money. After you have made these comparisons be your own judge. Galloway engines are **honestly** rated, accurately built and our descriptions are the **truth.** Engines shipped from Waterloo, Kansas City, Council Bluffs, St. Paul or Chicago, whichever is nearest.

NEW BOOK FREE

I want you to have this new 250-page book. It tells how to pick out, size up and judge an engine; it also gives you engine secrets and facts; why to insist on heavy weight, large bore and low speed which mean long engine life and continuous users' satisfaction; why we sell direct at wholesale prices; how to install an engine and hook up machinery; how Galloway engines are built; how to lay out an inexpensive power house; why our prices on high-class portable engines from 1 3-4 h. p. to 16 h. p. and 6, 8 and 12 h. p. saw rigs are so low considering high quality. This book will SAVE YOU from $50 to $250 in fitting up your farm power house.

When Writing to Advertisers Please Mention The Wisconsin Farmer

UPPER WISCONSIN

IN ONEIDA COUNTY.

Oneida county, Wisconsin, which won single honors at the state and national potato shows last fall, is more than a potato-raising county, as one might surmise from the success of its potato growers at the various shows. Oneida county is making just as much progress in grains as in potatoes; some of the best herds and flocks in Upper Wisconsin are being built up within its borders and this county, only a few years ago covered with lakes and virgin timber, is developing rapidly in general farming.

The Oneida county exhibits at the state potato show at Marinette swept the boards as the best in Wisconsin and later at Grand Rapids, Mich., won first in national competition, so the county immediately sprung into the limelight as a potato county. But a glance at the winners at the state grain shows discloses many Oneida county farmers taking prizes on their grains and in a few years Oneida county live stock will no doubt be in the blue ribbon division. Farming is rapidly replacing lumbering as the chief industry of the county and this article is intended to show the advancement along farming lines.

Less than 5 per cent of the county is in farms, but the high yields of grain and potatoes attest the fertility of the soil and the fine herds and flocks indicate a growing live stock industry. There are now about 800 farms in the county and the area of tillable land is being increased steadily by the clearing operations in progress throughout the county.

An editor of The Wisconsin Farmer had the pleasure some time ago to spend a day with Mr. W. D. Juday, county agricultural representative, and Secretary Barstow, of the Rhinelander Advancement Association. Oneida county was the first county in the United States to employ a county agent and his efforts for better agriculture are certainly bearing fruit. Many of the farmers and settlers are confronted with conditions which they have not encountered before and it means much to them to be able to step to the telephone and confer with a county employe whose services are free and who is experienced in all matters pertaining to farming and live stock raising in that particular community. This co-operation between representative and farmer in Oneida county has undoubtedly done much toward advancing conditions there and this county can already boast of some accomplishments, which, in comparison, would make some of the older communities feel ashamed.

One of these accomplishments is the almost complete elimination of the scrub dairy sire. This shows that the county is building for the future. Our older communities have been putting up with scrub sires for decades when they should have been eliminated long ago and the percentage of pure-bred sires per farm probably is higher in most of the new upper counties than in some of the older parts of the state. The same holds true with horses, and for the two scrub stallions in the county there are two pure-bred stallions and pure-bred boars and rams are being introduced as rapidly as these two classes of live stock farming develop.

PIGS AND CALVES ON THE WILLIS JEWELL FARM, ONEIDA COUNTY.

Dairying will doubtless be the great industry of this county, as it has in other counties. The cow and the potato today are the principal standbys, but the farmers are being urged not to go so strong on potatoes in the future and pay more attention to other lines of farming. Mr. Juday is advising that four acres of potatoes is enough on a forty-acre farm and is likewise working for standardization of varieties and pure seed. The experience of farmers last summer with oats, wheat and other grains proves these crops are very successful and the farmers are, therefore, urged not to "put all the eggs in one basket," as is the case when half of the farm is in potatoes. In those cases a potato failure means a year lost, while with diversified farming there is never a failure.

The outlook for dairying is unusually bright. There are already many fine herds in the county and pure-bred and high-grade stock is being shipped in constantly. During the last year

WAIST DEEP IN BARLEY ON FARM OF ALBERT RADKE, ONEIDA CO.

twelve new silos were built and Oneida county can be depended upon to produce enough corn to fill every silo. With silos full, an ideal soil for hay and clovers and cheap land the farmer has splendid dairying conditions. As the writer rode through the country he saw clover growing wild at the roadside which was thick enough to trip a person afoot. Where the second growth has been taken off the cut-over land the cows can pasture and many farmers have built up fine pastures among the stumps by brushing and raking the surface and sowing a pasture mixture.

Potato growing has led in general farm operations and probably 90 per cent of the county's potato crop last year was Green Mountains with Triumphs and Rural New Yorkers closely tied for second honors. The soil seems ideal for the Green Mountains, but, as mentioned before, an effort is being made to cut down the potato acreage and at the same time increase the profits per acre by improving the stock. Hill selection has be-

SHEEP BRUSHING DOWN THE CUT-OVER LAND ON THE WHITE FARM, ONEIDA COUNTY.

come a common practice and about fifteen farmers in the county last year grew certified seed.

Mr. Juday is recommending a crop rotation which should greatly improve the farmer's profits. He advocates an initial rotation of oats seeded with clover. The second year cut the first crop of clover for hay and plow under the second crop. Then follow this the third year with corn and potatoes, each of which he would give half the acreage allotted to oats and clover. By rotating the plots of corn and potatoes these two crops are thrown into a six-year rotation. With fertilizer every third year this assures the potatoes an absolutely disease-free soil every year.

The soil is mostly a sandy loam with considerable swamp land, which will no doubt be drained in future years. Medium red clover always gives two cuttings and sometimes three, while two crops of alsike are often secured. Alfalfa runs about five tons to the acre and with abundant feed and creameries to take the milk dairying is bound to boom.

Although a new county there are some farms there which would be a credit to older communities. Frank McLaughlin, three miles out of Rhinelander, has one of the substantial farm homes in the county and this spring will erect a new barn to accommodate his herd of high-grade Holsteins. He has been using a pure-bred bull for years and the result shows up in his cows, there not being a cow in the herd that gives less than forty pounds of milk a day with ordinary feed. Some of his cows are giving seventy pounds a day.

George Burhart, also of Rhinelander, is another progressive farmer and does all his plowing, disking, etc., with a tractor. He has a good grade Holstein herd headed by a pure-bred sire and last year had splendid success with sixteen and a half acres of alfalfa on soil that had been limed. He also had twenty acres of pure-bred Green Mountains.

Swine breeding has not developed so rapidly as the cattle industry, but there are several good herds in the county, among them being the pure-bred Duroc Jerseys owned by Joe Kurtz, of Monico. Mr. Kurtz has about seventy head in addition to a grade Guernsey herd which he is improving with the services of a pure-bred sire.

F. S. Campbell, of Three Lakes, who has won quite a reputation with his potatoes, is one who is succeeding with diversified farming and in 1914 he sold all of his seed potatoes for 80 cents to $3 per bushel. He had eight acres in Green Mountains, Cobblers, Rurals and Triumphs and one acre yielded him 442 bushels. Mr. Campbell is what many of his friends call a crank on soil fertility. In his case it appears wise to be a crank on the subject, as his increased yields as the result of fertility prove his judgment to be good and sound. Mr. Campbell also has a good grade Guernsey herd.

Sid Florsheim has a pure-bred Guernsey herd at Minocqua which is supplying some good stock to neighboring farms and Henry Blumenstein, at Woodruff, is making a specialty of seed potatoes in addition to handling a herd of Guernseys, four of which are pure bred. Herman Schoeneck, of Enterprise, has won many laurels with his pure-bred grains and this year at the Panama-Pacific Exposition was awarded a bronze medal on his barley. He is also building up a Guernsey herd, headed by a pure-bred sire, and only recently bought three heifers that are closely related to the great cow, May Rilma. Two other well-known farms are those of Brown Bros., of Rhinelander, and F. Robbins, also of Rhinelander. Brown Bros. Tamrack Farm is the home of the noted Holstein cow, Oneida Bess. Some unusual yields were secured on this farm last fall, oats averaging sixty-four and one-half bushels to the acre for thirty-two acres. This farm started as a log camp and is gradually being enlarged each year. On the Robbins farm just north of Tamrack Farms is eighty-nine head of stock pasturing on the cut-over lands. Here Mr. Robbins has thirteen head of pure-bred Herefords and his experience with beef cattle is being watched with much interest. His foreman is Mr. James Mitchell, a constant reader of The Wisconsin Farmer.

JOE KURTZ AND HIS PURE-BRED DUROC JERSEYS ON HIS FARM AT MONICO.

There is also considerable interest in the possibility of sheep raising in the county. The flocks are few, but as sheep are good brushers of the land, more may be expected. Charles Ryan is the shepherd of the White flock at McNaughton, where 300 head are brushing down the land. All of these sheep were out every day last winter with three or four exceptions, which indicates the climate is not too severe.

ATLAS EXPLOSIVES

Blow Out Those Stumps It's Easy, Quick, Cheap

"Farm Powder is the easiest, quickest and cheapest means of removing stumps," repeated tests have proved. The Minnesota Experiment Station found explosives "blew stumps entirely out and broke them into pieces easily handled." Clear your stump land with

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

—Made especially for farm use and sold by dealers near you. Convenient—costs little—no experience needed—no money tied up in expensive tools. It will help you make idle acres pay a profit.

Use it to blast holes for tree-planting and watch the trees outgrow those planted with a spade. Use it for subsoiling or for digging ditches. It is the cheapest, fastest, hardest working farm hand you can get.

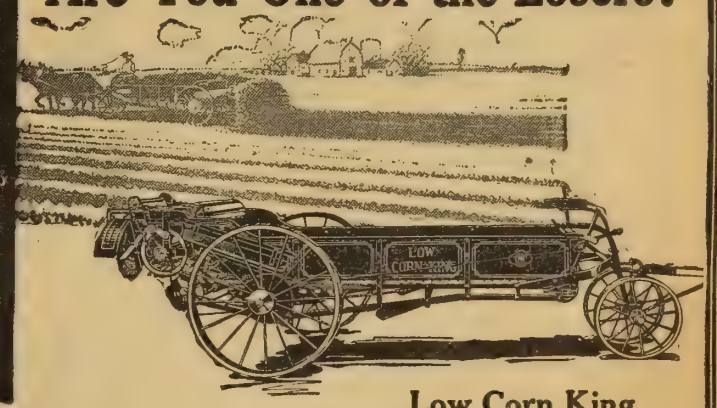
Are You One of the Losers?



Low Corn King
Low Cloverleaf

SOMETIMES Americans wonder why they get only about half the crop yields from an acre that are produced in other countries. Well, here's one reason—a large majority of the farmers in this country own no manure spreader. One corn belt state lost $20,000,000 last year by the wasting and poor handling of manure. Are you one of the farmers who shared in this loss? If you are, you need an **I H C** manure spreader.

International Harvester spreaders, **Low Corn King** and **Low Cloverleaf**—besides being low, strong, durable, simple in beater and apron mechanism, with good traction, light draft, and plenty of clearance—have a really successful wide-spreading device.

Low Corn King and **Low Cloverleaf** spreaders are low for easy loading and narrow for easy handling in yard, stable or field. From a box 45 inches wide either of these spreaders covers an even strip of ground 8 feet wide, or better. It saves time and labor, and keeps wheels and horses well away from the slippery manure already spread.

See the **I H C** dealer about a **Low Corn King** or **Low Cloverleaf** made to stand by you for years. Write us for catalogue.

Cream Fed Pigs

Are you feeding cream to the pigs? You undoubtedly are.

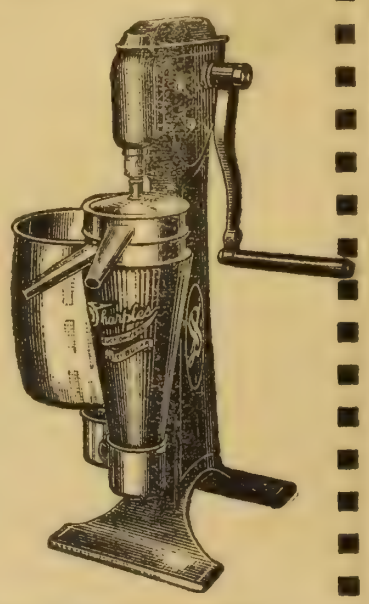
In the morning you feel fresh and strong; you turn your separator at full speed. At night, you're tired and don't turn quite so fast. You also stop a moment to refill the supply can; the speed slackens and some cream escapes into the skim milk.

Your separator may skim clean at full speed, but, no matter how good the machine, it will lose cream, and a lot of it, when the speed slackens. Many dairymen are losing a hundred dollars or more every year through imperfect skimming. They are feeding cream to the pigs. A marvelous but simple invention now enables you to stop this loss—stop it absolutely. The saving is clear "velvet"—more profit without added expense. You get *all* the cream with

THE NEW SHARPLES SUCTION-FEED

Separator. Whether you turn faster or slower than the regulation speed, the bowl of the Suction-Feed *drinks in just the right quantity of milk* to insure the closest possible skimming. Does away with speed indicator, which is not a protection against cream loss.

The New Sharples Suction-Feed has many other important advantages. Turn fast or slow, you secure smooth cream of an even thickness. No more streaked butter from mixing different grades of cream—no more dissatisfied customers.



The capacity increases when you turn faster than the normal speed, so you can get through quicker when in a hurry. The large, seamless supply can is only knee-high. The entire machine is made simpler and better than ever.

Send for our new book, "Velvet for Dairymen," which fully explains how you can save the cream now going to the pigs. Also ask for our liberal *free trial* offer. Do it today, before you forget. Address Department 44

DAIRY

THE HANDLING OF CREAM.

[Editor's Note.—The following extracts are taken from the paper read by J. D. Jarvis, before the Wisconsin Buttermakers' Association meeting at Eau Claire, February 3d.]

A person is interested in an article or subject only to the extent that the article or subject will benefit him. The care of cream on the farm will interest you only to the extent of the price you will receive for the butter fat in your cream. The price you receive for your cream as a rule is determined by the price your creamery receives for its butter. The price the creamery receives for its butter depends upon uniform quality butter. It stands to reason that extra quality butter cannot be made from poor quality cream. Your cream buyer knows this to be true and you and he also know that extra quality butter cannot be made out of second or third-grade (quality) cream. So beware of the cream buyer that tells you he would just as soon have old, sour, rotten cream as good, clean, sweet-flavored cream.

Today competition in many localities is keen among the cream buyers and they force one another to accept anything that looks like cream. When the cream buyer pays your neighbor just as much per pound for butter fat for a can of old, sour, rotten, abused cream as he does you for a can of good, clean-flavored, properly kept sweet cream he is paying the neighbor for something he is not getting and if there is such a thing as under or overreading the Babcock butter-fat test the chances are that it will be the can of sour cream that will cause the trouble.

According to the dairy division of the United States Department of Agriculture, there is manufactured annually over 627,000,000 pounds of creamery butter and 995,000,000 pounds of farm butter, or a total of over 1,500,000,000 pounds of butter. From reliable information only 15 per cent of this butter grades as extras or best quality butter, while the remaining 85 per cent grades from firsts to packing stock, the poorest quality butter. There is an average range in the market price between extras, firsts and seconds of 4 cents per pound and between seconds and packing stock of 8 cents per pound.

It is prudence to assume that the butter fat in the packing stock butter was as pure, clean and wholesome as the butter fat in the extra quality butter when it was drawn from the cow at the time of milking and this difference in quality and price is due to neglect or lack of intelligence in taking proper care of the butter fat from time of milking until the butter is consumed. Taking the lowest range, 4 cents per pound, on 1,500,000,000 of butter the loss due to neglect or ignorance would be $60,000,000.

This large sum of money, if saved, would benefit the farmer, creamery operator and the consuming public because more daily cash money placed into the trade channels will help business in general. For this reason everybody should be interested in better quality cream and better quality butter. The quality of cream depends to a great extent upon the care cream receives on the farm. There are three chief factors to be considered in taking care of cream on the farm, namely, cleanliness, rich cream and cold temperature.

The care of cream begins the moment milk is drawn from the udder of the cow and since milk is one of the most delicate and nourishing human foods it is of utmost importance that it should be produced under proper sanitation and cleanliness. The cows should be kept clean and healthy; they should receive wholesome feed and kind, gentle treatment. The milkers and all who handle the milk or cream should appreciate cleanliness and thoroughly clean the stable and all dairy utensils (pails, strainers, cans, separator bowl and tinware) every time they are used.

A good housewife does not leave the supper dishes stand overnight and use them again for breakfast without first washing them. And still, the small amount of food particles left on the supper dishes is far less repulsive and objectionable than the dirty, filthy, often bloody, pus matter that collects as slime in the separator bowl.

The tinware and the separator bowl should be washed as follows: First, they should be rinsed in lukewarm water to remove all milk particles; then they should be thoroughly scrubbed with a brush in warm water to which a good washing powder has been added; next they should be immersed for a few minutes in boiling water. After this they should be inverted and allowed to dry. Tinware, when not in use, should be placed in pure air and sunlight, because these agencies will destroy undesirable germs.

Milk and cream absorb odors like a dry sponge absorbs water. Mainly for this reason do not feed the cows strong-flavored feeds like silage, cabbage, turnips, etc., just before or at milking time. Do not keep cream in musty cellars or near strong-smelling vegetables or in the cooking odors of the kitchen. If you have a milk house do not let the men or boys use it to store their felt boots, overalls, old harness or any other strong-smelling material.

Rich cream will keep better than thin cream, just as thin cream will keep sweet longer than milk. It is also for economic reasons to the cream patron and to the creamery that they should agree upon a cream testing between 30 and 45 per cent butter fat. Rich or heavy testing cream is more profitable to the creamery patron than thin cream because:

1. He has his butter fat in smaller bulk, needs fewer cream cans and a smaller cooling tank.
2. His heavy cream will not sour as quickly as thin cream and it requires less ice or cold water to quickly cool.
3. He takes better care of a smaller amount of cream and thereby produces a better quality of cream.
4. He has less bulk to haul or ship to creamery and thereby saves transportation charges on the same.
5. He retains a larger amount of wholesome skim milk for feed.
6. He receives a better grade and hence a better price for his butter fat.

Rich or heavy-testing cream is more profitable to the creamery because:

1. It reduces the amount of cream to handle, reduces the amount of buttermilk, hence less pounds of butter fat loss and requires less labor in operating creamery.
2. It enables the operator to increase the capacity of creamery.
3. Where cream is pasteurized it prevents the abnormal loss of butter fat in buttermilk.
4. It gives a larger overrun, thus reducing cost of manufacture.
5. It improves the quality of butter by receiving a better quality cream and by permitting the use of a more clean high-flavored starter.

In order to accomplish the best results it is advisable to have the patrons skim a cream testing from 40 to 45 per cent during the summer months and from 30 to 35 per cent during the winter months.

From experimental data temperature control is the big factor in assisting or preventing the growth of germ life (bacteria, yeast, mold, etc). Two samples of milk were kept at 50 and 70 degrees respectively, and after a period of twenty-four hours there were five bacteria for every one at the beginning in the milk at 50 degrees, while there were 750 bacteria for every one at the beginning in the milk at 70 degrees. Thus a difference of 20 degrees in twenty-four hours multiplied the number of bacteria in the 70 degree milk by 150 over the number of bacteria in the 50 degree milk.

In most states the temperature of well water is below 60 degrees and from the above-mentioned experiment bacterial development was very slow below 60 degrees temperature. The thought suggested itself that if we could keep the cream at the temperature of well water nine-tenths of our poor quality cream troubles would be over. Some farmers do keep their cream in cans hung in wells or cisterns, but there is a chance for dirt,

dust and foreign materials falling into it, as well as the cream absorbing the stale, dank odor of the air which is in the bottom of the well.

The thermos bottle and fireless cooker have demonstrated that keeping cold water cold or hot water hot is merely a matter of insulation. We, therefore, conceived the idea that in a tank which is perfectly insulated on top, bottom and sides and connected up the water pumped for stock purposes would flow through it the water would always be at practically the same temperature of well water and a can of cream kept in it would be cold enough to keep it in good condition for several days.

All the available data relating to the heat-resisting properties of wood, various metals, felt, charcoal, sawdust, cork, paper, vacuum and various patented materials were considered and the manufacturers of thermos bottles and fireless cookers were consulted. A large number of sample tanks were made and carefully experimented with. A ten-gallon can of cream kept in one of these tanks, temperature of water at 54 degrees, and in a room averaging 100 degrees in daytime and 85 degrees at night had a temperature of 59½ degrees at the end of the week, a rise of 5½ degrees in that period of time.

In order to prevent the mixing of warm cream with cold cream (cream of older separation) a small two-gallon can is used for the warm cream and then lowered into the tank through the small square opening in the back. The can is held down by a convenient latch which engages the square ends of the handle. A cream stirrer can be left in the small can so the cream may be stirred at frequent intervals until thoroughly cooled. The lid to the compartment for the small can is ventilated, thus allowing the animal odors and vapors to escape. Just before the next separation the cream in the small can is emptied into the delivery or shipping can in the large compartment. It is then washed and ready for the next separation. The tank is intended to be set outdoors. where the air is fresh and pure, a place between the well and the stock tank, so all the water pumped daily for stock purposes flows through it. The insulation is so perfect that it is not necessary to have the tank under a roof. Even when it stands in the direct rays of the sun in the hottest summer or in the sharp, cold winds of the coldest winter the water in it will be within a few degrees of the temperature of the well water if the water required for six horses or cows flows through it.

During the spring of 1914 we had fifty of these tanks constructed and we loaned them to patrons of creameries in North and South Dakota, Kansas and Oklahoma. They were put out under the supervision of our dairy and creamery advisory experts and the results were very gratifying. Many farmers who before they used these tanks were delivering the poorest cream immediately began furnishing the best cream. Buttermakers were surprised and could hardly believe their own eyes. In one case cream was kept perfectly sweet for over a period of one week during very hot weather. Those tanks also gave good service where used during the winter, because if they were able to keep out heat they were likewise able to keep out cold.

The experiment had the desired result. It attracted attention of creamerymen and cream producers all over the country and the American Association of Creamery Butter Manufacturers and the dairy schools took up this movement of better quality cream by recommending the use of tanks similar to those used by us. It is now possible for those who desire to purchase similar cream tanks to obtain them by writing either the dairy supply houses, the secretary of the American Association of Creamery Butter Manufacturers, Chicago, Illinois, or your local creamery.

In summarizing, the following factors will enable the farmer to produce a better quality of cream on the farm:

1. Clean, healthy cows, fed wholesome feed and kept in clean, well-lighted and well-ventilated stables.
2. Clean, healthy milkers who appreciate cleanliness.
3 Clean utensils, pails, strainers, cans, seperator bowl and tinware thoroughly cleaned and sterilized every time they are used.
4. Skim a cream testing between 30 and 45 per cent butter fat.
5. Cool cream quickly to temperature of well water and control the temperature of all by use of a well insulated cream tank similar to the aforesaid.
6. By using cleanliness, rich cream and a properly insulated cream tank, a better quality of cream can be produced on the farms of the United States and the annual $60,000,000 loss will be considerably reduced.

DEVELOPMENT OF THE DAIRY COW.

[Editor's Note.—The following extracts were taken from one of the recent addresses of the late Dr. Henry B. Favill, of Chicago. The address was given before a meeting of Wisconsin Holstein breeders. Dr. Favill was one of the best posted Holstein-Friesian breeders in the country, and was a member of the national association.]

The development of a dairy cow is our object. The ends to be secured are three, constitution, size and specific function. Constitution is an indefinite word of which we vaguely conceive several desirable attributes. Most important of these are capacity to assimilate food, ability to transform such food into milk, to procreate, and to resist disease. It is conceivable that we may have either of these three without the others. Our problem is to combine them.

It will be seen at once that the question of size is more or less closely related to the capacity for assimilation of food. Also that milk and reproduction are the essence of specific function. The interesting question is, are there conflicts in the various methods which we may pursue to these ends? Aside from hereditary endowment it seems to me clear that the determining fact as to the capacity of a calf to assimilate food is its daily habit and experience. If we are looking for the highest degree of transforming power of food to milk, it is fair to assume that consistent pushing of the assimilating power within the limits of health maintained is necessary to establish the best results. Although there is room for the best judgment as to what is consistent with health all experience in the rearing of animals as well as human beings, goes to show that growth and assimilative power are dependent upon judicious crowding of food in the early period of life. Let us not be led astray by the popular dictum founded upon sound observation that it is well to keep calves hungry. Whatever truth there is in that observation is but a practical method and not a principle. It is simply a way of satisfying ourselves that the calf is not overfed and does not at all mean that the purpose for which we are working would not have been better secured if the hungry calf had been fed more.

With other domestic animals whose rearing is attempted under different physical conditions there is no suggestion that it is desirable to keep them hungry. In draft colts, for example, whose value is related to size, all experience goes to show that early feeding is indispensable. Less trouble occurs with them, however, because of the freedom of their lives as compared with the hot-house methods employed with dairy calves.

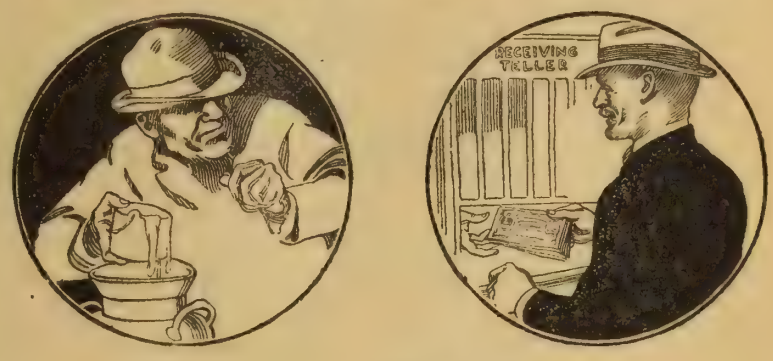
This question, however, presents itself and is prominent in the minds of many breeders: Does the heavy feeding and development of dairy calves have a tendency to transform them from the dairy type to the beef type? You are perfectly familiar with the discussion of that subject and with the difference of opinion that exists. I believe that where full feeding of dairy stock has had bad results, if at all, it is in incorrect feeding rather than excessive feeding. Let me here call attention to the fact that growth of a calf is a matter of skeleton and not a matter of flesh. All people agree that the dairy cow, and particularly the Holstein-Friesian cow, should be brought to its full size. All breeders know that it is only to be brought to its full size by forcing it during its first two years. The simple question is, need anyone fear to do it lest he impair the milk function?

I am strongly of the opinion that the heaviest feeding consistent with health of proper skeleton forming foods cannot interfere with the dairy type.

So far as science throws any light upon it at all it distinctly favors that view of the matter. My conclusion, therefore, is that in our effort to create a strong transforming machine for turning food into milk we not only must begin this early but we need not fear that in the process we shall destroy the milk type by creating another type. If there is no such fear, then the factor of size is at the same time secure, and if, moreover, it is true that assimilative power, skeleton and milk function are all dependent upon essentially the same kind of food, viz., high protein food, the problem seems to take a definite form.

Right here let me call your attention to something which is not always realized. Bones are not primarily lime or phosphate. They are primarily tissue, more like gristle, a high protein substance, and must have abundance of proteid material to form them. Lime and other salts are put into them ultimately for the purpose of stiffening, but growth of the skeleton is a proteid growth. There remains, however, a further phase to constitution, of the utmost importance—resistance to disease. Let us depart from the narrow question of cows to the general question of relationship of animals to disease. Most of the diseases in question are infectious diseases. In general, they must be regarded as a struggle in the body of an animal to prevent the undue development of lower forms of life, usually low plant life, under the general terms of "germs." Every sickness represents, not what the germ is doing to the animal, but the struggle which the animal is making against the germ. If it succeeds, it survives; if it does not succeed, it perishes. But sickness is a manifestation of warfare and not a mere passive surrender. Never, for example, is probably a conservative process and not destructive. It is nature's method of meeting the germ attack by what we regard as resistance. In the body of every animal

WHICH WILL YOU BUY



A "Cream Thief" or a "Savings Bank" Cream Separator?

WITH a great many machines or implements used on the farm it doesn't make much difference which of several makes you buy. One may give you a little better or longer service than another, but it's mostly a matter of individual preference and often it makes little difference which one you choose.

Not so with buying a cream separator, however.

There is a big difference in cream separators.

The most wasteful machine on the farm is a cheap, inferior or half worn-out cream separator.

The most profitable machine on the farm is a DE LAVAL Cream Separator

A cream separator is used twice a day, 730 times a year, and if it wastes a little cream every time you use it it's a "cream thief," and an expensive machine even if you got it as a gift.

But if it skims clean to the one or two hundredths of one per cent, as thousands and thousands of tests with a Babcock Tester show the De Laval does, then it's a cream saver, and the most profitable machine or implement on the farm—a real "savings bank" for its fortunate owner.

But cleaner skimming isn't the only advantage the De Laval user enjoys.

There are many others, such as longer life, easier turning, easier washing, less cost for repairs, and the better quality of De Laval cream, which, together with its cleaner skimming, make the De Laval the best as well as the most economical cream separator.

If you need a De Laval right now there is no reason why you should let its first cost stand in the way, because it may be purchased on such liberal terms that it will actually pay for itself out of its own savings.

A De Laval catalog to be had for the asking tells more fully why the De Laval is a "savings bank" cream separator, or the local De Laval agent will be glad to explain the many points of De Laval superiority. If you don't know the nearest local agent, simply write the nearest De Laval main office as below.

THE DE LAVAL SEPARATOR CO.

Danger for the Great Milker

Freshening time is the most critical period in the life of a cow or heifer. No injury or sickness has such disastrous results as failure to properly clean. If blood poisoning does not set in (sometimes causing death), the animal will be ruined as a milk producer for the whole season. Many cows, especially heifers, retain the afterbirth. If allowed to remain, disease and blood poisoning may follow. If you forcibly remove it, some parts of the afterbirth will remain. These parts decompose and are absorbed by the animal, causing a rapid wasting of flesh and loss of milk. Avoid all danger by using

Dr. David Roberts' COW CLEANER AND ANTISEPTO

Cow Cleaner stimulates the circulation in the blood vessels of the genital organs, causing the afterbirth to ripen and come away of its own weight, leaving the organs in a healthy condition. Cleanse the genital organs with Antisepto—it is cooling, soothing and healing, all of which are essential to health. Keep your cows in a healthy breeding condition. Give them the help they need at this trying time.

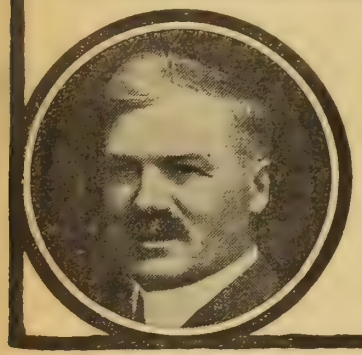
Cow Tonic Aids digestion, increases appetite, tones and keeps animals in condition.

Breeding Tonic Acts on the genital organs and puts in condition for breeding.

Calf Cholera Remedy Prevents scours and calf cholera. Avoids stunting. Keeps calves growing.

Ask at your drug store also for Dr. Roberts' Calf Meal, Diolice, Badger Balm, Laxotonic and Stokvigor.

There is a Roberts' medicine for every common animal ailment. Over 500,000 copies of the great book (184 pages), "Practical Home Veterinarian," are already in the hands of live stock owners. If you do not have a copy, send 25 cents and copy will be sent postpaid, together with 8-ounce sample of Stokvigor.



Go to your druggist. Buy Dr. Roberts' animal medicines and tonics. Over 3500 drug stores carry them. Take no other. If your druggist hasn't Roberts' goods, write us direct. Give us his name. We will see you are promptly supplied. Look for and insist on getting the package that bears Dr. Roberts' picture.

Special Sample Offer—Stokvigor, 10c

This trial package of Stokvigor will cure for one cow or horse two weeks. Get it and see for yourself what a nice stock tonic or stock food you can make. Enclose dime or stamps.

Dr. David Roberts Veterinary Co.
950 Wisconsin Avenue Waukesha, Wis.

struggling with infectious disease there are forming antagonistic chemical substances whose purpose is protection. All serums which we use in practice are the products of such protective reaction.

In the modern theory and method of treating human tuberculosis, fresh air, food and rest are cardinal principles.

Do not get the idea that fresh air is valuable because it does not contain tuberculosis germs. It may or may not contain germs, but its value undoubtedly is in its tonic effect upon the entire cellular mass of which the animal is made up. So also as to food. There is no antagonism between milk and eggs and tuberculosis germs. The benefit herein lies in the fortification of the tissues in the minutest particle for carrying on its own protective resistance. So, also, as to rest. Probably rest in tuberculosis is of value because it permits the assimilative power of the organism to be concentrated on the upbuilding of the cells and does not dissipate their powers in unnecessary activities.

In fact, it is now manifest that in combating tuberculosis in human beings which is already established there is a value in prescribing activity which shall result in a re-active fever representing the natural defense of the body, following which activity, perfect rest permits the utilization of the protective products, in killing out the tuberculosis germ.

Today in Chicago the movement is on foot to put all children who are, as we say, sub-normal, into open-air schools. The result of these efforts is astonishing. Not only do these children thrive, gain in weight and grow, but they become mentally normal, when almost invariably they have hitherto been mentally backward. They accomplish in the school curriculum from 30 to 100 per cent more in the year than they did under the former conditions, and in every way the experiment shows that the element which we call vitality, for want of a better name, was lacking and that that vitality can, in the majority of instances, be supplied by food and fresh air, and, I think it is true that neither will accomplish this result without the other.

Can there be any doubt as to the importance of the bearing of this experience upon our dairy problem? Admitting as we must, the menace to our industry, of tuberculosis, to say nothing of other infectious diseases; halting along unsatisfactorily as we do with the tuberculin test and its weeding out method, can we close our eyes to the fact that safety in this situation lies in the development of a vital resistance, and that particularly in the earliest months of life?

Resistance to infectious disease, aside from tuberculosis, is by no means, so far as we know, related to size, vitality or constitution. There are many infectious disease among human beings, which apparently attack the very strong as dangerously and perhaps more dangerously than the apparently weak.

There is no question that there is less infectious material outside the barn than within it. When we stop to consider, therefore, the highly stimulated resistance on the one hand and the less exposure to infection that there is in the open air on the other, can we avoid the conclusion that our animals, and particularly our young animals, are safer in the open air than they are in the barn?

There is no doubt that calves can be kept looking better in the stable than in the open during certain seasons of the year. There is no doubt that the attack of flies upon young stock hampers its development. There is no doubt that exposure to cold roughens their general condition and appearance. It takes more food to keep them in condition in open air than in stable life.

It has been suggested that continued breeding from tuberculous cattle, avoiding infection of the calves, would produce a race of animals immune from tuberculosis. The theory, though attractive, is not thus far substantiated, and I have no opinion to express as to its possibility.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Vulcanizing Auto Tires.

Please tell me how to vulcanize auto tires.

Answer.—A vulcanizer, some benzine or gasoline, some semi-cured sheet rubber and some vulcanizing cement are required. There are many vulcanizers on the market, the more elaborate ones being steam heated and the simpler ones heated by gasoline. The car owner is more likely to have the latter. To vulcanize a hole in a tube proceed as follows:

Clean the tube thoroughly around the hole with gasoline or benzine. Cut a piece of sheet rubber, semi-cured, large enough to extend past the hole in the tube one-half inch in every direction. Coat the patch and tube with the rubber cement and allow to dry until it appears dull. The patch should then be placed in position on the tube and clamped in place between the plates of the vulcanizer. Put a little water in the gasoline bowl of the vulcanizer, then fill the bowl with gasoline and ignite. Just enough heat should be generated by the burning gasoline to cause the patch to weld to the tube. The small amount of water placed in the gasoline bowl tends to keep the temperature from becoming too high. Not enough heat results in an imperfect patch. Too much heat ruins the tire. Steam vulcanizers are accompanied by instructions as to how many pounds of steam pressure to use and how long a time is required. The higher the pressure the hotter the steam.

Storage Battery Questions.

I wish to make a storage battery, six volts, sixty amperes. Please explain how to make such a battery. What determines the voltage and amperage of a storage battery? What is the difference between the positive and negative poles, if lead is used for both plates? Why are the volts and amperes of various makes of storage batteries not proportional to each other? Why should one be six volts, forty amperes and another six volts, sixty amperes?

Answer.—Space will not permit us to give a detailed description of how a storage battery is made. There are many books on the subject. We advise you to consult your local book dealer. While it is possible to make a storage battery on the farm, it is not very practical to do so.

The number of cells determines the voltage of the battery, the rating being two volts per cell. The actual voltage when the battery is fully charged is about 30 per cent higher. Therefore, the voltage rating of the generator should be at least 30 per cent higher than the voltage rating of the battery.

The ampere-hour capacity of the battery is determined by the number of square inches of plate surface. The larger the plates and the more there are of them the higher the ampere-hour capacity. There is no relation or proportion between the voltage rating and the ampere rating. A six-volt, thirty-ampere battery might be compared with a water tank six feet high and holding thirty gallons of water; a six-volt, sixty-ampere battery to a water tank six feet high and holding sixty gallons of water. The pressure would be the same in both cases, but it would take twice as long to drain the latter if both are drained at the same rate.

Both negative and positive plates are made of lead, but the grids of the positive plates are filled with a paste made of red lead and sulphuric acid; the negative plates with a paste made of litharge and sulphuric acid.

Magneto for Auto Engine.

I have a four-cylinder Franklin car that runs on five dry cells. The dry cells soon give out, causing much trouble. Could I install a Savage magneto that is made for a single-cylinder engine? If not; please give reason. Does one of these magnetos give a steady current that is distributed to the spark plugs through the timer?

Answer.—We are not familiar with the Savage magneto. We doubt that you could use it successfully on a four-cylinder engine. If it is very well made, generating a low-tension current, it might be used with some success in the manner shown by the two-cylinder wiring diagram published in this issue. As a rule, stationary engine magnetos are not well enough constructed to be durable on an automobile.

If it is a high-tension magneto it could not be used, as a distributor is necessary to distribute the current to the spark plugs. The timer does not distribute the current to the plugs—it simply causes the current to flow at the proper time in the magneto windings and the distributor determines where it shall flow, that is, to which plug.

Motor and Battery.

Please tell me how to wind an armature for a small electric motor. Please tell we how to make a sal ammoniac wet battery

Answer.—Space will not permit us to describe the process of winding a small armature. If interested in this line of work you should obtain a book on the subject. Your nearest book dealer has a list of such books and you can obtain the information you want from the book. The sal ammoniac battery is made by suspending a sheet of zinc and a carbon rod in a glass jar filled with a solution of sal ammoniac and water. There should be all the sal ammoniac used that will readily dissolve, but no more. The carbon and zinc must not touch. A square jar is generally used. The carbon rod is placed in one corner and the zinc sheet, bent in cylindrical form, is placed in the middle.

Battery Trouble.

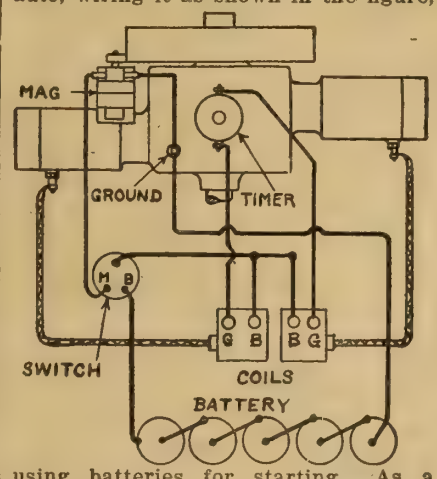
I connected the carbon post of a battery to the magneto sparker post, and the zinc post of the battery I grounded on the engine. The battery lasted only one day. The magneto does not work. Why did the batteries give out so soon?

Answer.—We are not sure just how you wired your engine. It may be that you wired it in such a way as to short circuit the battery, in which case the battery would be ruined in one day. There may be a short circuit in some part of the sparker that caused the trouble, or the switch may be defective. If you leave the switch closed and the sparker is in contact position, standing idle, the battery will be ruined in a short time. It does not matter whether the zinc terminal or the carbon terminal is grounded.

Low-Tension Magneto for Runabout.

I want to know whether or not a common belt-driven magneto such as is commonly used on stationary engines will make sufficient spark to ignite a two-cylinder runabout. How should it be wired?

Answer.—If the magneto is well made it should work all right on your auto, wiring it as shown in the figure,



using batteries for starting. As a rule stationary engine magnetos are not durable when used on an auto.

Lighting From Magneto.

I own a Model 59T Overland automobile, with Splitdorf magneto. Could I arrange to light the headlights direct from the magneto?

Answer.—The magneto is not suitable for lighting purposes.

Auto-Oiled Windmill
ALL WORKING PARTS INCLOSED
and flooded with oil from the supply in the gear case, which needs replenishing only once a year.

Put your old Aermotor wheel and vane on this self-oiled motor, and have an up-to-date outfit at small cost.

Don't waste your time climbing to oil an old mill. Replace it, on your old tower, with an Auto-Oiled Aermotor which will last you a lifetime and furnish you an abundance of water.

IT NEEDS ATTENTION ONLY ONCE A YEAR.

Clean Up! Disinfect! Prevent Disease!

Gilbert Hess, M.D., D.V.S.

Is it worth, say, half an hour every week and a few cents to clean up and disinfect your hog pens, stables, poultry houses, troughs, etc.? Or are you going to wait until some disease strikes your county and then fall over yourself to do this thing—to save your stock—like many farmers did last year. I can't understand why many farmers will neglect disinfecting until they actually see their hogs or other animals dropping off one by one. There is a place on every farm for

Dr. Hess Dip and Disinfectant

One Gallon Makes 70 to 100 Gallons Solution

Cures ringworm in cattle, scratches and grease heel; also thrush and foul feet. Invaluable for disinfecting sinks, drains, troughs, garbage cans, outhouses, etc. Good for home and stable. Sold under a money-back guarantee in pint bottles, quart, half-gallon and gallon cans and barrels.

Dr. Hess Fly Chaser

Does not gum, color or blister. Makes stock comfortable.

DR. HESS & CLARK, Ashland, Ohio

Your Cows Yield as they Feel

Poor milkers are not accidents—they are usually backward because there is something wrong with their physical condition. You cannot expect such a cow to give a good milk yield until her sluggish organs have received proper medical treatment.

Kow-Kure has become the standard remedy in thousands of dairies because this famous cow medicine has great medicinal qualities that work upon and tone up the digestive and genital organs, making each perform its proper function.

You can prove for yourself the merit of Kow-Kure by trying a package on one of your poor milkers, and watch results carefully. Besides being a general tonic, Kow-Kure is especially recommended for the prevention or cure of such diseases as Abortion, Barrenness, Milk Fever, Scouring, Lost Appetite, Bunches, Retained Afterbirth, etc.

Dairy Association Company
Lyndonville, Vt.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Sniffles In Pigs.

Is canker a contagious disease in young pigs and what is the best means to combat it? I raised sixty shoats this year. They were farrowed during last April and ten of them have what I think is canker. The nose of the pig is either crooked or wrinkled up. They sneeze a great deal. The pigs that are affected do not grow very much. I have never tried any treatment for them.

Your pigs are affected with what is commonly called sniffles, but which is in reality necro-bacillosis of the mucous membranes. This disease is one of the discouraging kind when it comes to treatment. There could not be much advised in line of treatment that would be worth your while. Just play a waiting game.

Balking in Horse.

I have a four-year-old mare that I broke to work this last fall. She did very well, but would throw herself sometimes. Have fed well all winter and now she won't work at all. Won't pull a thing, just bucks and throws herself. Please tell me how to work her.

The trouble with your horse is probably just a bad habit or maybe she is troubled with some derangement which affects her nervous apparatus. You usually find that balky horses are of a nervous disposition. We could not advise intelligently without first knowing the cause of the trouble.

Lameness in Mare.

I have a coming two-year-old gray mare that has been lame in the right hind leg for a month. She is poor and gaunt. I can't find anything wrong with her foot or hip either one. When she gets down she has a hard time getting up. No treatment has been given, thinking it was her hoof broken off too close. She has been kept in the barn the last two weeks and doesn't seem to be getting any better. Can you give me any information about this?

From the very few symptoms you give it would be folly to attempt diagnosis and treatment. Lameness is sometimes hard to diagnose even after a careful examination. If the young mare is of much value it might pay you in dollars as well as in peace of mind to have a competent veterinarian make a careful examination.

Abortion.

Could you please give me some information about abortion in cows? I have a cow that dropped a dead calf the seventh month after pregnancy. What can be the cause of it? Is there any cure for it, and when should it be treated to prevent it? Is there any medicine that can stop it? How soon would you advise me to have the cow bred again?

If there hasn't been any abortion in your herd heretofore the above-mentioned case was probably brought about by some other means than contagion, probably from injury or eating some irritating substance which set up an inflammatory condition of the urinary or generative organs. In case you think an animal is going to abort you should send for a veterinarian immediately. If the cow you speak of having aborted has cleaned up all right she may take the bull at her next period.

Chronic Cough.

I have a horse that coughs as if he had the heaves, though I do not think he has. I had this horse in a pasture last summer and when I got him back he had this cough. Nearly all the horses in that pasture had the same cough at that time, although most of the others got over it in time, but this one groans and coughs more or less every day. When he works hard and sweats good the cough eases some. I will be very glad to have any information as to what to do for him.

A chronic cough may succeed the acute diseases of the respiratory tract, such as pneumonia, bronchitis, laryngitis, etc. It accompanies chronic roaring, chronic bronchitis, broken wind. As previously stated, cough is but a symptom and not a disease in itself. Chronic cough is occasionally associated with diseases other than those of the organs of respiration. It may be a symptom of chronic indigestion or worms. In such cases it is caused by a reflex nervous irritation. The proper treatment in all cases of chronic cough is to ascertain the nature of the disease of which it is a symptom and then cure the disease if possible and the cough will probably cease. All coughs are not treated alike. We would advise you to let some good veterinarian examine this animal and advise treatment, as first-hand advice in these cases is advisable always.

Abortion in Cattle.

I have a bunch of about thirty Holstein cows in which abortion started about six weeks ago. I would like your advice in regard to a cure, if there is any cure. Also would like to know about the nature of the disease. I have lost six calves up to date.

You did not say whether there had been any abortion in your herd previous to the above-mentioned time. Abortions are either infectious or non-infectious and should be treated according to kind. Non-infectious abortions may be caused from irritating foods, injury, etc. Infectious abortion is caused by the bacillus of abortion gaining entrance into the uterus of the cow. This is a disease which takes time and patience to handle. The animals not affected should be separated from those affected and all the infected stables, lots, etc., should be thoroughly disinfected. Any dead calves should be burned or scalded. Those cows which have aborted should have the vagina and uterus irrigated with warm, antiseptic solutions which can be done by means of a soft rubber tube, one end of which is placed deep into the uterine cavity and the other end elevated and a funnel placed therein and the antiseptic solution allowed to flow into the womb. As a solution use 1 to 2 per cent lysol solution. This treatment should be repeated at first one or two times daily, later every two or three days until the discharge has ceased for several days. After treatment it is still advisable to keep them from other cows and not breed for at least two months after abortion. The bull used should be treated by clipping the hair off the prepuse and irrigating the preputial cavity with warm, antiseptic solution. Careful attention to these rules and persistency may win. Would advise you, however, to have a competent veterinarian if there is one to be had near you and have him determine whether the trouble is of infectious or non-infectious nature.

Here are a few of the simple rules which one Wisconsin farmer follows in growing grain for seed and exhibition purposes: "Select pure seed that is adapted to the climatic conditions and purchase only from reliable growers; plow the land in the fall, which is to be sown to grain; disk the field lightly in the spring and harrow several times; clean the seed and treat it for smut; sow with a drill; roll the land after sowing so as to crush all limbs and to form a fine dust mulch; cut the grain when ripe, but do not allow it to get so ripe as to shell out; put up in long shocks of not over twelve bundles each; do not stack until the straw is perfectly dry and allow the grain to remain in the stack until it is well sweat out."

Wisconsin, according to the president of the agricultural experiment association, grows more pedigreed seed grains than all the other states combined. Our seeds have found their way into other states and other countries and the demand for them, as reported by the members of this organization, is constantly increasing.

HEPSEY BURKE--A Sister to David Harum

By G. N. Wescott, the Brother of the Author of "David Harum."

(Copyright 1915.)

SYNOPSIS.

Hepsey Burke with the Junior Warden met the new pastor, Donald Maxwell, at the depot, giving him a welcome to his new parish. During the ride out to Thunder Cliff, Hepsey's home, she gave Maxwell in her outspoken way a very clear idea of the requisites or, as she put it, what the "parish wanted in the shape of a pastor." Having arrived at Thunder Cliff, Maxwell settled himself in the room assigned to him and then while resting read a letter from "Betty." However, he decided not to tell Mrs. Burke of her just yet. The new pastor's first call was upon the Senior Warden, receiving a hearty welcome from Virginia Bascom, his daughter. Hepsey surmised that Maxwell was engaged and made a neighborly call upon Jonathan Jackson, the Junior Warden, to see what he thought about the matter. The ladies of the parish gave a missionary tea, at which Virginia read a paper feeling that she was thereby gaining the much desired attention of her pastor.

CHAPTER IX.

The Rectory.

A FEW WEEKS after Donald's conversational duel with Mrs. Burke he started on a six weeks' vacation, which he had certainly earned; and as he busied himself with his packing—Hepsey assisting—he announced:

"When I come back, Mrs. Burke, I probably shall not come alone."

He was strapping up his suitcase when he made this rather startling announcement and the effect seemed to send the blood to his head. Mrs. Burke did not seem to notice his confusion as she remarked calmly:

"Hm! That's a good thing. Your grandmother can have the room next to yours and we'll do all we can to make the old lady comfortable. I'm sure she'll be a great comfort to you, though she'll get a bit lonesome at times unless she's active on her feet."

Donald laughed, as he blushed more furiously and stuttered:

"No, I am not going to bring my grandmother here, and I strongly suspect that you know what I mean. I'm going to be married."

"So you are going to get married, are you?" Hepsey remarked with due amazement, as if the suspicion of the fact had never entered her head before. "Well, I am mighty glad of it. I only wish that I was goin' to be present to give you away. Yes, I'm mighty glad. She'll make a new man of you up here, so long as she isn't a new woman."

"No, not in the slang sense of the word, although I think you will find her very capable, and I hope with all my heart that you'll like her."

"I'm sure I shall. The question is whether she'll like me."

Hepsey Burke looked rather sober for a moment and Donald instantly asserted:

"She can't help liking you."

"We-ell now, I could mention quite a number of people who find it as easy as rolling off a log to dislike me. But that doesn't matter much. I have found it a pretty good plan not to expect a great deal of adoration and to be mighty grateful for the little you get. Be sure you let me know when to expect you and your grandmother back."

"Most certainly I shall," he laughed. "It will be in about six weeks, you know. Good-by, and thank you a thousand times for all your kindness to me."

There was considerable moisture in Hepsey's eyes as she stood and watched Maxwell drive down the road. Then wiping her eyes furtively with one corner of her apron she remarked to herself:

"Well, I suppose I am glad, mighty glad; but somehow it isn't the jolliest thing in the world to have one's friends get married. They are never the same again; and in ten times out of six the lady in the case is jealous of her husband's friends and tries to make trouble. It takes a lady saint to share her husband's interests with anybody and maybe she ain't to blame. Well, the next thing in order is to fix up the rectory in six weeks. The best way to repair that thing is with a match and some real good kerosene and a few shavings; however, we'll have to do the best we can. I think I'll set Jonathan Jackson to work this afternoon and go around and interview the vestry myself."

Jonathan proved resignedly obedient to Hepsey's demands, but the vestry blustered and scolded, because they had not been consulted in the matter, until Hepsey said she would be glad to receive any contributions they might offer; then they relapsed into innocuous desuetude and talked crops.

As soon as the repairs were well under way the whole town was wild with gossip about Maxwell and Miss Bascom. If he were going to occupy the rectory the necessary inference was that he was going to be married, as he surely would not contemplate keeping bachelor's hall by himself. At last Virginia had attained the height of her ambition and captured the rector. Consequently she was the center of interest in every social gathering, although, as the engagement had not been formally announced, no one felt at liberty to congratulate her. To any tentative and insinuating advances in this direction Virginia replied by non-committal smiles, capable of almost any interpretation; and the seeker after information was none the wiser.

Mrs. Roscoe-Jones, by virtue of her long intimacy with Hepsey and her assured social position in Durford's thirty gentry, felt that she was entitled to some definite information; and so, as they walked back from church one Wednesday afternoon, she remarked:

"I hear that the parish is going to repair the rectory and that you are taking a great interest in it. You must be on very intimate terms with Mr. Bascom and the vestry!"

"Well, not exactly. Bascom and I haven't held hands in the dark for some time; but I am going to do what I can to get the house in order for Mr. Maxwell."

"I wonder where the money is coming from to complete the work? It seems to me that the whole parish ought to be informed about the matter and share in the work; but I suppose Mr. Bascom's shouldering it all, since there's been no effort to raise money by having a fair."

"I really don't know much about it as yet, Sarah. Of course, Bascom's charitable work is mostly done in secret, so that nobody ever finds it out. He is a modest man and wouldn't like to be caught in the act of signing a check for anybody else. It might seem showy."

"Yes, I understand," Mrs. Roscoe-Jones retorted dryly; "but under the circumstances, that is——"

"Under what circumstances?" Mrs. Burke inquired quickly.

"Oh, considering that Mr. Bascom is Virginia's father and would want to make her comfortable, you know——"

"No, I don't know. I'm awful stupid about some things. You must have discovered that before."

"Now, Hepsey, what is the use of beating around the bush like this? You must know the common gossip of the town and you must be in Mr. Maxwell's confidence. What shall I say when people ask me if he is engaged to Virginia Bascom?"

"Tell 'em you don't know a blessed thing about it. What else can you tell 'em? You might tell 'em that you tried to pump me and the pump wouldn't work 'cause it needed packin'."

After this Mrs. Roscoe-Jones felt that there was nothing left for her to do but retire from the scene; so she crossed the road.

When Mrs. Burke began the actual work on the rectory she quickly realized what she had to cope with. The workmen of Durford had a pleasing habit of accepting all offers of work, and promising anything, and making a start so as to get the job; and then, having upset the whole premises, they promptly "lit out" for parts unknown in order to get another job, and no mortal knew when they would return. It always seemed promising and hopeful to see a laboring man arrive in his overalls with his dinner pail and tools at seven, but when two hours later he had vanished, not to return, it was a bit discouraging. Mrs. Burke was not in a very good humor when, arriving at the rectory, she met Tom Snyder, the plumber, at ten-thirty walking briskly away from his job. She planted herself squarely across the walk and began:

"Good morning, Thomas; where are you going, if I may ask?"

"I am going back for my tools, Mrs. Burke."

"Excuse me, Thomas, but you were never more mistaken in your life. You put the kitchen pipes out of business two weeks ago and you must have been goin' back for your tools ever since. I suppose you're chargin' me by the hour for goin' backwards."

Thomas looked sheepish and scratched his head with his dirty fingers.

"No, but I have to finish a little job I begun for Elias Warden on the hill. I'll be back again right away."

"None of that, Thomas. You're goin' back to the rectory with me now, and if the job isn't finished by six o'clock you'll never get your hands on it again."

The crestfallen Thomas reluctantly turned around and accompanied Hepsey back to the rectory and finished his work in half an hour.

After much trial and tribulation the rectory was duly repaired, replastered and papered. The grass had been cut, the bushes were trimmed and the house had been painted. Then Mrs. Burke obtained a hayrack and a team, and taking Nickey and Jonathan Jackson with her, made a tour of the parish asking for such furniture as individual parishioners were willing to give. Late in the afternoon she arrived at the rectory with a very large

We Are Prepared

Within the wide boundaries of our country, embracing more than three million square miles, dwell a hundred million people.

They live in cities, towns, villages, hamlets and remote farms. They are separated by broad rivers, rugged mountains and arid deserts.

The concerted action of this far-flung population is dependent upon a common understanding. Only by a quick, simple and unfailing means of intercommunication could our people be instantly united in any cause.

In its wonderful preparedness to inform its citizens of a national need, the United States stands alone and unequaled. It can command the entire Bell Telephone System, which completely covers our country with its network of wires.

This marvelous system is the result of keen foresight and persistent effort on the part of telephone specialists, who have endeavored from the first to provide a means of communication embracing our whole country, connecting every state and every community, to its last individual unit.

The Bell System is a distinctly American achievement, made by Americans for Americans, and its like is not to be found in all the world.

Through it, our entire population may be promptly organized for united action in any national movement, whether it be for peace, prosperity, philanthropy or armed protection.

MEAD CYCLE CO., DEPT. H164, CHICAGO

load and the next day Jonathan was made to set to work with his tools, and she started in with some paint and varnish, and the result seemed eminently satisfactory to her, even though her hands were stained, she had had no dinner and her hair was stuck to her head here and there in shiny spots. As they were leaving the house to return home for supper she scowled severely at Jonathan as she remarked:

"Jonathan, I do believe you've got more red paint on the top of your head than you left on the kitchen chairs. Do for mercy sake wash the end of your nose. I don't care to be seen comin' out of here with you lookin' like that," she added scathingly.

After that it was, as Mrs. Burke remarked, just fun to finish the rectory; and though so much had been given by the people of the parish, there were many new pieces of furniture delivered, for which no one could account. As neither Mr. Bascom nor Miss Bascom had sent anything, and as neither had appeared on the scene, excitement was at fever heat. Rumor had it that Virginia had gone to the city for a week or so to buy her trousseau. Presently the report circulated that Maxwell was going to bring his bride back with him when he returned from his vacation.

The day before the one set for Maxwell's arrival Mrs. Burke confessed the truth and suggested that the rectory be stocked with provisions, so that the bride and groom should have something to eat when they first got home. The idea seemed to please the parish and provisions began to arrive and were placed in the cellar or on the newly painted pantry shelves or in the neat cupboards. Mrs. Talbot sent a bushel of potatoes, Mrs. Peterson a pan of soda biscuit, Mrs. Andrews two loaves of bread, Mrs. Squires donated a pan of soda biscuit, Mrs. Johnson some frosted cake and Mrs. Marlow two bushels of apples. Mrs. Hurd sent a pan of soda biscuit, Mrs. Waldorf three dozen eggs and a sack of flour, Mrs. Freyburg sent a pan of soda biscuit, Mrs. Jones a boiled ham, Mrs. Orchardson two bushels of turnips and half a pan of soda biscuit.

Mrs. Burke received the provisions as they arrived and put them where they belonged. Just about supper time Mrs. Loomis came with a large bundle under her arm and remarked to Hepsey:

"I thought I'd bring something nobody else would think of—something out of the ordinary that perhaps Mr. and Mrs. Maxwell would relish."

"I'm sure that was real thoughtful of you, Mrs. Loomis," Hepsey replied. "What have you got?"

"Well," Mrs. Loomis responded, "I thought I'd bring 'em two pans of my nice fresh soda biscuit."

Mrs. Burke kept her face straight and responded cheerfully:

"That was awful nice of you, Mrs. Loomis."

"Oh, that's all right. And if you want any more just let me know."

Finally, when the door was closed on the last contributor, Mrs. Burke dropped into a chair and called:

"Jonathan Jackson, come here quick."

Jonathan responded promptly and anxiously inquired:

"Hepsey, be you ill?"

"No, I'm not sick; but we have ten pans of soda biscuit. They are in the pantry, down cellar, in the woodshed, on the parlor table. For mercy's sake take eight pans out to the chickens or stick 'em on the picket fence. I just loathe soda biscuit; and if any more come I shall throw 'em at the head of the woman that brings 'em."

CHAPTER X.

The Bride's Arrival.

NEXT morning, when Nickey brought up the mail, Mrs. Burke looked anxiously over her letters until she came to the one she was expecting. She read it in silence.

The gist of the matter was that Maxwell had been married to the nicest girl in the world and was looking forward to having Mrs. Burke meet her, and to have his wife know the woman who had been so supremely good to him in the parish. He closed by informing her that they were to return the next day at 5 p. m., and if it were not asking too much, he hoped that she would take them in for a few days until they could find quarters elsewhere. The letter was countersigned by a pretty little plea for friendship from "Mrs. Betty."

Mrs. Burke replaced the letter and murmured to herself, smiling:

"Poor little dear! Of course, they could come and stay as long as they pleased; but as the rectory is in order I think that I'll meet them at the depot and take them there direct. They'll be much happier alone by themselves from the start. I'll have supper ready for 'em, and cook the chickens while they're unpackin' their trunks."

As Mrs. Burke thought it best to maintain a discreet silence as to the time of their arrival there was no one but herself to meet them at the station when the train pulled in. As Maxwell presented his wife to Mrs. Burke Hepsey took the girl's two hands in hers and kissed her heartily, and then, looking at her keenly as the bride blushed under her searching gaze, she remarked:

"You're a dreadful disappointment, Mrs. Maxwell. I'm afraid it'll take me a long time to get over it."

"I am horribly sorry to disappoint you so, Mrs. Burke."

Maxwell laughed, while Mrs. Betty looked puzzled.

"Yes," Mrs. Burke continued, "you're a dreadful disappointment. Your picture isn't half as sweet as you are." Then turning to Maxwell, she said:

"Why didn't you tell me? Who taught you to pick out just the right sort of wife, I'd like to know?"

"She did!" Maxwell replied, pointing delightedly to the young woman, who was still smiling and blushing under Hepsey's inspection.

"But Mrs. Burke," Mrs. Betty interposed, "can't you give we a little credit for 'picking out' Donald, as you say?"

"Yes; Mr. Maxwell's pretty fine, though I wouldn't want to have you tell him so for anything. But I know, because Durford is calculated to test a man's mettle, if any place ever was. Now, Mrs. Betty, if that's what I'm to call you, if you'll get into the wagon we'll drive home and have some supper. You must be 'most famished by this time, if you stop thinkin' about Mr. Maxwell long enough to have an appetite. I suppose that we might have had a committee of the vestry down here to bid you welcome to Durford; and Nickey suggested the village band and some hot air balloons, and that the boys of the parish should pull the carriage up to the house after they'd presented you with a magnificent bouquet; but I thought you'd just like to slip in unnoticed and get acquainted with your parishioners one at a time. It'd be simply awful to have a whole bunch of 'em thrown at your head at once; and as for the whole vestry—well, never mind."

They got into the "democrat" and started out at a smart trot, but when they came to the road which turned toward Thunder Cliff, Mrs. Burke drove straight across the green.

"Why, where are you going, Mrs. Burke?" Maxwell exclaimed.

"Well, I thought that maybe Mrs. Betty would like to get a sight of the town before we went home."

When they came to the rectory and turned into the yard the wonderful transformation dawned on Maxwell.

"My gracious, what a change! It's perfectly marvelous," he exclaimed. "Why Mrs. Burke, I believe you've brought us here to live!"

"Right you are my friend. This is where you belong."

"Well, you certainly do beat the Dutch. Who is responsible for all this, I'd like to know? But, of course, it's you."

"Well, I had a hand in it, but so did

"OH, WELL, I ALWAYS BELIEVE THAT TWO YOUNG MARRIED PEOPLE SHOULD START OUT BY THEMSELVES, AND THEN IF THEY GET INTO A FAMILY ROW IT WON'T SCANDALIZE THE PARISH."

If none of the above combinations suit you, you can make up your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wis.

This Season's Novelty!

Stylish Angora Style Wool Scarf

You Want One? Read This!

Send us 75 cents only, and get The Housewife for One Year (regular 50 cents) and this Dollar Scarf.

A $1.50 VALUE FOR JUST HALF!

AT LAST fashion has been kind to the women of small means. She has given the scarf, the novelty of the season, to those who cannot afford furs. Comparatively few women can afford really good furs, therefore, they have either had to go without them or be satisfied with a cheap imitation of the real thing. But now comes the scarf, a thing of beauty and chic, which can be wound around the throat with a dashing air lending a smart appearance to its wearer. Scarfs of all kinds and colors are being worn but the most popular and the prettiest variety is the one made of angora wool either in pure white or dainty colors. The outdoor girl first brought the light of fashion's favor on the scarf and showed the fashionable world just how pretty and practical it could be, and now, that cold weather is here it is no longer used just as a pretty piece of decoration, but as a serviceable piece of milady's wardrobe. These scarfs are very warm and easily cleaned, with these two characteristics they are destined to remain immensely popular. The scarf we offer is made of fine wool, angora style and measures 56 inches long by 7 inches wide, it may be obtained in different colors. Each scarf has striped ends of harmonizing colors and is finished with a self fringe. Kindly state color desired when ordering.

Remember, all you need to do to get this Scarf, is to subscribe for The Housewife for a year and remit 75 cents only for both Housewife and Scarf. The regular rate of The Housewife is 50 cents—the usual cost of the Scarf is $1.00.

WE OFFER BOTH FOR 75 CENTS!

Remit by P. O. Money Order or Registered Letter to

THE HOUSEWIFE, 30 IRVING PLACE, NEW YORK

the whole parish. Now walk right in and make yourself at home."

Mrs. Burke enjoyed to the full Maxwell's surprise and delight, as he and Mrs. Betty explored the house like a couple of very enthusiastic children. When they got into the china closet and Mrs. Betty found a silver tea-ball she exclaimed rapturously:

"Look here, Donald! Did you ever see the like of this? Here is a regular tea-ball. We will have tea every afternoon at four and Mrs. Burke will be our guest. How perfectly delightful."

This remark seemed to please Hepsey mightily, as she exclaimed:

"Oh, my, no! Do you want to spoil my nervous system? We are not given much to tea-balls in Durford. We consider ourselves lucky if we get a plain old-fashioned pot. Now you get fixed up," she directed, "while I get supper ready, and I'll stay just this time, if you'll let me, and then if you can stand it perhaps you'll ask me again."

Soon they sat down to a little table covered with spotless linen and a pretty set of white china with gold bands. Maxwell did not say much; he was still too surprised and delighted.

The broiled chickens and the browned potato balls were placed before Maxwell, who faced Mrs. Betty—Hepsey sitting between them.

"Now this is what I call rich," Maxwell exclaimed as he carved. "I hadn't the slightest suspicion that we were to come here and find all these luxuries."

"However did the house get furnished?" chimed in Mrs. Betty.

"Oh well," Mrs. Burke replied, "I always believe that two young married people should start out by themselves, you know; and then if they get into a family row it won't scandalize the parish. The only new thing about the furnishings is paint and varnish. I drove around and held up the parish and made them stand and deliver the goods, and Jonathan Jackson and I touched it up a little; that's all."

"We ought to acknowledge each gift personally," Maxwell said. "You must tell us who's given what."

"Oh, no you won't. When I took these things away from their owners by force I acknowledged them in the politest way possible, so as to save you the trouble. You're not supposed to know where a thing came from."

"But there must have been a lot of money spent on the rectory to get it into shape," Maxwell asserted. "Where did it all come from?"

Mrs. Burke grinned with amusement.

"Why, can't you guess? Of course, it was that merry-hearted, generous old Senior Warden of yours. Who else could it be? If there is anything you need just let us know."

"But the house seems to be very completely furnished as it is."

"No, not yet. If you look around you'll see lots of things that aren't here."

Mrs. Betty quite raved over the salad, made of lettuce, oranges, walnuts and a mayonnaise dressing. Then there came ice cream and chocolate sauce, followed by black coffee.

"This is quite too much, Mrs. Burke. You must be a superb cook. I am horribly afraid you'll have spoiled Donald, so that my cooking will seem very tame to him," Mrs. Betty remarked.

"Well, never mind, Mrs. Betty. If worst comes to worst there are seven pans of soda biscuits secreted around the premises somewhere; so don't be discouraged. There are lots of things you can do with a soda biscuit, if you know how. Now we'll just clear the table, and wash the dishes, and put things away."

When about nine o'clock she arose to go, Maxwell took Hepsey's hands in his and said quietly:

"Mrs. Burke, I'm more indebted to you than I can possibly say, for all you have done for us. I wish I knew how to thank you properly, but I don't."

"Oh, never mind that," Mrs. Burke replied, a mist gathering in her eyes. "It's been lots of fun and if you're satisfied I'm more than pleased." Then, putting her arm around Mrs. Betty's waist, she continued:

"Remember that we're not payin' this nice little wife of yours to do parish work, and if people interfere with her you just tell 'em to go to Thunder Cliff. Good-by."

She was turning away when she stopped, an expression of horror on her face:

"My! think of that now! This was a bride's dinner-party and I put yellow flowers on the table, instead of white! What'd city folks say to that!"

(To be continued.)

GAMES FOR THE SCHOOL ROOM.

In two Illinois school districts they have discovered a way to keep their boys away from the poolrooms. The method adopted has been to introduce the pool table into the schoolhouse. Mr. Charles McKinley, head of the Pool and Billiard Association, of Chicago, presented each of the school districts with a pool table. These were placed in the game rooms. These school districts use their school building as a community and social center. They have considerable trouble in keeping their boys away from the poolhalls. The new plan gives the boys all the pleasure which may be derived from the game and at the same time removes it from undesirable association. The fathers and mothers of the school districts are well pleased with the change. Mrs. Charles H. Treadwell, principal of one of the schools, says that the tough poolroom problem will be solved when school districts are willing to establish desirable games under school supervision.

Alfalfa is a splendid servant. It promises to do much and it does more than it promises. It is also a forceful master. It teaches lessons of forethought, thrift, industry and loyalty. It will not dwell in an uncongenial environment, but insists upon a soil which is deep enough to accommodate its roots for at least three or four years, that does not have an excess of water, and which is free from acidity and has at least a small amount of inoculation.

Our 1916 offer is Better and Bigger than any previous group---Splendid and unusual types chosen in well balanced assortment comprising Eight Hardy Beauties in all.

Bigger, Better, Brighter Than Ever

Frau Karl Druschki—A pure paper-white, free-flowering, large-sized Hybrid Perpetual. It is a remarkably handsome plant with bright, heavy foliage and strong, upright growth. There is nothing in the line of perfectly hardy Roses that can compare with this one in form, color and general finish.

Robin Hood—This new Rose has a glorious rosy-scarlet color that is at once soft and bright and lasting; the bloom is full and of beautiful build. It is a grand grower, heavy caned and profuse in foliage; flowers very freely produced; we feel sure this will prove a delightful companion for Rhea Reid.

Rhea Reid—Considered by many experts to be the finest red Rose in existence; has no rival. Rhea Reid is an offspring of American Beauty, which fact alone would place it right in the front rank along with its hitherto unrivaled parent. Much darker and richer red than the American Beauty; fragrant and continuous.

Violet Blue (the Blue Rambler)—the most novel creation of the age. A perfectly hardy, rapid-growing Rambler, identical with Crimson Rambler, except the color of its flowers. The immense clusters of beautiful violet-blue flowers, reminding one at a distance of the Blue Clematis, is a sight never to be forgotten. It is entitled to a place in every garden. It will cover the porch or trellis where planted in a short time, and will succeed everywhere.

Climbing American Beauty—Climbing H. P. A seedling from American Beauty with Wichuraiana and Tea blood in its veins. The introducers say of it: "Same color, size and fragrance as American beauty, with the addition of the climbing habit. Good foliage, and better blooming qualities. One plant of this new Rose will produce twenty times as many flowers in June as the old American Beauty, besides blooming occasionally during the summer. Blooms three to four inches across; has proved perfectly hardly and stands heat and drought as well as any Rose in our collection." We feel sure this Rose has a great future.

White Dorothy. (New)—A pure white sort of well-known Dorothy Perkins, of same habit of growth and freedom of flowering; a splendid companion for the pink variety, as it flowers at the same time. A most valuable addition to this class. Awarded gold medal National Rose Society and Award of Merit, Temple Show, England.

Madame Caroline Testout—Clear bright satiny-pink: flowers very large and extremely showy; quite distinct. It is the Rose par excellence. It does well everywhere.

Marechal Niel Rose—The world-renowned Rose. A beautiful deep sulphur-yellow, very large and exceedingly fragrant. It is the finest yellow Rose in existence. It has a climbing habit.

OFFER ENDS POSITIVELY MAY TENTH

THE HOUSEWIFE

THE HOUSEWIFE is showing wonderful improvement and the evidences of this are just beginning—the very best fiction, illustrated by work of famous artists are to appear in coming issues.

Look at a few of the many names of those now contributing to The Housewife's pages:

AUTHORS.

Holworthy Hall—Author of Henry of Navarre, Ohio; the "Pepper" stories, etc.

Ellis Parker Butler—Who wrote "Pigs is Pigs;" the Great American Pie Company, etc.

Jane W. Guthrie—Who can tell a love story as few can, which explains her fame.

Lilian Dynevor Rice—Whose special cookery and household columns will be welcomed and—

No end of other features, Mother Knows Hows, Childrens' Pages, Real Poetry, Short Stories, and many big features to be announced from time to time.

ARTISTS.

F. Early Christy, whose cover designs are their own best description; John R. Neill, of whom it has been said, "He more than illustrates a story—he illuminates it;" P. J. Monohan, whose pictures are always full of action and real people; W. B. King, he of the deep understanding and deft touch; the list could be made as long as wanted, both as to artists and authors.

No expense nor time nor trouble is being spared to make

THE HOUSEWIFE

the finest popular priced magazine for women in America.

At any price The Housewife would not be a luxury —at 50 cents a year it is a necessity!

As an introductory offer—The eight famous roses described in detail above will be sent to any person who subscribes to The Housewife for one year at 50 cents a year, for but 15 cents additional. In other words for 65 cents, you get The Housewife for one year and the roses will be sent you postpaid. THIS OFFER APPLIES UPON ORDERS RECEIVED BEFORE MAY 10TH—IT WILL BE WITHDRAWN UPON THAT DATE AND ORDERS RECEIVED AFTER THAT DATE WILL NOT BE FILLED. Think of it!—Eight beautiful roses for 15 cents! Lose no time in sending in your order—take advantage of this sensational springtime offer at once. There is going to be a lively demand, so the sooner you get your request filed, the better.

THE HOUSEWIFE, 30 IRVING PLACE, NEW YORK.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

GOOD BOOKS.

What is a good book? A good book is one which will bear re-reading; a book that inspires one to higher ideals and better living; a book that has stood the test of time. A good book opens up a new field of knowledge and brings one in contact with great minds from which have come thoughts that take us out of ourselves and refresh us with new ideas and visions.

Books, someone has said, are like friends. They broaden our sympathies and our outlook on life, and in the selection of our reading, as in the cultivation of friends, we should be guided by our needs. For instance, do not read a book just because someone has said it was a good book if you are

BABY WACHTL.

not interested in the subject of which it treats. Do not laboriously wade through the works of a certain author just because you think you ought to like it. Sincerity is just as much a part of book friendships as human friendships. Read the best you can get, but let it be something that rests you and uplifts you and from which you get the most pleasure and the greatest degree of help.

Again, a book that makes an appeal one day may not fit the mood of another day. When tired do not undertake heavy reading, but turn to a light, restful novel. For profitable reading never sit down with your book and scan the pages in a nervous hurry; read quietly, restfully and thoughtfully. If you have only a few minutes to read, then read only a little and get the best there is in it. Another good idea in planning one's reading is this: For every new book read one of the old ones that has stood the test of time. Among the latter may be named "Old Curiosity Shop," "A Tale of Two Cities" and "Nicholas Nickelby," by Charles Dickens; "The Mill on the Floss," by George Eliot; "Ivanhoe," by Scott, and "Vanity Fair," by Thackeray. "Vanity Fair," by the way, has been pronounced by an overwhelming vote of present-day novelists and writers to be the greatest novel ever written. If more solid, thought-inducing books are wanted try "Heroes and Hero Worship" and "Sartor Resartus," by Thomas Carlyle; "Representative Men," by Emerson; essays by Ruskin, Addison's "Spectator" and Stevenson's "Kidnaped."

A WARNING.

This is the time of year for measles and the Philadelphia department of public health has issued a warning which might well be heeded everywhere. This is to the effect that parents must abandon the dangerous custom of exposing children to the disease for the purpose of "having it over with." It has been stated on good authority that this, as well as other contagious diseases, would die out of their own accord if proper precautions were taken at all points of infection.

The department points out that measles is by no means to be considered lightly, since statistics show that in 1915 in that city there were more deaths from measles than from typhoid fever, scarlet fever or whooping cough. And the disease is on the gain, the death toll last year being 184 as compared with seventy-seven in 1914 in Philadelphia alone.

The bulletin sets forth that voluntary exposure to the disease indicates gross ignorance and may unnecessarily predispose the child to serious complications, which may result in death. This disease, therefore, is termed a serious one and should not be treated with indifference on the part of parents or guardians. The bulletin continues:

The greatest mortality from measles occurs among children under five years old, and the cause of death usually is attributed to inflammation of the lungs, which is a frequent complication. Those who survive may be so injured physically as to predispose them to other infections. Running ears and even deafness may be the result of an attack of measles.

The early symptoms are those of an ordinary cold. The child coughs, sneezes, has a running nose, and the eyes are red and watery. These symptoms last three or four days and are followed by the appearance of a rash upon the forehead, neck and face. Children who present such symptoms should not be sent to school, nor allowed to be visited by other children. The family physician should be sent for immediately to determine the nature of the case.

If the disease is measles, it is necessary that all persons in the household who have not had it stay at home, because they may become infected and spread the disease before symptoms actually present themselves. Adults who have had the measles may attend their regular duties, excepting school-teachers and janitors, provided they do not come in direct contact with the patient and do not attend church, go to theaters or other public gatherings while the disease prevails in the household.

Other children of the family who have not had the measles, after proper cleansing and the disinfection of their clothing, may take up their residence in other premises occupied exclusively by adults. They then may be readmitted to school fourteen days after such removal, but must not visit their home until it has been disinfected by the health authorities.

The patient should be isolated in a room free from bright light and devoid of unnecessary tapestries and furniture. Bedclothes, towels, napkins and clothing used by the patient should be disinfected and then thoroughly washed. Milk dealers are cautioned not to take empty bottles from a house where measles exists unless they have been thoroughly cleansed in boiling water or disinfected in a solution of chlorinated lime, one-half pound of lime to a pail of water.

The measles epidemic is now in its period of incubation, and the extent of its prevalence in the spring will depend upon the readiness with which the public accepts the precautions mentioned.

UP-TO-DATE KITCHEN HELP.

Farmers' wives should not worry because of inability to obtain kitchen help. The time has come when a few dollars invested in modern kitchen and laundry equipment will solve the help problem.

The first and most important of all labor-saving devices is running water in the kitchen. Of course, everyone cannot afford an expensive water system with accompanying bath room connections, but there are inexpensive devices for piping water into the kitchen and providing for its disposal. The cost is so small and the benefits so great that it would be well to economize along some other line and provide for this convenience.

With water provided for the next step is improvement in laundry equipment. There are power washers on the market that are run by gasoline engine or by electricity and there are electric, gasoline and alcohol irons that save many steps, to say nothing of the heat of a stove when doing the ironing.

INTERESTED IN BABY PICTURES.

To the Editor:—I have been watching with interest the baby pictures in your paper, and, as I have three healthy babies, I am sending their pictures.

The first children were a pair of twins, Eunice and Eugene, weighing six and seven and a half pounds at birth. At the time the picture was taken they were a year old and weighed nineteen and twenty-one pounds. Now, at the age of twenty-one months they weigh twenty-four and twenty-six pounds. The boy has always been about two pounds the heavier.

The baby is five and a half months old now. She was four months old when the picture was taken and weighed nineteen pounds. Both boys were brought up on mother's milk, but the little girl was brought up on the bottle. I hope to hear from more mothers. Mrs. John C. Wachtl.

EUNICE AND EUGENE WACHTL, YEAR OLD TWINS.

MORE TWINS.

To the Editor:—We have seen different pictures of little baby girl twins, so I'll send you a picture of our little boys, Philip and David. They were born on Christmas day in the morning, 1913. They weighed each eight pounds and were brought up on mother's milk.

One of the pictures was taken just two weeks before they were a year

PHILIP AND DAVID AND LADY.

old. The other was taken last October when they were one year and ten months old.

They began to creep when nine months old, but did not walk until they were thirteen months old. I think they are as healthy and strong as any babies I ever saw. They are used to fresh air at night as well as in the daytime. We always have some windows open from the top, summer or winter, day or night, therefore, they never have even a cold.

They are exceedingly fond of water and drink nearly a glassful at every meal besides all the way from three to ten drinks between meals.

We have weighed them the 25th of every month as old as they are and found they always weighed alike with the exception of one or two ounces. They now weigh thirty-one and a half pounds.

They are not very fond of talking, for they say only a few words, such as baby, kitty, Lady (our dog's name), but they can make one understand anything they want.

Mrs. John P. Warren.

CREED TO BE FOUND IN NEW TESTAMENT.

To Constant Reader:—You say in attending different churches you are urged to join, but you have no opportunity of learning their creeds. If you will turn to Matt. 16:16 in your New Testament you will find the only divine creed that Christ said he would build His church on. If you believe that "Jesus is the Christ, the Son of the living God" and are ready to obey him, turn to Acts, second chapter, and see what Peter told the people to do who wanted to be saved.

Do the same things that people did in the days of the apostles to become Christians and you will be saved from your sins and be in the church that Christ established and need not worry over different men-made creeds.

A Reader.

WHEN TO JOIN CHURCH.

To the Editor:—I have read the letters of many and would like to hear from some of you who read this pa-

er. My husband, who is nearly twen--one, says he isn't going to join hurch until he is about forty, beause, he says, he then will be able to eep the church's rules, etc. He says e will know better what to do when e is older. We know other boys who elong to churches who swear and do any things that they should not. My usband is an industrious boy and is nxious for us to have a home of our wn. What I want to know is this: Do you think he is right about joining hurch at forty? —Mabel.

TOO MUCH BAKING POWDER.

To the Editor:—I noticed in a reent issue that "A Reader" is having rouble with her cakes falling and being coarse grained. The trouble is

WARREN THORNTON BROWN.

very likely too much baking powder. If she will use about one-third less I think she will find her cakes much nicer. The teaspoon should be just a little rounded.

Can anyone tell me why my bread dries out? It is fine grained and I have a bread box and I am sure it is not baked too long. I would be glad to have any suggestions. We get many useful hints from the paper.

C. E.

YOUNG HOUSEKEEPER HAS SUCCESS WITH CAKES.

To the Editor:—I read where someone was having trouble with her cakes. I have been married a little over seven months and, though I never baked a cake before I was married, I seldom have one fall now. I think the trouble is in the weight or measurement of the ingredients. It should be exact. Too much sugar will make a cake fall. I have had that experience. Use the same cup for sugar, milk and flour. Also, the more you beat the cake the better it will be. The batter should be real spongy when it has been beaten enough.

I have never written to the paper before, but I hope this little letter will do some one good. Mrs. B. R.

THE UNFINISHED PRAYER.

"Now I lay me—say it, darling."
"Lay me," lisped the tiny lips
Of my daughter, kneeling, bending,
O'er her folded finger tips.

"Down to sleep," "to s'eep," she murmured;
"I pray the Lord," I gently added—
"You can say it all, I know."

"Pay de Lord," the words came faintly,
Fainter still, "my soul to teep."
Then the tired head fairly nodded,
And my child was fast asleep.

But the dewy eyes half opened
When I clasped her to my breast,
And the dear voice gently whispered—
"Mamma, Dod knows all de yest."

Oh! the trusting, sweet confiding
Of the child-heart! Would that I
Thus might trust my Heavenly Father,
He who hears my feeblest cry!

—Selected.

POINTERS.

White cotton piece bags hung in the linen closet are a great convenience. Have them made with a string to draw from both sides. Mark in large letters in indelible ink what the bag contains, as "Dress Pieces," "Old Linen," "Cotton and Linen Sundries," "Old Silk," "Old Gloves," etc.

Small rugs should be cleaned out of doors each week. Place the rugs right side down and beat lightly with a rattan or wire beater. Sweep, turn and sweep the right side. Better yet, go after them with a vacuum cleaner.

Sunlight is a great purifier of air. Let it into every room in the house. Don't neglect the cellar. Keep it not only clean and sweet but give it fresh air and good ventilation.

Water boils when it bubbles, fat when it is still. Fat, however, is not ready for frying until a blue smoke rises from the surface. Be particular about this point.

French fried potatoes dipped in corn meal before frying are excellent.

Milk will keep sweet longer in a shallow pan than in a pitcher.

Soiled pans filled with hot water start cleaning themselves.

Beeswax and salt will make rusty flatirons clean.

Granulated sugar is best for cakes.

WEIGHTS AND MEASURES.

Two and one-half teaspoonfuls make one tablespoonful.
Four tablespoonfuls make one wineglassful.
Two wineglassfuls make one gill.
Two gills make one teacupful.
Two teacupfuls make one pint.
Four teaspoonfuls salt make one ounce.
One and one-half tablespoonfuls granulated sugar make one ounce.
Two tablespoonfuls flour make one ounce.
Two cups or one pint granulated sugar will weigh about one pound.
One scant quart wheat flour about one pound.
Ten ordinary sized eggs about one pound.
A piece of butter the size of an egg about one and one-half ounces.
Two cups of butter about one pound.

RECIPES.

Graham Bread.—Two and three-quarter cupfuls of graham flour, one teaspoonful of salt, one-quarter cupful of sugar, one teaspoonful of soda, one-third cupful of English walnut meats, cut up; one-half cupful of molasses, one cupful of milk, one egg, one tablespoonful of shortening. Mix dry ingredients, beat egg and add flour, add molasses, milk and shortening, stir thoroughly, put into tin and bake forty to forty-five minutes in slow oven. If sour milk is not at hand use sweet milk, one teaspoonful of baking powder and cut the amount of soda to one-half teaspoonful. Bacon fat is a good shortening.

Fig and Orange Jelly, With Cream.—One and one-fourth cupfuls figs, one and one-fourth cupfuls fig juice, three-fourths cupful sugar, one and one-half tablespoonful gelatine, juice of one lemon, one and one-half cups orange juice. Cook figs very slowly in water to cover, reserving the water in which they were cooked. Heat together the fig juice and sugar. Pour this over the gelatine, which has been soaked in cold water, add juice of lemon and orange juice. Then strain. When beginning to set, add figs, cut small, mold and serve with thick cream.

Raisin Puffs.—One tablespoonful sugar, one cupful flour, one-fourth cupful butter, one-half cupful milk, one egg, one-half cupful raisins, one teaspoonful baking powder. Steam one-half hour in buttered cups. Serve with a sauce made of two eggs, one pint milk, one-half cup sugar and one teaspoonful vanilla. Boil until it thickens. Remove from fire, add a pinch of salt and a teaspoonful of vanilla. Serve hot.

Lemon Custard.—Four eggs, one lemon, one cupful sugar, three tablespoonfuls cornstarch, butter size of an egg, one pint boiling milk. Beat the grated lemon, sugar, melted butter, yolks of eggs and cornstarch, mix well, then add the boiling milk. Let these ingredients cool and beat in lightly the beaten whites. Bake in rich pastry. This recipe makes two pies.

Brazilian Stew.—Two pounds of veal, cut in small pieces, one-half pound of salt pork, sliced thin, four quarts water, three tablespoonfuls vinegar; boil one hour; skim thoroughly. After skimming add one chopped onion and two chopped turnips. Season with salt and pepper. Then place all in a pan, put in oven and stew slowly two hours.

Breast of Mutton and Tomato.—Bone the meat, roll and tie it, place in a saucepan with the bones, brown all over a hot fire; dredge a tablespoonful of flour over meat and brown it. Put with the meat a quart of fresh or canned tomatoes, peeled and sliced. Season highly with salt and pepper. Cook slowly for an hour. Remove the bones and the string from the meat and serve with the sauce.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

HAS A TRICK DOG.

Dear Young Folks:—I have been reading your most interesting letters and I enjoy them very much. I am eleven years old and am in the eighth grade. I love to go to school and I think every child should.

I have many little pets. My pony's name is Dapple. All my friends wish they had one like him. He doesn't kick or bite. I also have a little white dog. His name is Moufflo. He can do many tricks. Sometimes he makes a wheelbarrow out of himself, and he can dance and jig. Sometimes I hold a biscuit in front of him and count one, two, three, then he will snap and catch the biscuit. One day he ran away from me. He didn't come back for many days and I thought he was lost. Then one day he came home, thin and hungry. I was so glad to see him again. On Sundays I wash his hair and tie it up with a blue ribbon and then he is so proud of himself he does not want to walk in the sand. He will jump up on a chair and looks so cute. He goes to meet me when I come home from school. I feel very proud of him. —Elsie.

GETS PRIZES AT SCHOOL.

Dear Young Folks:—I have been reading your letters and thought I would write one, too. I live in the country and walk half a mile to school. Our winter term closed the 18th of February with a program in the afternoon. I got two prizes, one

PHILIP AND DAVID, TWIN SONS OF MR. AND MRS. JAMES P. WARREN.

"I Know They'll Be So Good I Just Can't Wait"

"If you've ever tasted the big, tender, tasty, light biscuits, doughnuts, cakes and other things made with Calumet you can't blame me for being tempted.

"Mother sticks to Calumet because, like millions of housewives, she knows it means sure, uniform results—better bakings every bake day—purity in the can and purity in the baking. Calumet is economical to buy and to use. Try it now on the money back guarantee."

Received Highest Awards.

for head marks and the other for being neither absent nor tardy. Now we have five weeks' vacation. During that time I expect to visit my grandma and several cousins that live near. I am also going to finish reading "Helen's Babies" and learn some new patterns of crochet. Then I will be ready to go back to school.

—Bernice.

HELPED TO GET A DEER.

Dear Young Folks:—I am a little boy eight years old. I will tell you a story about last hunting season.

One day my father went hunting. While he was gone the horse got sick and my mother said I would have to go call my father. So I went and I took my little gun with me. I followed my father's track and at last I heard a noise. I looked up and saw a big buck. I was so frightened that I could not make a noise.

I put my gun on a stump and shot at the deer. He started to run and he was bleeding so I followed the track. I went a long, long ways and then I heard a shot. I kept on going and pretty soon I met my father. He had got the deer that I had shot at and I was very glad.

I was so hungry and tired that my father had to carry me home.

—Johnnie.

NERO PUNISHES A ROGUE.

Dear Young Folks:—I read the Young Folks' letters and thought I would write about my dog. His name is Nero.

Nero is very useful. He is sometimes sent on errands and brings parcels from the shops very nicely. He goes alone to the market.

But Nero has an enemy, a fierce bull dog that lives on the road to the market. Nero is stronger than the bull dog, but the sly rascal keeps out of sight except when Nero has a basket in his mouth. Then he runs at him and Nero is too faithful to drop his burden, so he has to scamper.

One day the scamp worried Nero all the way home. He came in much excited. I set the basket on the table and took out the meat. Then Nero leaped up, seized the basket with his teeth and ran out of the house. Nero went straight to the house where the ugly dog lives. The dog saw the basket and thought he had a good chance to bite Nero, so out he rushed. What then? Why, Nero dropped the basket in a hurry and he gave that wicked dog such a whipping that he never forgot it.

—Bertha.

PET LIKES BREAD AND CAKE.

Dear Young Folks:—I enjoy reading your letters very much. I am a little girl nine years old and I live in the country about four miles from town. I have a mile and a half to go to school. I am in the fifth grade.

I have two sisters and one brother and we have a little pony named Pet. We drive her to school and when we eat our lunch at noon she eats what is left. She will eat bread, apples and cake and is always glad when it is time to go home. Sometimes we drive her to take our music lessons. We can have lots of fun with her in vacation.

—Florence.

ENJOYS THE YOUNG FOLKS' LETTERS.

Dear Young Folks:—I often read your letters and take a great interest in them, for you all write such interesting letters. I can hardly wait until the mail carrier brings the paper.

I am thirteen years old and am in the seventh grade. I have about two miles to go to school, but I like to go just the same, for we play games and have lots of fun.

We have a fifty-acre farm and keep nine cows, two horses and two colts and about eighty chickens, mostly Plymouth Rocks and a few Buff Orpingtons. The Buff Orpington roosters are very tame. When I feed the chickens, first the colts come to get a taste of oats and then one of the roosters comes to eat out of the pail or my hand. All three roosters are tame, but I like this one best.

The next time I write to the Young Folks I am going to send a picture of myself.

—Rose.

International Sunday School Lesson

Lesson for March 12, 1916
(By E. O. SELLERS, Acting Director of Sunday School Course.)

HEROES AND MARTYRS OF FAITH.

LESSON TEXT—Heb. 11:1; 12:3.

GOLDEN TEXT—Let us run with patience, the race that is set before us, looking unto Jesus, the author and perfector of our faith.—Heb. 12:1, 2.

There are two kinds of heroism for which medals are awarded in this country. Congress confers a "medal of honor" for distinguished services and extraordinary heroism in war. The Carnegie "hero fund in peace," bestows medals and pecuniary recognition for heroic deeds performed in preserving and rescuing human life, and the first medal thus issued was given to a boy for rescuing another boy from drowning.

I. Faith Defined, v. 1. This is perhaps the most quoted and succinct definition we have of faith. What follows is but the illustration and application of the fact. Faith is an "assurance" (R. V.). The ground of this assurance and conviction is the word of God. (See Rom. 10:17). The only sure ground for a dynamic and intelligent faith is God's word: Put to the acid test of experience it never fails.

II. Faith Declared, vv. 4, 5. Faith had been declared and manifested by many illustrations before the death of Stephen:

(a) Abel, at the risk of his brother's anger, obeyed the unseen God and earned his approval; his heroic, martyred spirit still speaks to men (v. 4).

(b) Enoch, the diligent seeker after God, in a world of lawlessness lived a life well-pleasing to him through a faith that made his presence real (vv. 5, 6).

(c) Noah (v. 7), a lonely man of faith (Gen. 6:5), chose the unseen God and preached righteousness rather than avoid the ridicule of his neighbors. Noah reckoning the invisible as tangible, continued to build his ark and became a blessing to the race.

(d) Abraham and Sarah (8-12). Not knowing whither they went, by faith these lonely pilgrims unerringly followed an invisible God to an unseen country; but a faith greater still led them to "dwell in the land" and not possess it (v. 10). Their faith redeemed them from the mere emigrant character. They "looked for a city, which had foundations, whose builder and maker is God."

(e) Moses (23-28) showed his faith by a right choice. He weighed values and had "respect unto the recompense of reward." His faith "endured, as seeing him who is invisible." Moses saw by faith the "reproach of Christ," that which Christ suffered for the redemption of the world, as being of "greater riches than the treasures of Egypt."

These, and others not mentioned, are summarized by their having accomplished ten different things (32-40). They performed great deeds of heroism (32-34); they endured great suffering and persecution (35-36). All of this suffering was to issue in a greater reward with the glory that was to come (Rom. 8:18, II Cor. 4:17, 18). All these men of faith "obtained a good report."

III. Faith Demanded, 12: 1, 2. The Holy Spirit has given us this long list of heroes as an exhortation to stir up those living to the performance of their duty. The roll call of triumphant heroes is not yet completed. All these mentioned are witnesses, not onlookers. These are they who have testified to God and to the truth of his word. In the light of this testimony and on the same ground of their testimony, we are to do several things:

1. To "lay aside every weight." No runner carries any weight beyond that which is needful. Some things are burdens that are not necessarily sins. Every such thing hinders our running and should be laid aside.

2. "The sin that doth so easily beset us." Literally, that wrap themselves about us as an ill-fitting garment, and which trip or impede the runner's progress. These sins (not sin) are those little devil habits and practices which must, for that reason, be laid aside.

3. "Run with patience the race set before us." There must be steadfastness and endurance. If church members were as faithful in following up as the average business house is we would have less of lapsed church members and fewer boys and girls who drift away from the Sunday school.

4. "Looking unto Jesus." This is the keynote to this entire epistle and to this category of heroes. He is our "file-leader" and the perfector of our faith. Once we get our eyes off him we will stumble and fall in the race. "For the joy (literally equal fellowship with God) set before him, he endured the cross" (Phil. 2:6-8). If we would win the race we must despise the sin which lies in the path of absolute loyalty to God.

The work of Jesus and the bestowing of the Holy Spirit who is always with us, is the source, the author of our faith.

There is far too much easy-going Christianity and too little self-surrender and almost no privation in our modern church life.

Such a passionless Christianity has produced an indifferent world.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Wisconsin Farmer, Madison, Wis.

7594 Ladies' Waist.—Cut in sizes 34 to 44 inches bust measure. This smart bodice has two short tucks at each side of the front, a plain back and shoulder straps. The open neck is trimmed with large revers and there is a flare collar with wide points at the sides, which trims the back of the neck. The sleeve is plain, gathered into a band.

7596 Ladies' Dress.—Cut in sizes 34 to 44 inches bust measure. A great aid when altering is the design which permits the use of two materials. The one shown is of these and they are also the best and latest in style. The waist consists of a loose blouse, in jacket effect, with band trimmings simulating a vest. The skirt has a three-gore upper part and a deep contrasting flounce.

6459 Ladies' Brassiere.—Cut in sizes 34 to 42 inches bust beasure. The brassiere or bust supporter is indispensable with the low-cut corsets now worn. It serves both comfort and looks. This design is the regulation one, made with a short yoke in front, below which the material is fitted by darts. In the back the two sections cross over and are held by a single button at the shoulder.

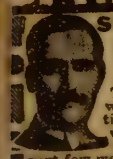
7585 Children's Dress.—Cut in sizes 2, 4 and 6 years. This dress is in one piece from shoulder to hem, with center front closing and loose, full length sleeves. The high neck has a flat collar. With it is worn an underwaist, to which are attached bloomers gathered at the knee.

7599 Girls' Dress.—Cut in sizes 8, 10, 12 and 14 years. Smart to the last degree is this little frock. It consists of a plain blouse with small, flat collar and long sleeves gathered into a band cuff. To this is buttoned a side pleated skirt which has a plain panel in front. Over both these garments is worn the jacket which has a flaring, circular cut, plain on the shoulder, but rippling at the edge.

7603 Ladies' Dress.—Cut in sizes 34

SPREAD NOW!

SPECIAL PROPOSITION
10,000 GALLOWAY
NO. 8 SPREADERS



This extra offer is made with the idea of getting ten or more Galloway Spreaders in every township in the next few weeks. One Galloway No. 8 Spreader always sells from one to a dozen more in the same community. That's why I make this new special offer to distribute 10000 advertising spreaders quickly

LOOK! Our new 250 page catalog. Tells you all about the special patented features on the famous Galloway Manure Spreader; how to make a spreader pay for itself in six months' time; shows why 3 exclusive Galloway patented features make the Galloway Spreader worth $50 more than any other spreader, but cost nothing extra on the Galloway; also shows full line of other Galloway implements and merchandise.

NEW SELLING PLANS

Cash or time—one year to pay—installment plan—note settlement—half cash half note—bank deposit or cash, at prices so low you cannot afford to do without a manure spreader now. We sell direct at less than wholesale from factory to farm at the actual cost of material, actual cost of labor and only one small profit based on tremendous output.

All Steel Beater and V-Rake

Steel Tongue

LOOK! 3 GREAT INVENTIONS

They make the Galloway Spreader in a class by itself, are:

1. Invincible Roller Feed worth $25 on any other spreader. Exclusive on the Galloway, but costs you nothing extra. One of the secrets of our light draft.
2. Patented Automatic Stop, Uniform Clean-Out Push-Board worth $10 on any spreader. Costs nothing extra on the Galloway.
3. New Steel Everlasting Beater with V-Rake which gives wide spreading and tears the manure into shreds for uniform available plant-food. This exclusive feature alone worth $15. Costs nothing extra on the Galloway.

Many other special 1916 features: low down; double chain drive; cut-under front wheels; channel steel frame, trussed like a steel bridge; steel tongue; endless force feed apron; top of box only 42 in. high; front wheels under the box, and other special features make it easy for two average horses to handle.

SPREADER PRICES LOWER

Get in on this special distribution advertising offer from now until seeding time.

At the end of twelve months, if the Galloway spreader has not paid for itself, if you have hauled out 100 loads of manure or more, and it has not proven everything I say for it, I agree to take it back, pay freight both ways and return your money, no matter on which plan you buy. Could I make this offer if I was not sure of my ground? Every sale backed by a $25,000 bank bond—an additional guarantee to you! Galloway spreaders have passed a field test in every state and almost every county.

Ask for this new 250-page book and special proposition today.

Spreaders shipped from Waterloo, Kansas City, Council Bluffs, St. Paul and Chicago.

to 44 inches bust measure. Gracefully simple, this dress has a plain blouse with diagonal closing, the neck slightly open, with chemisette and wide, turnover collar as a finish. The sleeves may be in either of two styles, one closely fitted to the arm and the other loose and flowing, gathered at both shoulder and wrist. The skirt has three gores.

7622 Ladies' Combination.—Cut in sizes 36, 40 and 44 inches bust measure. This combination is slipped on over the head. It consists of a corset cover which has a surplice arrangement in both front and back and a short petticoat which has a tab in envelope style at the lower edge.

7597 Ladies' Apron.—Cut in one size. This bungalow apron is all but a dress. It is in one piece and is slipped on over the head. It may have a side front opening as well. The neck is low, the sleeves short, and it has a small patch pocket. Gathers hold it in at the waistline.

Price of any of these patterns is 10 cents each.

BANKER-FARMER MEETING.

The following program has been arranged for the banker-farmer meeting at Madison, Tuesday and Wednesday, March 28th and 29th:

TUESDAY FORENOON, MARCH 28,
Chairman, S. M. Smith, President Wisconcin Bankers' Association.

10:00 What the Farmer-Banker Movement Means to Wisconsin—H. L. Russel, Dean of the College of Agriculture.
The Value of Pure-Bred Seed on Wisconsin Farms—R. A. Moore, In charge of Agronomy Department.
Questions and discussion by farmers and bankers.

TUESDAY AFTERNOON.
Chairman, J. R. Wheeler, Vice President Wisconsin Bankers' Association.

1:30 The Value of Herd Records—J. R. Wheeler, Banker, Columbus, Wis.
The Management of the Dairy Herd—C. C. Humphrey, In charge of Animal Husbandry Dept.
Questions and discussion by farmers and bankers.
How to Succeed with Alfalfa—L. F. Graber, Sec. Alfalfa Order, Wis. Exp. Assn.
Questions and discussion by farmers and bankers.
4:00 Feeding the University Herd—Demonstration at Dairy Barn.

TUESDAY EVENING.
Chairman, C. R. Thomson, Chairman Sub-Com. Wisconsin Bankers' Ass'n.

7:30 Moving Pictures: Alfalfa Growing.
Some Benefits to be Obtained from Farm Records—D. H. Otis, Professor of Farm Management.
Moving Pictures: How Grains are Improved.
Moving Pictures: The Building of a Wire Fence.

WEDNESDAY FORENOON, MARCH 29,
Chairman, Geo. D. Bartlett, Secy. Wisconsin Bankers' Association.

8:00 Demonstrations at the University farm buildings in the order named:
1. Poultry Plant "How to Make Hens Lay."
2. Dairy Barn, "The Selection of Dairy Cattle."
3. Hog Barns, "Making Pork." "Preventing Hog Cholera."
4. Sheep Stables, "Money-Making Mutton."
5. Beef Cattle Barn, "Profitable Beef Production."
6. Live Stock Pavilion, "Horse Breeding."
11:00 Better Horse Breeding (Illustrated Lecture) Auditorium—Dr. A. S. Alexander.

WEDNESDAY AFTERNOON.
Chairman, H. J. Maxwell, Member W. B. A. Agricultural Committee.

1:30 Swine Management—J. C. Fuller, in charge of Swine Husbandry.
Questions and discussion by farmers and bankers.

Questions and discussion by farmers and bankers.
4:00 Adjournment of meeting.

FIGHT GRAIN SMUTS AND BLIGHTS.

(Continued from page 16.)

do so would lower or destroy germination.

3. When the seed has been treated and is yet damp and swelled the seeder or drill should be set to sow one-half bushel (barley or wheat) to three-fourths bushel (oats) more to an acre than the usual amount.

No. 1. Treatment best for barley.—One pint formalin to twenty gallons of water, temperature 60° F. Soak the seed in loosely filled burlap or gunny sacks for two hours. Drain on slats over the barrels or tanks to prevent wasting the solution. Dry by spreading on a clean floor or canvas, stir occasionally with rake or shovel. It will dry faster if the wind can blow over the wet grain. Sow as soon as the seed will run freely or dry thoroughly and store in clean bags or bins until it is planted. Barley requires a two-hour treatment to kill the leaf stripe and loose smut diseases.

No. 2. Treatment best for oats, wheat and rye.—One pint formalin to thirty-five gallons water. Dip the seed, in loosely filled burlap or gunny sacks, into the solution and soak for five minutes. Drain and pile the oats and wheat on a clean floor or canvas and cover with sacks of canvas for two hours. It is best to leave rye covered four to six hours. This covering is important, as it prevents too rapid evaporation of the formalin. It is difficult to dry oats after long treatment is applied. Dry and handle as in treatment 1.

No. 3. Treatment sometimes used for oats, wheat and rye, but never recommended when the other treatments can be used. One pint formalin to thirty-five gallons water. Sprinkle the solution on the seed, using about one gallon to the bushel, shoveling over at the same time to make sure of thorough and uniform wetting. Cover in a pile with clean bags or canvas and handle as in treatment 2. The effectiveness of this treatment depends upon the thoroughness of wetting. If any part of the seed is left dry the smut may live.

MONTANA

Is the Country of Opportunity for Ambitious Young Men

DON'T let your boys go to the city—keep them in the country where their health and morals are both preserved and make them successful and independent farmers, owning their own farms and sharing an interesting community life.

Montana is the place for young men. Here millions of acres of good farm land that can be bought at small cost await the plowshare to convert them into the finest grain land. Soil is fertile—climate ideal. There are good schools and churches—everything that makes for a happy community life.

Learn more about Montana—send for illustrated descriptive literature—then next spring buy a round trip excursion ticket and go see this wonderful country.

6 Beautiful Roses FREE with The People's Popular Monthly

2 Years for Only 50c

If you send your order by MARCH 25TH

EVERYONE loves flowers and the one special favorite of all is the Rose. Naturally, it is the most popular of all. The beauty of the Rose is first manifested in its long, graceful, shapely and solid buds, delicate and firm texture and opening to present a depth of blossom showing a formation of shell-like beauty.

Read this Description of the Roses we Send

Thousand Beauties.—A very appropriate name to give this great novelty. We are free to predict that Thousand beauties will become the most sensational climbing rose yet introduced. A single cluster of flowers is a whole bouquet in itself. Blooming profusely from the beginning of June until the last of July, the flowers appear in large clusters, ten to fifteen in a cluster, are of splendid size and quite double. The colors run from delicate balsam or tender rose through the intermediate shades of bright rose and carmine, with white, yellow and various other delicate tints showing. There is no other rose in cultivation like it.

American Crimson Rambler.—The most magnificent Hardy Crimson Rose in existence. Splendid flowers, two and one-half inches across, perfectly double. Borne in grand clusters completely covering the whole bush. Color, pure, deep rich crimson, far brighter and more intense than the old "Crimson Rambler." The Rambler does not fade, bleach or wash out, but holds its bright dazzling color to the last, which adds greatly to its value. Has handsome foliage, does not mildew, and is a most abundant bloomer.

Lady Alice Stanley (Pink).—Whatever else one may plant in the way of Roses, however much the grower may be in love with other varieties, the garden should contain this Rose to be complete. It is a silvery-rose in color with a sweet fragrance, and the flowers come freely and constantly. The blossoms are large, full and globular.

Mrs. Aaron Ward (Yellow).—A creamy-yellow rose, strikingly pleasing, both in form and fragrance. The flowers are large and heavy, beautiful in every respect, and come freely upon the plant. The growth of the bush is inclined to assume a compact form and produces flowers in abundance. It blends well with the other yellow varieties. Yellow roses are often desired by many growers of this flower and this one is sure to become a great favorite.

Leslie Holland (Red).—A fragrant dark velvety crimson Rose that flowers constantly upon a strong, vigorous plant, whose foliage is remarkably resistant to mildew. The color is constant and durable, being one of the few dark red Roses that does not rapidly fade.

White Killarney.—A creamy-white Rose, very highly perfumed, with a texture of blossom that forms a wonderful substance. The flowers are large, full and heavy, and follow each other so rapidly that there is not a noticeable pause between the successions of blossoms. The bush is particularly strong and vigorous in its growth, with all large, handsome foliage, which sets off the exquisite flowers in a most charming manner.

Remember—You will receive the six rose bushes (1 year plants) just as described and The People's Popular Monthly for 2 full years for only 50c. ***No need to write a letter*** but just write your name and address on the coupon below and fold 50c (stamps, coin, check or M. O.) in a piece of paper. We will know exactly what you are to receive and your order will have our best attention.

GOOD DAIRY RECORDS.

Some splendid records were made last year in the River Falls & Roberts Cow-Testing Association, which closed its year on February 1st and has been reorganized for another year's work, the year to begin soon. Mr. P. B. Van Horne, who conducted

DAISY, GRADE HOLSTEIN.

Owned by John L. Chapman, River Falls, Wis. At five years her record is 10,343 pounds of milk, 400.3 pounds of fat, milk testing 3.87.

the tests last year, will return for the coming year and The Wisconsin Farmer is indebted to him for a report of the year's work, together with the accompanying illustrations of

MAGGIE, GRADE HOLSTEIN.

Owned by John L. Chapman, River Falls, Wis. Record at six years, 12,086 pounds of milk, 457.3 pounds of fat, milk testing 3.78.

four of the eleven cows which produced more than 400 pounds of butter fat during the year, February 1, 1915, to February 1, 1916. Some splendid work has been done by this association and of the eleven cows producing more than 400 pounds of fat nine, or all except two, are grades. In this list are two Short-horns, five Holsteins and four Guernseys.

The best cow in the association of over 450 cows was a grade Guernsey, Buttercup, owned by Mr. John L. Chapman, of River Falls. She calved

BUTTERCUP, GRADE GUERNSEY.

Owned by John L. Chapman, River Falls, Wis., at nine years she made a record of 10,560 pounds of milk, 501.6 pounds of fat, average test 4.75.

January 14, 1915, making 10,560 pounds of milk and 501.6 pounds of butter fat. Mr. Chapman had three other cows making over 400 pounds of butter fat. He is also the proud possessor of the best four cows in the association. The four averaged 442.1 pounds of butter fat.

The following list is compiled for the cows giving over 400 pounds of butter fat:

Owner, name and breed	Lbs. B. fat
John L. Chapman, Buttercup, G. G.	501.6
Alton Bros., Pet, G. H.	475.2
Theo. Nopp, Cad, G. S. H.	461.4
John L. Chapman, Maggie, G. H.	457.3
O. R. Schwalen, Beauty, R. G.	457.2
H. A. Rundell, Bessie, G. G.	450.3
D. E. Flower, Trilby, R. H.	440.9
F. T. Wilford, Maude, G. G.	422.0
John L. Chapman, Susie, G. H.	409.3
Oscar Weiss, Nellie, G. S. H.	403.3
John L. Chapman, Daisy, G. H.	400.3

Mr. W. A. Chapman has an exceptional heifer who deserves special mention. She is a registered Holstein, Colantha, making 386.8 pounds of butter fat and freshened April 1, 1915. This record was made in ten months' milking and at the close of the January test she was under a good flow and by April 1, 1916, she will have passed the 425-pound mark. Mr. Walter Chapman had twenty-three

SUSIE GRADE HOLSTEIN.

Owned by John L. Chapman, River Falls, Wis. Age five years. Record, 10351 pounds of milk, 409.3 pounds of fat, test of milk, 3.95.

cows which averaged over 300 pounds of butter fat.

"Try-a-bag" of fertilizer. Our brands are soluble and active, and not only increase yield but improve quality and hasten maturity. Agents wanted. Address American Agricultural Chemical Co., Cleveland, Cincinnati, Detroit or Baltimore.

Three Hundred Million Bushel Crop in 1915

Farmers pay for their land with one year's crop and prosperity was never so great.

Regarding Western Canada as a grain producer, a prominent business man says: "Canada's position today is sounder than ever. There is more wheat, more oats, more grain for feed, 20% more cattle than last year and more hogs. The war market in Europe needs our surplus. As for the wheat crop, it is marvelous and a monument of strength for business confidence to build upon, exceeding the most optimistic predictions."

Wheat averaged in 1915 over 25 bushels per acre
Oats averaged in 1915 over 45 bushels per acre
Barley averaged in 1915 over 40 bushels per acre

Prices are high, markets convenient, excellent land low in price either improved or otherwise, ranging from $12 to $30 per acre. Free homestead lands are plentiful and not far from railway lines and convenient to good schools and churches. The climate is healthful.

There is no war tax on land, nor is there any conscription. For complete information as to best locations for settlement, reduced railroad rates and descriptive illustrated pamphlet, address

GEORGE A. HALL 123 SECOND ST., MILWAUKEE, WISCONSIN

Canadian Government Agent.

B. V. T. Silo

Built of vitrified Brazil fire clay tile, the most durable material in existence. B. V. T. tile are non-porous, won't chip or crack. The only silo that is actually

STATE HOLSTEIN-FRIESIAN MEETING.

(Continued from page 7.)

his plea, and when they get good animals encourage them and help them.

Advertising, Mr. Aitkins pointed out, is an important matter for the Holstein men to consider. Not only advertising to sell animals but also advertising the great food value of milk and dairy products to sell the Holstein milk. He told of the dairy council's plan for national advertising campaigns on the value of milk as food and dairy products as good and predicted that the consumption could be doubled in a few years and, of course, that means better prices for stock and better prices for milk.

C. P. Norgord, commissioner of agriculture, spoke at the forenoon session on the "State and the Farmer." As much interest was shown in his discussion of tuberculosis as in any other matter discussed at the convention. Mr. Norgord explained the state plan to prepare an accredited list of tuberculin-tested herds which has been worked out in more detail since it was presented during Farm and Home Week at Madison. He used charts showing how easily tuberculosis is spread, one showing that one public sale carried tuberculosis into twelve herds. Another showed its spread by the use of skim milk from a cheese factory. Tuberculosis was brought into two cheese factory districts by the purchase of new animals and was spread by the skim milk from the two factories. In a few years 30 per cent of the animals in these two districts had contracted the disease, while only 8 per cent of those in the adjoining districts had contracted it. Another chart showed how the disease had been spread by a watering trough in the barn, a cow at the head passing it to all cows along the trough.

The members entered into a lively discussion of the accredited list plan. Four states now bar Wisconsin cattle unless inspected by federal authorities. This is an important item to breeders and shippers and Mr. Norgord's plan is to place Wisconsin in a better light and make it possible for breeders to ship everywhere on state tests and compile a list from annual tests of tuberculin-tested cows. This will advertise the herds free from the disease, so far as the test can show, and would be of great value to the breeders. Afterwards the convention adopted this resolution:

Whereas, our attention has been called to the question of tuberculin tested herd lists;

Be it Resolved, that this association approve of this plan in general and awaits its development.

The plan as outlined by Mr. Norgord is not yet complete and is still open to revision and suggestion. As it now stands it contains the suggestions made at the conference of representatives of all the cattle breeders' associations following the meetings at Madison during Farm and Home Week. The tentative plan as outlined at Watertown follows:

The owner of any herd of cattle may make application to the Wisconsin Department of Agriculture to have his herd placed on file for preparation to enter the "Accredited Tested Herds" list. It is not required that these herds must have been tested prior to application.

(a) The tuberculin testing of these herds after application has been made shall be by veterinarians in the employ of the department of agriculture.

(b) The number of tests required to be made upon each herd will depend upon:
   1. If any re-actors are found.
   2. Number of re-actors found on first test.
   3. Previous history of herd with regard to tuberculosis.
   4. Whether some of the herd have been bought from untested herds or not.

Number of cattle to be tested by one man at one time.

While testing in this work, the veterinarian shall not test more than fifty head at one time.

Re-actors must be removed, and also other diseased cattle, under the direction of and in a manner satisfactory to the board.

If tuberculosis has existed or re-actors are found, the premises shall be disinfected under the direction of the board.

1st. Introduction of adult animals: No adult cattle shall be introduced into these herds unless such cattle are either from accredited tuberculin tested herds or have been tuberculin tested by a graduate veterinarian immediately before entry into the herd.

2d. Calves: Untested calves shall not be placed in these herds when bought from any herd except a herd which is also on the accredited tuberculin tested herds list, and any other calves bought must be segregated until such time as they can be tested.

3d. Nurse cows or other cows introduced temporarily into herds must be on same basis as the above.

Calves in these herds shall not be fed on milk skimmed in public skimming stations or on whey from cheese factories, unless such milk or whey has been sterilized by thorough pasteurization or heating, sufficient to kill tubercular germs.

The expense of making these tests must be met by the owner of the herd. This shall be as near the actual cost of the work as can be calculated by the live stock sanitary board. (Actual rates will be established and published later.)

Only breeders who wish to avail themselves of the privileges of the accredited tuberculin tested herds plan of the live stock sanitary board shall sign an agreement to abide by all the rules and regulations herein enumerated.

1. To co-operate.
2. To furnish all data available to tester.
3. Submit herd to test whenever it is thought necessary by the board.
4. To furnish sufficient attendants to keep cattle in good condition and to keep barn clean while testing.
5. To provide conveyance and suitable maintenance of deputy while making tests.
6. To allow examination of any or all animals in the herd at any time.
7. Not to introduce any cattle except as provided by the board.
8. To comply with orders as to disinfection of premises.
9. To pay to the live stock sanitary board, the amount determined by the live stock sanitary board.
10. To remove all reactors whenever found.

Dr. W. L. Williams, of Cornell University, New York, gave a very interesting and instructive talk on "Contagious Abortion," which was illustrated with lantern slides. Mayor Kading, of Watertown, delivered the address of welcome to which F. B. Fries, of Richland Center, responded on behalf of the association.

J. M. COYNER, OF MONDOVI.

Wisconsin man has recently been chosen county agricultural agent for Portage county. He will be located at Stevens Point.

The banquet on the opening evening was social in character and greatly enjoyed by all. Mr. Riordan, as acting president, presided as toastmaster and called on various breeders for remarks. Fred Pabst, of Oconomowoc, was introduced as "Col." Pabst, to which Mr. Pabst replied that he desired no such title, the only honor he wishing was that of producing a forty-pound cow. S. A. Baird, of Waukesha, spoke briefly on the taxation of cattle and told of the injustice often found where a cow in one town is assessed at $75 and one of like breeding and similar market value is assessed at $150. He hoped for some method in Wisconsin eventually of an equitable assessment of dairy stock.

Other addresses were made by William Everson, of Lake Mills; R. J. Schaefer, of Appleton; F. B. Fries, of Richland Center; S. E. Jones, of Watertown; manager Norton, of the Carnation Farms at Oconomowoc, and A. J. Glover, of Hoards Dairyman. Mr. Glover told of the wonderful result of unity and co-operation. Just forty-four years ago, he said, the pioneer of all dairy organizations—the Wisconsin Dairymen's Association—was organized in Watertown.

It was announced also that hereafter dues in the association will be $2 a year as before, but that no initiation fee of $2 will be charged. The $2 entrance fee now will cover the dues of the first year also. Heretofore, the first year cost has been $4.

WISCONSIN MEN PROMINENT.

Charles McCarthy, C. J. Galpin, J. L. Gillin, Edward M. Barrows, John R. Commans, Peter W. Dykema and Edward A. Fitzpatrick, of Madison, Wisconsin, have joined with about seventy leaders in the community-center movement in signing a call for a national conference on the use of school buildings as community and civic centers. The conference will be held in New York beginning April 19th and ending April 22d. Its president is Dr. Luther H. Gulick, president of the Camp Fire Girls of America. Among others signing the call are Prof. John Dewey, of Columbia University; Prof. James Ford, of Harvard; Raymond N. Phelan, of the University of Minnesota; Henry Bruere, city chamberlain of New York; Mrs. J. Borden Harriman; George E. Vincent, president of the University of Minnesota; William G. Willcox, president of the New York Board of Education. The executive chairman of the conference is Albert Shiels, director of the division of research of the New York Board of Education. The secretary of the conference is John Collier, 70 Fifth Avenue, New York.

In less than three years the membership of the Alfalfa Order of the Wisconsin Agricultural Experiment Association has grown from a very few to more than 1,300. Its enthusiastic members are working co-operatively to place alfalfa on the rural map of Wisconsin.

Failures in alfalfa growing in Wisconsin are often due to one or more of the following causes: Lack of sufficient lime in the soil, improper inoculation, low fertility, lack of drainage, late fall pasturing and too late sowing of the grain crop with which it is sown.

8 Fine, Hardy Rose Plants Free

To introduce our popular home magazine, THE PEOPLE'S HOME JOURNAL, into thousands of homes where it is not already taken, we offer for a limited period only, **absolutely free** for a year's subscription at 50 cents (the regular price), a Set of Eight Fine, Everblooming Tea and Hardy Roses, all choice varieties, as follows;

1 **THE BRIDE.** A mammoth, ever-blooming Cream-White Tea Rose, of exquisite form and texture. A strong, healthy grower, and a constant bloomer. One of the largest white roses known, the flowers being very double; can be cut with long stems.

1 **CHAMPION OF THE WORLD.** A hardy ever-blooming Rose, producing flowers in abundance of a rich, glossy pink color, and delightfully fragrant. A strong, vigorous grower.

1 **MRS. DUDLEY CROSS.** A pale, soft, rosy-yellow Rose, an exquisite color, with blooms of beautifully rounded form held on good stems. A splendid bedding variety.

1 **WELLESLEY.** The beautiful Pink Rose, the outside of the petals being bright and clear, with a silvery reverse. A very vigorous, healthy grower, free bloomer, and clothed with heavy dark green foliage.

1 **WHITE DOROTHY PERKINS.** A new climber, a pure white sport of the well-known Dorothy Perkins, with the same habit of growth and freedom of flowering. A splendid companion for the pink variety as it blooms at the same time.

1 **YELLOW MAMAN COCHET.** An unusually hardy, pure Tea Rose. A sturdy, clean grower, with stiff stems and luxuriant bloom. Flowers are large, perfectly double and shapely, of a rich sulphur-yellow color.

1 **QUEEN OF BEDDERS.** This is, without doubt, the best of the red Roses for bedding. It can be planted anywhere, being entirely hardy. The flowers are large, and of a fiery scarlet.

1 **RED DOROTHY PERKINS.** This is an improved Crimson Rambler. The flowers are large and double, thirty to forty on a stem, the color being an intense crimson-maroon, tipped with scarlet. A fine climber.

The eight rose plants described above are grown by one of the largest and most reputable rose growers in the United States. They are not cheap, common roses, but well-known standard varieties. We send strong, healthy, well-rooted, 1-year-old plants, warranted true to name and color. They are carefully protected in the packing, and are shipped, prepaid, from the greenhouses where they are grown, directly to our subscribers, thus receiving but one handling, and are guaranteed to reach their destination in good order.

THE PEOPLE'S HOME JOURNAL

has been published for over thirty years, and goes regularly every month into over nine hundred thousand homes, where it has reached the very hearts of its readers. Its widespread popularity is no accident—it is the natural outcome of a policy consistently adhered to from its very beginning over a third of a century ago. The publishers believe, and the success of the magazine has proven it, that the great majority of people read magazines for **both** pleasure and profit. In other words, while THE PEOPLE'S HOME JOURNAL maintains a number of excellent departments for the housewife, each conducted by an expert in her line, the publishers believe that for the greater part of her reading the busy housewife wants to get away from the practical side of life with its, ofttimes, perplexing problems that demand her care and attention for ten to twelve hours of the day, and wants recreation, entertainment, inspiration for mind and body—wants to read bright, cheerful, optimistic, wholesome, refreshing stories and articles dealing with the emotions of life. Such is THE PEOPLE'S HOME JOURNAL, edited for all members of the family—in fact, it is a member of the family in over 900,000 homes—conceded to be the most indispensable publication in the magazine field today, catering to the tastes and needs of every American household.

OUR SPECIAL OFFER— To any one who will send us 50 cents in payment for a subscription to THE PEOPLE'S HOME JOURNAL before May 31st, we will send the Magazine for one year, and in addition will send free the full Set of Eight Fine Rose Plants above described, both fully prepaid.

Our offer is remarkably liberal, and every one who is fond of flowers should take advantage of this unusual opportunity to secure a fine collection of choice rose plants absolutely without cost. Address all orders:

4 TIMES THE LIGHT From Same Oil—Using This MANTLE

BEATS ELECTRIC

Make Your Home Bright and Cheerful

GOVERNMENT tests show that by use of this wonderful mantle, you get four times as much light from a gallon of oil as in the ordinary way. The mantle is made from the rare earths thorium and cerium, best light giving substances known to science. By this process you can not only get more than twice the light from half the amount of the same kind of oil you now use, but it will be a pure white, brilliant, steady light, which scientists at leading Universities say is nearest in color to sunlight and better than electric. Lights whole room. No odor, smoke or noise. No pumping up; no pressure; no danger. Revolutionizing farm and small town home lighting. Saves the eyesight.

One in each locality is wanted to show this new way of getting better light. Be first and get the opportunity of getting **Yours Free**

Just ask for free book. Tells all about wonderful oil-saving process of getting white light better than electric. You will also be given full particulars about our liberal free offer. Agents wanted.

SEED CORN

ADAPTED to central and northern Wisconsin. Early varieties with guaranteed germination. Hardiest alfalfa, clover and grass seeds. Seed oats and Marquis wheat. Write for price list. Address **John Henderson, R. 1, Cokato, Minnesota**

SEED OATS for sale. Wis. White Bonanza, short and stiff in straw, yields 80 bu. per acre, state tested. Albert Wollin, Johnson Creek, Wisconsin.

When writing to advertisers please mention The Wisconsin Farmer.

Live Stock Items and Commercial Notes

Gathered by Representatives of The Wisconsin Farmer

Attractive Prices on Percherons and Belgians.

WE recently called on Thos. McNamara, Bloomington, Wis., the veteran horseman of Grant county and found him with three choice Percheron stallions and one outstanding imported Belgian horse. Until recently Mr. McNamara has operated his farm and has maintained the following stallions for his own use on his registered mares and for the good of the community. He has recently moved to town and does not care to keep these horses for public use only and for that reason they are being offered for sale. The advertisement that appears in this issue gives the age of each and inasmuch as he has had these horses since they were three and four years old, it goes without saying that they are good ones or he would not have kept them in the stud. The attraction of the offering is a four-year-old black horse that he bred and raised. He has all the good points of a Percheron draft horse and is one of the best colts we have seen in Wisconsin. The seven-year-old gray horse is the "Dutchmans' type," heavy bone, short back and a compact draft horse. We saw some excellent colts sired by this horse. The eight-year-old gray is heavier, a ton horse in ordinary condition, sound in every respect and an excellent sire. The Belgian weighed 1,980 pounds the day we were there and is a stallion that can go into any locality and make good. Mr. McNamara guarantees these horses for soundness and he will give you a 50 or 60 per cent breeding guarantee with each stallion. Here is a grand opportunity for some one to get a stallion that has made good in the stud. They have paid for themselves in the stud and consequently the prices he asks will appeal to anyone wanting a stallion for the coming season and you can well afford to investigate these horses. In this issue can be seen a kodak picture of the black four-year-old Percheron. Write at once for detailed description and price, on one or all and please mention The Wisconsin Farmer. See page 39.—Adv.

McNutt's Holsteins.

REGISTERED and high-grade Holsteins are advertised for sale on page 38 by H. F. McNutt, Oxford, Wis. He has a large herd of close to a hundred head of registered animals and a hundred head of grades. At the present time he is offering heifer calves and yearling heifers and young cows bred to the forty-pound bull, Johanna King Segis. He is a son of the former world's record cow, Johanna De Kol Van Beers, that with her three sons have sold for a total of $62,000. Mr. McNutt is also offering high-grade springers and young cows that are well marked, of good, straight type and of high producing ability. These were sired by registered bulls and are bred to his prize-winning bull, Wisconsin Colanthus. He can supply a carload of registered or high-grade females if desired. He also has several fine yearling bulls and younger out of A. R. O. and untested dams. Whatever your wants may be in the way of Holsteins they can be supplied to good advantage in this herd.—Adv.

Get Information in Time.

DON'T wait until the rush season before you decide on the silo filler to buy, but study up on them now so that you will be well informed when the time comes to buy. Rosenthal Corn Husker Co., Milwaukee, Wis., advertises a silo filler on page 24 of this issue which is claimed to do very rapid efficient work. The company makes three sizes running from four to eighteen horse power. The distinctive features advertised are: A direct drive to main cutterhead shaft, two and three-eighths inches in diameter; a powerful six-blade fan on same shaft; and an emery wheel attached. It will pay to write for the company's catalog and also their Farmers' Account and Record Book both of which are free to our readers. Please mention The Wisconsin Farmer when you write.—Adv.

Hasse's Holsteins.

SONS of the thirty-seven-pound bull, Sir Canary Belle De Kol, are advertised ford sale on page 38 by John A. Hasse, Monroe, Wis. He is a son of the 37.46-pound cow, Belle Mercedes Lady. She has been five times an association prize winner, winning both first and second association prizes in 1913. At nine years old she gave 721 pounds of milk in seven days and made 146 pounds of butter in thirty days. She is a daughter of Sir Gem De Kol, that has two daughters with records of thirty-three to thirty-seven pounds respectively. Mr. Hasse also has a few females for sale. For further information in regard to these animals write to the above address.—Adv.

Bear's Short-horns.

GREEN VIEW STOCK FARM, owned by John Bear & Son, Spring Green, Wis., offer for sale the richly bred Short-horn bull, Royal Sultan 390142. He is a 2,300-pound grandson of the great bull, Whitehall Sultan. He is an excellent individual of great size, good, straight conformation and of good type. They are also offering several of his yearling sons, which are ready for immediate service. For pedigrees and further description write to the above address. See page 37.—Adv.

A Good Rock County Duroc Herd.

ONE of the real good Duroc Jersey herds in Wisconsin is owned by E. H. Parker, Janesville. His herd numbers about fifteen brood sows that will farrow this spring. These sows carry the blood of many of the greatest sires of the breed. One of the good ones is Opal Orion, and she is by the great Orion Chief, a boar that stands out preeminent as a sire of high-class sows. She now has a seven-pig spring litter by a son of Cherry King, so that is good enough for anyone. Two daughters of Illustrator do their part to keep up the popularity of this herd. Two are by Dominant Col., the Illinois grand champion of 1912 and a son of the renowned Sensation Col. They are litter sisters out of an Illustrator dam. Others bred by the Wisconsin champion, Lee's Defender. Daughters of Marion Wonder (C. W. Again-H. A.'s Queen) are as good as the best. Mr. Parker has been using a son of Royal King. This boar is by Orion Cherry King, by Cherry King by Cherry Chief. Royal King was sold to Johnson Bros., of Minnesota, last year for $2,650. At this time Mr. Parker has two fall boars that will be heard from later. One is by Orion Cherry King, out of a Watt's Model 1st dam, and the other is by The Chief's Col. by Cherry Chief, out of a Pal's Col. dam. Here are two choice boar prospects, and with the care their owner will give them, you can rest assured that there will be some hog show at Milwaukee this fall. Keep this good herd in mind. See page 39.—Adv.

Bernd's Poland Chinas.

BIG-TYPE Poland Chinas and Short-horn cattle are advertised for sale on page 39 by W. J. Bernd, New Richmond, Wis. He is offering spring gilts and fall yearling gilts bred for spring litters. Also a few fine yearlings and spring boars. The gilts are bred to King Jumbo, a son of the 1,106-pound boar, Long Jumbo. The fall yearlings are bred to Big Wonder, first-prize boar at the Minnesota State Fair. Write for further particulars.—Adv.

Upland Farms' Holsteins.

THE Upland Farms, Walworth, Wis., have a choice herd of seventy-five registered Holsteins. They are well marked, of choice breeding, and of high production ability as a whole. The herd is headed by the twenty-seven-pound bull, Sir Pontiac Artis Duke 77994. He is a son of the 31.71-pound bull, Sir Korndyke Pontiac Artis, that has forty-five A. R. O. daughters. His two nearest dams average 29.42 pounds of butter in seven days and his three nearest sires have 158 A. R. O. daughters, eleven with records over thirty pounds. At the present time they are offering some choicely bred yearling bulls, several from A. R. O. dams. They are well marked, of good, straight conformation and big, growthy animals. For extended pedigrees and further information write to the above address.—Adv.

Tochtermann's Holsteins.

SEVERAL choicely bred Holstein bulls of serviceable age and younger are advertised for sale on page 38 by C. Tochtermann, Monroe, Wis. There are three a little over a year old, which are strong enough for hard service at the present time. Nearly all of the bulls offered for sale are from A. R. O. cows with records up to twenty-four pounds of butter in seven days; 750 pounds of butter and over 17,000 pounds of milk in a year. The bulls are well grown, of good, straight type and from choicely bred cows. Their sire, Piebe Longfield De Kol, is a grandson of Homestead Jr. De Kol, that has sixty-nine A. R. O. daughters, five with records ranging from thirty to 35.55 pounds of butter in seven days. For extended pedigrees and further information in regard to the animals offered for sale write to the above address.—Adv.

Gordon's Holsteins.

SOME choice young Holstein bulls are offered for sale at very reasonable prices by J. Roy Gordon, Mineral Point, Wis. These were sired by Pontiac Cornucopia Coronis, whose dam is a 27.06-pound 5 per cent daughter of Hengerveld De Kol, which has 116 A. R. O. daughters, eight with records above thirty pounds. Some of these bulls are out of advanced registry dams with creditable records. They are well grown, well marked and of good type. For extended pedigrees and further information write to the above address. See page 38.—Adv.

Notseter's Short-horns.

YEARLING Short-horn heifers and bulls are advertised for sale on page 37 by John Notseter, Deerfield, Wis. He has a fine herd which he established many years ago. For several years he has purchased his breeding stock of McLay Brothers, who are known all over this continent as the leading breeders of Clydesdale horses and as Short-horn breeders. The young animals offered for sale were sired by a McLay-bred bull, King's Crest 396857.

A TYPICAL Beau Perfection Hereford owned by Birch & Thompson, Lake Geneva, Wis.

Most of them are also out of daughters of a McLay bull, Copestone. King's Crest was by Scarlet Crown, that was out of Duchess of Gloster J. and sired by Golden Crown. Copestone was by Gloster Archer. Several are out of daughters or granddaughters of Scotch Lad by Guardsman. The cows in the herd are of Arabella and Imp. Bertha breeding, which combined with the Duchess of Gloster blood has produced some very good, growthy yearlings. For further information in regard to these animals write to the above address.—Adv.

A Low-Priced Tractor.

FARMERS looking for a low-priced, light-weight, serviceable tractor should learn of the Happy Farmer tractor advertised on page 25 of this issue. By simplifying the construction of this machine, the makers are able to offer it for $550 and still furnish a tractor that is durable and efficient. Happy Farmer tractors are built so that 88 per cent of the weight is on the traction wheels, thus giving it the greatest pulling power possible. Other important features are an all steel frame, enclosed gears run in oil, and wooden clutch shoes, pins, rollers, etc., which are easily replaced when worn out. For full particulars regarding this exceptional offer write the Happy Farmer Tractor Co., 330 Third Ave. North, Minneapolis, Minn., and kindly refer to this paper.—Adv.

Fisher Buys Disturber 52d.

WE have just been advised that J. L. Fisher, Janesville, Wis., has purchased Disturber 52d. It will be remembered that this was the first-prize senior yearling boar at the Wisconsin State Fair, 1915. Mr. Fisher has changed his name, and from now on he will be known as Gold Bond. He is sired by the noted Disturber, out of a Tattle Tale sow by Educator by Ohio Chief. It would be difficult to write a better or more fashionable pedigree. More good hogs have come from this line of breeding than any other. This boar will be mated to a grand lot of sows, and we feel confident Mr. Fisher will be able to make a reputation for him as a sire. He didn't get the boar in time to breed any sows for early litters, but he has several bred for April and May.—Adv.

The Use of Cement.

THIS age is called a "concrete age" by many; true enough, the use of concrete has grown marvelously in the last few years. Farmers especially find many uses for concrete in building barns, silos, feeding floors, watertroughs, fence posts and other necessities and conveniences on the farm. Success in the use of concrete depends largely on the grade of cement used, therefore care must be exercised in buying cement. Marquette Portland Cement is tested and guaranteed by the Marquette Cement Manufacturing Co., Chicago, Ill., whose advertisement appears on page 12. Their product is known by the green zig zag tag on the bag. If your dealer does not carry Marquette cement, a postal sent to the company will bring information regarding the nearest point where it can be secured. If you write them please mention this paper.—Adv.

The Eagle Farm Tractor.

THE farm tractor is past the experimental stages; its practical service to the farmer has been demonstrated on thousands of grain-belt farms, where it is considered more economical than horses. Since many of our readers will be in the market for tractors soon, we would advise them to investigate the Eagle Farm tractor which is advertised on page 11. This tractor is claimed to be especially smooth-running, with abundant power for all-around belt and tractor work. It does both heavy and light work, quickly and economically. This is important since the greater the number of uses to which the tractor can be put, the greater the return on the investment. The Eagle tractor is not an assembled machine, since all parts are made by the Eagle Manufacturing Company in their own factory at Appleton, Wis. The knowledge and experience of men who are familiar with Wisconsin farms and farm conditions have entered into the construction of this tractor, therefore, Wisconsin Farmer readers should be especially interested in learning about it. Since an investigation costs nothing, we would suggest that you write today for complete information. Address Eagle Manufacturing Company, 672 Winnebago St., Appleton, Wis., and mention The Wisconsin Farmer when writing.—Adv.

An Auto-Oiled Windmill.

WHENEVER you climb up the tower to oil or repair an old, squeaking windmill, you are losing time. If you wish to save this time, and also the expense of repairs, you should investigate the Auto-Oiled Aermotor, advertised on page 25 of this issue by the Aermotor Co., 1125 S. Campbell Ave., Chicago, Ill. This self-oiled motor can be attached to the wheel and vane of your old windmill and the oil supply will need replenishing only once a year. The working parts of the motor are inclosed in a metal hood or helmet which keeps out the rain and dust. The company has aimed to produce a set of working parts which will give the greatest amount of power from the windmill with the least amount of attention and expense for repairs. If you want better service from your old windmill or want a new one, you should write to the Aermotor Co., for their Folder-Hanger which tells about the Auto-Oiled Aermotors and Easy-To-Build-Up towers. Kindly mention this paper when writing.—Adv.

The New Gilson Weeder.

A NEW garden tool, the Gilson Weeder, is on the market, which it is claimed does better work than the old-fashioned hoe and is much easier to handle. It will do more than a hoe in cutting weeds, loosening the soil and working close to the plants or shrubs without injuring them. The blade is double-edged, and is made in four widths running from three and one-half inches to eight inches. By reversing, the weeder may be used as a rake. If you have a garden, you should write to J. E. Gilson Co., Dept. 14, Port Washington, Wis., for folder and prices on this new tool. See page 15 for their advertisement and mention The Wisconsin Farmer when writing.—Adv.

Rowe's Holsteins.

SIR CANARY ALCARTRA is the sire of the young bull advertised for sale on page 38 by A. L. Rowe, Waupaca, Wis. These young bulls are well grown are three-fourths and nine-tenths white in color and several are from A. R. O. dams with records up to twenty-one pounds of butter in seven days. Sir Canary Alcartra was sired by the $1,000 bull, Canary Paul, and out of Nellie Alcartra Rue, that made 874 pounds of butter in a year. For charted pedigree and description of the animals offered for sale write to the above address.—Adv.

Jacobson Brothers' Holsteins.

JACOBSON BROTHERS, Menomonie, Wis., are offering registered Holstein heifers, one to twelve months old, for sale on page 38. They are also offering bull calves, one to six months old. These are out of good producing dams, many with A. R. O. records. They are all sired by Hillvale Robert La Follette, a richly bred Ormsby bull. For further information in regard to breeding write to the above address.—Adv.

Paddock Brothers' Holsteins.

PADDOCK BROS., Augusta, Wis., are offering registered Holstein heifers and cows for sale on page 38. They are choicely bred, of large, straight type and good producers. Many of them are granddaughters of Homestead Jr. De Kol and have A. R. O. records. They are also offering registered Percheron

stallions and Collie pups. For pedigrees, prices and description write to the above address.—Adv.

Freehoff's Berkshires.

W. A. FREEHOFF, Waukesha, Wis., writes us that he has everal fine fall Berkshire boars for sale. One is an August boar sired by the first prize winner at the state fair last fall. He is a good growthy, meaty pig. Another is a September pig of Masterpiece breeding, a growthy showy animal. He has a few boars sired by a half brother to the grand champion at the recent world's fair. Mr. Freehoff guarantees these boars to please, or you need not keep them. Mention this paper when writing. See advertisement on page 39. —Adv.

North's Holsteins.

JOHN NORTH, Kilbourn, Wis., is offering registered Holstein heifers, cows and young bulls for sale on page

MAPLECREST DE KOL FRIEND, sire of the yearling Holstein bulls advertised for sale on page 38 by Watson & Will, Menomonee Falls, Wis.

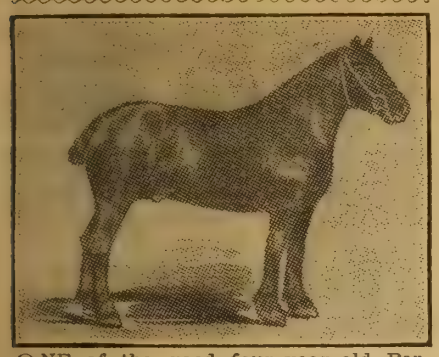
38. Some of these were sired by Jewel Aaggie Alcartra 143023, whose four nearest dams averaged over twenty-five pounds of butter in seven days. For extended pedigrees and further information in regard to these animals write to the above address.—Adv.

Little's Durocs.

DUROC spring gilts are advertised for sale on page 39 by B. W. Little, Janesville, Wis. They are of Defender, Ohio King and Wonder lines of breeding. They are bred for March and April farrow to Critic Top Notcher, half brother to the grand champion at the 1912 Nebraska State Fair. For further information in regard to the animals write to the above address.—Adv.

Vandervort's Jerseys.

REGISTERED Jersey bulls are advertised for sale on this page by Rollie Vandervort, Tomah, Wis. These were sired by Golden Fern Don, a richly bred bull of the Golden Fern family. These



ONE of the good four-year-old Percherons being offered by Thos. McNamara. See field note on page 36.

young bulls are out of well bred, high-producing dams of good type. They are well grown, of good, straight conformation and are offered at reasonable prices.—Adv.

Miller's Chester Whites.

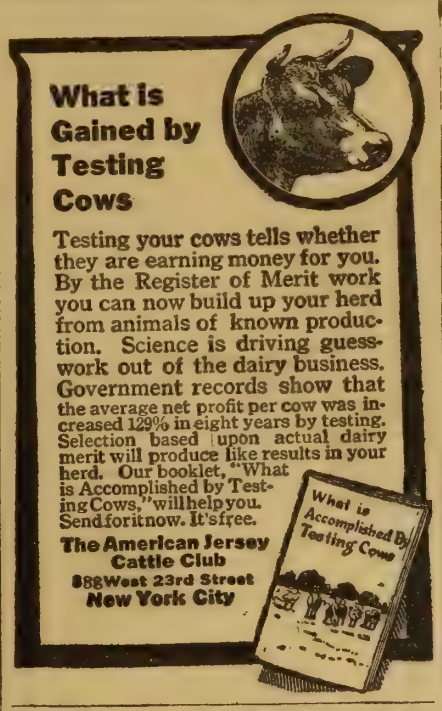
CHESTER WHITE spring boars and gilts are advertised for sale on this page by W. F. Miller, West Salem, Wis. These were sired by Combination C. and St. Elmo Chief, two fine individual boars of well-known lines of breeding. For further information in regard to the animals offered for sale write to the above address.—Adv.

Simon's Chester Whites.

ATTENTION is called to the advertisement of John Simon, Cambellsport, Wis., which appears on this page. He is one of Wisconsin's most successful breeders and at the present time is offering bred sows and early fall pigs at reasonable prices.—Adv.

Bargains in Guernsey Bulls.

THORN HILL FARM, Deerfield, Ill., advertises on this page they are overstocked with bulls of all ages, all from advanced register cows, and will price them from $40 up. This herd is



What is Gained by Testing Cows

Testing your cows tells whether they are earning money for you. By the Register of Merit work you can now build up your herd from animals of known production. Science is driving guesswork out of the dairy business. Government records show that the average net profit per cow was increased 129% in eight years by testing. Selection based upon actual dairy merit will produce like results in your herd. Our booklet, "What is Accomplished by Testing Cows," will help you. Send for it now. It's free.

The American Jersey Cattle Club
886 West 23rd Street

SALE DATES.

Hereford Cattle.

May 18, Birch & Thompson, Lake Geneva, Wis.

According to the experience of many alfalfa growers of the state, southern and southwestern-grown alfalfa seed is about as well adapted to Wisconsin conditions as is the northern-grown seed. It is cheaper than that grown in the far-famed seed-producing sections; it does not winter kill any easier and the stands are as good as those produced from the more expensive seed.

Every farm family should have a supply of early vegetables, and in order to secure them with the least expense a hotbed will be needed. The family on a farm has the greatest opportunity to live well, and something is wrong somewhere if they do not do so.

NEW BARN JUST COMPLETED BY JOHN NOTSETER, DEERFIELD, WIS., WHOSE SHORT-HORN ADVERTISEMENT APPEARS ON THIS PAGE.

HORSES.

IMPORTERS AND BREEDERS OF

PERCHERON, BELGIAN AND CLYDESDALE STALLIONS AND MARES

WE now have in our barns more big-boned, rugged draft colts, from yearlings to 4 and 5 years, of the different breeds than ever before. We have two-year-olds that weigh over a ton—herd headers and show propositions.

Five farms over 1,000 acres devoted to the horse business. We do all our own buying and selling, grow all our own feed. Our economical way of handling stallions saves money for the purchaser. We guarantee all horses sold and can sell you a high-class stallion cheaper than any other firm in America.

We are located in North Central Iowa, 20 miles from the Minnesota line, on the C. M. & St. P. Ry., midway between Mason City and McGregor.

Send 20c in stamps for large Horse Hanger which shows our Main Farm and sales stables. Correspondence a pleasure. **We have a horse for every purse.**

FRANK P. SHEKLETON & SONS, LAWLER, CHICKASAW CO., IOWA

PERCHERONS

THE rugged kind with size and quality. We can suit you. A few imported horses and some extra good American bred colts. Barns in town. Co me and see what we have to offer.

300 Home Plans and 5000 Bargain Book FREE!

This Bungalow $1413!

This is a photo of the bungalow on which Dr. Whitehurst writes that he saved $800. It is our famous Standard Home, Plan 144.

Broad low lines, big rooms, plenty of sunlight — these features combined with every modern convenience make this a perfect bungalow. Architecturally correct in exterior appearance and interior arrangement. Notice wide eaves supported by heavy brackets and the "battered" sides, sloping to the ground from the window sills.

The entire front of half of this house can be thrown into one. The arrangement of pantry, linen closet, coat closet, buffet and bed-room closets is unusually convenient. There is also a large, well lighted attic.

Outside dimensions are 42 feet by 30 feet 9 inches, not including front porch or rear pantry.

All interior finish in this house beautiful slack grain Douglas Fir. All the finish is California "Bungalow" design —all doors our 2-panel fir. The house is covered with clear cypress lap siding, painted a soft brown with white trimmings. This is only one of the 300 plans we will send you Free. Use the coupon.

Save $300 to $800 On Your Home!

Send **today** for **two** plan books—**Ready-Cut Homes**—standard material cut-to-fit. **Standard Homes**—material in the standard way, over 300 illustrations, floor plans, color schemes. Saved $800!

Gordon-Van Tine Company,
Davenport, Iowa

Gentlemen:

Enclosed is photo of our new house, in which we used your millwork, including Siding, Maple Flooring and Wall Board.

I have the swellest bungalow I think I ever saw, and saved about $800.00 in the building of it.

I received your check for $25.70 some time back, covering an over-charge in freight.

Please accept my thanks for your honest treatment.

These hardwood veneered doors, thick maple floors and Queen Anne windows are the talk of the town.

Respectfully

D. WHITEHURST, M. D.
Peniel, Texas

All or Any Part of Any Building Wholesale!

Barns

We supply all the material for complete barns from $212 up. Send today for Barn Plan Book showing barn above in 26 different sizes. Also shows other plans and Barn Interior Equipment, Hay Tools, Stanchions, Barn Hardware, etc. Book shows Horse, Cattle, Feed Barns, Hog Houses, Poultry Houses, etc.

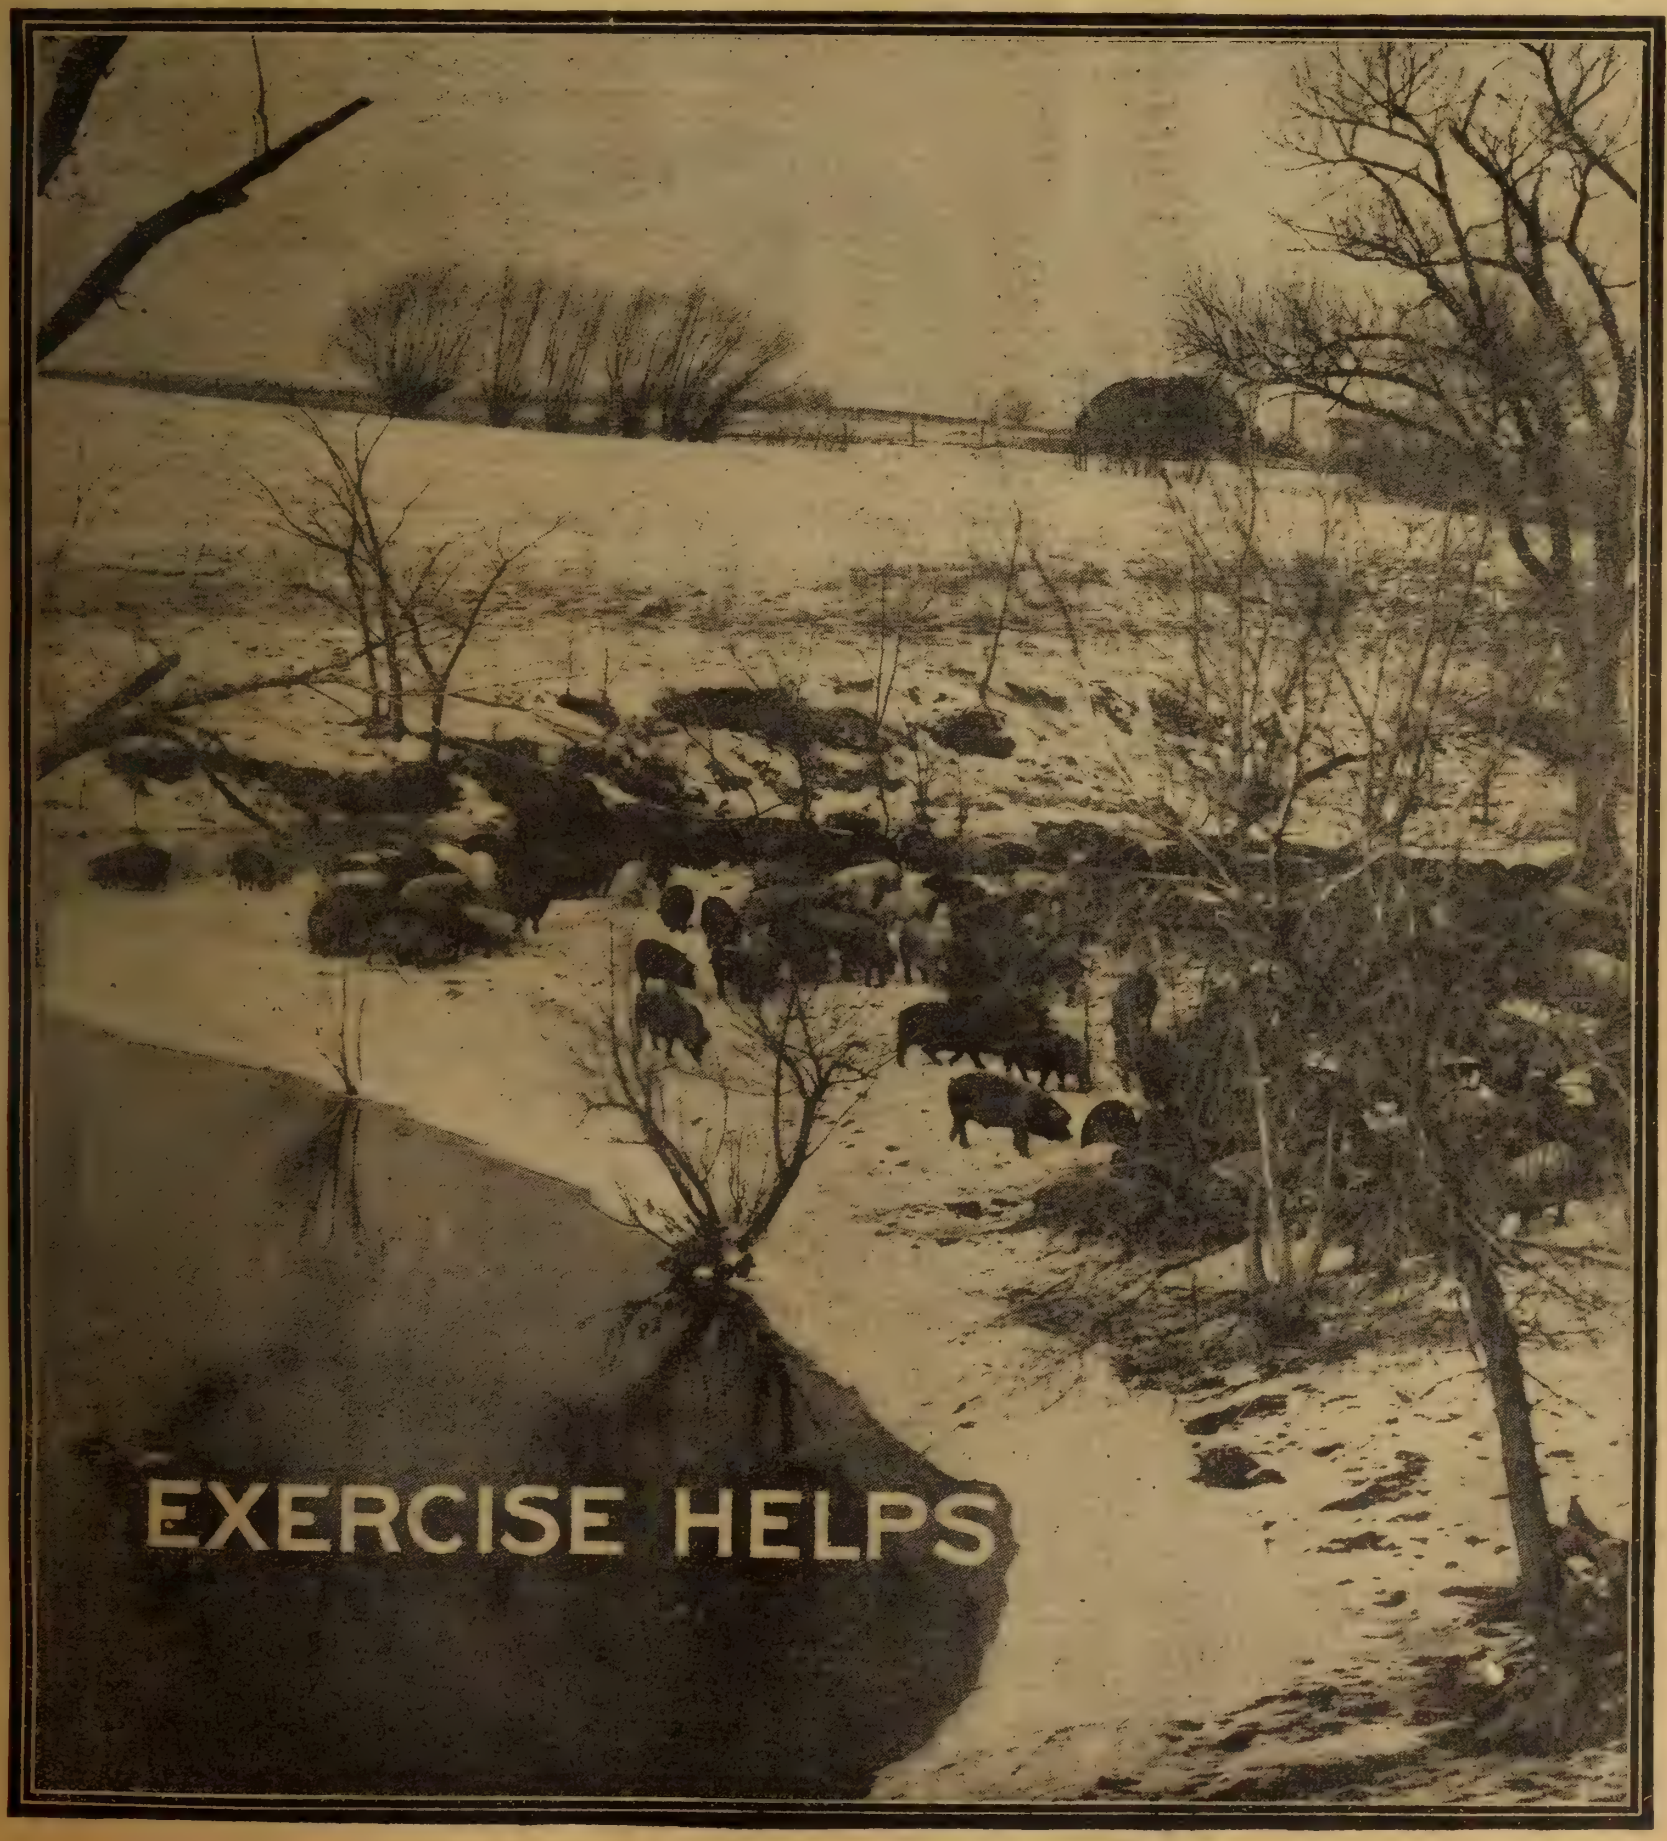
VOL. XLV. NO. 11. THURSDAY, MARCH 16, 1916. WHOLE NO. 1781



CURRENT EVENTS

RENEWED trouble with Mexico was threatened last week when a large band of bandits, said to be commanded by Francisco Villa himself, crossed the boundary line and "shot up" the town of Columbus, New Mexico, killing fifteen Americans, civilians and soldiers alike. Villa is said to have issued orders to kill as many Americans as possible in order to force intervention, because the United States recognized the Carranza government instead of his. The bandits shot their victims down in cold blood and then fled across the border. They were followed, fifteen miles south of the line, into Mexican territory, by troops of United States cavalry commanded by Colonel Slocum, who took matters into his own hands and crossed the line without waiting for authority from Washington. When the word reached Washington the officials there stood firmly behind the doughty colonel, holding that this following of a "hot trail" did not constitute intervention, which President Wilson has strenuously opposed ever since coming into office. Formally there is no authority for the presence of the American troops in Mexico. In fact, the patrols along the border have from the beginning of the disorders there been under orders not to cross under any consideration. If the provocation had not been so great, the officers responsible for the action would face court martial. Suggestions that Colonel Slocum, in command at Columbus, might be court martialed, however, were scouted by some officials, while at the war department itself the subject was not discussed.

UP TO the beginning of the present week the Germans had been unsuccessful in their efforts to storm and to capture the French fortress and town of Verdun, although they had been successful in capturing outlying posts and in pushing the French lines back two or three miles in several places. The fighting was still in progress the first of the week, with tremendous losses on both sides. Most of the action consists of artillery duels, it being said that some parts of the battle line saw 100,000 shells exploded within twelve hours, making the greatest artillery fight in the history of the world. The Germans are sacrificing immense numbers of men, sending them across open plains in the face of front and cross fires which mow them down by the thousand. Some of the woods round about Verdun are said to have been shot into splinters, while the face of the country has been completely changed by the terrific duel, twenty-five feet of one hill having been completely blown off. There have been rumors during the past week of a naval engagement between the German and English fleets, but these are not confirmed. Winston Churchill gave England warning, in a speech in parliament, that the German fleet might be expected to come out any time, as it has undoubtedly been strengthened and will be called upon to attempt the almost impossible task of beating the allied fleet before the war comes to an end.

BY A VOTE of 276 to 142 the lower house of congress last week killed the resolution warning Americans to keep off of armed merchant vessels belonging to the warring nations, thus standing by the president in most decisive fashion. The senate having killed a similar resolution by the overwhelming vote of 68 to 14, the president felt sufficiently vindicated in his course and resumed his correspondence with Germany in regard to the Lusitania case and the right of Americans generally on the high seas. To the rallying cries of "Stand by the president" and "Is it Lansing and Wilson or von Bernstorff and the kaiser?" a big democratic majority and nearly half the republicans in the house rolled up overwhelming votes against every effort to tie the president's hands or embarrass him in the present diplomatic crisis. Released from the bonds of embarrassment forced upon him by the dissensions in congress, which have been represented in foreign capitals as indicating that he was making his demands on Germany in direct opposition to the elected representatives of the people, President Wilson is now prepared to go on with the submarine negotiations with the central powers. The next step probably will be an answer to Germany's last proposal to settle the Lusitania case, in which the United States will probably ask for such further assurances as it considers sufficiently broad and complete to guarantee that the new submarine campaign which began on March 1st and in which notice had been given that all ships carrying guns will be sunk without warning, will not endanger Americans traveling the seas on merchant vessels.

THE German commerce raider, Moewe, made famous by her exploits, has performed one of the most spectacular feats of the war by reaching Germany safely, getting through the strong cordon of blockading English battleships in the North sea. The Moewe arrived in port with four British officers, twenty-nine British marines and sailors, 166 men of crews of enemy steamers (among them 103 East Indians) as prisoners, and a vast sum of money in gold bars. The vessel captured fifteen enemy vessels, the greater part of which were sunk and a small part sent as prizes to neutral ports. Count von Dohna, the Moewe's commander, has been awarded the iron cross of the first class and the members of the crew have received the iron cross of the second class. Count von Dohna has been ordered to meet Emperor William at headquarters. The success of the Moewe in eluding capture and in getting through the blockading lines is one of the marvels of the war, the story of the raider being a picturesque chapter of a war which, for the most part, is so bloody and horrible as to have little of the picturesque in it.

NEWTON D. BAKER, formerly mayor of Cleveland, Ohio, has been appointed secretary of war to succeed Lindley M. Garrison, resigned. President Wilson sent the appointment to the senate last week. Mr. Baker is a young democrat of promise, being only forty-four years old. He began his public career by serving as private secretary to Postmaster-General Wilson in President Cleveland's cabinet. When "Tom" Johnson, the noted reform mayor of Cleveland, died, Mr. Baker succeeded to the office. President Wilson offered him the post of secretary of the interior three years ago, but the offer was declined. Announcing the appointment of Mr. Baker to be secretary of war, the president explained that he desired a good lawyer in this important position, because of the legal problems involved in the proposed reconstruction of the army system.

THE first of the national preparedness measures to reach either house of congress for consideration has been introduced in the senate by Senator Chamberlain, of Oregon, chairman of the military committee. It proposes an even more sweeping change in military policy than that outlined by President Wilson in his annual message, and was described by Mr. Chamberlain as the most comprehensive piece of military legislation ever offered in congress. All of the elementary administration army plans prepared by former Secretary Garrison are retained, although in altered form, and additional proposals for organization of industrial reserves in peace times go further than the administration had suggested. For the regular army the bill provides a peace strength within five years of 178,000 men of all arms, or approximately 165,000 fighting troops. The percentage of men in each company, battery or troop at peace strength would be increased in the interest of efficiency, and the full war strength would be 225,000. The army would consist of sixty-five infantry, twenty-five cavalry and twenty-five field artillery regiments in addition to the staff and other special corps and the coast artillery. Enlistment is fixed at seven years, four with the colors and three in reserve. At the end of one year of service efficient men may be discharged into the reserve on recommendation of their commanders and at the end of two years at their own request if approved. Reservists would receive a minimum pay of $24 a year and the president would have authority to mobilize the reserve in time of actual or threatened hostilities.

The Kewaunee Cheesemakers & Dairymen's Association will hold its next meeting at Kewaunee on March 28th. This announcement was made recently at the annual meeting of the Blahnik cheese factories which handled 45,280 pounds of fat during the year and paid the patrons an average price of .3274 cents per pound.

Satisfaction Guaranteed In Rawleigh Engines.

SIXTY days' free trial, absolute satisfaction guaranteed or no pay, are the conditions under which the Rawleigh Manufacturing Co., 104 Taylor Ave., Freeport, Ill., are offering their engines direct from the factory. As further inducement, they make the following liberal terms: Cash, sixty-day bank deposit or one year in which to pay. Rawleigh engines are tested on the brake to pull 15 per cent more than their rated horse power. Therefore, they will always develop the power expected of them. They are simple and perfect in design, easy to set up and run. Gasoline, kerosene, distillate or gas may be used in them. The different horse power ratings and prices are given in the Rawleigh advertisement on page 27. If you expect to buy an engine, write for the new Rawleigh catalog and please say you saw the advertisement in The Wisconsin Farmer. —Adv.

Don't Pot Your Trees

Spade-dug holes, like pots, confine and cramp the roots. Set your trees out in blasted holes. Stop the big percentage of early losses. Make them grow sturdy, hearty and fast. Cash in on your investment quicker by getting earlier yields.

DU PONT

Red Cross Farm Powder

Drawn from actual photo.—Note marked difference in growth between tree planted in blasted hole and tree planted in spade-dug hole.

lightens labor and increases profits. It loosens the earth, makes better rootage and provides increased nourishment for young trees. It rejuvenates old trees and makes them bear.

Practical Proofs

E. J. BARKER, Beech Bluff, Tenn., says: "I would not set trees without first subsoiling with explosives, even if it cost four times the amount."

J. C. SAYLOR, Penna., says: "Blasted trees the finest in the orchard."

O. C. LANGFIELD, Calif., says: "Planted 14,000 trees with dynamite—advanced value of land from $15 to $200 per acre in less than a year."

FAMILY CIRCLE TALKS
BY THE PUBLISHER

MUSIC IN THE FARM HOME.

I AM quite interested in the plaint of a noted eastern musician and the answer made thereto by the editor of one of our well-known magazines. Here is what the musician said:

The young people here in America do not have their minds directed definitely enough in musical channels. I do not see groups of children standing about a piano in the twilight and singing to a mother's accompaniment. I do not see the boys of a neighborhood forming a small orchestra and playing really fine music as they do in France and Germany.

And here is the magazine editor's answer:

Mr. Stransky overstates his case somewhat. We know of a farmer's family of six children, each playing a different instrument, who, with father and mother, make a real little orchestra. And there are a good many such groups of the sort Mr. Stransky says he has not seen—youngsters about their mother at the piano. But there should be still more—many more. There cannot be too many. For, as the wise conductor says, music is something more than mere entertainment. It is "a serious and permanent joy in life....to keep the emotions stirred, the imagination young."

I am inclined to think that there is merit in the complaint and inspiration in the answer. It is a fact that we do not find families gathered about the piano or organ, singing the old favorites, today as we did when I was a lad. A letter from a very good friend (Mr. J. C. Loehr, living in Lone Tree, Iowa,) brought this very matter to my mind a day or two ago. This friend and I were boys in the same state, Ohio, with only a county or two between us, but it was not until long afterwards (a couple of years ago) that we came to know each other. Here is a portion of his last letter, right in line with what we are discussing here:

I remember in the fall of 1860 my father took me to Tiffin, Ohio, in a buggy. It was when Lincoln and Douglas and Breckinridge were running for president. I remember, also, about the breaking out of the war between the North and the South and the patriotic songs we used to sing in Tiffin. Here is the way some of them ran:

Stand up for Uncle Sam, boys,
With hearts so brave and true;
Stand up for Uncle Sam, boys,
For he has stood by you.

Then conquer we must,
For our cause it is just,
And this be our motto:
"In God is our trust."
And the star-spangled banner
In triumph shall wave
O'er the land of the free
And the home of the brave.

The army, the navy, forever,
Three cheers for the red, white and blue;
The army, the navy, forever,
Three cheers for the red, white and blue.

Ah, how well I remember these stirring songs and the others of the war days, the songs that kindled patriotic fervor and sent many a brave boy to the front, to fight and die for Old Glory. I took this friend's letter home with me, and my wife and I sat for an hour recalling the words of the old war songs, with glistening eyes and sometimes, I must confess, with trembling lips.

But now all is changed. Where once we gathered, in the twilight, with mother or an older sister softly fingering the keys, all joining as best we could (regardless of real vocal merit) in the words of some good old Gospel Hymn or war song or ballad on the "Juanita" or "Maid of Athens" style, now we go dashing madly about the countryside in an automobile, or we put a new record on the talking machine, or otherwise adopt the fad or amusement of the moment. Yet for every family which no longer has these twilight or nighttime song reunions there are literally hundreds which have had music brought into homes formerly bereft of this refining influence through the medium of the phonograph or the piano player. It is astounding the number of homes, in the country as well as in the city, where the talking machine, in some of its numerous forms, holds sway, to the delight of young and old. Sousa's swinging marches, the wondrous beauty of the sextet from "Lucia," the "Miserere" from "Il Trovatore," or the "Traumerei," the haunting melody of the Hawaiian instrumentalists or the lilting lyrics of the latest opera, all these are being enjoyed, day and night, in hundreds of thousands of farm homes, where music was hardly known at all before. As we become more and more deficient in vocal ability, due to the very lack of this gathering around the family organ or piano, we become more and more proficient in recognizing and carrying tunes, thanks to the "canned" music in most of our homes. And as we come to know music better we invariably come to love it more, and so, in the end, we are brought back to the simple, home music which we forsook because it seemed old-fashioned to some of the younger folks. Music in the farm home is one of my hobbies; it is a refining, uplifting influence second to none.

GET OUT THE RURAL VOTE.

THE problem of how to get out the rural vote may not have been completely solved at this week's primaries in Minnesota, but in my opinion the plan which was promulgated by the managers of one of the presidential candidates was so deserving as to warrant a little of our attention. The offer was made, in apparently the best of faith, of $200 in cash, to be expended for good roads, to the township which cast the largest percentage of the vote it cast in the 1914 election. You see, it is not for the largest vote cast, that would give the prize at once to some city township; it is for the largest percentage of the 1914 vote, which means that a rural township casting 100 votes two years ago and fifty votes this spring will win the $200 over a city township which cast 10,000 votes two years ago and 4,900 this spring. The "corrupt practices" act is avoided by offering the prize to the township for the entire vote, regardless of whether it goes to the candidate in whose interest the prize was offered or not. From whatever angle we view it the offer is so novel and inspiring as to be worthy of attention.

I hope the day will never come when the farmers of the middle West will have to be paid (either directly or indirectly) to vote. The right of franchise is one of our dearest possessions, and every good, loyal citizen—be he farmer or town man—exercises it every opportunity allowed him. But there are often temptations for the farmer to stay away from the polls, obstacles in his way so great that it seems hardly worth while, at times, to attempt to overcome them in order to exercise the right of franchise. Election day comes and the roads are well-nigh impassable, or there is work in the field to be done, or any one of a dozen other reasons, and the busy farmer excuses himself on the ground that one vote, more or less, would not change the general result, anyway. But what if we all made this excuse to ourselves and let the city vote determine the election? We would as effectively disfranchise the great body of farmers as though congress had completely and forever barred us from the privilege. In a way, this offering of $200 to the good roads fund is an indirect bribe to the farmer, yet it is made in such a good cause and such a good end is served that I find it worthy of commendation, rather than condemnation. If the farmer vote of Minnesota, or any other grain-belt state, expresses itself so emphatically that the men are nominated as our party leaders who most honestly have the farming welfare of the nation at heart, and incidentally the cause of good roads is advanced by farmers making their voices count loudly at the polls, so much good has been accomplished that we need hardly question the selfish motives which inspired the $200 gift.

I shall watch with interest the outcome of this novel experiment in politics and give you the results later. Many a good man has been defeated because the better element among the voters stayed away from the polls; anything which will bring out the vote and make the result representative is worthy of a fair and impartial trial, in my opinion.

STARTING A FARM CLUB.

I AM in receipt of a letter from a farmer living at Palatka, Michigan, which pleases me very much, not only because he asks my help, but because his letter testifies to a high state of prosperity and progress in his neighborhood. His letter follows:

I am contemplating organizing a club of farmers in my neighborhood, but do not know exactly how to proceed. I have talked the matter over with a neighbor of mine and we are both of the opinion that co-operation means better farming and dairying. We are, therefore, trying to organize such a club. Would you kindly advise me where I could get the necessary literature and instruction for starting such an organization? We expect to hold our meetings in the country schoolhouse and at each meeting have some interesting farm question discussed by all the farmers and thereby get the opinion of all, but at times we would have some prominent agricultural man come to our meeting and speak to us. Don't you think such a club would be a benefit to all concerned and at the same time increase our knowledge of farming and teach us to do it scientifically? I cannot say too much in praise of your paper and I am sure that most farmers will agree with me in saying that it is one of the best farm papers published.

In reply I set forth my views on farm clubs, as I have expressed them frequently here in this page of mine (most of you know by this time that I am heartily in favor of such organizations, believing them to be of the greatest value) and sent samples of constitutions and by-laws of several farmers' clubs in Wisconsin, which state has made more rapid progress, perhaps, in this splendid work than any other. I also sent sample programs of farmers' clubs all over the grain belt, enough to give my Michigan correspondent ideas for the whole year, I hope. A little work, changing the constitution and program to meet local conditions, should enable that community to organize a club that will be the most prominent factor in country life betterment the vicinity has ever known.

I believe firmly in both the things my Michigan correspondent inquires about: Farmers' clubs and co-operation. If the latter were not an unqualified success would we find over 1,500 farmers' co-operative companies in Wisconsin alone; 347 co-operative creameries, 290 cheese factories, 35 live stock shipping companies, 5 fruit exchanges, 40 grain elevators, 200 insurance organizations and 609 telephone companies, according to a count made a year and a half ago? If it were not an unqualified success would we find 50,000 Iowa farmers joining the 367 co-operative elevator, grain and lumber companies now in existence in the Hawkeye state, with property to the aggregate value of almost $4,000,000? If co-operation were not an unqualified success would we find as eminent an authority as W. M. Jardine, dean of agriculture in the Kansas State Agricultural College, publicly asserting that there is a waste of from 30 to 40 per cent of the crops on the farm under the present marketing system and that co-operation is the remedy? If any of you are dubious on this co-operative question let me suggest that you write to the Department of Agriculture, Washington, D. C., for a couple of bulletins, reprinted from the Yearbook of 1914: "Co-operative Marketing and Financing of Marketing Associations," by C. E. Bassett and Clarence W. Moomaw, and "The Organization of a Rural Community," by T. N. Carver. Both bulletins are full of practical advice on how to organize and to work together to cut down waste and get 100 per cent efficiency and production.

If my Michigan correspondent organizes his neighborhood club, as I sincerely hope he will, he cannot possibly do better than to consider this big and vital question of co-operation at an early meeting and have talks founded on the very bulletins I have mentioned here. There is a host of wonderfully good material in these state and federal bulletins on agricultural and kindred topics if we will take the trouble to look through them, as I hope many of my readers are in the habit of doing.

A COUNTRY STORE SUCCESS.

THE current issue of the Banker-Farmer contains an inspiring little article written by the proprietor of a general store in Cloud Chief, Oklahoma, now a bustling little town, but at the time the store was established a pokey little settlement ten miles from a railroad, consisting of a postoffice, a blacksmith shop and a small grocery store. By working with his farmer customers, to increase their crops and profits, and making their interests paramount, this man has built up a good trade and (far more important) has increased the prosperity of the whole community. I cannot refrain from quoting a little from the story as he tells it:

I maintain a rest room for the use of my customers, where they may take the children, or look over the latest papers and magazines. I made a hit with the farmers at the last harvest time by delivering all orders for goods amounting to $5 or over. I gain the interest and trade of the farmers by visiting them in their homes. I never lose sight of the fact that my interest is hitched up tight to the farmer, his family and his home. When the roads are good I spend as much time getting around the country as I do behind the counter. I drop into the different farms for a little chat most any time of the day. My best friends are my farmer customers. I enjoy visiting with them and they always seem glad to see me.

There is a lesson here which I wish thousands of our small-town merchants would learn. The farmer is not merely a customer, he is a partner in the development of every community, urban as well as rural. No town under 100,000 in population can grow and prosper unless the country immediately around about is prosperous.

MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.25; ten years in advance, $4.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Experiment Station for Waushara County.

THE business men of Hancock, Waushara county, are showing the proper spirit in offering, free of cost, to the state the choice of several near-by farms for the establishment of an experiment and demonstration farm by the college of agriculture. The county advancement association, realizing the great good to the community which will result from having such a farm in its midst, will donate a farm, rent free, as an experiment station and the college authorities have agreed to the proposition. The college men will choose the farm best suited for the purpose. The result is that in a few months an experiment station will be opened at Hancock.

The soil about Hancock is typical of about 4,000,000 acres of sandy soil in Wisconsin. The experiments carried on there will be under conditions existing in many parts of the state and the results will be applicable to the 4,000,000 acres of like soil. What to do with the sandy soils has long been a big problem in Wisconsin and the college authorities believe the selection of the sandy soil at Hancock offers a splendid opportunity to solve this problem. Experiments have been carried on for many years with sandy soils, as a result thousands of acres now produce which never produced before. It has been possible to discover crops best suited to these soils. Considerable work of this kind has been done at Sparta, in Monroe county, and some splendid results have been obtained there. However, the work at Sparta has been largely concluded and the station now located there will be moved to the new fields at Hancock. These farms at Hancock have been cropped for many years and the soil is pretty well run down so that the soils department of the experiment station will have splendid opportunity to demonstrate how these run-down and cropped sandy soils can be improved. It has been impossible to produce clover on them for some years and as dairying is a big factor in that community and clover essential to profitable dairying the improvement of this soil so that it will grow clover will be one of the first efforts at the station.

The expense to the Hancock business men must be considerable as they will have to take care of the rental, taxes, etc., on the farm picked by the college authorities. These business men realize the relation that should exist between merchant and farmer. The success of one is dependent upon the other. These men know that the soil about Hancock can be made to produce more. They know there are certain crops for such soils that are immensely profitable and that the location of an experimental farm there will teach the farmers of their vicinity what to do and how to do it. Part of the farm selected will be given over to experimental work in growing grasses, grains, etc., and the remainder devoted to demonstrational work in order to show what can be done by the proper methods. A committee of the board of regents, consisting of Mr. Ben Faast, of Eau Claire county. Mr. S. D. Jones, of Marathon county, and Mr. Theodore Hammond, of Milwaukee, was named to locate the station by selection of one of the farms offered by the Hancock Advancement Association.

Taxes For the University.

FROM one of our readers, Mr. Lewis Ostenson, of Waukesha county, comes the following inquiry relative to the tax paid for the support of the state university, of which the college of agriculture is a part:

> How much tax do we pay to the University of Wisconsin for every $1,000 that we are assessed?
>
> In other words, how much of the taxes that we have to pay goes to the fund that is levied for the maintenance or running of the state university for every $1,000 that we are assessed?
>
> It is the standing rate—so many mills, or such a fraction of a mill per dollar of assessment. This is in addition to the other appropriations that the legislature may make, and does make, from time to time for other purposes of the university, as new buildings, etc.

The state tax now for the support of the university is three-eighths of one mill or, for every $1,000 that the farmer is assessed, as Mr. Ostenson inquires, 37½ cents. That is, for every $1,000 of assessment the taxpayer pays 37½ cents towards the maintenance of the University of Wisconsin. On a $10,000 assessment it would be $3.75, etc.

This three-eighths of a mill or 37½ cents per $1,000 of assessment is levied as a direct tax for the maintenance or running of the university. This is the only direct tax made for the university, as the appropriations made by the legislature are paid from the general fund. The general belief during the tax fights which has been a part of the political campaigns during the last few years, has been that the university received money in some other manner from the taxpayers. This 37½ cents per $1,000 is the only direct tax, and the appropriations which are made by the legislature for new buildings at the university, etc., comes from the general fund which has never, with but one exception, been raised by direct state taxation. This fund is created by the income tax, corporation taxes, etc.

The Wisconsin Farmer is pleased to receive inquiries from its readers and glad to note interest in state officers. The taxation question is one of great interest to every farmer, as he pays a good share of the taxes, and he should be conversant with all the facts of our taxing system. Friends of the university in the last fight in the legislature pointed out that in most cases the university costs the taxpayers in many localities nothing, as they get back more for local education than they contribute in direct taxes to the university. In 1915 the state returned for local education $3,161,935, which was paid out of the fund made up from corporation taxes, etc., and not by direct tax. This money is returned in the nature of state aid to rural schools; county agricultural schools, etc.

The Wisconsin Farmer is glad to answer any questions of fact sent to us by our readers in good faith.

Read the Farm Mechanics Department.

IT IS time to get the car out—those of our farmers who have not been running it all winter. An increasing number of our readers are joining the "all the year 'round" company of automobile drivers, especially since the new "all weather" tops have appeared.

But those who have had the car jacked up in the barn will be itching these spring days for a spin, and it is best to give the car a good looking over to see that it is in trim. The Farm Mechanics department of this paper offers many helpful suggestions from week to week to automobile owners and drivers. Every question answered in this department is bona fide. The Wisconsin Farmer has an expert employed to answer these questions from farmer automobile drivers. The service to our readers is free and we shall be glad to have all take advantage of it. The Wisconsin Farmer receives more questions for this department each week than we can afford space to answer, so the most important ones are picked out and answered first. For this reason it is well for our readers to go through the department every week, as the very problem concerning which they would inquire doubtless has been answered in these columns very recently. It is not infrequent that we receive several questions of the same kind in the same week. In such instances we aim to publish one answer, thus serving all, and giving space for other problems.

Read the Farm Mechanics department regularly and you will find such helps in this section of The Wisconsin Farmer alone which will more than pay you for the subscription price of this paper. The Wisconsin Farmer is the only Wisconsin farm paper which runs such a department for the benefit of its readers.

Test Your Tobacco Seed.

JUST as much care should be taken this spring in testing by the tobacco growers as the corn and small grain growers, for what corn testing means to the corn growing sections tobacco seed testing means to the tobacco regions. If the tobacco growers of Wisconsin expect to obtain the full benefit of what points to an excellent market for the 1916 crop they should begin by buying the best seed obtainable and then test this seed to determine its germination qualities. Good seed should be secured regardless of cost, for "any old kind" will not do.

Tobacco growers will also find it to their profit to find out the class of tobacco in demand by buyers to supply the binders' trade and then try to procure it. The seed has much to do with the quality of the crop and quality is what is valuable. Therefore, it is highly important that only good seed be used and there is plenty of such seed to be obtained from those who make it a practice of propagating the improved varieties. If a desirable binder is produced in Wisconsin this year the farmers should recover much of their losses of the last two years as conditions were never better for securing remunerative prices for the coming crop. By the time the 1916 crop is harvested every bit of old leaf is likely to be out of the market and the manufacturers with smaller stocks on hand than ever before. The bad season last year cut the quality and the price and market conditions the year previous were upset because of the war. It has been anticipated that many farmers have contemplated going to grains, but the tobacco riders report a good many plans to increase their acreage, believing the forecast for good prices.

Some interesting conclusions on the failure of the crop in so many sections last year were recently set forth by Director Brooks of the Massachusetts Experiment Station. The wet season, he attributed as the reason for the failure of the New England crop, and similar conditions prevailed in Wisconsin. On old tobacco soil he found that the crops had failed because the roots were unable to reach available fertilizer because of the very rainy weather late in the season. The root growth had apparently been stunted in the early spring when it was cold. Some of the best crops were produced on land which had had little fertilizer, and for this year he recommends thorough cultivation and aeriation of the soil to make this residue of fertilizer quickly available. Many contended that the fertilizer had been washed away by the heavy rains because the crop failed, but Director Brooks believes it was so deep and the root growth so stunted that the plants did not receive any benefit from it.

Spreading Better Farming Advice in Grant County.

MR. JOHN D. KEENAN, in a letter addressed to the farmers of Grant county, signs himself "Professor of Agriculture, Fennimore High School." This thing of having "professors" of agriculture in a high school is coming to be very popular. A great many of these men are doing splendid work. It is difficult to get enough men who are properly equipped to fill positions of this kind. Under ordinary circumstances, we believe it is just as well to omit the word "professor." This is not said in a spirit of criticism. There is no reason at all why farmers should have any prejudice against "professors," and a great many farmers do not have such prejudice. At the same time there are hosts of farmers who have been successful and have done it without any considerable amount of "book learning." It is nothing more than natural that these farmers should hesitate when it comes to taking advice from a man who has learned a considerable part of his agriculture out of books. We have come to speak of men as professors who gain their title from the study of bound volumes. But Prof. John D. Keenan, of the Fennimore High School, is evidently on the right track. We judge this from the contents of his letter to Grant county farmers. He writes as follows:

> I am wondering if you realize what we mean when we speak of plant food. You all know that different grains fed to fattening stock have different effects. You know that corn is the best grain to fatten your steers and hogs with, but do you know that this fact is dependent upon the soil? Like cattle and hogs, grains and hay crops must have the proper food to get the proper results. They are as much a living thing as your stock. In grains and hay we look for the power to produce fat and energy. To get this fat and energy the soil must contain plant food that will produce a large amount of leaves and stalks in hay and a large kernel in the grain.
>
> These plant foods are in the soil, not in the form of fat, protein, sugar and starch that is required for good results in feeding, but as nitrogen, phosphorus, potassium and calcium. Each of these foods has a certain duty to perform, in the building up of the plant with which we fatten our stock.
>
> Due to these facts we should take pains to find out which of these foods is lacking in our soil. If our oats grow all to stalk and produce but small head, we feel sure, providing our share has been done in preparing the soil properly, that the soil is lacking in the food needed to build up the grain.
>
> Think of your soil in this way. Does that field produce what the other one does? Why? Why can't I get a catch of clover in this field? Why doesn't my corn fill out the tips? Why doesn't corn do well after clover? Why do oats go down on the field where I have just broken up clover sod? Why do oats grow best on the ridges?
>
> "There is a reason." Let us answer these questions for you. Come and see us or let us meet you in your country school some evening to discuss these questions.
>
> JOHN D. KEENAN,
> Prof. of Agriculture, Fennimore High School.

If Professor Keenan can arouse the farmers in the vicinity of Fennimore to a discussion of such important topics as he mentions in his letter, he will have accomplished a great deal.

Ice Cream Manufacturing in Wisconsin Creameries.

THE manufacture of ice cream as a sideline to the manufacture of butter has been freely discussed in Wisconsin during the recent months at meetings of farmers interested in co-operative factories. Creamery owners have also taken up this subject. This interest has prompted the issuance of a bulletin by the state experiment station, entitled "Ice Cream Making", which was prepared by Mr. A. C. Baer. Mr. Baer discusses the manufacture of ice cream in detail and the bulletin contains much valuable information to creamery owner and operator.

Profits from the manufacture of ice cream are twice as great as from butter, and this fact has caused many creameries and milk plants in recent years to equip for making ice cream. Ice cream can be made a profitable sideline of a creamery or milk

plant with the additional small equipment and as the demand increases, ice cream plants continue to spring up. It is not practicable nor advisable to ship ice cream a long distance.

In Wisconsin, where a 14 per cent fat standard is required for ice cream, a gallon of ice cream will contain approximately a pound of butter. This ice cream at wholesale would sell for seventy-five cents a gallon, while the cost, although it varies owing to equipment, etc, need never exceed forty cents a gallon. This leaves a good margin of profit, but despite this profit and the increasing demand Mr. Baer points out that the manufacture of this product is today where the butter and cheese industry was twenty years ago. Standardization of operations will do much towards boosting the industry. The product is not uniform from day to day, and the difference in its quality are not well understood. The result is that creamery and milk plant operators who understand the manufacture of ice cream and take it on as a sideline are likely to find it profitable provided the output is from fifty to 100 gallons a day.

Many Wisconsin creameries which have begun the manufacture of ice cream have met with success. Not one in twenty is so located as to handle the business profitably, though. Location is the chief factor as there must be a market for the product, and the average output should be at least twenty-five to fifty gallons daily during the season. If well located and not hampered too much by competition no creamery need fear the experiment.

The equipment necessary for making ice cream in a creamery where the power in already available is given by Mr. Baer as follows:

1 10-gallon upright freezer	$100
1 ice crusher	50
Packers and cans	200
Shafting and pulleys	15
1 hardening tank	20
1 mixing vat	10
1 extra wash sink	15
Small tools and conveniences	25
Total	$435

An ordinary ten gallon tub freezer, Mr. Baer says, will be sufficient at the start. This freezer will cost from $75 to $100 and can be replaced by a better machine as the business increases.

In the smaller cities, ice cream making can also be made a profitable side line of a small milk plant or pasteurizing plant. The largest flow of milk usually occurs during the summer months and milk plants contracting for the product from farms often have a surplus at this season which can be manufactured into butter or ice cream. A milk plant usually has pasteurizing facilities and refrigerating machinery which enables it to handle the cream properly for ice cream making.

Grain Pictures and Letters.

THE editors have arranged for this issue an illustrated page on seed corn testing. Our readers will refer to page 16 for this feature. Several of the pictures used in this feature have been borrowed from the agronomy department, Wisconsin College of Agriculture. They are used here because they provide the best illustrations which we are able to get hold of.

Special attention is also called to the Farm Forum department this week. This is headed with an article on growing show corn, by S. P. Markle, of La Crosse county. Names of other prominent Wisconsin grain growers will also be found in the Forum column this week. The Forum is a medium for exchange of views, and as such it is open to every farmer who writes his convictions or experiences in good faith. Within the past few months many excellent articles have appeared in the Farm Forum department. We are sure that others of our readers have good ideas which they might give us for this department, and their brother farmers of the state would profit thereby.

Department of Agriculture Indorses Plan of Drilling Oats.

CLIMATIC conditions that are favorable to the production of corn are not conducive to the best development of small grain, particularly oats. The central West produces an enormous quantity of oats every year for the simple reason that a tremendous area is seeded. Last year the ten grain-growing states of the central West produced approximately one billion bushels of oats, but the yield per acre was only 36.8 bushels. Comparatively speaking, this was a good yield, but it was not enough to afford the grower anything like a satisfactory profit in the case of high-priced land. If an increase of one bushel per acre could be made this in itself would amount to millions of dollars.

In this connection we beg leave to refer to a recommendation recently made by the United States Department of Agriculture in the weekly news letter published by that department. Referring to the method of sowing oats it is pointed out that drilling gives a more even stand than broadcast seeding, for all the seed is covered to about the same depth. In sowing broadcast, some of the seed may not be covered at all and some may be covered too deeply. Germination is better from drilled seed and the growth is more uniform throughout the season. In numerous tests at the experiment stations drilled oats have outyielded oats sown broadcast by several bushels to the acre. Better stands of grass and clover can also be obtained in drilled than in broadcast oats.

The best depth to sow oats varies with the soil and the season. In any case they should be covered with half an inch to an inch of moist soil. They should be sown deeper in sandy soils than in loams or clays. Deeper seeding is also necessary when the ground is dry than when it is moist. On the average the best depth is from one to one and one-half inches.

Oats should be sown as early in the spring as it is possible to make a good seed bed. The exact date, of course, varies with the season and with the locality. This does not mean that the preparation of the land should be neglected in order to sow early. Better yields will be produced from seed sown in a good seed bed than from that sown a few days earlier in ground too cold and wet for the seed to germinate.

Alfalfa Ruined by Cutting at the Wrong Time.

THOSE who are successful in growing alfalfa must become students of the habits of this important legume, and in the following communication one of our subscribers, Mr. J. N. Shirley, of Marion county, Ind., calls attention to some important points in connection with the cutting of alfalfa. He writes:

In agricultural papers and bulletins I often see instructions to "clip" weeds as often as they threaten alfalfa. These writers don't say why this should be done, but I suppose they mean to benefit the alfalfa and hope to kill the weeds. I am sure they are wrong, and the results are just reversed.

It will pay the farmer to study the nature of alfalfa. It will pay both in dollars and in pleasure. The alfalfa plant is regarded as a weakling at first, but this is not true. Of course it is tall and slender for a few weeks and looks out of proportion, but it is stretching itself that it may get air and sunshine among the weeds or so-called nurse crop. If we cut an alfalfa plant high it dies down to the ground and takes a fresh start from new buds at the base. If we clip weeds high we don't kill them because we clip over a bud on each weed branch at the stem of the weed and we make the weeds thicker by throwing the weed force into these buds "in waiting," and at the same time we retard the alfalfa plants by cutting their lungs out, and unless their new buds at the base of the plants are well started the weeds, foxtail, crab grass, etc., get the ascendancy and matters are made much worse. I have known many alfalfa fields ruined by this very process. I plead guilty myself but promise not to do it any more.

A few years ago a brother-in-law of mine in Park county, Ind., told me that he took special pains to break and prepare seven or eight acres of good, rich land for alfalfa. He said he had a fine stand at first, but I think he was mistaken. It must have been too thick, for he used about twenty pounds of seed per acre. He said he even clipped the weeds off of it three or four times the first year! He did not kill the weeds by cutting them high, but he did kill or retard the alfalfa plants by both cutting their heads off and their lungs out and by making the weeds thicker.

My father, in February, 1915, sowed twenty acres of alfalfa, with Jack Frost on corn ground, using nine or ten pounds of seed per acre, and he got a splendid stand. His tenant, wanting something to do, while it was too wet to plow corn, clipped the weeds off the alfalfa two or three times, with the usual and inevitable result.

Last summer I hired a man to cut close to the ground the first crop of April 5, 1915, seeding of alfalfa, about ten acres, sowed on dry, windy, weather-checked or cracked ground. The work was to be done when the buds for the next crop of alfalfa had well started. This man cut the upland part "when he had time," when it was too wet to get into his corn. He killed the alfalfa, or nearly so, but he killed the weeds, too, by close cutting, and I mean to reseed this three or four acres as soon as the snow leaves and Jack Frost gets the ground in condition. I, myself, two weeks later, cut the weeds and a little alfalfa from the other six or seven acres. I admit I had a heavy crop of weeds, from four to six feet high, and but little hay, this first cutting, but I got a good second crop of clean alfalfa and I could have cut a light third crop if I had had the time to do it.

Unquestionably those who succeed with alfalfa must give attention to the matters referred to by Mr. Shirley. A study of the new buds that make their appearance at the base of the plants must be made and must be made with care. If the crop is cut before these make their appearance the crop will be greatly weakened while, on the other hand, if cutting is unduly delayed we may actually harvest two crops instead of one. In former days heroic attempts were made to improve the growth of alfalfa by cutting back the weeds when, as a matter of fact, the soil was not in condition for the alfalfa crop. This is being overcome by the use of lime and by the inoculation of soils.

Better Success With Thin Nurse Crop.

IN THE following communication one of our subscribers gives the result of his observation in the thick and thin sowing of a nurse crop when it was used in connection with timothy and clover. He writes:

Two of my neighbors were preparing to seed down a couple of fields to meadow. The fields had nothing more than the public road running between them, and the soil on them was of practically the same fertility. Both fields had been in corn the previous year, so that all conditions may be considered as equal.

Both men pursued practically the same methods as to seed bed preparation, and both had good seed oats, but when it came to sowing the oats, Neighbor John sowed them at the rate of only about two and a half bushels to the acre, while just across the road Neighbor George was slapping on about four bushels of seed to the acre.

Calling across to where his neighbor was sowing his oats, Neighbor George inquired how many bushels of seed he was putting to the acre. Upon being told by Neighbor John how much seed he was sowing to the acre, Neighbor George laughed at him, saying:

"'Sow sparingly, reap sparingly.' I'm putting on four bushels to the acre. We'll see the difference in these two patches when harvest comes."

Neighbor John smiled good naturedly and merely remarked that there was such a thing as a fellow getting too much seed on old ground, especially if it was to serve as a nurse crop. Then he passed unconcernedly on about his oat sowing.

The writer helped handle those oats that fall, and truly (as Neighbor George had said) there was a big difference in the final results. On the thickly seeded field of oats they made about twenty-five bushels of grain to the acre. The man actually had sown the seed so thick the plants did not thrive well. As for his clover and timothy meadow—he had none. The thick-standing oats simply had smothered down the young, tender plants.

On the other hand, just across the road from the thickly seeded one, where the seeding of the oats was much lighter, the yield of grain was about thirty-five bushels to the acre. And not only were both quantity and quality of the grain higher on this thin-seeded land, but the thin stand of oat plants admitted the air and sunlight to the timothy and clover plants below, causing them to secure a strong, vigorous growth, which resulted in a fine "set" for a meadow.

There is a much greater difference in the yield in this instance than can ordinarily be expected between thick and thin seeding. Something depends upon the character of the soil, to be sure, but up to four bushels per acre, under ordinary conditions, the yield will always be higher from the thicker seeding. Usually three bushels per acre will give the most satisfactory results as the returns from the thicker seeding, although greater, may not be sufficient to justify putting on the extra seed, particularly if it is high in price.

Of course, from the standpoint of the timothy and clover, the thinner seeding is to be preferred, and ordinarily ten pecks of seed is sufficient when oats are used as a nurse crop.

An Example of Business Carelessness.

WE ARE all more or less prone to make mistakes. Strive as we may we blunder nevertheless. Some of these are costly from the standpoint of dollars and cents, while they are all more or less annoying. We are started on this train of thought by a communication from a business firm stating that they have a number of statements with remittances for furs, hides, pelts, etc., awaiting claimants. In some cases no postoffice is given, while in other instances the persons forwarding orders have failed to sign their name. As a result there are scattered here and there throughout the entire central West individual customers whose carelessness has involved them in a money loss. It goes without saying that no reputable firm wants goods for nothing. If it stays in business year after year as a result of following a square deal its one great desire is to treat each and every customer with fairness. In such cases, however, as those referred to the company is helpless.

It is a well-known fact that the government receives hundreds of thousands of dollars' worth of goods every year because of the same weakness in human nature, while the express companies and railroad companies have thrust upon them thousands of packages, the contents of which are of value to the original owner but of little value to anyone else. All this is a loss, as stated by one government official, that falls on careless people.

We are calling attention to the matter in the hope that such firms as the one referred to above may be able to once more make connections with some of its claimants. We hope that the mere suggestion here given may be sufficient to inspire action on the part of subscribers who have had unsatisfactory dealings with any firm or individual advertising in this paper. Doubtless in most cases there would be no occasion for holding a grudge if all the facts were known.

Running Water a Household Necessity.

IMPORTANT truths are often forced upon our attention by the simple plan of making comparisons. An instance of this kind is furnished by a statement made by the governor of an eastern state while addressing a farmer audience recently. Upon that occasion Governor Craig, of North Carolina, said:

If I were asked to name what in my opinion is the most desired utility of modern life, I would not name the railroad, nor the telephone, nor the electric light, nor the automobile, essential as they are, but I would name running water in the home. This conduces more to cleanliness and health and comfort than any other improvement that modern civilization has brought us. It can be had too, at a little cost. There is not a farmer of moderate means who cannot with economy have running water and sewers in his home, and this would contribute more to the health and comfort of his family than any other improvement.

The house fly and mosquito are deadly enemies of our people. They can be guarded against with slight expense. With running water and screens, any home, however humble, can be clean and comfortable and healthy, and the people who live in it will be cleaner, more comfortable and more healthy.

It is undoubtedly true that most of us fail to realize the great importance from the standpoint of comfort and health of an abundant supply of running water. A supply of running water will do more to eliminate drudgery from the work of the home than any one factor that could possibly be mentioned. The sink in the kitchen with drainage facilities is an absolute essential. Pressure may be obtained by elevating a supply tank or by air compression, and the money invested in either equipment will pay dividends in comfort, health and pleasure that cannot be matched by any other investment that could be named.

EXPERIMENTS WITH HEMP.

With War Prices Hemp Seems a Profitable Crop in Wisconsin, But It Demands a Considerable Amount of High-Priced Machinery to Handle the Crop.

HEMP growing, which has been largely confined to Kentucky, promises to become an important farm crop in Wisconsin, as it has been proven after seven years of experiments that this crop can be made to pay well in this state. Growers of hemp the past year in Wisconsin netted from $40 to $80 an acre and constantly increasing inquiries indicate an increased interest by the farmers.

The war has had much to do with added interest in hemp growing in this country, as many of the nations engaged are the largest producers and imports have been cut off. Hemp is cultivated commercially for fiber in large quantities in Russia, Italy, Austria-Hungary, France, Germany, Belgium, Turkey, China and Japan, all of which, excepting China, are involved in the war. Russia, before the war, produced more hemp for export than all other countries and as the cultivation of this crop has never reached very large proportions in the United States hemp growers see a splendid market ahead.

Hemp is easy to cultivate and requires no attention between seeding and harvesting. It follows a cultivated crop better than any other crop and does not follow well the grains, so that in a rotation it should follow either corn or clover with the grain following the hemp. In a deep soil it withstands drouth exceedingly well, is not affected by light early frosts, does well during a moist season and is a sure killer of thistles and other weeds which cannot survive the dense shade of the hemp.

WISCONSIN HEMP IN THE FIELD AND IN SHOCK.

Special machinery is one requirement for successful hemp fiber production and this fact must be borne in mind by the farmer who undertakes it. The crop cannot be grown profitably in small, isolated areas. Two hundred acres or more should be grown on one or adjoining farms to warrant the introduction of the necessary machinery for drilling, harvesting, breaking and baling and make it possible to ship in car lots. Three or four hundred acres is even better.

HEMP FIBER GOING TO MARKET AT WAUPUN, WIS.

HEMP GROWN FOR SEED.

This condition brought about the organization of hemp districts in Wisconsin and hemp is probably best handled as it is at Waupun, where the farmers have co-operated in buying the necessary machinery for handling. This solved the big problem of the farmers about Waupun and where a farmer doesn't have sufficient acreage to warrant introducing the machinery needed it is advisable to join with others near by.

Hemp fiber is now bringing from $11 to $12 per 100 pounds and the price of seed has gone soaring since the war began, good seed now being worth about $11 a bushel, as compared with a normal price of about $3 a bushel. At this price for fiber it would almost be profitable to break the hemp by hand.

The Wisconsin Hemp Growers' Association, which included all the commercial growers in the state, first took up the work of buying special machinery, etc., and recently the Waupun growers organized the Waupun Hemp Growers' Sales Co., which will finance the handling and marketing of the crop there.

There are at present three hemp-growing centers in the state. The district of which Waupun is the center extends as far north as Brandon and as far south as Beaver Dam. Burlington, in Walworth county, is the center of a small district and Union Center is the center of the third district.

These three centers do not by any means represent the entire hemp growing of the state, but they do represent the commercial hemp-growing districts. Hundreds of acres are devoted to hemp in all parts of the state as an eradicator of quack grass and Canadian thistles. Farmers have found this crop good for stamping out these farm enemies, but hemp is too valuable a crop for such purposes when it will net $40 to $80 in a district where machinery is accessible for handling. Of course, it is worth much, many farmers say, if it eradicates quack grass and thistles.

Wisconsin has good soil for hemp and the 1915 crop of the association at Waupun sold for $12,000, the farmers netting from $40 to $80 an acre. About 500 acres were devoted to hemp and it ran from 1,000 to 2,000 pounds of fiber to the acre, some acres yielding as high as 2,200 pounds.

Any good, deep soil which will produce a good corn crop can be depended upon for hemp and it works best in the usual four-year rotation with corn, grain and leguminous crops. Since 1909 experiments have been running in this state under the direction of C. P. Norgord, commissioner of agriculture. Two problems faced the growers—one a plan for growing and marketing the crop; the other the securing of the necessary machinery. This was finally worked out by the organization of the Waupun association where different machines have been tried out and where farmers interested in the crop can secure valuable information.

Hemp is uninjured by light frosts and can consequently be sown earlier than oats and harvested later than corn. It requires about 110 days for its growth and should have a rainfall of about ten inches during that period. For its best development it requires a rich, alluvial or loamy soil not subject to drouth, yet not of a swampy nature. It is not to be recommended for a light, sandy soil unless it follows a crop of clover or beans which have left a good quantity of nitrogenous fertilizer. Hemp will not do well in acid soils. The acid lands should be limed as they are for alfalfa. Government experiments in Indiana have developed good crops on peaty soils over marl.

Hemp may be introduced in any crop rotation, but it is best to have it follow clover, peas or beans or a cultivated crop. It may follow corn or grain, providing these crops are well fertilized. The best fertilizer is the barnyard manure and this should be applied to the previous crop, or, at the latest, in the fall before sowing the hemp.

Fall plowing is always best and seed should be sown at the rate of approximately a bushel per acre about the time of sowing oats or as nearly after the severe frosts as possible.

In harvesting most of the hemp is now cut with self-rake reapers made especially for this crop. They leave the hemp stalks in gavels. After lying in the gavel for two or three days the stalks are either spread for retting, set in shocks without binding or tied in bundles and set in shocks. In Kentucky the fiber is gray if dew-retted and light yellow if water-retted. In the North where there is no danger of hot weather to sunburn the stalks the hemp may be spread for retting immediately after cutting. If there is danger of dry, hot weather it is better cured in shocks. If it is to be stacked it must be tied into bundles before it is ready for shocking.

HEMP FIBER ON WAGON AFTER LEAVING BREAKING MACHINE.

HEMP BREAKING MACHINE IN ACTION AT WAUPUN, WIS.

The Red Side Wall and Black Tread

This Color Combination Is the Trade-Mark of Firestone TIRES

THIS design and color combination is an added feature to the many "extra values" which have meant "Most Miles per Dollar" to Firestone Tire users during the past sixteen years. It combines appearance with sturdiness and adds a touch of elegance to your car. The Firestone Tire is the product of specialists in buying—specialists in building—specialists at distribution—and in this concentration of purpose you find the fundamental reason for Firestone leadership.

Firestone Red Tubes

For several years Firestone Red Tubes have given motorists an added measure of mileage and security. The thick wall of pure rubber, built up layer upon layer, is cured by the antimony method.

Free Offer: Send us your dealer's name and address and the make of tires you use, and we will send you, free, a fine waterproof Tube Bag. It will keep your inner tubes in prime condition. Write today and ask also for free book, "Care and Repair of Tires" No. 17

Why Disk Cultivating Brings a Better Crop

As you see in the illustration above, the disks leave the roots intact, down in the soil. The shovel cultivator cuts them off and lifts them toward the surface. Here, roots cannot get moisture—the plant is robbed of nourishment. The shovel turns the hard baked soil down to the roots and throws the moist, life giving soil up to the sun. The disk cultivator rarely goes deep enough to cut the roots. Should the disks touch the roots, they leave them deep down in the moist soil. The disk rolls over the soil. Its pressure is always downward. The disk blade keeps mulching the surface and killing the weeds, in any kind of soil, no matter what variety or in what quantity the weeds may be; when the field gets full of clods, the shovels knock them about and break the corn. The disks cut and crumble the clods to form a surface mulch and conserve the moisture below.

JANESVILLE Disk Cultivator

Manufacturers of Farm Implements

Here is a cultivator that we consider as near perfect as can be made. You can tilt the disks to any angle—in or out. Disks cut deep or shallow and do a good job of hilling or level cultivation. Following the disks we have a surface blade on a spring steel holder which practically gives you two cultivations with one trip. This adjustable surface leveler cuts the weed roots, mulches the surface. Found only on Janesville Cultivators. Cultivate your corn this year with the Janesville Disk Cultivator. Increased corn yield usually pays back its cost with the first crop on 40 acres or more. It's easier on the horses, too. A rolling, springy motion of a disk is a much lighter pull than the dead drag of a buried shovel. You can cultivate more acres per day and do the work better.

Disks Can Throw Dirt In or Out

SUDAN GRASS

The every year money-maker for every farmer. Thrives anywhere in the corn belt, makes 6 to 10 tons good, sure, luscious feed per acre; relished by all stock. Thousands who bought and tried it last year now order 2 to 10 times as much. Big seed book free. Also other seeds of all kinds. GALLOWAY BROS. & CO. Dept. 38 Waterloo, Iowa

Show Corn Methods.

To the Editor:—Raising show corn and raising hog corn are two very different things. How to raise show corn and get a fine lot of seed corn at the same time is a problem, too. It requires a lot of common sense. One must first take into consideration the nature of the soil. First, the soil must not be too rich or high in fertility, as that tends to interfere with the type of the corn; second, plant your corn as soon as the soil is fit, as the longer growing season you give it the more certain you are of not losing your type and besides you will have a much firmer ear. Third, never plant all the corn at the same time. Skip two rows out of ten and plant these two rows seven days later. This is one way to get better-filled tips. When corn is ripe put into shocks. But be sure it is ripe, as the longer you can let it stand the better. Leave it in the shocks two weeks before husking. Never pick show corn while the corn is standing. Also never dry show corn by heat. Dry as nature does and you will have a more natural ear. When husking time arrives husk the corn, separating the crib corn from the seed corn, also the show corn from the seed corn. Hang your seed corn up to dry. Lay your show corn in rows three deep to dry. Don't think of picking out your corn the day before the grain show. Better begin picking it out a month in advance and keep on working at it until the time for the show. I have won four first prizes on fifty-ear lots at Madison in five entries and I put in six weeks on the lot every year. Care must be taken in placing your ears so as to have your corn line up in length as well as in color. Then when you have accomplished this you are all ready for the show. Pack up by placing each ear in paper and packing in a suit case so as not to shell off any of the corn. After you have packed your fifty, ten and single ears start out for the show and see if you can't beat the other fellow. S. P. Markle.

La Crosse Co., Wisconsin.

Prize Two-Row Barley.

To the Editor:—My experience with two-row barley is very limited, as I grew it for the first time last year and only a small patch of it. I bought a peck of barley seed from a seed company in this state and sowed it on good, rich soil. It grew very rank and most of it was badly lodged at harvest time. I took about fifteen of the best sheaves and hung them in a shed as soon as they were cut to keep it from getting colored. After it was dry I threshed it by hand and with the use of a good fanning mill was able to clean up a good peck for the grain show. While I didn't expect to get first prize, I knew I had a pretty good peck of two-row barley. I expect to sow a number of acres of this barley next year and probably after next harvest I shall be better able to say what I think of this barley. Anton Bohl.

Dodge Co., Wisconsin.

Profits in Potatoes.

To the Editor:—The experiences I have had in growing potatoes are nearly along the lines of the older writers, but I have this to say: The ground should be prepared for potatoes in the course of rotation, taking two or three years for the best results. We of the new lands use it the first year as soon as the weeds and the wild brakes are subdued. We followed the second year with potatoes, after fall plowing and again plowing in the spring. This land was moist and spongy all summer and it is now plowed for clover and oats to be sowed this spring.

We bought forty acres three-fourths of a mile from town. We raised 3,000 bushels the first year from twenty-three acres. Last year we cleared the balance and put it into potatoes. Having frost in August hurt some, then the blight got some of the late planting, but we put into the warehouse 4,100 bushels of assorted seed stock of Triumph, Cobblers, Rose and Ohio. it doesn't take much figuring to see that the forty acres, all cleared, doesn't cost much money and is worth $3,000 as it stands today. The first cost was $17.50 per acre, with a clearing expense of about $35 per acre. We got about 30 cents and better for the first 3,000 bushels, and with 4,100 bushels on hand today, all seed stock, the land proposition looks good to parties that have the money to carry 't to the second year. O. G. White.

Mgr. L. Starks Co., Amberg, Wis.

Growing Premium Corn.

To the Editor:—I will tell you how we grow our corn, which will not differ much from the general rule. Our soil is mostly a black clay loam. We practice a three-year rotation, oats, clover and corn. We manure the clover sod with stable manure which we plow about seven inches deep as early in the spring as we can harrow it. We give the weeds a chance to start and when they have started nicely we disk it, using a disk harrow and then the smoothing harrow until planting time, which is from the 15th to the 20th of May. We use a check-row planter and try to plant about three inches deep with three kernels to the hill. If the weather will permit we harrow twice before the corn is up. As soon as the corn is two or three inches high we begin cultivating and cultivate rather deep while the corn is small and then shallow as often as we can until the corn is too large for a two-horse cultivator. Then we go through it with hoes and clean out the weeds that escaped the cultivator, which, as a rule, are not very many. After that we go through it with a one-horse cultivator with small teeth if necessary to stir the ground to keep up a mulch. We let it get thoroughly ripe in the fall before we cut it if the frost will hold off long enough, which it did not do in 1915. We husk as soon as we can after cutting so as to get our seed corn in before cold weather. Our seed is put in a dry kiln and a fire kept under it until it is thoroughly dry. H. C. Brueckner.

Jefferson Co., Wisconsin.

Dynamite a Time and Labor-Saver on the Farm.

To the Editor:—Farmers are just beginning to see the importance of using explosives on the farm for such work as blasting stumps, ditches, tree holes, subsoil and hardpan. Two men can take a case of dynamite, some caps and a fuse, and very quickly remove a good number of stumps, and they are almost always broken up so that they can be handled with ease for hauling or burning, as the case may be; and there is no dirt left on them. Some time ago I blasted out some stumps that were seven or eight feet across, but they came out nicely and were well broken up.

Dynamite will dig a ditch where no other method can be used, in such places as swamps and ponds. It does better work in wet ground than in dry. Anywhere a man can work to punch the holes and load them a ditch can be blasted. The blast lifts the dirt out and scatters it far on each side of the ditch, thereby leaving no big banks of dirt on the sides of the ditch to hold the water back or to be washing into the ditch, and the jar from the explosion loosens up the earth so that the water can drain into the ditch. A ditch dug with spades has hard sides so that the water cannot drain in, and then there is lots of dirt on the sides of the ditch—unless it is hauled away about four feet deep and from five to seven feet across at the top. Blasted ditches have sloping sides, therefore there is no caving. If the proper method is used, ditches as large as six feet deep and twenty feet wide can be blasted.

Trees should never be set in any but a blasted hole, as the blast cracks up the soil so that the roots can grow fast and the moisture can rise. Spade-dug holes have hard sides that the young roots and moisture cannot penetrate. Fruit trees set into blasted holes come into bearing from one to three years earlier than those set in spade-dug holes, and the cost per tree for blasting is very light.

If you have clay subsoil and want bumper crops, use one-half stick of 40 per cent dynamite about three feet deep and fifteen feet apart, and if the work is done at the proper time you will get them. The dynamite cracks up the soil so that the rain can soak in and not run off, as is usually the case, and then the moisture can rise and the roots can go down deep, getting the plant food. As early as possible in the fall this work should be done, and when the soil is dry, or it will only blow a hole in the ground, doing no good. L. M. Hodges.

From Buffalo County.

To the Editor:—I sat down at my desk today and looked over very carefully The Wisconsin Farmer of March 2d. One article especially appealed to me and that was the community celebration at Richland Center. Such a spirit ought to exist in every locality with merchants and country folks. My experience as a merchant for almost thirty years in the small village of Cochrane has shown me that the relation between the merchant and the farmer is not close enough. There should not be a line between the village people and the country folks. Frequent gatherings would bring better results, both for the farmer and for the merchant, and I think you cannot state too strongly in the columns of your paper that the farmer must not look upon his home merchant as a deadbeat, and that he needs his home merchant and a home market in order to prosper and keep advancing.

I do not know how large a circulation you have in my vicinity, but I think every farmer ought to have your paper, and if I can be of any assistance I will do it. Cochrane has two rural routes, and the mail to Naumandee, Wisconsin, goes through this office. Buffalo county is a very good county, and the Naumandee valley is one of the richest valleys in the state. Dairying is carried on very extensively.

I am of Swiss descent, and I remember that my father was one of the first to make cheese in Buffalo county. That was in 1855, when he came here. Buffalo county has the smallest incorporated city in the state, Buffalo City, with a population of 275, situated one mile from the Cochrane station, on the C., B. & Q. railroad.

Buffalo Co., Wis. G. M. Rohrer.

Favors Sanitary Barn Law.

To the Editor:—In your issue of February 24th, you have an editorial headed, "Falling in Line with the New License Law." In this editorial you say that cheesemakers and buttermakers are complying with this new law and its conditions. Now, in order to help them along in their effort for cleaner and more sanitary dairy conditions, I believe there should be a law passed and enforced to the effect that all cow barns must be kept clean and sanitary. There are some farmers and a large percentage of them too, who try their best to be clean and sanitary. But there are others who do not care whether the milk is clean or not, so long as it is accepted at the factory, and it is against such persons that I think there should be rigid law enforcement. I have visited a certain farmer who used a cloth for a strain, and this cloth was dirty and sour, and so long as such things are permitted the cheesemaker and buttermaker cannot make a clean and sanitary product. J. C. Paul.

Brown Co., Wis.

Work of Effective Dairy Tester.

Suggestions By Roy Harris, Official Supervisor Dairy Tests in the State of Wisconsin.

A CERTAIN hardware firm has adopted as its slogan the phrase, "The recollection of quality remains long after the price is forgotten." I commend it to you testers, and would-be testers, as worthy of your most thoughtful consideration. Whether you are in official or association work, but especially the latter, you are engaged in something in which the one to whom service is rendered enters with more or less doubt and hesitation. In forming an association the most frequent objection raised is on the score of its cost. Why should a farmer spend the money necessary to have his cows tested? Dollars are not so plentiful with him that he can afford to throw them away recklessly. He expects to get something in return and he ought not to be disappointed.

If he goes to a hardware store and buys a steel square he expects to get one that is "square"; one that will tell him where his work is out of plumb; that will enable him to find and remedy imperfections and one that can be depended upon as accurate. If he joins a testing association he will have the right to expect about the same qualities, will he not? Should he not expect to learn which of his cows are giving him a "square deal" and, if any are not, how the failure may be remedied? Is it asking too much, if he expected the tester to be on the lookout for his interests and giving his time and thought to improvement in production and economy? Certainly, he should be able to rely on the accuracy of the tests and the tester's accounts. If the measure is wrong its use leads to error and is worse than none at all.

If the pure-bred cattle breeder calls for an official test may he not expect that the work will be accurately done and properly reported? May he not also expect the tester to so conduct the test that the records will stand as the actual unquestioned production of his cows? He certainly may, else he had better keep his money and do his own testing. His own private records are as good—and lots cheaper—than loosely conducted advanced registry.

A tester's position is one of very considerable responsibility, and his qualifications are many. He must first of all be thoroughly familiar with the Babcock test. Next, he must have more of an acquaintance with cows than can be picked up in one visit to the stockyards. He really ought to know quite a bit about them. None of us know any too much. But feeds, rations, tried mixtures, profitable use, market prices, etc., there is no limit to what he may well know in this direction. He may also be something of a veterinarian to advantage. A working knowledge of first aid treatment is useful to whoever has anything to do with farm animals. He ought to be posted on current dairy news too; know what is going on in dairy organizations and at his agricultural college.

Whether he possesses all of the above qualities or not there is one that he can and must have. That is a clean mind and a clean body so he will be welcome in any family circle.

The opportunity for social influence and acquaintance found in either kind of testing, should appeal strongly to any young man with the spirit of leadership in him. Far beyond any money consideration is the lasting satisfaction of having led someone or influenced someone to do something better than they were doing it before.

Still, with all of these virtues, many of you will agree with me that a tester has to be something of a diplomat. Imagine for instance, the reception he is likely to receive when he drops down box and baggage on a place on wash day, or in the midst of house cleaning, or the day the Mrs. sprained her ankle "with the shredders comin' next week and me that much behind with my work, I don't know what to touch next!" Well, it takes quite a genius to get through a situation like that and leave them with a feeling that after all he is not such a nuisance, and "we're glad he came this week instead of next."

The real test of your work, young man, comes a long time after it is done. If a year, two years, or even longer after you have left they are still speaking of you as "that young fellow who helped us so much in improving our herd; who was so nice to have around and right on the job, too"; you will not have to wonder whether they regret the money paid for testing or not. The answer is in the record you have left behind you.

Now, addressing more particularly the official, or advanced registry, testers; all that I have said applies to you just as much as to those in charge of cow-testing associations. Besides, you have heavier responsibilities through the larger values attached to the records made and the fact that you are acting as a direct representative of the state in conducting the tests. We vouch for your work in the belief that we can depend upon you fully and that you will so conduct the tests that our own people and every one else will have full confidence that anything bearing the name "Wisconsin" can safely be accepted anywhere at its full face value. The rules are strict and fairly plain, and we hold you to the letter of them. You know that you must be right there while each test cow is being milked; that nothing is to be taken for granted or left to chance. You don't guess, you know that each cow actually produced in the time stated the amounts of milk and butter fat which you report to her credit. There are certain things which the owner has to do and others which he may not do and have his records accepted. You have not the authority to compel him to do anything but are expected nevertheless to see that he does them. You accomplish this by watchfulness, remindings, persuasion and arguments, if necessary. Usually the first two are enough but occasionally you must have recourse to the others.

Interest in Holsteins.

To encourage interest in the Holstein cow the Manitowoc County Holstein Breeders' Association conducted an essay contest among the boys and girls of the county this winter, the authors of the best essays to receive a prize. The contest closed recently

ED BERGNER, CLEVELAND, WIS.
Winner of gold medal in Manitowoc Holstein Essay Contest.

and the essays submitted were judged by M. H. Gardner, superintendent of the Holstein registry at Delavan, Wisconsin.

Honors for the best essay were awarded to Edward Bergner, of Cleveland, twelve years of age, who prepared the following essay on the Holstein cow:

The Holstein cattle are called the Dutch or the Holland cattle. This breed had its origin in Holland. It produces a larger quantity of milk than any other breed. The breed is of value also for beef, the frame is large and the color is black and white. The Holstein cow is the only cow that has held all the world's butter records. The cattle have increased rapidly and are now found nearly in all parts of the country. When the cow is not in milk it takes on flesh rapidly and soon becomes full in form. Most cows weigh 1,100 to 1,400 pounds. The Holstein cows give about forty to sixty pounds a day. Most of the cows have a record from fifteen to twenty-five pounds of butter a week. The males are very large and heavy, often above 2,500 pounds. Its head is long, rather narrow and he has a large mouth and nostrils. The back is usually level and the tail is long and thin. The calves are large and strong at birth and develop very fast. The calves show a strong resemblance to the Holstein cow. She has very few calves that are not black and white. With a few crosses they look like full bloods and make splendid cows.

As winner of first place Mr. Bergner will be given a gold medal. Other winners were:

Second—Johanna Pischel, camera.
Third—Norris Johnson, fountain pen.
Fourth—Esther Thompson, ladies' pocket knife.
Fifth—Mildred Wimmler, silver spoon.

Other contestants in the contest were Joe Lemberger, Malinda Basken, Esther Basken, Charles Basel, Ed Reiderer, Bernard Reiderer, Florence Bergner, Elsie Johannes and Isidor Lemberger. Ten subscriptions to The Wisconsin Farmer were donated by the publisher of this paper and these will be awarded the contestants who failed to finish in either of the four first places.

This was the first contest of its kind ever held in that part of Wisconsin and was very successful in every way. The contest was originated and handled by Charles H. Hampke, the secretary, and he is entitled to much credit for his work for the association which is rapidly growing and now has about 100 members. The association is in splendid financial condition and a judging as well as a milking contest is planned at the annual summer meeting in June at Manitowoc. This county is fast becoming a Holstein center and there are several splendid foundation herds in the county which are supplying high quality stock to the farmers.

When the calf is from ten days to two weeks old give it a small amount of choice mixed clover or alfalfa hay. A little later give it a very small amount of grain and increase the allowance gradually as the young animal develops. It is well to keep a calf a little hungry rather than to tax its digestive organs.—[Wisconsin Bulletin.

Warm the house —make a home!

Women like radiator heating—it puts June in every room

All mothers wish for homes that are evenly warmed all over to cheer and comfort husband and little folks; and to make the home a cozy, genial center for the gatherings of good friends.

All mothers now-a-days deserve to be freed forever from the back-breaking labor of "tending stoves," that heat only "in spots," and spout ash-dust and coal-gases. The only sure way to fill a house with mild, delightful warmth and make it a home is with an IDEAL-AMERICAN outfit.

AMERICAN RADIATORS & IDEAL BOILERS

They increase the value of your property by more than their cost. They are noiseless, absolutely safe (a child can run them), and can at any time be put in new or *old* houses without disturbing anything or tearing out walls or partitions.

They protect against fire risk **and run independently of the water works supply, as same water is used over and over again for years.**

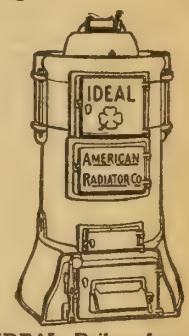
They pay for themselves in savings

The IDEAL Boiler may be put in cellar, side-room or "lean-to" and will burn any local fuel—wood, oil, gas, lignite, hard or soft coal, (even cheap grades of pea coal, slack, run-of-mine, screenings, etc.) Bankers and real estate men will back our statement that it is a paying and permanent investment and not an expense.

A No. 020 IDEAL Boiler and 262 ft. of 38-in. AMERICAN Radiators, costing the owner $185 were used to heat this farm house, at which price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions. The IDEAL outfit is the *only* feature of the house which is never worth *less* than you paid for it.

IDEAL-AMERICAN outfits heat the whole house, with one fire—no more care-taking than to run one stove for one room. The yearly fuel savings soon pay the first cost of the outfit.

Let us tell you all about it and give you special information so you can judge for yourself. Write today—now—for free booklet: "Ideal Heating." You will not be asked to promise or obligate yourself in any way, but send for it at once.



IDEAL Boilers have large fuel pots in which the air and coal gases thoroughly mix as in a modern gas or oil mantle or burner, thus extracting every bit of the heat from the fuel. Easier to run than a stove.

Sold by all dealers.
No exclusive agents.

Holstein Meeting at Plymouth.

Breed Flourishes in Sheboygan County, Wis., Which Has Become Nationally Famous as a Dairy Center.

THE spring meeting of the Sheboygan County Holstein-Friesian Breeders' Association, which was held last Saturday in the city hall at Plymouth, was one of the most enthusiastic and best attended meetings ever held by the association. More than sixty prominent Holstein breeders were present and several important plans were discussed and set going that should do much to advance the interests of the association and the breed during the coming year in that county.

GOOD TYPE SHEBOYGAN COUNTY HOLSTEIN.

Vickery Johanna 75517, milk, 438.4 pounds; butter, 23.10, at twelve years. She is the old foundation cow in the herd of H. R. Weiskoff, at Cleveland, and every animal in the herd traces back to her.

The Sheboygan association now has about ninety members in good standing and is one of the most active in the state in furthering the interests of the Holstein. Unlike most community breeders' associations the Sheboygan breeders meet frequently, at least four times a year, while most such organizations only meet twice a year. The annual meeting was held last January and the spring meeting was called primarily to discuss the question of holding another Holstein sale this spring.

Official testing and community advertising has done much during the past few months to call attention to the high standing of Sheboygan county as a Holstein breeding center. Only recently two cows in official yearly tests completed remarkable records, one in the herd of Emil Titel, at Plymouth, producing 980 pounds of butter fat and another in the herd of Harry Keach, at Glenbeulah, producing 972 pounds of fat. The Titel record is all the more remarkable, as seven weeks after completing her year's work she dropped a calf and these two A. R. O. records, backed by the enthusiasm of the breeders and the splendid results being made by other cows now in official work, have done much to call attention to this splendid Holstein county.

Another factor has been the splendid work of the Sheboygan County Cow-Testing Association, which led the state last year in the state cow-testing association work. Sheboygan county also had the best herd in the association work last year, the Keach herd winning this honor. Frank Ubbelohde, of Sheboygan Falls, secretary of the association, told an editor of The Wisconsin Farmer who had the pleasure to attend the meeting, that the association records so far this year were better than they were last year. He expects his association to finish first again in the state work, although the Keach herd is not now entered, Mr. Keach dropping out of local work to do A. R. O. testing.

Feed is plentiful in the county this year and the silage, while not up to the quality of past years, is better than the average and the hay and alfalfa crops last year were the finest in the history of the county. With these conditions the Sheboygan breeders have been enabled to keep their herds in fine condition and the demand for stock has been better this spring, many breeders informed the writer, than ever before. More persons are coming to Sheboygan county than ever before to select and buy their pure-bred Holstein stock.

REGISTERED HOLSTEIN COWS.

On the P. J. Liebenstein Farm, near Adell, Sheboygan county, Wisconsin.

These conditions, combined with the knowledge that they have the stock, convinced the association breeders that another sale should be held and May 9th was selected by the association as the date. Although the sale last year, which was the first, was not so good from the seller's standpoint as the breeders would have desired, there was not a vote against a sale this year. Many breeders agreed that they would have to pocket a little loss on the first sales, but that in the end they would get it all back by the increased prices their stock would bring in future sales when the buyers had been shown what Sheboygan county is producing. About forty-five animals have already been consigned to the sale in May. There were about eighty in the first sale last spring and it is hoped to do better than this this year. A sale committee consisting of Frank Ubbelohde, Charles Nehrling, Foster Smith and Carl Krumrey, which was named at the January meeting, was instructed to proceed with the arrangements and work out the details in order to make the sale successful in every respect. This sale will be held at Plymouth.

As the meeting was called primarily to consider a sale this matter occupied most of the attention of the breeders present. E. A. Harrington, of Madison, gave some pointers on how sales are conducted in New York and was followed with some sound advice by Frank Everson, of Lake Mills, who has directed the Lake Mills sales for many years.

Mr. Everson praised very highly the enthusiasm and interest of the Sheboygan breeders. Looking around the room he declared that the Lake Mills breeders could never get out half so large a crowd and he could see no reason why Sheboygan county couldn't have one of the best sales in the country. There is no better way, he pointed out, to get rid of the surplus stock than the sale ring, but emphasized the importance of placing good animals in the ring, for it is a poor place to sell those that are not good.

Mr. Harrington spoke of the sixty-day guarantee under which several Wisconsin sales will be conducted this year. This is a guarantee given by the consignor that his animal will not react to the tuberculin test with-

NEW CROP SEED CORN

Plant Early Yellow Rose

THE corn that made Shenandoah famous as a seed-producing center. The earliest big corn, biggest early corn. An all round kind. Records show Early Yellow Rose matures well in southeastern South Dakota, also Harrison, Worth, Greene, Story and Allamakee counties, Iowa, and southern Wisconsin, also northern Illinois. Iowa Agricultural College got ninety-four bushels per acre of Early Yellow Rose shelling out sixty pounds corn from seventy pounds ears. It's a good corn for north central Iowa sure. While it lasts, a few hundred bushels, fall picked, rack dried seed at $3 shelled and graded or $4 select ears crated. Offer for same territory early strain Reid's Dent, ear $3.75; shelled $2.75. Early strain Silver Mine, same price. Farther north use Pride of the North, ears $4, shelled $3, Longfellow's Yellow Dent ears $4, shelled $3.75. White Cap Red Butcher (large and early) ear $3.75, shelled $2.75; Smoky Red Northwestern Dent, ears $5, shelled $4. Wisconsin White Dent ears $4, shelled $3. Improved Silver King ears $4, shelled $3. Special reduction on lots five bushels or more. All hand picked and selected ears packed in bushel crates. Shelled seed all hand picked, tipped and butted, milled and graded ready to plant. 94 to 98 per cent germination. All sold under our regular warrantee or guarantee as per our free seed corn circular same as years past. Catalog and samples free. Now is the time to get cream of our big supply.

GROUP OF GRADUATES OF THE SECOND WISCONSIN COLLEGE OF AGRICULTURE SHORT COURSE.

a sixty days after sale. In case she hould react he will have to refund he money; in case not the sale tands. He also warned against any y-bidding and said that if an asso- iation is to build up a successful ale that the buyer must be assured hat the animals will go for what hey are bid in at in the sale ring. This the association decided a wise ourse and the committee announced no by-bidding would be permitted. This rule was followed last year. Mr. Harrington also spoke relative to the percentage of bulls and heifers in the sale and said that in New York the percentage, as a rule, was one bull to ten females, as buyers will not come a long distance to buy bulls. Mr. Everson suggested that as many cows be put in as possible and suggested not less than twenty-five cows in the coming sale. These are problems which have to be worked out by the associations just going into the sale game and the breeders discussed them fully and with much interest. Finally it was left to the sales committee to work out these rules and regulations.

The association also decided to incorporate and the officers were instructed to proceed along these lines, as it was agreed that such is advisable since the association has gone into the business of holding sales.

Another important matter was the support given by the association to the erection of a combination show and sales barn on the county fair grounds at Plymouth. R. B. Melvin, of Glenbeulah, a director in the county agricultural association, outlined the proposal and in less than thirty minutes the breeders present had subscribed about $1,400 worth of stock. This indicates the progressive spirit of the Sheboygan county breeders and the subscribing for stock started off with a rush, the first subscribers taking blocks of ten shares worth $100.

Mr. Melvin said the plan is to erect a barn that will accommodate 200 head of cattle at the fair and so arrange it that the annual sales can be held there. The county fair is now cramped for room and the cattle barns are far inadequate and the association got behind the movement immediately. The barn will cost about $2,500 or $3,000, so it is seen that about half of the necessary funds were subscribed at this meeting.

The principal speaker of the day was Dr. O. H. Eliason, of Madison, state veterinarian, who spoke for C. P. Norgord, commissioner of agriculture, who was unable to be present.

Dr. Eliason outlined the plan of the department for an accredited list of tuberculin tested cattle which has been discussed in the columns of The Wisconsin Farmer previously. He outlined the plan as it was outlined by Mr. Norgord at the state Holstein breeders' meeting recently at Watertown and which was reported in our report of that convention.

The plan, Dr. Eliason said, is primarily to give those herds which are clean the advantages they are entitled to and in this way do much in cleaning up the state. These herds must be tested by a veterinarian from the state department; the breeder to pay the costs, and when the tests are completed these herds will be certified as tuberculin tested herds. Other states are co-operating and Dr. Eliason expects much of the difficulties now encountered in shipping to other states will be overcome by the new method.

The department is without funds to pay for the work, so it must be self-sustaining. Dr. Eliason said that he believed the testing could be done for about 75 cents per head with a minimum of $15 for the herd, although the plan and the cost has not been entirely perfected. He expects to have the plan completed and ready to go to work within the next ten days or two weeks.

The officers of the association are Dr. H. A. Arpke, of Sheboygan, president; T. H. Thackray, of Glenbeulah, secretary, and C. J. Nehrling, of Plymouth, treasurer.

ON EMIL TITEL FARM NEAR PLYMOUTH.

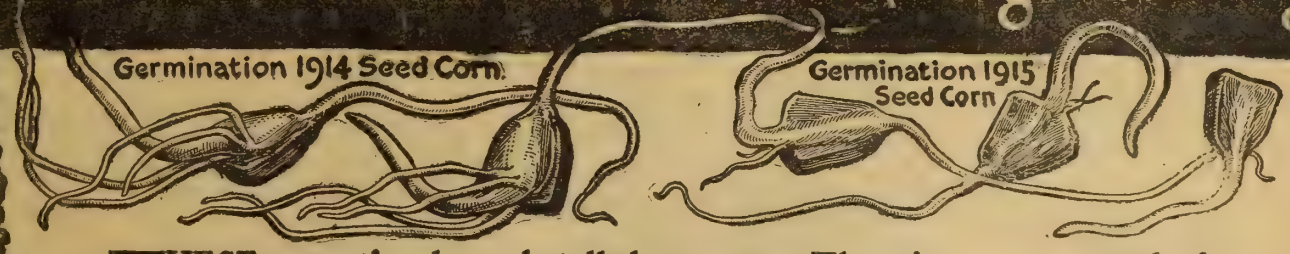
One of Titel's Holstein cows, Vickery Vale Beachwood, recently made a 365-day record of 26,050.7 pounds of milk and 980.54 pounds of fat.

The state automobile bureau of New York has devised a psychological number plate for motor cars that, it is believed, will make it easier to catch those meanest cads on earth, the people who do not stop when their car has injured a person. For a man to catch a number quickly it is necessary that the number be not only plain but so arranged as to be easily read. Plain numbers containing many figures, as, for example, 893526, are not easily read; but a little knowledge of psychology shows that when the number is divided by hyphens, as 89-35-26, the eye takes it in quicker and the mind fixes it more firmly. Therefore, New York is to have hyphenated motor car plates. Rather a pretty little application of scientific knowledge to everyday use, is it not?

"Simon C. Johnson, living on the east mail route, uses a scheme for mailing letters during the cold winter months that is simple and handy for the rural carriers," wrote a mail carrier in the Grand Junction (Iowa) Globe, then explains it: "He uses an ordinary clothes pin to fasten the letters together and when out of stamps puts the money for the postage in a paper and fastens this and the letters together with the clothes pin. The carrier can remove them without taking off his mittens and it also insures no letters being overlooked in the box." To make his argument stronger the carrier guaranteed to return the clothes pin.

Proved By All Vitality Tests

1914 Seed Corn Best For This Spring's Planting



THESE sprouting kernels tell the story. The picture was made from photographs of Minnesota grown seed corn. The two kernels at the right show the poor vitality of what little 1915 crop seed corn will germinate. Only 40% to 60% of this 1915 corn will grow and that is weak and sickly, having few, if any lateral or side roots.

Contrast with this the strong, vigorous roots, laterals and sprouts of the 1914 crop seed corn we are selling. Its germination is about 90%. This Minnesota grown 1914 crop seed corn is early maturing, sound and dry. It is practically the only seed corn which is safe to plant this spring in Minnesota, Northern Wisconsin and North Dakota. We recommend this, also, for South Dakota and Southern Wisconsin.

Dealers Everywhere Sell

NORTHRUP, KING & Co.'S SEEDS

You can buy this seed corn from your dealer. If he has not ordered from us, urge him to get it for you. Every bag we ship bears a tag on which appears our name, germination test and the county in which the seed was grown.

Our Catalogue Tells the Seed Corn Story

It gives the reasons for the failure of the 1915 seed corn crop and is interesting to every man who plants corn, or any other crop.

Cow-Testing Reports.

Waupaca Association.

The following is the report of the official tester, George L. Moss, of the Waupaca and Butternut Ridge Cow-Testing Association for the month ending February 18, 1916. There will be one more report of this association before the beginning of the new year. Mr. Moss reports that there are now several cows reaching the 400-pound mark. This association is now in its fourth year, with H. C. Frihart, president; E. Schroeder, vice president; William Kneip, secretary; Ira Farley, treasurer, and C. A. Stinchfield, director. The report is as follows:

Grade Guernsey Leads.

Mr. Joseph Feinberg, of Lima Center, official tester for the Rock County Cow-Testing Association, has forwarded this paper his report for January, 1916. This report shows Marguerite, a grade Guernsey owned by F. O. Uehling, has the highest milk and butter-fat record for the month. In January she gave a total of 1,559 pounds of milk and 77.9 pounds of butter fat. The milk was 5 per cent test. Other records over forty pounds for January were as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent fat	Pounds B. fat

Eau Claire County Report.

The Eau Claire County Cow-Testing Association No. 2 with headquarters at Augusta has just begun its third year's work with E. G. Sutton as official tester. The past year was very successful and the results will be published in The Wisconsin Farmer as soon as compiled by Mr. Sutton, who sends in the following report for the thirty-one days of the first month of the third year:

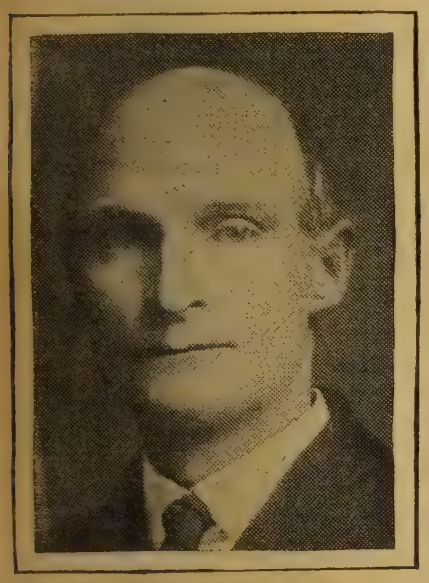
In and Around Wisconsin

Barron County Holstein Breeders Meet—Grant County Has Completed Plans For Pig Contest.

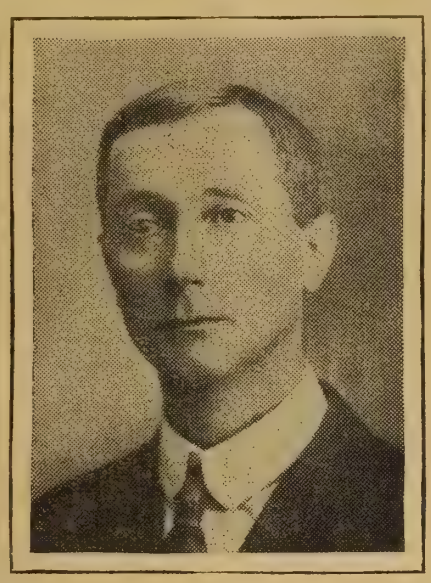
A Holstein in the herd of Barney Bosar, Brown county, recently gave birth to three calves, all of which are living.

Farmers in the vicinity of Mt. Calvary, Fond du Lac county, have begun the organization of a cow-testing association and at a recent meeting nineteen farmers with 232 cows signed up for an association. It is hoped to secure another 200 cows shortly and begin work about April 1st.

At the North Dakota Experiment Station where manure and alfalfa sod preceded corn the yield was 72.9 bushels per acre in 1915 and 56.9 bushels in 1914. While the yield of corn following corn in 1913 was fifty-two bushels per acre and in 1914 was 38.7 bushels per acre. This made an increase of 20.9 bushels in 1913 and 18.2 bushels in 1914, or an average increase of 19.5 bushels per acre due to alfalfa and manure preceding the corn crop.



IRA INMAN, BELOIT, WIS.,
Recently elected president Wisconsin Brown Swiss Association.



WILLIAM F. RENK, SUN PRAIRIE,
Secretary Wisconsin Sheep Breeders' Association.

The Marquette County Agricultural Society at its recent annual meeting at Monticello elected these officers: President, Henry Schwark; vice president, F. E. Crane; secretary, W. P. Fuller, Jr.; treasurer, Chas. O'Neil; director for three years, Emil Tonn; director for two years, Geo. Dewar; director for one year, Gus Petrich.

IRVING JEWELL, MINERAL POINT,
President Wisconsin Hereford Breeders' Association.

F. F. SHOWERS, DELAVAN, WIS.,
President Wisconsin Jersey. Breeders' Association.

The Jefferson county order of the experiment association at its recent meeting at Lake Mills elected Orris J. Emmert, of Johnson Creek, president; William Leonard, of Jefferson, vice president, and Arthur O. Popp, of Jefferson, secretary-treasurer. The grain show which was held in connection with the meeting was the largest ever held by the county order.

Action looking toward the receipt of higher testing cream was taken recently at a joint meeting of the Lawton creamery, the farmers' creamery at Esdaile, and the Ellsworth creamery at Ellsworth, Pierce county. This is an important move and one which should result to the benefit of the creameries as well as the patrons. It was shown that in churning 20 per cent cream there would be 2,400 pounds of buttermilk and in 30 per cent cream only 1,600 pounds of buttermilk. Even if the loss in churning were the same in both instances it is readily seen that it is more profitable to handle richer cream. At a meeting of the directors this resolution was adopted: "That we urge our patrons to skim a cream that will test from 25 to 30 per cent and to produce the same under the best sanitary conditions, keeping barns, cows, milk utensils, separators and everything coming in contact with milk or cream absolutely as clean as possible, so there will be nothing to cause bad flavors, as it is only the clean-flavored cream that will make the finest butter. Finer quality means higher prices."

The secretaries of Upper Wisconsin fairs, at their recent annual meeting at Grand Rapids, decided upon the dates for the 1916 fairs as follows: Marshfield, Aug. 22d-25th; Merrill, Aug. 29th-September 1st; Wausau, September 5th-8th; Stevens Point, September 12th-15th; Chippewa Falls, September 19th-22d; La Crosse, September 26th-29th. The officers elected were: President, A. G. Cox, Chippewa Falls; vice president, C. S. Van Auken, La Crosse; secretary-treasurer, W. A. Gethins, Stevens Point. Marshfield will open the season for the fair racing circuit and have announced $2,300 in prizes in these events.

The Klondike Holstein-Friesian Breeders' Association was organized recently at a meeting of farmers at Klondike, Oconto county, with G. J. Stodola, of Colman, as president; A. B. Decleue, of Klondike, secretary; August Holtger, of Klondike, treasurer, and Joe Guillanme and Henry Brumlick, members of the executive committee. The association was organized by J. W. Hicks, of Prentice, a Holstein breeder and also president of the state potato growers' association.

The annual meeting of the Barron County Holstein Breeders' Association, which was held recently at Barron, was well attended and the following officers were elected for the coming year: President, E. J. McKinney; vice president, Fred Hoxie; secretary, M. M. Matthys; treasurer, Frank Barfknecht; executive committee members, F. J. Frahenbuhl and Louis Voll. Vice presidents from the different towns were also chosen, they being: W. S. Carpenter, Barron; G. J. Gleiter, Maple Grove; Carl Anderson, Clinton; A. M. Chrislaw, Oak Grove, and John LeJeune, Bear Lake. Mr. Matthys, Dr. C. C. Post and Fred Hoxie were named members of an advertising committee whose duties shall be to advertise and boost the Holstein industry of Barron county. The association also voted to hold a summer picnic, the date and place to be selected by a special committee named by the president. J. L. Tormey, of Madison, addressed the convention on "Feeds and Feeding," pointing out that it always pays to feed well. Mr. Tormey advocated that instead of growing so much timothy Barron county farmers will find alfalfa and clover more profitable. R. V. Gunn, of Madison, explained the advantages of the farm management contest work which has been carried on in Barron county for three years and explained that the records show a silo to be worth a great deal to every farm. Out of 104 farms studied in that vicinity fifteen did not have silos. These had an average labor income of $355, while the eighty-nine farms with silos had an average income of $746.

A number of farmers met recently at Lancaster, Grant county, and organized "The Hurricane Products Company." The company is incorporated at $1,000, divided into forty shares of $25 each. No person is permitted to hold more than two shares. The company has contracted with Ben Springer, of Platteville, an expert cheesemaker, who will put in the necessary machinery to make

YOUR FEED YARD SHOULD BE DRY

Concrete feed floors do not soak up water—waste grain and manure—or become infected with disease germs when

MEDUSA WATERPROOFING

is used in the mixture. Medusa Waterproofing makes your concrete work *water tight*—and keeps down the cost of construction. Eight pounds of Medusa Waterproofing to every barrel of Portland cement does the job. It keeps your feed floors, water drains, silos, etc., from cracking. They should last forever.

What Medusa Means to Concrete

You know the qualities of Medusa Gray and Medusa White Portland Cement. They have been the standards for years in concrete construction for the farm. They give the mixture the hardening, setting and strength necessary for perfect concrete work. Medusa Waterproofing is a product of equal merit—a time and money saver that has given permanence to every concrete job on which it is used.

Ready-Waterproofed Cement

You can get Medusa Waterproofing already mixed in proper proportions with Medusa White or Gray Portland Cement. These products assure you of *watertight*, perfect construction.

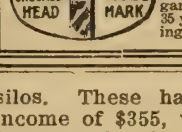
It Will Pay You

to have Capewell horse nails used. If uncertain about the brand have the shoer show you the Trade-Mark on the nail head. Owners are entitled to the best nail—the one to be relied on in all emergencies—not the cheapest regardless of quality. Quality plus 35 years' experience in nail making goes with "The Capewell."



Oliver

The Oliver No. 78 is a power-lift tractor plow, the bottoms raising and lowering at the pull of a trip rope. The farmer who uses this plow can do the same good work he does with his horse plows. The work is done with all the speed and comfort of the improved method of plowing with tractor and power-lift gang.

The combined rolling coulter and jointer, the most successful weed covering device yet invented, is regular equipment on this plow. Note the absence of weeds in the field above.

The No. 78 is furnished with two or three 14" bottoms.

Write us if your dealer cannot supply you.

HEIDER TRACTOR
Is No Experiment

Eight years of actual field work and the experiences of hundreds of users has proven the Heider 10-20 the one real all-purpose tractor.

The price now within reach of every purse.

10-20

The Heider is not a freak, but a standard four-wheel, four-cylinder, light-weight, one man tractor to work on your farm every month in the year. Sturdy, compact, simple, easy to operate and economical.

WHAT IT CAN DO

The Heider can pull your plows, discs, harrows, seeders, binders, graders, hay loaders, wagons, etc. It will operate grain separators, shellers, hullers, hay balers, silo fillers or feed grinders. Does light work economically, such as operate cream separator, washer, pump water, saw wood, etc. Pulls three bottoms under normal or four under very favorable conditions.

WRITE FOR CATALOG

Other points are fully described in our big Heider catalog. Send for it at once and be convinced that the Heider is the biggest value for you. Don't buy your tractor until you have seen this catalog.

STRAWBERRY PLANTS 250 best 3 varieties $1; $3.50 per 1,000. Cuthbert Red Raspberry, $1.25 per 100. Fresh, live plants. C. R. Tuttle, Baraboo, Wisconsin.

FARMERS HAVING BEES. A postal brings the booklet—How to Care for Bees—and prices on bee supplies. Address Gus Dittmer Company, Augusta, Wisconsin.

American cheese. The officers of the company are: Albert Keene, president; S. R. Kerr, secretary and treasurer; directors, Albert Keene, Clyde Richardson, Frank Zenz, L. A. Clark and S. R. Kerr.

The Milladore, Wood county, farmers' co-operative creamery had the biggest year in 1915 in its history. The butter output was the largest in five years, the creamery making 195,000 pounds from 165,000 pounds of fat. The creamery paid an average of .2860 for its fat and received an average of .2696 for its butter.

The annual meeting of the Rusk County Agricultural Society was held recently in Ladysmith. The officers elected are Phil. Koehler, of Weyerhauser; A. F. Hein, of Tony, and Nate Hand, of Ladysmith; directors. The directors elected Thomas Baker, president; Nate Hand, vice president; E. M. Worden, treasurer, and V. V. Miller secretary. The dates for the 1916 fair were left open.

Work has been begun on the Farmers' Co-operative Packing Plant at Madison. The plans and specifications for all the buildings are about ready, and contractors will probably be asked to bid soon. The work now being done is preparatory to building operations and consists of cleaning up the grounds, grading, etc. Sidetracks have been ordered built from the Milwaukee road to the packing plant.

The Grant County Fair Association has completed plans for the boys' pig contest which will be conducted this year in connection with the fair. Six cash prizes, totaling $80, will be awarded, $18 for first, $16 for second, $14 for third, $12 for fourth and $10 each for fifth and sixth. Dodson & Eastman will also give $10 to the winners, providing the winning pigs are sired by a pure-bred Poland China boar bred by them. The Grant County Poland China Breeders' Association will add another $10 provided the winning pigs are bred by a pure-bred Poland China. The rules governing the contest follow:

1. The contest will be open to boys of Grant county from the age of eight years to eighteen years.
2. The pigs to be shown shall be three grade barrows of any breed, but must be sired by a pure-bred sire and farrowed on or after March 1, 1916.
3. Barrows to show, must be fed and cared for by the boys making the entries.
4. All entries shall be made with the secretary of the fair upon blanks furnished by the fair association, which will be sent upon application to the secretary of the fair.
5. Pigs may or may not be bred by exhibitor, but if not bred by exhibitor same shall be purchased on or before July 1, 1916.
6. No restrictions have been placed upon the methods of feeding and every contestant is urged to secure all possible help and advice from experienced breeders, feeders, judges of swine and show men, in the selection and feeding of their hogs.
7. Judging shall be done by the judge who has judged the hogs in the general hog classes.
8. Each exhibitor will be allowed but one entry of three pigs each, but more than one boy from a family may enter in the contest. All entries must be made on or before July 1, 1916.
9. Each boy must feed, care for, and show his own entry. A certificate to this effect will be required of his parent or guardian.
10. Misrepresentation in regard to any part of contest will disqualify the contestant.
11. No entry fee in pig contest, except the regular admission to the grounds.

Potato Seed Certification.

Seed potato certification has worked out so admirably in Wisconsin during the past two seasons that the work is to be placed upon a self-sustaining basis this year. The college of agriculture which has been directing the inspection work has decided to increase the prices for inspection to make the work self-sustaining, not only because the previous rates have been too low but to enable the scope of the work to be broadened.

About 57,000 bushels of potatoes were inspected and certified last season for 103 growers in the state. The demand for this stock has been very great this winter and much of the seed has been sold at prices three times the market value of potatoes as a food product. There was a large increase in acreage and production over the previous year and the college authorities concluded that the experimental stage had been passed and that the growers would be willing to pay a little more for their inspections in order to make the work self-sustaining. This will also enable the college to make more inspections, enlarge the work and give many growers the attention to which they are entitled. This attention they have been previously denied because the charges did not cover the cost, and the appropriations for such work was limited. Under the new plan any potato farmer wishing to grow certified seed this year can feel sure of getting someone to make the inspections.

The new prices, effective this year, are $6 for two inspections of from one to four acres, $9 for two inspections of from five to eight acres and $1 additional for two inspections for each acre over nine acres. In other words, ten acres would cost $10, twelve acres $12, etc. It is expected that the acreage this year will be very large, as the increased prices which growers are getting for certified seed has caused many others to become interested.

Need Grain With Rape.

Can you afford to feed grain to your hogs this summer?

R. C. Ashby, in charge of swine at University Farm, St. Paul, says you cannot afford to grow them without grain. He gives the results of three tests of feeding corn to hogs on rape pasture to prove his claim.

Six fifty-pound pigs were put in each of three lots, about a quarter of an acre in size, on rape pasture. The pigs in the first lot were fed a half ration—2 per cent of corn; that is, two pounds of corn for every 100 pounds of live weight. Those in the second lot were fed three pounds of corn for every 100 pounds of pig; that is, 3 per cent. The pigs in the third lot were fed a full ration, 4 per cent, of corn. The pigs were on good rape pasture eleven weeks—from July 10th to September 26th. Their gains were counted as worth 7 cents a pound and corn was charged at 55 cents a bushel.

The returns paid for the rape pasture an acre were: Lot No. 1, $52.80; lot No. 2, $66.72; lot No. 3, $65.60. If the corn is figured at 75 cents a bushel the balance for the pasture on the three lots would be $43.16, $51.36 and $45.60, respectively.

Without the feeding of grain the pigs would have gained little, Mr. Ashby says. Rape may be expected to pay $50 an acre as pasture only with the proper feeding of grain.

Timothy for Seed.

To the Editor:—I sow my timothy and clover seed together and the second year after sowing the clover is mostly gone. I endeavor to cut this new seeding for seed, rather than taking the older seeding, for the heads are larger and more even and I think also have a greater vitality in the seed. I do not wait until the last and smaller heads are ripe, but cut as soon as the majority, and especially the first headed, are ripe. In this way I think I get the largest and best seed.

A. N. Kelly.

The Province of MANITOBA, CANADA
Calls for Farm Helpers

There is a very urgent call for farm workers this spring for the Province of Manitoba, Canada. Owing to the keen demand for all kinds of foodstuffs caused by the war, together with the enlistment of so many thousands of our young men, the farmers of Manitoba find themselves face to face with a serious labor shortage. In order to encourage farmers' sons and other farm workers from the United States to answer to this call the Railway Companies are offering reduced rates to all such passengers from all points on the International boundary line northward, going West in Canada. This will enable anyone who wishes to see Western Canada to do so at a very small cost, and will permit inspection at first hand of the thousands of acres of cheap land which are still available.

The scale of wages for experienced men will run from $25.00 to $45.00 per month according to experience, and it is estimated that from 3,000 to 3,500 such men are needed. In order to allay any apprehension on the question, it may be asserted that absolutely no military obligation of whatever sort is imposed upon anyone coming into or living in Canada.

If you are interested, write or apply personally to the

Percheron Fee Raised.

To the Editor:—At a recent meeting of the board of directors of the Percheron Society of America, the registration fee on imported horses was increased to $100 per head, taking effect July 1, 1916. The object sought is to discourage the importance of inferior horses, and it is believed this high fee will have the desired effect. Provision is further made to refund $85 of the $100 paid to importers, on horses that are good enough to win at fairs recognized by the Percheron Society of America. It is believed this action will effectually bar inferior horses, without interfering with the importation of really valuable animals. Members of the Percheron Society have already been advised of this action, and breeders generally appear to be heartily in accord with the new ruling.

Forty-one fairs and expositions in the United States were accorded recognition by the Percheron Society for 1916. Classification and list of fairs is attached hereto. Provision was also made to recognize, with a special classification, all Canadian fairs that obtain recognition from the Canadian Percheron Association. Strong exhibits of Percherons at the fall fairs will benefit the Percheron breed, and all breeders. Special attention is directed to the futurity stakes—for colts foaled in 1915—to be held at the Iowa, Illinois and Ohio state fairs and the International in 1916. Breeders should fit good yearlings for these shows, and help to demonstrate that America can produce Percherons second to none.

Memorial resolutions on the death of M. Charles Aveline, president of the Society Hippique Percheronne de France, were adopted and a copy was ordered sent to the family and to the Societe Hippique Percheronne.

Records in the office of the Percheron Society show an active trade, particularly as to sales made by breeders. Prices are gradually growing stronger on good Percherons, but demand is slack for poorer sorts. More men are seeking stallions of exceptional merit, fit to head pure-bred studs, than at any time in the last three years, and more confidence is expressed by purchasers generally.

More than $112,000,000 worth of horses, and $23,000,000 worth of mules have been exported from the United States in the sixteen months ending January 1, 1916. This is a greater total in cash received than we obtained for all horses and mules exported during the preceding sixteen years, and our shipments show no signs of lessening. Good draft geldings are in keen demand also, and are bringing from $275 to $325 on the Chicago market, despite pessimistic comments of country horse buyers, who generally seek to give, for selfish reasons, the impression that drafters are not wanted. Farmers who cannot secure satisfactory prices at home should club together and ship their draft geldings direct to the large markets. Country horse buyers are doing all they can to hammer down prices on drafters in the country, for their own profit, and are having fair success. The war horse demand keeps business going, and if a big drafter is passed by often enough, the farmer who owns him may take the price offered. For this reason, direct shipments should receive consideration.

The urgent need, more apparent than ever before, is for men to assemble small but select bands of mares, absolutely sound and right in every way, breed then to really high-class sires, and develop and show the colts. From such hand-picked studs, stallions can be developed fit to head any band of pure-bred mares. This is precisely what American breeders are most urgently in need of now, and the opportunity is a great one.

Wayne Dinsmore, Secretary.

Madison Horse Show.

Entries at the Madison Horse Show held at the University Stock Pavilion, March 10th, under the auspices of the Wisconsin Horse Breeders' Association, were chiefly from Madison and vicinity. The college of agriculture entered a number of pure-bred draft horses, including the Percheron stallion, Principal, that has been a consistent winner of show awards. A feature of the show was the parade of dairy cattle, led by the university herd sire, Windsor Ormsby Butter Boy, and a parade of beef cattle, including the animals of the university Hereford and Angus herds. R. P. Stericker, of Chicago, judge of the events, awarded prizes as follows:

Three-Gaited Saddle Horses—Diamond MacDonald, gelding owned by F. B. Luchsinger, first; Duke's Mixture, sorrel gelding, owned by W. K. Caldwell, second; chestnut gelding owned by Frank Hinrichs, third; and bay gelding owned by Thomas Lyons, fourth.

Five-Gaited Saddle Horses—Miss Cliff, mare, owned by F. B. Luchsinger, first; Cinnamon Roll, chestnut gelding, owned by W. K. Caldwell, second; Hazel, chestnut mare, owned by J. S. Evans, third; Magneto, chestnut mare, owned by W. K. Caldwell, fourth.

Combination Horses—F. B. Luchsinger, first; Frank Hinrichs, second; Thomas Lyons, third; Palace Livery, fourth.

Madison Heavy Deliveries—Kennedy Dairy Co., first; B. F. Orvis, second; American Express Co., third.

Draft Teams Under 3,000 pounds—Karl F. Steul, first; E. S. Reynolds, second; J. F. Salter, third.

Draft Teams Over 3,000 Pounds—Conklin & Sons, first; J. R. Cullinane, second; Sinaiko Bros., third.

Pair of Roadsters in Harness—F. B. Luchsinger, first; Palace Livery, second; W. K. Caldwell, third; Palace Livery, fourth.

Single Roadster Horse in Harness—B. J. Kehoe, first; Dr. J. P. West, second; E. L. Gallagher & Son, third.

Solve This Puzzle and Win a Prize

Here are seven sheep in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this, we will send you as a prize, *a surprise package of beautiful season and greeting post cards,* lithographed in rich colors, and also a certificate of entry in our grand contest for an Overland Automobile. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

Overland Auto Given Away

Remember the Overland will absolutely be given away at the close of the grand contest. In case of a tie an Overland will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars by return mail.

THE AUTO MAN, Dept. 46 Des Moines, Ia.

NEW CROP, WESTERN GROWN, UPLAND ALFALFA TESTED FOR PURITY
At special bargain prices. Write for samples, price list, and illustrated circulars telling how to grow and use the crop.
SWEET CLOVER WHITE OR YELLOW
Of excellent purity and quality. Samples, circular of information and Red Ink Bargain Price List FREE.
IOWA SEED COMPANY
Dept. D8 DES MOINES, IOWA

BEING centrally located in the clover seed section of Wisconsin, we have a large quantity of alsike, red clover and timothy seed for sale and also a large stock of alsike and timothy mixed. Our seeds are guaranteed. Every bushel is inspected by the agricultural seed inspection department. Write for prices and samples. Pickart Bros., Malone, Wis.

UPPER WISCONSIN has the great markets of St. Paul and Minneapolis on the westward, Superior and Duluth on the north, and Milwaukee and Chicago on the south—through lines of railroad. Its cheap lands out produce—but let us send you official crop figures and state map. Wisconsin Advancement Association. 1590 First National Bank Building, Milwaukee, Wisconsin.

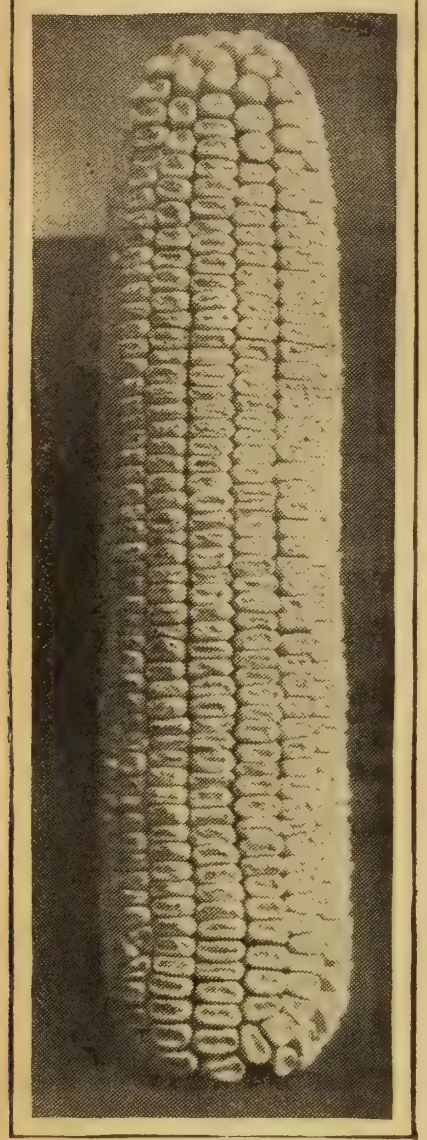
Testing Seed Corn Important.

Good Yield of Corn Depends Largely Upon the Selection, Curing and Testing of the Seed—Wisconsin Pays Careful Attention to These Essential Items.



SELECT THIS KIND.

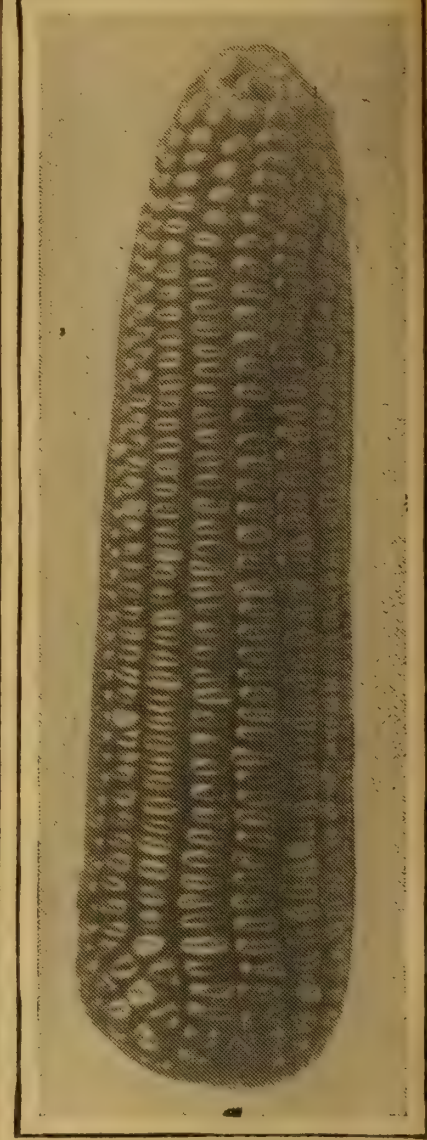
This ear of corn is nearly a perfect specimen, true to type which is regarded as the goal toward which the Wisconsin farmer should strive. The corn is a good size for this state, the rows are regular, the grains well dented, and the tip and butt well filled. If there are any ears of corn as good as this in your seed corn be sure to see that they are planted, provided, of course, the kernels meet the germination test. It is almost certain that this corn will test high.

ANY FARMER WOULD BE PROUD OF THIS CORN.

A well-selected ten-ear sample showing what the Wisconsin Farmer can do when he has good seed and takes proper care of his corn.

KNOW THE EARS WHICH WILL GROW.

Every square on the tester which does not show a vigorous root and stem for each kernel should be noted. The ears corresponding to that number should be thrown out of the seed.



DISCARD THIS KIND.

This ear should not be saved for seed corn. On the theory that like will produce like and that there is a tendency for the quality of grain to deteriorate, the planting of this ear will mean many ears even poorer than this one. The rows here are uneven, the shape irregular and the tip and butt not well filled. There are many poorer ears of corn raised in Wisconsin each year than this one, but one cannot expect to improve the quality of corn with an ear like this in the seed selection.

THE RAG DOLL TESTER IS SIMPLE AND INEXPENSIVE.

A single strip of cloth nine inches in width and sixty inches in length makes this simple tester. Each roll is numbered to correspond to every twenty ears tested.

REMOVING THE KERNEL.

Insert the knife blade between the rows so as to avoid injuring the germ.

UPPER WISCONSIN

Swine Raising.

Swine raising is becoming more general in Upper Wisconsin each year and the accompanying illustration shows a brood sow and her litter of eleven spring pigs which were exhibited at the last Langlade County Fair by J. G. Urness, of Antigo.

Mr. Urness likes the type which produce large litters and he has chosen the big-type Poland Chinas. This brood sow is three years old and has lived up to his ideal as a producer of large, strong litters and with such brood types he believes there is a splendid opportunity in Upper Wisconsin for the swine breeders. The future of this country lies in dairying largely, but as the two go hand in hand Mr. Urness sees great possibilities with hogs.

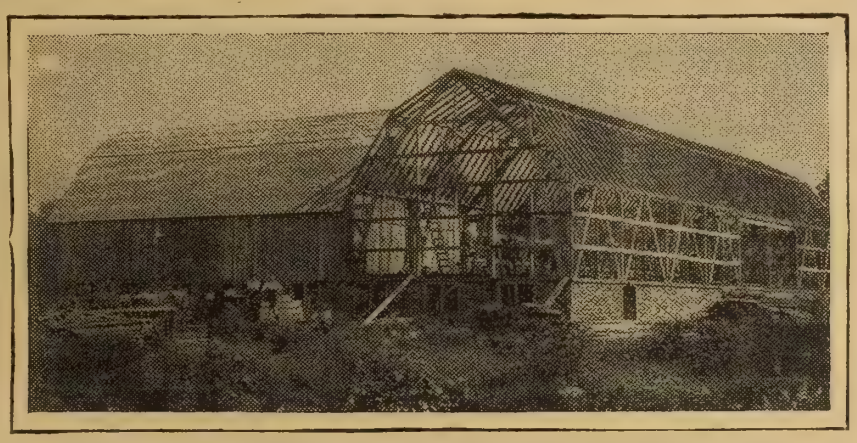
This brood sow had eight in her first litter, nine in her second litter and eleven in her third litter. That all of the last farrowing lived is shown by the picture which shows all eleven. This picture was taken on the fair grounds. This sow is also due to farrow again this March.

This sow won first place at the county fair last fall. She is a full-blooded Poland China, but through neglect in registering her ancestors she cannot be marked with a pedigree.

SWINE ON URNESS FARM IN LANGLADE COUNTY, WISCONSIN.

Barn Building.

In this department this week will be found a picture of a barn taken on the farm of Edward Falbe, near Holcombe, Wisconsin, Chippewa county. The picture was taken when the barn was only partly finished, but it is illustrative of the character of improvements which are being built in Chippewa county. This barn was built right in the woods. It has a full nine-foot stone basement and is thirty-six feet in width. Mr. Falbe writes us that he is now putting up two silos 16x30. This is certainly a fine illustration of the character of improvements which are being made by progressive farmers in Upper Wisconsin.



NEW BARN ON EDWARD FALBE FARM IN CHIPPEWA COUNTY.

Silo the Short Course Built.

The silo and barn addition shown in the accompanying illustration is one which J. M. Walz, county agricultural representative of Douglas county, refers to as "the silo the short course built."

This new concrete silo on the farm of Charles Bong, near Poplar, Douglas county, was built last summer as the result of his brother, Arvid Bong, attending a short course conducted in the county by Mr. Walz. Arvid rode horseback every morning to the short course, which was conducted at a point eight miles distant from his home during weather when the snow covered the ground and the thermometer was from 25 to 30 degrees below zero.

When the short course ended Arvid immediately began to study silo construction and the result was the building of the silo shown in this picture. The addition to the barn was another improvement due directly to the short course and this gives room for thirteen cows in addition to other stock on the farm. The picture was taken before the addition was painted and shows up at the right end of the barn in the rear of the new silo. This farm, where thirty-five acres are under the plow, is surrounded entirely by timber and shows what is being done in the cut-over districts of Douglas county.

UPPER WISCONSIN SILO.

Go Slow and Buy Right

Lily and Primrose Separators

THE cream separator is the center around which every successful dairying establishment revolves. A good separator will add considerably to your cash income. You can't afford to buy at random. If you are not personally acquainted with the best features of the best cream separators, let us help you.

An ordinary separator will save you money, but if you want to make the most from your cream buy a **Lily** or **Primrose.** These **International Harvester** separators work so efficiently and for so many years that even the two- or three-cow farmers use them with profit. Is yours a bigger herd? Then take the advice of thousands of the most prosperous dairymen and buy either a **Lily** or a **Primrose.**

Lily and **Primrose** separators skim very closely—leaving only a drop of cream in a gallon of milk. They are strong and simple, needing few adjustments—which any man or woman can make. The frame on each is open and sanitary. The supply can is large and low. Every bearing and quiet gear is well oiled always by a splash system. There are no better separators.

Buy a **Lily** or **Primrose** from the **I H C** dealer and be sure of satisfaction. Write us for catalogues and booklets on dairying.

HORTICULTURE

Top Grafting.

To the Editor:—We are nearing the time for spring work. The orchard should be pruned this month and any trees that are unprofitable should be either dug out or top grafted. If healthy and vigorous top graft it with some good winter apple. If the tree is very large cut back the main branches severely. This will cause water sprouts that may be grafted after two years. We don't recommend grafting limbs larger than a broom handle and a big tree would carry the grafts too far from the ground. The best success in top grafting is on young trees two or three years old set for that purpose. Every orchardist should set a few trees every year and there is nothing equal to Hibernal and Virginia crab for top grafting. Their limbs stand out at right angle with the trunk and do not break down or split when in heavy bearing. If you have a variety that will make a nice top the trees can be grafted as soon as set by whipping one cion on the main stem. This is less work in grafting, but does not do as well as grafting when the side branches get as big as your thumb. Now, how about your cions? Did you cut them before zero weather and bury them in a box with just leaves? Some kinds even when hardy get a little injury by zero and have not the vitality they should have.

You may find some nurseryman who has early cut cions, but they are mostly cut from young trees. I prefer cions from young trees just coming into bearing. Cions in perfect condition will do to graft till June 10th. It is better to top work the trees in the early part of April. I have successfully grafted in March and June. For wax there is nothing better than one part tallow, two parts beeswax, four parts rosin, slowly melted, run into water, well worked as you pull molasses candy. Laid away in balls or rolls on oiled paper it will keep for years. The best way to put it on is with a brush, having a little furnace with a little fire to keep the wax warm, not hot. After the graft is well waxed a thin strip of old cotton cloth wrapped around before the wax is cold is a good protection against the hot sun. I have used newspapers that do well, but cloth is better. If there is no way to keep the wax warm use it in the ball or rolls. If the weather is cool keep it in warm water; if hot keep it in cold water, but be sure to protect every crack and put a tip on top of the cion. Watch the growth. Don't let suckers steal the sap and don't let the grafts grow too rapidly. Pinch them if necessary. As to varieties to top graft you may use any old favorite that has died out or that you had back East. Get the cions sent you by mail. Northwestern Greening, Windsor, Golden Russet, McIntosh, Jonathan, Grimes Golden. We would also try Delicious, but it has not done well so far north as Minnesota.

Geo. J. Kellogg.

Flowers to Plant.

To the Editor:—There are so many kinds of flowering plants in the seed list that if one has only a limited space it is hard to decide which ones to grow. There are, however, some hardier varieties that will grow under the most adverse conditions of soil and position that it is possible for anyone who has any ground at all to have flowers. Some of these standbys are the nasturtiums, petunias, phlox drummondi, zinnias, verbenas, marigolds, Shirley and California poppies. The last two, if sown early, will grow in any place where there is a bit of soil and sunlight.

Poppies will hide the drying leaves of the spent tulip bed and with a few zinnias planted in later will furnish a gorgeous show of flowers from early spring until frost. If it is possible to have flowers growing in rich garden soil have some that are good for cutting, such as sweet peas, sweet William, corn flower and antirrhinum, commonly called snap dragon or lionmouth. There has been a great improvement in this half-hardy perennial and it is fast getting to be one of the popular flowers both for greenhouses and outdoor cultivation. One advantage to be derived from planting snap dragon is that it will bloom from spring until fall and later will bloom in the house if potted. Their long, graceful spikes of bloom make them desirable for a mixed bouquet or alone.

The little cut-and-come-again sunflower, the rudbekias, the oxheart daisy are easily grown and are fine for house decoration. These can be grown in any corner of the back yard or along the fence and will be a help to hide any unsightly places.

Dahlias and gladioluses are fine for fall cutting. Asters have not done well in the last two or three years, having suffered from a disease called the yellows. This trouble with asters seems to be spreading and as yet there is no remedy.

Often the only available place where flowers might be planted is shaded by trees or is a North or East exposure. Should you wish something bright and attractive from the street for such locations get the begonia semperflorens. This is a constant bloomer, grows readily from seed and cuttings taken any time will root. This plant also makes a good house plant for window box or stock may be kept over winter in a box placed in a basement window.

There is quite a list of more delicate flowering plants that are more or less adapted to shaded places, such as pansies, English daisies, bluebells, etc. A border of Canterbury bells and fox gloves for the background is one of the most beautiful flower combinations that can be made. If a tall border is required plant the single and double hollyhock of the lighter shades with the perennial larkspur. Such a border may be kept a permanent feature.

Another fine flower for cutting is the gailardia. Their rich shading of red, brown and yellow harmonize well with the furnishing of a room finished in those colors. They make a gorgeous bed, are perennial, but will bloom in July if sown early. The old plants bloom from May until frost.

Cannas, caladiums and castor beans are favorites with many. If the ground is ample a free use of these luxuriant foliage plants lends a tropical effect to the landscape. Coleous and cannas are sometimes grown in the same bed, but it is a mistake, as the two plants do not harmonize. Coleous should be planted alone and in a sunny place. A few salvia plants with cannas help to brighten the bed, but plant only a few so as not to crowd the leaf effect of the cannas.

There are but few plants that can be grown in the shade with success and of the bedding plants commonly used cannas or coleous are the least likely to do well in the shade.

Every child who has any yard whatever should be given opportunity to dig and plant. It is their natural inclination and birthright. Association with flowers and growing plants and the soil elevates the mind and will keep many a child out of mischief and away from the streets once their interest is aroused.

J. W. Roe.

Winnebago Co., Wisconsin.

STOP Covering Corn! Use Daisy Shields

Save time and labor and raise more corn and better corn with these famous revolving shields on your cultivator. Don't waste time and effort uncovering corn—Daisy Shields absolutely prevent clods from falling on the young corn. Enable you to plow faster—plow smaller corn—kill more weeds.

Fit Any Cultivator

Daisy Shields have shanks to fit any make of cultivator and can be adjusted to meet any conditions. They revolve like a wheel—cannot gather up trash and will not get out of adjustment. The fine dirt passes right through them and covers up weeds and grass—clods are thrown AWAY from the corn.

Old Way — New Way

Investigate these shields—best ever put on a cultivator. Write for folder and send your dealer's name. We'll send a pair for your inspection.

Francis Woodward, Tester.

Geneva Association.

Mr. Charles L. Turner, secretary and treasurer of the Geneva Cow-Testing Association, writes us under date of March 3d from Elkhorn, Wisconsin, giving the official January records. These records were published last week. This association was organized October 1, 1915, and at that time had about 500 cows under test. There are now over thirty members and over 600 cows. For December this association had ninety-five cows producing forty pounds of butter fat or better. The officials of the association are Ora Taylor, president; Harry Dunbar, vice president; Charles L. Turner, secretary and treasurer; Percy Harrington, Alfred Holt, Earl Palmer and James Henderson, directors, and Frank Drake, tester. We believe the Geneva report shows more forty-pound cows than any association report in the state. If there is any other association which can beat this record we shall be very glad to have them send us a report.

March Crop Report.

The summary of the March crop report for Wisconsin and for the United States, as compiled by the bureau of crop estimates of the department of agriculture and transmitted through the weather bureau, shows that on March 1st this state had on its farms 1,170,000 bushels of wheat, a large increase over last year; 4,900,000 of corn, a big decrease; 43,000,000 of oats, almost double last year's; and 6,520,000 of barley, a third more than on March 1, 1915.

Following is the report:

Wheat—State: Estimated stocks on farms March 1st this year, 1,170,000 bushels, compared with 878,000 a year ago and 1,319,000 two years ago. Price on March 1st to producers, $1.10 per bushel, compared with $1.32 a year ago and 83 cents two years ago.

Wheat—United States: Estimated stocks on farms March 1st this year, 242,000,000 bushels, compared with 152,903,000 a year ago and 151,795,000 two years ago. Price on March 1st to producers, $1.03 per bushel, compared with $1.34 a year ago and 83 cents two years ago.

Corn—State: Estimated stocks on farms March 1st this year, 4,900,000 bushels, compared with 18,863,000 a year ago and 24,725,000 two years ago. Price March 1st to producers, 77 cents per bushel, compared with 71 cents a year ago and 59 cents two years ago.

Corn—United States: Estimated stocks on farms March 1st this year, 1,140,000,000 bushels, compared with 910,894,000 a year ago and 866,352,000 two years ago. Price March 1st to producers, 68.2 cents per bushel, compared with 75.1 cents a year ago and 69.1 cents two years ago.

Sheep Prospects.

Recently The Wisconsin Farmer gave some pointers to its readers from the address of A. J. Knollin, of Chicago, at Madison, Farm and Home week. Mr. Knollin is an officer of the American Shropshire Breeders' Association, and he has a very high standing among the sheep breeders of the country. The Wisconsin Live Stock Breeders' Association has furnished us with a copy of Mr. Knollin's address and we quote further from this address, concerning matters which will interest Wisconsin sheep men.

Any man who is familiar with the sheep industry of the United States for the past forty years can readily recall to memory more vivid pictures of the tearing down and building up of the industry than I can possibly portray in words. As a nation, we owe a deep debt of gratitude to the shepherds who, out of love for their flocks and faith in the industry, continued to hang on through periods of depression when the entire industry seemed utterly ruined, thereby saving seed stock with which again to build up an industry of inestimable value to the nation.

Do many of our citizens realize, I wonder, what a splendid animal the sheep is? In this country we have about 50,000,000 golden-hoofed sheep that are gathering weeds and flowers from our farm fields and from the rugged, rocky fastnesses of snow-capped mountains; gleaning the harvested fields of grain, corn, beets and every variety of cultivated crops; gathering shrubs and grasses from our uncultivated farm lands, from the foothills of the mountains, and from the plains; brambles and sage from the desert waste, converting this mass of otherwise largely waste vegetation into soft, beautiful fleeces more magical than that which Jason sought, and producing delicately flavored, nutritious meat, both of which are necessities for the comfort of human life.

In view of the facts as stated; that sheep largely gain their sustenance from vegetation that would otherwise go to waste; that they provide us with the most comfortable and durable clothing and the most healthful and nutritious animal food known, and the further facts that the gross value of these products of the sheep in our country, in their raw state, aggregates the enormous sum of $250,000,000 annually, do you not agree with me that sheep are wonderful and useful animals from an economic standpoint?

Moreover, the sheep industry, from the time the first bleat of the newborn lamb is heard, until the wool has gone through many different processes of preparation for its varied uses and the meat is prepared for the table, affords labor for hundreds of thousands of our people, distributing in wages many millions of dollars each year. Let us note how labor is represented in various phases of the sheep business.

First, there is the care of the sheep, their transportation to market, their care in the stockyards, the slaughter of the sheep, and the preparation and sale of the innumerable by-products, many of which have great medicinal value. In connection with the wool, there is shearing, the transportation by railroads, the passing of the wool through the hands of the graders, then through the scouring process. Then comes the carding, the spinning, the weaving—and still there are innumerable busy hands through which it must pass before it reaches milady's boudoir in the shape of a beautiful gown, or clothes President Wilson "immaculately" (as described in a Kansas City newspaper when he addressed a gathering of 15,000 citizens there recently). And even after the beautiful gown and the immaculate clothing are cast aside by milady and the president, it passes on through still other processes and into innumerable uses. Is not, therefore the sheep industry a real economic necessity? It must be, and I feel certain, will be so considered in the broad policy of preparedness that our nation is about to adopt.

Planting Trees.

Many other gains result from the proper planting of trees around the farm home. In protecting the farm buildings from the winter winds the fuel bill is appreciably reduced. The live stock receives much protection from the winds. If the trees are properly selected and cared for they will supply timber for fence posts and for general repairs about the farm as well as an abundance of fuel. The protection afforded by a good windbreak of trees makes it possible to grow many varieties of small fruits and of vegetables, that could not be raised on the open prairie. Many kinds of edible fruits are borne on ornamental plants—useful for hedges and windbreaks. Such fruits can be produced at a very low cost by planting them in the shrubbery clusters and windbreaks. The trees also protect the farm home from the dusty, drying winds of summer and reduce the rapid evaporation of moisture from the soil besides affording an abundance of shade. They serve as an attraction for birds, which not only bring happiness by their song, but also aid by catching many harmful insects. During the time the trees are growing they increase the value of the farm with little expense to the owner. Probably the greatest assets to a prairie farmer who has had enough foresight and interest to plant trees around his home, are the enjoyment he derives from them in later years and the appreciation of his work by those who follow him in life. —[Dakota Bulletin.

How to Bridge Graft.

To be effective, bridge grafting should be done in the spring before growth starts, though sometimes it can be done after growth starts if dormant cions for the purpose can be secured.

Prepare the wound in the tree by cutting away all dead tissue and thoroughly cleansing the injured parts. If possible, sterilize by washing with a solution of bichloride of mercury, copper sulphate, or some other antiseptic. The irregular edges of the bark above the girdled tract or wound should be cut back into an even edge, far enough from the wound to make certain that healthy cambium is under the bark.

For the grafting, select cions from wood of the previous season's growth, either branches which grew the preceding season or water sprouts that are only a year old. The cions should be a little longer than the space which is to be bridged, so they will arch slightly over the central part of the wound.

Bevel the cions at each end on the same side of the cion with a long sloping cut so that the wedge-shaped ends thus formed will be relatively thin and permit their being thrust well under the bark without danger of separating it unduly from the cambium at the points of insertion. The placing of the cions will be facilitated if the bark at the margins of the wound is slit for a short distance at the points where the ends are to be inserted.

A dispatch from Berlin, via London, said the Bundesrath had ordered all trimmings from hides converted into feed for live stock. Trimmings usually are used to make gelatine and glue.

Chick size grit and fine charcoal should be kept before the young chicks at all times.

Guard against sudden changes in the temperature. During cold weather locate the brooder indoors.

Drive Your Fence Posts Like a Stake
The modern way of fence building. No holes to dig or posts to set if you use Chicago Steel Fence Posts. Driving 320 posts a day is an easy job for a man and a boy. Then you're ready to staple up the wire and fence your land in one-fifth the time. There is no breaking, no wearing out. Your
Fence is Up to Stay
You can burn out your fence rows, destroying weeds and insects, and give your farm a clean, prosperous appearance. No danger of having your stock killed by lightning during a storm, because Chicago Steel Posts ground lightning. Don't wait till all wood posts rot to build an entire new fence. Replace rotten wooden posts with guaranteed Chicago Steel Posts now. You'll soon have a new all-steel fence. Write today and let us send you the best book you ever saw on fencing.

Chicago, Ill.

CARBO Systems Patented keep fencing wires TIGHT
Rigid posts (wood, concrete, steel) break or buckle. Carbo Supports act as a part of the fencing wire. They spring, allowing the fencing wire to take all strains—that's what they're for.
A Carbo System is 40 rods long, with a solidly set (in earth) Carbo Terminal at each end (one man sets a terminal in a half-hour).
Fencing wire is stretched tight between terminals, and held in alignment by Carbo Supports which are anchored 18 inches below ground; have knife-like edges to cut the ground, and cushion against earth. One man can drive 500 a day, soft ground or frost. No holes to dig.
CARBO COSTS LESS PER MILE.

Milk and Cream Contests.

Milk and cream contests have been found to be a very valuable means of inducing dairymen to take greater pains in the production and handling of milk. In a United States Department of Agriculture bulletin the axiom is quoted that "Education accomplishes more than legislation." The law, it is said, can, of course, be applied to glaringly insanitary conditions, but after a certain degree of cleanliness has been reached subsequent improvement must be obtained in other ways.

The first milk and cream contest was held in 1906 during the National Dairy Show at Chicago. Since then there have been many others and the method of scoring the exhibits has gradually been improved. Under the present system out of a total possible score of 100 points thirty-five are allowed for the bacterial count, twenty-five for the flavor and odor of the milk, ten for the absence of visible dirt, ten for percentage of fat, ten for percentage of solids not fat, five for acidity and five for the appearance and condition of the bottle and cap.

To obtain a perfect score for the bacterial count the milk must contain less than 500 bacteria per cubic centimeter. A bacterial count above the local legal limit results in a score of 0. The deductions from the possible score of twenty-five for flavor and odor are made according to the conditions found. This is also true of the examination for visible dirt. For this the milk is allowed to remain for some time undisturbed and the bottom is then examined very closely for the slightest movable speck. Four per cent, or more, of fat in the milk results in a perfect score of 10; less than 2.7 per cent in 0. To obtain a perfect score for the solids not fat the percentage must be 8.7 or more, and less than 7.8 per cent is counted 0. In the case of cream there is no credit for solids not fat and the percentage of fat counts 20 points instead of 10. To obtain a perfect score for acidity the percentage must be 0.2 or less. More than 0.24 per cent is counted 0.

The same score card is now being used for market milk and for certified milk, but in most of the contests those who compete in the certified class are not allowed to enter samples in the market class.

The educational value of these contests is indicated by the fact that almost invariably dairymen who have had experience in such competitions obtain higher scores than those who have not. On the other hand, the contests are used also to point out to consumers the fact that clean milk is more difficult and expensive to produce than dirty milk.

Crawford County Report.

The Wisconsin Farmer is in receipt of the directors' annual report of the Farmers' Co-operative Creamery at Soldiers' Grove, Crawford county. This is the fifth annual report of the company. In 1915 the company received $34,018.71 for butter shipped; $3,764.43 for butter sold in the city, and $1,586.45 for butter sold to patrons. Other receipts, such as cash for cream, buttermilk, etc., made a total of $39,747.15. The company paid out for cream, $30,647.09. After deducting all expenses, interest on stock, and taxes, the company showed a balance for the year of $3,639.44. This creamery handled 442,782 pounds of cream, with a total of 121,158 pounds of butter fat, and produced 146,724 pounds of butter. The average overrun was 21.70. The average price paid, including overrun, was $ .2975. The cost of butter manufacture and delivery to depot was only $.022. The officers of this company are Norman Barlow, president; John Lee, vice-president; Albert Johnson, secretary; Ben Coher and Bert Ehorn, directors.

Know Your Breed.

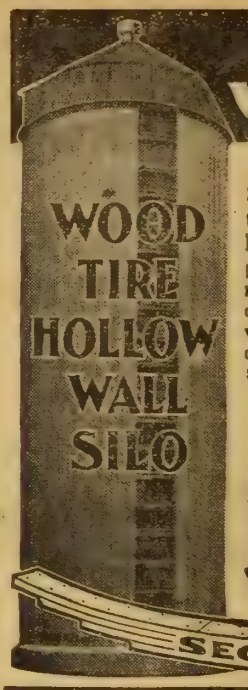
Each dairy breed has its stanch advocates and supporters. Each of those breeds has its distinct characteristics that distinguish it from other dairy breeds. Intermingled with the breed differences there is breed history. That breed history is both made and in the making. The man succeeds better if he knows the origin of his adopted breed and the locality that made it famous. The little island of Jersey off the coast of Europe is almost sacred in the minds of those who are foremost in the advancement of the interests of that breed in our own country. The story of the manner and method of caring for those little cows on their native island home is ever an example and source of information for practical breeders everywhere. He who knows the story of the Jerseys is a better dairyman and a better breeder. He is more enthusiastic and far more likely to consistently boost for that breed. Likewise the Guernsey breeder who is familiar with conditions in the native home of his breed is a better dairyman, a more successful breeder and a more substantial booster. The same is equally true with regard to the Holstein and the Ayrshire.

Present-day history is vital and alive. Since the Babcock tester came into use the real superiority of all dairy breeds has been shown conclusively and emphatically. The early records were large. The way those early records have been broken has been almost magical. Within a few years cows of three different breeds have held the world's championship record in butter-fat production. Each and every progressive breeder has learned those records and has made use of them persistently in advocating his chosen breed. The cost of production has come to be a living factor and much that has been interesting has been determined in respect to that and concerning each breed.

The record association of each breed has been working with determined energy to place before the public enthusiastic and truthful information concerning the merits of its dairy stock. The prospective breeder should not venture into the business until he has perused the literature sent out by the representatives of each breed. He will find that literature full of information and very interesting in its splendid illustrations and its discussion. The experienced breeder is ever gaining the latest information and new inspiration from that source and is loud in his praises.

It is well known that dairymen and dairy breeders are above fighting each other and are working and pulling together to advance the interests of all. Yet there is enough that is distinctive concerning each breed to make any man enthusiastic who sincerely admires one breed or who is engaged in business with stock of that breed as his capital.

At fairs and dairy shows and at sales men observe characteristics and type of their favorite breed. Fairs and shows are held primarily for educational purposes. The casual visitor may learn some new and vital fact. He may be enthused with what he sees and learns and will go home to reconstruct his farm operations or perhaps he will resolve to tie up his fortunes with one of the dairy breeds instead of the mongrels. The professional breeder usually observes more and sees more and learns more concerning his own breed than does any other visitor. Often the exhibitor, in being defeated, learns the demands set up for his breed and is more successful in future shows because of that defeat and the lesson he learned therefrom. At sales of dairy stock observing men learn much of the value of records, of type and of pedigree. It is very evident at present-day sales that animals that have not made satisfactory records or which lack in dairy and breed type and characteristics are the ones that go for the



Proof Against Wisconsin Weather

The Wood Tire Hollow Wall Silo prevents freezing, even when the mercury ranges from 20 to 30 degrees below zero, except sometimes a very little. It is built on a new (patented) principle which gives you a *real building*, so rigid and strong that it will resist storms and be as permanent as your house or barn. Moreover, it is easy to erect as it forms its own scaffolding. No guy wires needed—no hoops to keep adjusted—no staves to shrink or swell, but a continuous, smooth, double wall with a 3¾ inch air space from base to roof, the inner wall being of *California Redwood.*

GUARANTEED FOR 20 YEARS

"But Lasts a Lifetime"

Hundreds of Wood Tire Silos are in use in Wisconsin and neighboring states, perhaps one near where you can examine it and talk with the owner. Not a single one has ever blown down or even racked out of plumb. All give perfect service. If you are planning to buy a silo, send at once for our folder which shows how they are built. A postal brings it to you by return mail. Write today. *Agents wanted.*

The Healthy Herd

Hundreds of herds are kept in the prime of health and productiveness by the occasional use of KOW-KURE, the great cow medicine. KOW KURE has no equal in the cure of the common cow diseases of Abortion, Retained Afterbirth and Barrenness. It is also a positive cure for Bunches, Milk Fever, Scouring, Red Water and Lost Appetite.

But it is better to prevent than to cure. The periodical use of Kow-Kure in small doses will effectually prevent these diseases, and make the healthy herd pour a constant stream of profits into your pockets.

If you have a backward cow, buy a 50c package of KOW-KURE, and give according to directions. It will do wonders. 50c and $1.00 packages at all feed dealers and druggists.

low price. At the sales, too, breeders learn much from each other.

In visiting farms of men who have been successful in handling the chosen breed men are able to gain information and inspiration that will be of use to him in his own farm and business operations. Each breed has its own separate and distinct meetings and banquets. Always the man who attends comes away with a more progressive and more aggressive spirit than he possessed previously.

Men who have had college training have indeed had superior advantage in learning the characteristics of dairy cattle and of their favorite breed in particular. Many of the most active young breeders of today are those young men who have spent some time, perhaps a full four years, in college specializing in the general subject of dairying and in gaining knowledge of all that is good and useful concerning the breed with which he has since linked his fortunes. The dairy breeder who is best informed is the one who succeeds best. The breeder of pure-bred stock who is most successful is the one who is most persistent in gaining a further knowledge and acquaintance with his breed and with other breeders and with men furthering its interests.

Importance of the Creamery

The Wisconsin Farmer at various times has had much to say concerning the relationship a good co-operative creamery has to the town in which it is located. The amount of business such a creamery does, the quality of butter as well as quantity it makes, and the price paid the farmers for their fat all have an important bearing on the propensity of the community. In many Wisconsin communities the creamery is the most important business enterprise in the community. Too often this is not realized, for it is the creamery that takes the farmer's raw product and pays him the money that he will spend with the merchant for food, clothes, new equipment, etc. Therefore, it is of just as much interest to the country merchant as the creamery operator and the farmer that the creameries produce the best kind of product, secure the best kind of prices and pay the highest prices possible to the farmers for their cream and milk.

Barron, in Barron county, the co-operative creamery is an enormous factor to that little city. We have often spoken of this creamery and the importance of this creamery to the community in which it is located is well indicated by the report of its business for the month of January which has just come to our attention. During that month the creamery made 59,618.7 pounds of butter, which is more butter than hundreds of creameries make in an entire year. And this was in midwinter and in a country that was stumps and second growth two decades ago.

But most important of all was the price the farmers received for their butter fat. During January it was 34 cents per pound net, an increase of a cent a pound over the prices paid in 1915. The report shows that during the month twelve farmers received checks for cream that were more than $100 each. One check was for $173.33, another for $154, another $146. Ninety four farmers were paid more than $50 and less than $100 during the month for cream, which makes a total of 106 farmers receiving more than $50 each in January.

Every month these cream checks are being handed out and as the season approaches June, the high month in dairying, they will increase. The relation of the Barron creamery to its community is the same as that of any other creamery to its community and everyone should always bear in mind that whatever helps the co-operative creamery helps everyone else.

Early sowing of wheat has been found the best at the Langdon, N. D., substation in 1915. Marquis wheat sown on corn ground April 19th went thirty-five and a half bushels per acre, sown May 9th the yield was twenty-four and four-fifths bushels. Marquis wheat sown on sod land April 15th went thirty bushels per acre, while wheat sown May 19th yielded eighteen and a half bushels.

"Yes, It's A Natco"

Wisconsin University

As you are riding through the country, take special notice of the silos along the way. Throughout the fertile Middle West country and in the East as well, in every prosperous farming section, where livestock farming or dairying is done, will be noted the vitrified tile silos. And in the majority of such cases a closer inspection will identify the silo as a

Delaware State College

Natco Imperishable Silo

"The silo that lasts for generations"

—so distinctive in appearance you'll know it at once. The handsome glazed tile, contrasting with the white markings of mortar, and our famous "Michigan" hip roof, make it easily recognizable from a distance. A close inspection shows our convenient door front, the convenient steps of galvanized iron pipe which, with the steel reinforcement, holds the silo in a grip of steel, the perfectly smooth walls, and last and most important, the sweet, juicy ensilage in all parts. Here's the silo that's windproof, decayproof, fireproof and frost-resisting. In daily use by the following State Experiment Stations:—

Wisconsin
Connecticut
Michigan
Illinois
Pennsylvania
Kentucky
Indiana
New York

Purdue Ind. University

New Jersey Agricultural Experiment Station

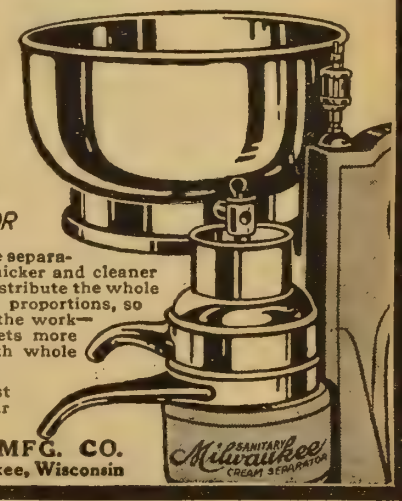
Why the "Milwaukee" Gets *all* the Cream

FEWER discs are used in the Sanitary Milwaukee, yet it skims closer, quicker and easier than any other separator. The discs are made of aluminum, which, unlike the tinned steel discs of other separators, will not rust, and can be drawn and tapered to the exact shape required for greatest skimming efficiency. Because of the tapered discs used in the

SANITARY Milwaukee CREAM SEPARATOR



the skimming space is widened where the separation actually takes place. This means quicker and cleaner skimming. Three removable feed slides distribute the whole milk into each skimming space in exact proportions, so that each disc must do its full share of the work—another reason why the Milwaukee gets more cream. Every Milwaukee is tested with whole milk before it leaves our factory.

Write for beautiful, new catalog, just off the press, and the name of your nearest Milwaukee dealer.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Fleas.

Will you please tell me how to get rid of fleas on cats? I dipped them once and the cats all died.

To rid cats of fleas the best treatment is frequent grooming and bathing in a 2 per cent solution of creolin or lysol. This must be repeated at times. Do not use stronger than 2 per cent solution. The use of a very few drops of oil of anise or oil of pennyroyal on the hair is of benefit. Clean and disinfect the cats' sleeping quarters.

Worms in Colts.

I have six colts coming two and three years old which I think are wormy. Would like to know the amount of turpentine and linseed oil to use.

The amount of turpentine to be used is from one-half to one ounce in two to three ounces of linseed oil. This amount should be given twice daily for three or four days and then followed with a purge of aloes one ounce. Do not repeat the dose of aloes. You will get better results from the turpentine if you feed the animals very lightly for twenty-four to forty-eight hours before using it.

Lame Mule.

I have a mule that was required to pull a heavy load two months ago, and has been lame ever since. First it was lame in the right hind leg and now it is in the left leg. She carries her leg all the time. It seems to be in the stifle joint.

Your mule has probably been severely strained from hard pulling, but from the few symptoms you give it would hardly be advisable for one who has not seen the animal to prescribe. It may mean dollars to you in the long run if you have your local veterinarian give this animal a thorough examination and then advise treatment according to the findings.

Digestive Disturbance in Sheep.

I am losing some of my sheep. They get lame in front feet and lie down and die in from one to two days. My sheep are fine and fat. They have had the run of the meadows and I have been feeding silage. I have heard that silage kills them. Their gall is almost ready to burst.

The disturbance you speak of is probably due to digestive derangement which, in turn, is the result probably of too much concentrated foods. It has been found in a good many cases that by diminishing or withdrawing the grain ration and feeding on small quantities of clean, wholesome hay the sheep will show no further disturbance.

Cataract.

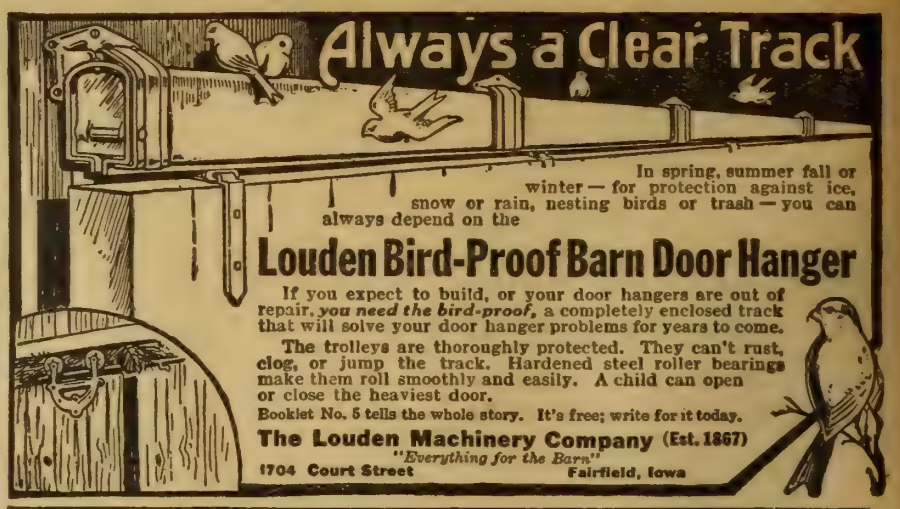
I have a fine black Percheron three-year-old mare that has something the matter with her eyes. About a year ago I noticed a little white speck in one corner of her eye. This winter the eye has become white almost all over the eyeball and she does not see any with that eye. The last few days the other one has been getting weak. The water runs out of both eyes. Will you please tell me what I can do for them, if anything? I have not done anything in the way of doctoring them.

This condition is frequently the result of recurrent ophthalmia or moon-blindness. It is quite doubtful if you will be able to successfully treat her yourself. A competent veterinarian may be able to save the eye that is not yet destroyed. However, it may be so far advanced as to not respond to treatment.

Ring Bone.

I have a six-year-old mare that has gone lame in the right front leg. There seems to be a bony enlargement just above the pastern joint. A doctor book I have describes it as ring bone. Can anything be done for it? I loaned the mare to a fellow last fall and she went lame as soon as she was returned.

As your description of the trouble is lacking in detail we will take your diagnosis. It is very probable that your horse is affected with ring bone, which is by now of chronic nature. The outcome of treatment for ring bone depends a great deal on cause, location, time of standing, etc. Most cases of ring bone have become chronic before treatment is begun. After a bony enlargement is noticeable they are more difficult to treat and get results. You may get results by blistering the affected parts with biniodid of mercury and cantharides ointment and then letting the animal rest for several weeks. If this does not prove effective the parts should be point fired by a competent veterinarian. In any event, do not expect the results to be wonderful.



In spring, summer fall or winter—for protection against ice, snow or rain, nesting birds or trash—you can always depend on the

Louden Bird-Proof Barn Door Hanger

If you expect to build, or your door hangers are out of repair, *you need the bird-proof,* a completely enclosed track that will solve your door hanger problems for years to come.

The trolleys are thoroughly protected. They can't rust, clog, or jump the track. Hardened steel roller bearings make them roll smoothly and easily. A child can open or close the heaviest door.

Proud of Wisconsin.

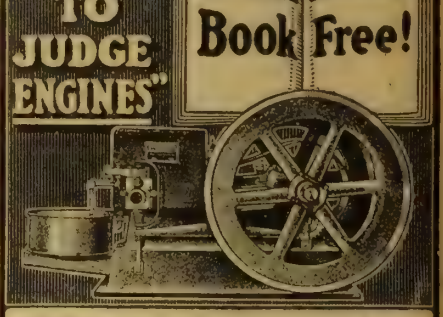
Principal S. M. Thomas, in a recent issue of the Wisconsin Journal of Education, sets forth in a concise and interesting style the advantages of the rural school system in Wisconsin. In a statement entitled "Wisconsin Leads, Doesn't This Make You Proud of Your State?" he writes:

I am proud of a state that
Is one of four states that grant state aid for improved physical conditions in country schools;
Is one of fifteen states giving state aid for consolidation and transportation;
Is one of six giving state aid to graded schools;

Is one of three where the state department may pass judgment on the fitness of the schoolhouse and enforce the penalty;
Is one of eight which grant state aid either on a basis of teaching efficiency or minimum salary;
Is one of three to place a premium on hiring country school-teachers with certain qualifications;
Is one of fewer than four states that require one year of professional training of those who enter upon the work of teaching country schools.

I am proud of a state
Whose law provides for a library in every country school with yearly additions;
That provides facilities for country school-teacher training in normal schools, county training schools and high school special courses;
That provides for supervision in each county in addition to that by the county superintendent;
That brings the school board members together in annual convention in each county;
That offers a high school education free to all boys and girls within its borders;
That has a minimum rural school year of eight months;
That, though she has all these things, is not satisfied with conditions as they are, but is constantly looking for the best in country school education.

"HOW TO JUDGE ENGINES" **A Valuable Book Free!**



EVERY man who has any idea of buying a Kerosene or Gasoline Engine should have this book.

Discusses different types of engines; how constructed; how operated; how cylinders and other parts should be made to give greatest efficiency.

It has taken 30 years of engine building experience for me to learn the facts in this book. Yours for the asking.

My 1916 Model Engines are the greatest value I have ever offered. All sizes pull from 30 to 50% over factory rating.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Chick's Digestive System.

In his book entitled "Productive Poultry Husbandry," Harry R. Lewis gives considerable attention to the care and management of young chicks, among other things on this subject, he says:

Crowding the digestive system of young chicks is always a dangerous, undesirable and unprofitable practice. Dry, crushed, hard grain is the best and safest material. In artificial brooding this question of feeding must be considered, but it is of no practical importance in natural brooding, because the hen will see to the feeding. As soon as they have been put in the brooder coop, give the hen a good feed of whole corn and place water where she and the chicks can drink it, then throw a little rolled oats on the sand. This probably is the best feed for young chicks, because, owing to its light color, it attracts their attention and they can see to eat it. Bread crumbs soaked in milk make an excellent first feed for naturally hatched chicks, as do hard-boiled eggs, to which use infertile eggs can be put. The general practice, however, and it is a good one, is to start the chicks on fine cracked corn or wheat. For the first few days only a limited amount of the grain should be given, but after they have learned to eat they should be fed two or three times a day with good feed which they can clean up in a short time. Where skim milk is available, it is well to give the chicks all of it they wish to drink. Unless they have access to green grass in the runs, a little chopped lettuce or other green feed should be furnished. In the absence of any fine sand or gravel on the floor of the coop, chick grit should be supplied. After the first few weeks the ration can be gradually simplified and made less expensive. Cracked corn or wheat should serve as its basis, in addition to which the chicks should be given animal and green feed, also grit. The feeding of young stock naturally hatched is a much more simple proposition than the feeding of artificially hatched chicks in the brooder; for, in the first case, the hen sees to their welfare to a great extent.

A good ration for the first week for chicks brooded by the hen contains equal parts of cracked corn, crushed wheat and oatmeal.

Put the feed where the hen cannot reach it, she being given three times daily a grain ration of equal parts of corn and wheat. During the second and succeeding weeks gradually eliminate the oatmeal, and as the chicks grow larger substitute whole wheat for the crushed. After the first week begin to give them dry mash similar to that used in artificial brooding.

Of course, every breeder understands the importance of withholding feed from chickens when they are young, that is, during the first twenty-four to forty-eight hours. Under natural or normal conditions, when chicks are hatched in the old-fash ioned method, they are always brought out from a location where there is very little food. The chicks are at least a day old and possibly thirty-six hours old before they ever leave the nest and then after that they are trotted through the yards and orchard, where they have an opportunity to pick up grit, but their privilege of gorging themselves with food is very limited. It would not be putting the matter too strongly to say that millions of chickens are lost every year in the United States from gorging during the first few days of their lives.

Second Season Roosters.

An Illinois subscriber sends the following communication:

Should we keep roosters over the second season? I mean is it advisable to change each year? Some breeders advise me to purchase new stock while others say it is safe to keep the old. It is late; good cockerels are hard to find, and I am afraid that if I buy they will not improve my flock. Purchased some eggs last season, but the cockerels are not so good as my own, and I do not like to use them.

If your cocks are of good breeding, are strong, sturdy and good individuals then would you better use them another season than to take chances on running your flock down. If the males are enough superior to help fix a certain type it is a good plan to mate them again to their pullets, thus getting stock that carries three-fourths of the blood of the sire.

In no case is it advisable to carry this inbreeding another season. Procure males of the same general type, of the same strain we would say, but from a distant parentage, for the next year.

Briefly speaking, if we have the best of heads to our yards and keep them over, our flock will have the advantage of getting superior blood in the shortest possible time. If the males are crossed or not of pure lineage, then will our flock by keeping them again, be deteriorated in a like ratio.

We have carried this experiment a few times, sometimes from necessity and a few times from the desire to find the result. In every case the good points were intensified, with the exception of size. A flock begins to run down in size first of all. However, the birds that were not so large as the parents, when mated to just ordinary sized individuals, produced offspring fully as large as the first head of the flock.

One fine cockerel that was produced by mating his sire back to his own pullets showed up in a deformed comb. You see some of his undesirable relations that he would not have owned if they had ventured to pay him a visit, possessed a "fish tail" comb. Inbreeding, or linebreeding, brings out the best and also the worst. So if we follow this plan it is very necessary that we get the best we can procure and afford.

Successful Goose Culture.

It would be possible for any goose to be a "dry land goose" so far as it doing without water to swim in is concerned, though the fact remains that water is the natural environment of waterfowl and it is a great help in the matter of cleanliness and health.

The Toulouse goose is perhaps the most popular of the breeds, though almost any variety would do well. This breed was named from the city of Toulouse, France. The sexes are exactly alike in color, grayish above and on the breast, running to white underneath. They attain great weight under heavy fare of coarse food, while the standard weight is eighteen to twenty pounds for the goose and gander respectively.

The Embden goose is pure white in color and its standard weight is the same as that of the Toulouse. The progenitors were brought from Hanover fully 100 years ago and have been greatly improved in size. The flesh is thought to be rather better flavored than the Toulouse and it is largely bred to fill the market for green geese.

The most successful goose breeder the writer has ever known who resides in the grain belt where waste land is unknown had an acre of pasture land fenced off at the lower side of a running ditch. The lot was fenced with woven wire and boards. The geese were the Toulouse variety and six pairs were kept. This woman, who had raised geese in the southland, said that it was not absolutely necessary to mate them in pairs, but that she had better success, everything considered, than when kept in trios or pens.

About the first of March the fowls would begin to gather straw and other trash that had been washed to the banks to build their nests. When the eggs were deposited some of the building material was placed over them. About fifteen eggs would be the result of the first laying and when the goose began to get broody she was removed from the nest until the fever had passed and she would begin to lay again in a short time. The eggs were mostly hatched under chicken hens and the geese broken up the second time, and they would lay the third clutch of eggs, though not so many as the first time.

After twenty-four hours they were placed in pens where there was plenty of grass, which together with water, was all they were given until the next day. The goslings from start until finish, or until they were grown, were fed soaked bread and ground grains mixed with water. By far the most stress was placed on the grass and clean water at all times.

A large pan of water was kept within reach of them so they could wash in it, though they were never permitted to be in the rain until they grew feathers. In conclusion this woman said: "They are not hard to raise once you get them started. After they

Ironclad TRADE MARK Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only $10 we guarantee to deliver safely, all freight charges paid (East of Rockies), BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an IRONCLAD—the incubator that has for two years in succession won the greatest hatching contest ever held? In the last contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered including practically every make, style and price. With 140-egg Ironclad—the same machine we offer with Brooder freight paid, for only $10, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in the last contest.

140 EGG Ironclads are not covered with cheap tin or other thin metal and painted like some do to cover up poor quality of material. Ironclads are shipped in the Natural color—you can see exactly what you are getting. Don't class this big, all metal covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering, galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boiler, self regulator, Tycos Thermometer, glass in door, set up complete ready for use and many other special advantages fully explained in Free Catalog. Write for it TODAY or order direct from this advertisement.

25 CTS

get to be a week old they are almost certain to live unless they meet with an accident, which should not count. After the first few days they are permitted to have the run of the yards in the daytime and cooped up at night. They are not permitted to run in the dew and when it rains they are driven to their coops. A goose, I mean a young goose, is the silliest thing imaginable in the rain. They just run 'round and 'round, never attempt to get to shelter, and drown. After grown geese can live almost wholly on grass and water."

For the most part, to be profitable geese need some such place as this pasture arranged for their needs. However, many people do raise them with no other accommodations than that for chickens. Where there is low, marshy land that is not under cultivation geese can be raised almost for the labor entailed.

Poultry Raising For Women.

To the Editor:—Poultry raising is a profitable, as well as a pleasant occupation for women, especially for the housewife who is not overly strong and who desires to be out in the fresh air as much as possible. Besides, there is an income derived from this business to the woman whose home duties require her to remain at home that otherwise cannot be secured. Farm women have the advantage of the city woman so far as facilities are concerned, in as much as the fowls have free range of the farm where they may gather a variety of seeds, grains, bugs, worms, etc., thereby balancing their ration. On the farm there is sunshine and fresh air in abundance, shade can easily be provided, also fresh, pure water where the fowls can help themselves when they so desire. The hen and her brood thus given the "right of way" will return at evening with their crops bulging with the fruits of their foraging and will make rapid development. Those wishing to engage in poultry raising should not make the mistake of starting with too many breeds. The secret of success depends much upon beginning right and continuing right. Experience counts for much in successful poultry raising and one must grow into the business. If eggs is the object sought, the best results will be obtained by selecting a laying strain, as well as a laying breed. On the other hand, if one desires to raise poultry for the market they will make no mistake in choosing a breed suited for this purpose. The writer's experience is that there is more money in eggs than any other branch of the poultry business, owing to the fact that there is a daily income derived from this source. Then the laying breeds mature so rapidly that one can secure good prcies for the cockerels and all undesirable pullets. One important thing the writer has learned by experience, and that is that it never pays to keep the pullets that are undesirable for layers or breeders until winter. S. E. M.

Early Hatches.

To the Editor:—The hatching season will soon be upon us and we who live on the farm should not wait until the rush and bustle of spring to attend to the many things which should be done now if we wish to be successful in raising the early-hatched broods. On the farm, in early spring, there will be more work to be done than can be well done, and consequently the most vital points may be neglected which will insure the well being of the early hatches.

Now is the time to repair the old brood coops and feeding pens, or build new ones if needed. Good, clean, roomy brood coops and substantial feeding pens are necessary at any season of the year when raising chicks, and more especially the early hatches require warm, comfortable, water-proof brood coops. If one does the hatching with hens there will be need of several in which to keep the mother hen and little chicks. These coops can be made now and be ready when the hens come off with their broods. The brood coops for our early hatches are made separate from the floor of plank beneath, which is a little larger than the coop. The coop is placed upon the platform and can be removed when necessary and cleaned. There is no danger of the chicks being eaten by rats when roosting in floored coops. Besides, they are handy and convenient, as they can be removed and the floor aired on sunny days.

When warm weather arrives we remove the coops from the platform and allow the hen and chicks to roost upon the cool earth, which we think is better at this time, as the chicks are larger and do not require so much warmth. We remove the coops to a new, clean place every few days, as the accumulation of manure increases as the chicks grow older.

If the hens and chicks have free range with the older fowls, a feeding pen is a necessity, for the older ones will get the bigger part of the food if they are fed together. Besides, the little things will be trampled by the older fowls and the consequence will be the loss of many. Our feeding pens are made of wooden slats, one style being about four feet long and of the same width and two feet high. The slats are nailed to four corner posts on the sides and ends, being nailed a sufficient distance apart to admit the little chicks when feeding. Slats are nailed on top in the same manner. The other style is made roof shaped, with wooden slats nailed far enough apart on sides and end to admit the chicks as they increase in size. We keep the feeding pens under shade trees in hot weather, with plenty of water inside so that the chicks can get a cool drink at any time. All preparations which are made now will diminish the labor after the chicks are hatched.

Geese and Duck Raising.

To the Editor:—Will some of your readers please give me some hints in your columns regarding feeding of geese and ducks before and during the laying season? Could someone also advise me why so many of the goose eggs do not hatch? My neighbors seemed to have so much trouble along these lines last year. Any advice you can give me through these columns will be greatly appreciated.

Mrs. C. E. W.

Making Your Hens Pay.

To the Editor:—"Why, I guess so!" will be the answer with a great many to whom this question is put. "Seems as if we must be doing well with our hens. The eggs bring a good price and we get a good many of them."

But do you know about this? How many eggs do you really get? How much do your hens actually bring in in the course of the year? What does it cost you to feed and care for these hens a year?

Ask these questions and before you know it you have your friend "up a stump." For not one in ten farmers can come within gunshot of knowing anything about whether his hens as a matter of fact bring in a cent over and above the cost of keeping them. They only know that eggs bring a good price and they get lots of them.

Honestly, now, how long would you think a man running a store could keep his head above water if he did business in that slipshod sort of way? Not long, let me tell you that. He knows that he must know not only the value of the goods he sells but the cost of those goods and the expense of selling them.

It does not require a very great deal of ability to keep track of the time spent in feeding and otherwise caring for the hens. You can get at the value of the food given very easily by measuring everything out and setting down the worth of it. In a little book you can set down the worth of the eggs sold and at the end of the year, or at any other time, for that matter, you can get your balance and know instead of guessing.

There is a lot of satisfaction in knowing, instead of guessing about these matters. And I believe that if an account such as I have mentioned were to be kept with the hens it would make us open our eyes. We would see that we are not quite as smart at the poultry business as we supposed we were.

But if any man does keep such an account as I have mentioned and finds that his balance is on the wrong side do not let him be disgusted and discouraged and throw up the sponge. It is not "a bad job," necessarily, just because you have not found a little balance where you could use it.

The thing to do in such a case is to pick out your best hens, the hens that are doing business right along, and let the rest, the hens that creep onto the roosts in your houses every night and eat right out of your hand, but do not give you back anything worth while for the feed and care, go to the meat market. And do it just as soon as you can. It is by such a process of selection that men bring their flocks up to a paying basis.

Then, too, there is much in growing the feed needed for use in your houses. Here we fail badly many times. Lets come more nearly to supporting our own hens, fellow farmers.

Subscriber.

Jersey Men Meet.

Langlade County Jersey Breeders met at the court house at Antigo on Monday at the office of the county representative, elected officers and discussed matters of interest to the breed.

Blaine Stewart was re-elected president. Harry Lyons, vice president, W. A. Reiland of Aniwa, secretary; Chas. Schotte, treasurer; and Geo. Hunt, member of the executive committee.

Chas. Schotte extended an invitation to the association to hold its summer meeting at his farm. The invitation was accepted the matter of date being left to the executive committee. It will probably be about mid June. Several bills were voted paid. F. G. Swoboda was voted an honorary member of the association.

Jersey men are elated over the showing their breed made in the Langlade County Cow-Testing Association the past year. The fact that eight out of the ten highest cows in the association were Jerseys speaks volumes for this breed and its ability to come across under northern Wisconsin conditions. They made light of the oft-expressed notion that to produce well the Jersey must be babied. Good care and feed and a clean, comfortable stable as befits any dairy cow, that is expected to produce is all that the Jersey requires.

Some of the breeders lamented the fact that it is difficult to sell a good sire even from a dam with a good record for milk and butter fat production. "The trouble is," declared one of the breeders, "too many of our farmers are too easily satisfied when it comes to a sire. They want to buy a well-bred calf for less than veal prices. Failing to get one they continue to use a scrub." "I might as well ask $1,000 for a bull calf as to ask what I am asking. I believe I would sell just as many," said another.

It was pointed out that in some localities farmer after farmer is still using a scrubby scrub bull. To pay a dollar breeding fee is considered wasteful extravagance by many.

The Jersey men are working hard to enlarge their membership and increase the interest in their breed.

Wisconsin Wins In Big Hatching Contests Every Year

Why Pay More

For only $10 you can get these two prize winning machines, delivered, freight paid east of the Rockies. You take no risk—money back if not satisfied. You can order direct from this ad. Ask the publisher about us.

Both Machines Freight Paid For Only $10

We also furnish 180 Egg Incubator and 180 Chick Brooder both for only..$12

Wisconsin Incubators have long proved their wonderful hatching qualities. Competing with every make known, they won in the five big annual National Hatching Contests. Think of it. Five consecutive victories. That certainly proves you can't make a mistake. Shipped on **30 Days' FREE Trial**

MONEY BACK IF NOT SATISFIED

10-YEAR GUARANTEE

Wisconsins have hot water heat, double walls, double glass doors, copper tanks and boilers, self-regulating. Nursery under egg tray. Made of finest, select, clear CALIFORNIA REDWOOD, not pine, paper or other flimsy material. Incubator finished in natural color—not painted to cover up cheap, shoddy material. Incubator and Brooder shipped complete with thermometers, egg tester, lamps, everything but the oil. This is the best outfit you can buy. If you don't find it satisfactory after 30 days' trial, send it back. Don't buy until you get our new 1916 catalog, fully describing this prize winning outfit. WRITE FOR IT TODAY. You can't make a mistake in buying a Wisconsin. On the market 15 years.

POULTRY.

DAY-OLD CHICKS

With Stamps of Quality insuring Vigor and Livability. Shipments Guaranteed up to 1,500 miles. White Wyandottes, Barred Rocks, White Leghorns, Buff and White Orpingtons, S. C. and R. C. Reds.

EGGS FOR HATCHING

at low prepaid prices. A Post Card will bring you our 1916 catalogue.

GOSHEN POULTRY FARMS, R-5, Goshen, Ind.

FOR SALE—S. C. R. I. REDS

STOCK and hatching eggs. Good breeders, both males and females. $2.50 to $5. Won 9 ribbons on 15 birds at Wisconsin State Fair, 1915; 4th pullet and 3d young pen at Chicago Coliseum, 1915. Winnebago Poultry Yards, R. 23, Omro, Wis.

50 VARIETIES Chickens, Bronze Turkeys, White Holland, Bourbon Red Turkeys, Toulouse, Embden, African China Geese, Pekin, Rouen, Indian Runner, Muscovy Ducks, Guineas, Incubators and Brooders. Catalog 2c. THEO. FRANZ, Box 104, Mankato, Minn.

Breeding Stock From a Specialty Breeder

WE are breeders of prize-winning S. C. White Leghorns, W. P. Rocks, Barred P. Rocks, R. I. Reds, Toulouse geese, Pekin ducks. Old and young stock for sale. Also eggs for hatching. Fred H. Thiele, Specialty Breeder, Prop. Elmwood Pigeon and Poultry Farm, R. 12, N. Milwaukee, Wis.

RHODE ISLAND RED HATCHING EGGS

FROM my heavy winter-laying, money-making strain. Our capacity has been tripled for 1916 season. Quick shipment via p. post, W. F. express or American express to any point in U. S., $2 per 15. R. E. Daly Poultry farm, Necedah, Wis.

WE PAY $60 A MONTH SALARY

AND furnish rig and all expenses to introduce our guaranteed poultry and stock powders. Bigler Company, X 660, Springfield, Illinois

SILVER WYANDOTTES. "The Aristocrats." Eggs from the grandest matings on earth. My mating list tells all. It's free. Write for it. Address Frank Faha, Jr., Box 620, Dyersville, Iowa.

WANTED to buy all leading varieties pure-bred poultry, especially Golden Wyandottes, Houdans, Hamburgs, C.I. Games, P. Rocks, Orps. and Spanish. Elmer Skink, 511 S. 10th St., Lyons, Ia.

58 BREEDS Fine pure-bred chickens, ducks, geese, turkeys, guineas, fowls. Eggs at low prices. America's finest poultry farm. 8,000 prizes. Large catalog 4c. A. A. Ziemer, Box 15, Austin, Minnesota.

PURE-BRED WHITE and BARRED ROCKS. Eggs $1.25 per setting prepaid; $5.00 per 100. Chicks $15.00 per 100. Address Mrs. J. F. Bloom, Route 1, Stillwater, Minnesota.

WINTER LAYERS Large type, strictly business strains, S. C. W. Leghorns. Eggs, stock, chicks. Satisfaction guaranteed. Certified Egg Farm, Madison, Wisconsin.

EGGS for hatching $6 per 100. Shipped C. O. D. and express prepaid. Barred, Buff and White Rocks, S. C. Reds, S. C. Brown Leghorns, W. Wyandottes. P.W. Condon, West Chester, O.

60 VARIETIES PRIZE-WINNING GEESE, ducks, turkeys, chickens, pea fowls, guineas. Stock; eggs cheap. Write wants. F. J. Damann, Farmington, Minnesota.

Tells why chicks die

Write today for the poultry expert's valuable free book, "White Diarrhoea and How to Cure It." This book contains scientific facts on White Diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually saves 95 per cent of every hatch. The valuable book is free. Send your name and address for it now. E. J. Reefer, 8483 Farmers Building, Kansas City, Mo.

MONEY IN POULTRY AND SQUABS Start small. Grow BIG. Get winter eggs. Keep healthy fowls. Save your chicks. Our Big Book Tells How. Shows fowls in natural colors, how to feed for eggs, select best layers, plans for houses. FREE.

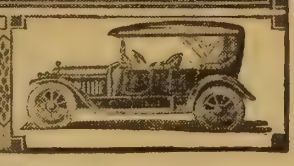
FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department



QUESTIONS AND ANSWERS.

Drive for Jump Spark Magneto.

I have a two-cylinder Maxwell runabout that runs on five dry cells. I wish to know if a common jump spark gasoline engine magneto can be used on it with a friction drive?

Answer.—If it is a low-tension magneto it may be used with a friction drive in place of the batteries. You would require the batteries for starting. If it is a high-tension magneto with a distributor it would have to be gear driven.

Making a Small Moto .

Is the wire on a telephone generator all right to use on a small motor? Could I use the magnets on the generator for the field? Could I use the armature to make the armature of the motor?

Answer.—You could use your armature complete if it has a commutator. If it has no commutator you could put one on and use the generator armature winding and core. Your permanent magnets would soon lose their magnetism. Make your field magnets by winding fine insulated copper wire on soft iron cores.

Power for Sawing.

Would like to know whether my two and one-half horse-power engine would pull my sawing outfit easier if belted to a jackshaft under the saw mandrel. If belted direct, I would use a sixteen-inch pulley on the engine. If belted to the jack shaft, I would use an eight-inch pulley on the engine and a two to one set of pulleys on the jack shaft, so that the speed of the saw would be the same in either case.

Answer.—If your engine has heavy flywheels it would be better to belt direct, as the jackshaft friction would be saved. Your engine may be too small for the work. It is large enough to run a twenty-two-inch saw if the saw is properly set and sharpened.

Some Electrical Questions.

What kind and what size wire should I use to make a rheostat for a forty-volt, twenty-ampere generator? If a small generator is run so as to deliver four amperes at ten volts, should a four-ampere fuse be used? If the speed is increased so that the generator gives five amperes at fifteen volts, would a four-ampere fuse burn out? When ordering a fuse is it necessary to state the voltage?

Answer.—If you wish to connect the rheostat directly across between the main wires use 500 feet of No. 8 B. & S. gauge iron wire. If you wish to use the rheostat in series with some load, as a storage battery, for instance, considerably less wire would be required. The amount would depend upon the resistance of the load, which is added to the resistance of the rheostat. Use a fuse as large as the maximum safe capacity of the generator. A four-ampere fuse will burn out if five amperes of current flows through it. It is not necessary to state the voltage when ordering a fuse. The heating effect depends upon the amperage, not the voltage.

Engine Lacks Power.

We have a four-horse-power Fuller & Johnson engine that lacks power. It explodes regularly and has good compression. It seems to leak between the mixing chamber and engine head, as air shoots out at each explosion. What is the trouble?

Answer.—The first thing to do is to stop the leak. Then if the engine still lacks power check up the timing. The exhaust valve should close about two inches past dead center, measured on the rim of an eighteen-inch flywheel. The spark should occur on top dead center when it is fully retarded.

Length of Rafters.

I am building a barn twenty-six feet wide with bungalow roof. How long should the top rafters be? What figures on the square should be used to cut them? How long should the bottom rafters be?

Answer.—We are not quite sure as to what kind of roof you have in mind. Since your barn is twenty-six feet wide you would require bottom raft : twenty-six feet long. We presume that if you make your roof eight feet and eight inches high you will have a satisfactory slope. However, you better lay this out; possibly you may want a steeper slope. For the above slope set the square at four and six, the four being for the vertical cut. You would require an eighteen-foot rafter, the distance measured at the center line of the rafter from the top to the bottom cut being fifteen and one-half feet.

Horse Power of Engine.

Please tell how to find the horse power of my kerosene engine. It has a six-inch bore, seven-inch stroke. It runs 450 revolutions per minute.

Answer.—The horse power formula for any engine is

$$H.P. = \frac{PLAN}{33000}$$

in which P=average pressure per square inch on piston head; L=length of stroke in feet; A=piston head area in square inches; N= the number of power strokes. To find the horse power multiply all the quantities above the line together and divide by 33000. The average pressure for a gasoline or kerosene engine is usually assumed at seventy pounds per square inch. The area of the piston head=.7854 times the square of the diameter. For a four-cycle engine under full load N=one-half the R. P. M.

For your engine

P=70 lbs. per square inch

$L = 7 \div 12 = 7/12$ ft.

$A = .7854 \times 6 \times 6 = 28.27$ square inches

$N = 450 \div 2 = 225$

$$H.P. = 70 \times 7/12 \times 28.27 \times \frac{225}{33000} = 7.8$$

The above is for a single-cylinder engine. If the engine has two cylinders multiply by two.

Gas Engine for Tractor.

I have a stationary gas engine that I am thinking of mounting on a truck to make a tractor of it. The engine has a nine-inch bore and a ten-inch stroke. The diameter of the flywheel is fifty-eight inches. The engine weighs 3,200 pounds. How many horse power will it develop? How many fourteen-inch plows will it pull?

Answer.—Your engine should develop eighteen horse power at 350 R. P. M. It would not be safe to run it much faster with so large a flywheel. It should pull two fourteen-inch bottoms under almost any condition and possibly three bottoms under favorable conditions.

Auto Does Not Start Easily.

We have a Model 81 Overland car. We have trouble in starting the motor by hand either in hot or in cold weather. When using the electric starter we have no trouble. The carburetor, manifold, compression and spark seem to be all right. The car is equipped with a six-volt, eighty-ampere storage battery. Could this battery be used for ignition when starting with better success?

Answer.—The magneto with which your car is equipped does not furnish a good spark when the motor is turned over slowly. In order to start the motor it is necessary to "spin" it, that is, turn it over rapidly several times without stopping. The battery could not be used with your present ignition system.

If none of the above combinations suit you, you can make up your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wis.

HEPSEY BURKE--A Sister to David Harum

By G. N. Wescott, the Brother of the Author of "David Harum."

(Copyright 1915.)

SYNOPSIS.

Hepsey Burke with the Junior Warden met the new pastor, Donald Maxwell, at the depot, giving him a welcome to his new parish. During the ride out to Thunder Cliff, Hepsey's home, she gave Maxwell in her outspoken way a very clear idea of the requisites or, as she put it, what the "parish wanted in the shape of a pastor." Having arrived at Thunder Cliff, Maxwell settled himself in the room assigned to him and then while resting read a letter from "Betty." However, he decided not to tell Mrs. Burke of her just yet. The new pastor's first call was upon the Senior Warden, receiving a hearty welcome from Virginia Bascom, his daughter. Hepsey surmised that Maxwell was engaged and made a neighborly call upon Jonathan Jackson, the Junior Warden, to see what he thought about the matter. The ladies of the parish gave a missionary tea, at which Virginia read a paper feeling that she was thereby gaining the much desired attention of her pastor. Maxwell returned from a vacation with Mrs. Maxwell and Mrs. Burke piloted them to the rectory which had been repaired and furnished under her supervision.

CHAPTER XI.

Virginia's High Horse.

MRS. Betty soon succeeded in winning a place for herself in the hearts of her parishioners, and those who called to look over her "clothes," and see if she was going to "put on airs" as a city woman, called again because they really liked her. She returned the calls with equal interest and soon had her part of the parish organization well in hand.

Maxwell's choice was, in fact, heartily approved—except by Virginia Bascom and the Senior Warden. The former took the opportunity to leave cards on an afternoon when all Durford was busily welcoming Betty at a tea; and was "not at home" when Betty duly returned the call. Virginia was also careful not to "see" either Betty or her husband if, by any chance, they passed her when in town.

Of all of which maneuvers Betty and Donald remained apparently sublimely unconscious.

As a means of making some return for the good-hearted generosity and hospitality of the inhabitants, represented by the furniture at the rectory and many tea-parties under various roof-trees, Mrs. Maxwell persuaded her husband that they should give a parish party.

So invitations were issued broadcast and Mrs. Burke was asked to scan the lists, lest anyone be omitted. China sufficient for the occasion was supplemented by Hepsey Burke and Jonathan Jackson, and Nickey laid his invaluable services under contribution to fetch and carry—organizing a corps of helpers.

The whole adult village—at least the feminine portion of it—young and old, presented themselves at the party dressed in their best bibs and tuckers, amusing themselves outdoors at various improvised games, under the genial generalship of their host; and regaling themselves within at the tea-tables presided over by Mrs. Betty, whose pride it was to have prepared with her own hands—assisted by the indefatigable Hepsey—all the cakes and preserves and other confections provided for the occasion. The whole party was one whole-hearted, simply convivial gathering—with but a single note to mar it; and who knows whether the rector, and still less the rector's wife, would have noticed it, but for Hepsey Burke's subsequent "boiling over?"

When the games and feast were at full swing Virginia Bascom's loud-voiced automobile drove up, and the door bell pealed. The guests ceased chattering and the little maid, hired for the occasion, hurried from the tea cups to answer the haughty summons. Through the silence in the tea room, produced by the overpowering clatter of the bell, the voice of the little maid—quite too familiar for the proper formality of the occasion, in Virginia's opinion— was heard to pipe out cheerily:

"Come right in, Miss Virginia; the folks has eat most all the victuals—but I guess Mrs. Maxwell 'll find ye some."

"Please announce 'Miss Virginia Bascom,'" droned the lady, ignoring the untoward levity of the now cowering maid, and followed her to the door of the room full of guests, where she paused impressively.

"Mrs. Bascom," called the confused maid, through the solemn silence, as all eyes turned towards the door, "here's—this is—I mean Miss Virginia says Miss Virginia Maxwell——" After which confusing and somewhat embarrassing announcement the maid summarily fled to the kitchen and left Virginia to her own devices.

Betty at once came forward, and quite ignoring the error, smiled a pleasant welcome.

"Miss Bascom, it is very nice to know you at last. We have been so unlucky, have we not?"

Virginia advanced rustling and gave Betty a frigid finger tip, held shoulder high, and cast a collective stare at hostess and guests through her lorgnette, bowing to Maxwell and ignoring his proffered handshake.

There was an awkward pause. For once even Betty-the-self-possessed was at a loss for the necessary tactics.

A hearty voice soon filled the empty spaces: "Hello there, Ginty; I always did say those auto's was a poor imitation of a street car; when they get balky and leave you stickin' in the roadside and make you behind time you can't so much as get your fare back and walk. None but royalty, duchesses and the four hundred can afford to risk losing their cup o' tea in them things.

There was a general laugh at Hepsey's sally and conversation again resumed its busy buzzing and Virginia was obliged to realize that her entry had been something of a frost.

She spent some minutes drawing off her gloves, sipped twice at a cup of tea and nibbled once at a cake; spent several more minutes getting her hands back into her gloves, fixed a good-by smile on her face, murmured some unintelligible words to her hostess and departed, annoyed to realize that the engine of the awaiting car—kept running to emphasize her comet-like passage through so mixed an assembly—had become quite inaudible to the company.

"Such an insult!" stormed the lady, as she returned home in high dudgeon. "I might have been a nobody, the way they treated me. Dad shall hear of this; and I'll see that he puts them where they belong. The impudence! And after his t-treating me s-s-so!" she wept with chagrin and malice that betokened no good to the rector and his little wife.

Even so, it is doubtful if the host and hostess would have permitted themselves to notice the supercilious rudeness of the leader of Durford "Society," had Hepsey been able to curb her indignation.

As she and Betty and the little maid, assisted by Donald and Nickey and his helpers, were clearing up the fragments that remained of the entertainment, Hepsey broke forth:

"If I don't set that young woman down in her place where she belongs before I've done I've missed my guess: 'Please announce Miss Virginia Bascom,' indeed! If that isn't sauce, I'm the goose."

"Oh never mind, Mrs. Burke," soother Betty in a low voice; "she'll soon realize that we're doing things in good old country style, and haven't brought any city ways with us to Durford. I dare say she thought——"

"Thought nothin'!" replied the exasperated Hepsey. "I'll thought her, with her high looks and her proud stomach, as the psalmist says. I'd like—oh, wouldn't I just like to send up a nice little basket of these left-over victuals to Ginty, 'with Mrs. Maxwell's regards.'"

She laughed heartily, but Betty was determined not to let herself dwell on anything so trivial and soon, by way of changing the subject, she was put-

ROSES! Eight Beauties For 15c!

No Flowers So Fair as Roses: No Finer Roses than The Housewife's

Our 1916 offer is Better and Bigger than any previous group—Splendid and unusual types chosen in well balanced assortment comprising Eight Hardy Beauties in all.

Bigger, Better, Brighter Than Ever

Frau Karl Druschki—A pure paper-white, free-flowering, large-sized Hybrid Perpetual. It is a remarkably handsome plant with bright, heavy foliage and strong, upright growth. There is nothing in the line of perfectly hardy Roses that can compare with this one in form, color and general finish.

Robin Hood—This new Rose has a glorious rosy-scarlet color that is at once soft and bright and lasting; the bloom is full and of beautiful build. It is a grand grower, heavy caned and profuse in foliage; flowers very freely produced; we feel sure this will prove a delightful companion for Rhea Reid.

Rhea Reid—Considered by many experts to be the finest red Rose in existence; has no rival. Rhea Reid is an offspring of American Beauty, which fact alone would place it right in the front rank along with its hitherto unrivaled parent. Much darker and richer red than the American Beauty; fragrant and continuous.

Violet Blue (the Blue Rambler)—the most novel creation of the age. A perfectly hardy, rapid-growing Rambler, identical with Crimson Rambler, except the color of its flowers. The immense clusters of beautiful violet-blue flowers, reminding one at a distance of the Blue Clematis, is a sight never to be forgotten. It is entitled to a place in every garden. It will cover the porch or trellis where planted in a short time, and will succeed everywhere.

Climbing American Beauty—Climbing H. P. A seedling from American Beauty with Wichuraiana and Tea blood in its veins. The introducers say of it: "Same color, size and fragrance as American beauty, with the addition of the climbing habit. Good foliage, and better blooming qualities. One plant of this new Rose will produce twenty times as many flowers in June as the old American Beauty, besides blooming occasionally during the summer. Blooms three to four inches across; has proved perfectly hardy and stands heat and drought as well as any Rose in our collection." We feel sure this Rose has a great future.

White Dorothy. (New)—A pure white sort of well-known Dorothy Perkins, of same habit of growth and freedom of flowering; a splendid companion for the pink variety, as it flowers at the same time. A most valuable addition to this class. Awarded gold medal National Rose Society and Award of Merit, Temple Show, England.

Madame Caroline Testout—Clear bright satiny-pink; flowers very large and extremely showy; quite distinct. It is the Rose par excellence. It does well everywhere.

Marechal Niel Rose—The world-renowned Rose. A beautiful deep sulphur-yellow, very large and exceedingly fragrant. It is the finest yellow Rose in existence. It has a climbing habit.

THE HOUSEWIFE is showing wonderful improvement and the evidences of this are just beginning—the very best fiction, illustrated by work of famous artists are to appear in coming issues.

Look at a few of the many names of those now contributing to The Housewife's pages:

AUTHORS.

Holworthy Hall—Author of Henry of Navarre, Ohio; the "Pepper" stories, etc.

Ellis Parker Butler—Who wrote "Pigs is Pigs;" the Great American Pie Company, etc.

Jane W. Guthrie—Who can tell a love story as few can, which explains her fame.

Lilian Dynevor Rice—Whose special cookery and household columns will be welcomed and—

No end of other features, Mother Knows Hows, Childrens' Pages, Real Poetry, Short Stories, and many big features to be announced from time to time.

ARTISTS.

F. Early Christy, whose cover designs are their own best description; John R. Neill, of whom it has been said, "He more than illustrates a story—he illuminates it;" P. J. Monohan, whose pictures are always full of action and real people; W. B. King, he of the deep understanding and deft touch; the list could be made as long as wanted, both as to artists and authors.

No expense nor time nor trouble is being spared to make

THE HOUSEWIFE

the finest popular priced magazine for women in America.

At any price The Housewife would not be a luxury—at 50 cents a year it is a necessity!

OFFER ENDS POSITIVELY MAY TENTH

As an introductory offer—The eight famous roses described in detail above will be sent to any person who subscribes to The Housewife for one year at 50 cents a year, for but 15 cents additional. In other words for 65 cents, you get The Housewife for one year and the roses will be sent you postpaid. THIS OFFER APPLIES UPON ORDERS RECEIVED BEFORE MAY 10TH—IT WILL BE WITHDRAWN UPON THAT DATE AND ORDERS RECEIVED AFTER THAT DATE WILL NOT BE FILLED. Think of it!—Eight beautiful roses for 15 cents! Lose no time in sending in your order—take advantage of this sensational springtime offer at once. There is going to be a lively demand, so the sooner you get your request filed, the better.

THE HOUSEWIFE, 30 IRVING PLACE, NEW YORK.

ting Nickey up to the idea of forming a boy-scout corps, which, as she added, could present the village with a thoroughly versatile organization, both useful and ornamental.

"Gee," remarked Nickey, who quickly saw himself captaining a body of likely young blades, "that's be some lively corpse, believe me. When can we start in, Mrs. Maxwell?"

"You must ask Mr. Maxwell all about that, Nickey," she laughed.

"But not now," interposed his mother. "You come along with me this minute and let Mr. Maxwell have a bit of peace; I know how he just loves these teas. Good night, all!" she called as she departed with her son under her wing.

"Donald! Wasn't it all fun—and weren't they all splendid?" Betty glowed.

"More fun than a barrel of Bascoms—monkeys, I mean," he corrected himself, laughing at Betty's shocked expression.

CHAPTER XII.

House Cleaning and Bachelorhood.

APART from Mrs. Burke there was no one in the town who so completely surrendered to Mrs. Maxwell's charms as Jonathan Jackson, the Junior Warden. Betty had penetration enough to see, beneath the man's rough exterior, all that was fine and lovable, and she treated him with a jolly, friendly manner that warmed his heart.

One day she and Mrs. Burke went over to call on Jonathan and found him sitting in the woodshed on a tub turned bottom upwards, looking very forlorn and disconsolate.

"What's the matter, Jonathan? You look as if you had committed the unpardonable sin," Hepsey greeted him.

"No, it ain't me," Jonathan replied; "it's Mary McGuire that's the confounded sinner this time?"

"Well, what's Mary been up to now?"

"Mary McGuire's got one of her attacks of housecleanin' on, and I tell you it's a bad one. Drat the nuisance."

"Why, Jonathan! Don't swear like that."

"Well, I be hanged if I can stand this sort of thing much longer. Mary she's the deuce and all, when she once gets started housecleanin'."

"Oh, dear," Mrs. Betty sympathized. "It's a bother, isn't it? But it doesn't take so long and it will soon be over, won't it?"

"Well, I don't know as to that," replied Jonathan disconsolately. "Mary McGuire seems to think that the whole house must be turned wrong side out and every bit of furniture I've got deposited in the front yard. Now, Miss Betty, you just look over there once. There's yards and yards of clothesline covered with carpets and rugs and curtains I've been ordered to clean. It's somethin' beyond words. The whole place looks as if there was goin' to be an auction or a rummage sale, or as if we had moved out 'cause the house was afire. Then she falls to with tubs of boilin' hot soapsuds, until it fills your lungs and drips off the end of your nose and your fingers, and smells like goodness knows what."

"Jonathan!" Hepsey reproved.

"Are you exaggerating just the least bit?" echoed Betty.

"No, ma'am, I'm not. Words can't begin to tell the tale when Mary gets the fever on. I thought I noticed symptoms of housecleanin' last week. Mary was eyein' things round the house and givin' me less and less to eat, and lookin' at me with that cold-storage stare of hers that means death or housecleanin'."

"But, Mr. Jackson," Betty pleaded, "your house has to be cleaned sometimes, you know."

"Sure thing," Jonathan replied. "But there's altogether too much of this housecleanin' business goin' on to suit me. I don't see any dirt anywheres."

"That's because you are a man," Hepsey retorted. "Men never see dirt until they have to take a shovel to it."

Jonathan sighed hopelessly. "What's the use of bein' a widower," he continued, "if you can't even have your own way in your own house, I'd just like to know? I have to eat odds and ends of cold victuals out here in the woodshed, or anywhere Mary McGuire happens to drop 'em."

A Clean Sweep in the Prize Soap Contests

320 out of the 368 Prize Winners in the State Farm Paper contests used Lewis' Lye.

This demonstration of superiority is a wonderful testimonial—not only to its soap making qualities—but to the absolute uniform strength and purity of

Lewis' Lye

The Standard for More than Half a Century

The nation-wide interest aroused by these home soap contests showed that thousands of women all over the country realize that the soap they make is better, purer and more economical than any commercial soap.

The Famous Prize-Winning Lewis Recipe for Making Soap Without Boiling

Empty a can of LEWIS' LYE into a jug containing 2½ pints of cold water. By stirring, it will dissolve immediately and get hot; let it stand until cold. In a basin melt 5½ pounds of any kind of fat or grease. ONLY IT MUST NOT CONTAIN ANY SALT. Let it stand until it is just warm, and then pour the liquid Lye into the melted fat, in a continuous stream. This should take but a few minutes' time until the consistency of syrup is obtained. Pour the mixture into a square wooden box, lined with a damp piece of muslin, to prevent sticking to the sides and bottom. Cover up with a blanket and set in the corner of the kitchen until the next day. You will then have a block of pure soap, weighing about ten pounds, at a cost of simply the can of LEWIS' LYE.

When you make soap do not take chances with its quality. Use Lewis' Lye and the famous Lewis' Recipe. Your soap will then be in the same class with the Prize Winners.

PHILADELPHIA

"That's tough luck, Mr. Jackson. You just come over to dinner with Donald and me and have a square meal."

"I'd like to awful well, Mrs. Maxwell, but I dasn't; if I didn't camp out and eat her cold victuals she'd laid out for me it'd spoil the pleasure of housecleanin' for her. 'Taint as though it was done with when she's finished, neither. After it's all over and things are set to rights they're all wrong. Some shades won't roll up. Some won't roll down; why, I've undressed in the dark before now, since one of 'em suddenly started rollin' up on me before I'd got into bed and scared the wits out of me. She'll be askin' me to let her give the furnace a sponge bath next. I believe she'd use tooth powder on the inside of a boiled egg if she only knew how. This housecleanin' racket is all dum nonsense, anyhow."

"Why, Jonathan! Don't swear like that," Betty exclaimed laughing; "Mr. Maxwell's coming."

"I said d-u-m, Mrs. Betty; I never say nothin' worse than that—'cept when I lose my temper," he added, safely, examining first the hone and then the edge of the scythe, as if intending to sharpen it.

Hepsey had gone into the house to inspect for herself the thoroughness of Mary McGuire's operations; Betty thought the opportunity favorable for certain counsels.

"The trouble with you is you shouldn't be living alone like this, Jonathan. You have all the disadvantages of a house and none of the pleasures of a home."

"Yes," he responded, yawning, "it's true enough; but I ain't a chicken no more, Mrs. Betty, and I've 'most forgot how to do a bit of courtin'. What with cleanin' up and puttin' on your Sunday clothes and goin' to the barber's and gettin' a good ready, it's a considerable effort for an old man like me."

"People don't want to see your clothes; they want to see you. If you feel obliged to you can send your Sunday clothes around some day and let her look at them once for all. Keeping young is largely a matter of looking after your digestion and getting plenty of sleep. It's all foolishness for you to talk about growing old. Why, you are in the prime of life."

"Hm! Yes. And why don't you tell me that I look real handsome, and that the girls are all crazy for me. You're an awful jollier, Mrs. Betty, though I'll admit that a little jollyin' does me a powerful lot of good now and then. I sometimes like to believe things I know to a certainty ain't true, if they make me feel good."

For a moment Betty kept silent, gazing into the kindly face, and then the instinct of match-making asserted itself too strongly to be resisted.

"There's no sense in your being a lonesome widower. Why don't you get married? I mean it."

For a moment Jonathan was too astounded at the audacity of the serious suggestion to reply; but when he recovered his breath he exclaimed:

"Well, I swan to man! What will you ask me to be doin' next?"

"Oh, I mean it, all right," persisted Mrs. Betty. "Here you've got a nice home for a wife and I tell you you need the happiness of a real home. You will live a whole lot longer if you have somebody to love and look after; and if you want to know what you will be asking me to do next, I will wager a box of candy it will be to come to your wedding."

"Make it cigars, Mrs. Betty; I'm not much on candy. Maybe you're up to tellin' me who'll have me. I haven't noticed any females makin' advances towards me in some time now. The only woman I see every day is Mary McGuire, and she'd make a pancake griddle have the blues if she looked at it."

Mrs. Betty grasped her elbow with one hand and putting the first finger of the other hand along the side of her little nose whispered:

"What's the matter with Mrs. Burke?"

Jonathan deliberately pulled a hair

SPREAD NOW!

SPECIAL PROPOSITION
10,000 GALLOWAY
NO. 8 SPREADERS

This **extra offer** is made with the idea of getting **ten** or **more Galloway Spreaders** in every **township** in the next few weeks. One Galloway No. 8 Spreader always sells from one to a dozen more in the same community. That's why I make this **new special offer** to distribute **10000 advertising spreaders quickly**

S-17

LOOK! Our new 250 page catalog. Tells you all about the **special patented** features on the famous Galloway Manure Spreader; how to make a spreader pay for itself in six months' time; shows why 3 **exclusive Galloway** patented features make the Galloway Spreader worth $50 more than any other spreader, but cost nothing extra on the Galloway; also shows **full line** of other **Galloway implements** and **merchandise.**

NEW SELLING PLANS

Cash or time—**one year** to pay—**installment plan—note settlement—half cash half note—bank deposit or cash,** at prices so low you cannot afford to do without a manure spreader now. We sell direct at **less** than wholesale from factory to farm at the **actual cost** of material, **actual cost** of labor and only one small profit based on tremendous output.

LOOK! 3 GREAT INVENTIONS

They make the Galloway Spreader in a class by itself, are:

1. **Invincible Roller Feed** worth $25 on any other spreader. **Exclusive** on the Galloway, but costs you nothing extra. One of the secrets of our light draft.
2. **Patented Automatic Stop, Uniform Clean-Out Push-Board** worth $10 on any spreader. Costs nothing extra on the Galloway.
3. **New Steel Everlasting Beater** with **V-Rake** which gives wide spreading and tears the manure into shreds for uniform available **plant-food.** This exclusive feature alone worth $15. Costs nothing extra on the Galloway.

Many other **special 1916 features:** low down; double chain drive; cut-under front wheels; channel steel frame, trussed like a steel bridge; steel tongue; endless force feed apron; top of box only 42 in. high; front wheels under the box, and other special features make it easy for two average horses to handle.

SPREADER PRICES LOWER

Get in on this **special distribution advertising offer** from now until **seeding time.**

At the end of twelve months, if the Galloway spreader has not **paid for itself,** if you have hauled out 100 loads of manure or more, and it has not proven everything I say for it, I agree to **take it back,** pay freight **both ways** and **return your money,** no matter on which plan you buy. Could I make this offer if I was not **sure** of my ground? Every sale backed by a **$25,000 bank bond**—an additional guarantee to you! Galloway spreaders have passed a field test in every state and almost every county.

Ask for this new 250-page book and special proposition today.

Spreaders shipped from Waterloo, Kansas City, Council Bluffs, St. Paul and Chicago.

from his small remaining crop and cut it with the scythe, as if he had not heard Betty's impertinent suggestion. But finally he replied:

"There's nothin' the matter with Mrs. Burke that I know of; but that's no reason why she should be wantin' to marry me."

"She thinks a great deal of you; I know she does."

"How do you know she does?"

"Well, I heard her say something very nice about you yesterday."

"Hm! Did you? What was it?"

"She said that you were the most—the most economical man she ever met."

"Sure she didn't say I was tighter than the bark on a tree? I guess I ain't buyin' no weddin' ring on the strength of that. Now, Mrs. Betty, you just try again. I guess you're fooling me!"

"Oh no, really I'm not. I never was more serious in my life. I mean just what I say. I know Mrs. Burke really thinks a very great deal of you and if you like her you ought to propose to her. Every moment a man remains single is an outrageous waste of time."

Jonathan grinned as he retorted:

"Well, no man would waste any time if all the girls were like you. They'd be comin' early to avoid the rush. Is Mrs. Burke employin' your services as a matrimonial agent? Maybe you won't mind tellin' me what you're to get if the deal pulls off. Is there a rake-off anywheres?"

Betty laughed, and Jonathan was silent for a while, squinting at the scythe-edge, first from one angle, then from another, and tentatively raising the hone as if to start sharpening.

"Well, Mrs. Betty," he said presently, "seeing I can't possibly marry you, I don't mind tellin' you that I think the next best thing would be to marry Hepsey Burke. She's been a mighty good friend and neighbor ever since my wife died; but she wouldn't look at the likes of me. 'Twouldn't be the least use of proposin' to her."

"How do you know it wouldn't? You are not afraid of proposing, are you?"

"No, of course not; but I can't run over and propose, as I would ask her to lend me some clothesline. That'd be too sudden; and courtin' takes a lot of time and trouble. I guess I 'most forgot how by this time; and then, to tell you the truth, I always was a bit shy. It took me near onto five years when I proposed to my first wife."

"Well, now that's easy enough; Mrs. Burke usually sits on the side porch after supper with her knitting. Why don't you drop over occasionally and approach the matter gradually? It wouldn't take long to work up to the point."

"But how shall I begin? I guess you'll have to give me lessons."

"Oh, make her think you are very lonely. Pity is akin to love, you know."

"But she knows well enough I'm mighty lonely at times. That won't do."

"Then make her think that you are a regular daredevil and are going to the bad. Maybe she'll marry you to save you."

"Me, goin' to the bad at my age, and the Junior Warden of the church, too. What are you thinkin' of?"

"It is never too late to mend, you know. You might try being a little frisky and see what happens."

"Oh, I know what would happen all right. She'd be over here in two jerks of a lamb's tail and read the riot act and scare me out of a year's growth. Hepsey's not a little thing to be playin' with."

"Well, you just make a start. Anything to make a start and the rest will come easy."

"My, how the neighbors'd talk!"

"Talk is cheap; and besides, in a quiet place like this it's a positive duty to afford your neighbors some diversion; you ought to be thankful. You'll become a public benefactor. Now will you go ahead?"

"Mrs. Betty, worry's bad for the nerves, and's apt to produce insomny and neurastheny. But I'll think it over—yes, I will—I'll think it over."

Whereupon he suddenly began to whet his scythe with such vim as positively startled Betty.

(To be continued.)

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS.

Adverse Possession Title.

A Subscriber, Chilton, Wis.—A man has been holding land in Wisconsin by adverse possession for more than twenty years. Can he sell the land and give a warranty deed which will be safe from future attacks without proceedings in the circuit court to perfect his title?

Answer.—He would have a right to sell and convey the land by a warranty deed and the title would be good, but it would not appear on the records in a perfect claim of title; therefore, it would be well for him to bring an action in the circuit court to quiet title by a decree of the court and have a certified copy of such decree recorded and that would show perfect title.

Good Cause for Divorce.

A Subscriber, Bancroft, Wis.—I am the wife of a husband who is jealous and selfish. I do all the housework and besides work for him in the fields and help do the chores about the farm and I am in all ways a good and honest wife. We have six children, the oldest eleven years old and the youngest four months old and I care for them. My husband abuses me and ill treats me and beats me and all the neighbors know of it. I have not a cent to pay a lawyer. What can I do?

Answer.—This is indeed a distressing case. We advise you to go to a good lawyer in the county seat of your county and tell him all about it and have him get a divorce for you. He will attend to it and compel your husband to pay the expenses.

Will—Proceeds of Farm.

A Subscriber, Brutus, Mich.—A and B were husband and wife living in Iowa and A owned a farm there, the title to which was in the wife's name. B made will providing that after her death the farm should be sold and certain sums paid to the children out of the proceeds and the balance to go to A. B died and the farm is not yet sold. During B's lifetime A farmed the land and received all he made from it. Who is entitled to the rent of the farm from the time of B's death until the farm is sold under the will?

Answer.—If there is no unnecessary delay in selling the farm, and it brings a price more than sufficient to pay the children the sums provided for them by the will, A would be entitled to the rents and proceeds of the farm until it is sold.

The importance of growing only pure-bred grains is emphasized in the following from the Jackson County Journal, which also points out the profits in pedigreed seeds: "Jackson county farmers will find it profitable to get into the pedigreed-seed business Several of our farmers are already making a good thing in raising pedigreed seed, but the opportunity to engage in it is unlimited. Some lost out on their corn last year the same as corn growers generally, but early frosts are not likely to come frequently. But other pedigreed seeds did well. There is not only the increased yield from such seed but the selling of grain for seed is more profitable than selling in the open market. A start can and should be made on every farm, and the seed for such a start can be obtained right here at home. Those farmers having pedigreed seed for sale can help the movement along by inserting an advertisement in the local papers as the planting season approaches. Better seed, like better live stock, means increased profits from the same amount of labor and effort expended. Wisconsin is fast becoming the great seed-raising state of the nation, and there is no county in the state better adapted to the business on account of soil and climatic conditions than our own.

Eggs shipped for some distance should be carefully packed and placed in a quiet place at least twenty-four hours before placing them under hens or in the incubator.

6 Beautiful Roses FREE
with
The People's Popular Monthly
2 Years for Only 50c
If you send your order by
MARCH 25TH

EVERYONE loves flowers and the one special favorite of all is the Rose. Naturally, it is the most popular of all. The beauty of the Rose is first manifested in its long, graceful, shapely and solid buds, delicate and firm texture and opening to present a depth of blossom showing a formation of shell-like beauty.

Read this Description of the Roses we Send

Thousand Beauties.—A very appropriate name to give this great novelty. We are free to predict that Thousand beauties will become the most sensational climbing rose yet introduced. A single cluster of flowers is a whole bouquet in itself. Blooming profusely from the beginning of June until the last of July, the flowers appear in large clusters, ten to fifteen in a cluster, are of splendid size and quite double. The colors run from delicate balsam or tender rose through the intermediate shades of bright rose and carmine, with white, yellow and various other delicate tints showing. There is no other rose in cultivation like it.

American Crimson Rambler.—The most magnificent Hardy Crimson Rose in existence. Splendid flowers, two and one-half inches across, perfectly double. Borne in grand clusters completely covering the whole bush. Color, pure, deep rich crimson, far brighter and more intense than the old "Crimson Rambler." The Rambler does not fade, bleach or wash out, but holds its bright dazzling color to the last, which adds greatly to its value. Has handsome foliage, does not mildew, and is a most abundant bloomer.

Lady Alice Stanley (Pink).—Whatever else one may plant in the way of Roses, however much the grower may be in love with other varieties, the garden should contain this Rose to be complete. It is a silvery-rose in color with a sweet fragrance, and the flowers come freely and constantly. The blossoms are large, full and globular.

Mrs. Aaron Ward (Yellow).—A creamy-yellow rose, strikingly pleasing, both in form and fragrance. The flowers are large and heavy, beautiful in every respect, and come freely upon the plant. The growth of the bush is inclined to assume a compact form and produces flowers in abundance. It blends well with the other yellow varieties. Yellow roses are often desired by many growers of this flower and this one is sure to become a great favorite.

Leslie Holland (Red).—A fragrant dark velvety crimson Rose that flowers constantly upon a strong, vigorous plant, whose foliage is remarkably resistant to mildew. The color is constant and durable, being one of the few dark red Roses that does not rapidly fade.

White Killarney.—A creamy-white Rose, very highly perfumed, with a texture of blossom that forms a wonderful substance. The flowers are large, full and heavy, and follow each other so rapidly that there is not a noticeable pause between the successions of blossoms. The bush is particularly strong and vigorous in its growth, with all large, handsome foliage, which sets off the exquisite flowers in a most charming manner.

Remember—You will receive the six rose bushes (1 year plants) just as described and The People's Popular Monthly for 2 full years for only 50c. ***No need to write a letter*** but just write your name and address on the coupon below and fold 50c (stamps, coin, check or M. O.) in a piece of paper. We will know exactly what you are to receive and your order will have our best attention.

COUPON FOR THE SIX BEAUTIFUL ROSES

People's Popular Monthly,
Des Moines, Iowa
DEPT. H.

Gentlemen—
Enclosed find 50c for which send me the 6 Beautiful Roses, and The People's Popular Monthly for 2 full years.

Street or Rt. No.....

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

The Care of the Palm.

Most every housewife likes to number among her indoor plant possessions a beautiful palm, but not every one is successful in her efforts to grow them. As a general thing, failure is due to the soil more than to any other one thing. Most palms thrive best in a mixture of garden loam and sand, using just enough of the sand to make the mixture friable. Old and well-rotted manure from the cow yard is a valuable addition to the other ingredients of the soil, but under no circumstances should fresh or unrotted manure be used. If the old manure cannot be obtained, finely ground bone meal may be substituted in its place. A teacupful of this material to a half bushel of soil is about the right proportion.

Having your soil prepared and ready, see that the pots you are going to use have proper drainage. Put an inch or an inch and a half of broken pottery, brick or charcoal in the bottom of each pot, taking care that the drainage hole in the bottom of the pot is not obstructed. Then fill with the soil mixture.

A deep, rather than a broad, pot is desirable, as the roots of palms go down instead of spreading out.

Palms do not do well if their roots are overwet. Therefore, be sure that water is not allowed to accumulate in the jardinieres in which the pots are set. Water is bound to collect in the jardiniere unless it is looked after frequently and if it is allowed to stand until there is enough to come up about the pot the effect will be the same as if the plants were given no drainage.

The question of when to water palms is one that should be given attention. This should be done regularly and you may be sure that whenever the surface of the soil looks dry it is time to give the palm a drink. Use enough water to thoroughly moisten the soil clear to the bottom of the pot, or until a little water runs out the hole in the bottom of the pot.

Let the palms have plenty of light in order to keep the soil sweet and wholesome. A sour soil means a diseased plant.

Wash the foliage at least once a week, using a soft cloth or a camel's hair brush. A small quantity of sweet milk added to the wash water will give the foliage a glossy look that will add much to the attractiveness of the plant.

If the plant seems inclined to stand still and produce no more leaves, make an application of some good fertilizer and examine the condition of the soil at the same time to make sure that it has not been injured by undue retention of water.

Do not repot your plants until you are sure that the old pots are filled with roots. The plants should be interfered with as little as possible. An annual repotting is not necessary unless the plants are root bound.

In repotting slip the ball of earth out of the pot and set it in another one a size or two larger and fill in about it with fresh soil. On no account scrape the soil away from the roots. To do so often causes the death of the plant. Large pots and frequent repotting are not necessary if the soil is kept well supplied with nutriment by the use of fertilizers.

Better Baby Clothes.

Remember when you were a baby how the ruffles of tatting and lace about the neck and wrists of your dresses sawed and irritated you until you cried? Remember how you used to get tangled up in the lace ruffles around the bottom of your clothes when you tried to learn to walk or creep? Profit by your own experiences and clothe your baby simply and comfortably. Instead of spending your time on the worse than useless task of embroidering and ruffling baby's clothes spend it in resting and in taking much-needed outdoor exercise. So says Miss Ethel Ronzone, of the University of Missouri College of Agriculture.

This ruffling and decorating of baby clothes is passing. The needs of the child are being considered instead of placing the emphasis on appearance. The need for proper and adequate clothing for the child is of great importance. The new-born babe is not capable of regulating its body temperature. Since the temperature must be kept about 98 degrees Fahrenheit it is necessary to control it by the use of clothing. This does not mean that the child be wrapped in several layers of flannel all the year around. It is as necessary to provide for getting rid of excess heat in summer as it is to provide for conserving heat in winter.

CLEO EPHRAIM CASKEY.

Son of Mr. and Mrs. Arlie B. Caskey, is four months old and weighs seventeen and three-fourths pounds.

The fabric which is best for conserving heat is wool. This fabric is warm on account of the air spaces between the fibers. Cotton flannel for the same reason is warmer than plain cotton material. The disadvantage is that it loses its woolly character with repeated washing. When it comes to losing heat in summer we find that cotton fabrics smooth in character are better, since they are good conductors of heat. On a very warm day the fewer the clothes the better. By careful watching and occasionally feeling the child's hands and feet the mother can tell when some added clothing is needed.

The frequent and repeated laundering which baby clothes require makes it necessary that they be simply made and of material easily cared for. Absence of tucks, ruffles and embroidery makes the laundering problem simpler. The use of crepe for slips does away with the necessity for ironing. Mixtures of wool and cotton are less apt to shrink than all-wool garments Diapers made of cheesecloth with pads of old towels or soft knit material absorb more moisture and are more easily cleaned than the usual diaper.

The ease with which the child can be dressed should be considered. Slips and night gowns should open all the way down the back. Gertrude petticoats opening on the shoulder are convenient.

Wants Whitewash Remover.

To the Editor:—I am coming to the Home Department readers for a little advice. It will soon be time to clean house and I would like to have someone tell me how to remove whitewash from walls so that the paper will stick. I want to paper a room where the walls have been whitewashed and I find that the paper will not stick. Can someone help me? —M. A. G.

Baby Sleeps Out of Doors.

To the Editor:—I am a reader of the Home Department and have been for over two years. I love to read it and only wish it would come every day instead of once a week.

FREDERICK MAX MULLER.

I see other mothers have sent pictures of their babies so I will send one of our baby, Frederick Max Muller. At the time the picture was taken he was six months old and weighed twenty-three pounds. He has had mother's milk and has had crackers and oatmeal twice a day ever since he was two months old. He will be ten months old this month and he walks around chairs and creeps. From the time he was six weeks old until the first of November he slept out of doors. Now he sleeps in a very cool room and sleeps all night through.

I enjoy reading the letters in the Home Department and wish more of the readers would write. I like to crochet and hope there will be more patterns in our department.

Mrs. Michael Muller.

RICHARD MINER BLACKBURN.

Likes Mothers' Letters.

To the Editor:—I have been much interested in the mothers' letters in the Home Department. I am sending a picture of my little girl, Loretta Jane. This picture was taken at the age of one year and four months, when she weighed eighteen pounds. She has always been a fresh-air baby and has always been well except for a little cold or two. She is now three years and eight months old and weighs forty-five pounds. She is the only child we have and we surely think a lot of her.

LORETTA JANE.

Please let us have more baby pictures and mothers' letters.

Mrs. W. J. Beidler.

"World's Fair" Starter.

To the Editor:—I note in the last issue a request for bread starter. I presume the famous "World's Fair" starter is the one in mind and send it herewith. I have used it with great satisfaction for several years.

For making: Take one pint of lukewarm, soft water, a half pint granulated sugar and flour enough to make batter as thick as for pancakes. Beat well and keep moderately warm for from two to seven days. Be sure to use soft water and to never salt the starter. The night before baking set bread sponge the same as with any other yeast, using the starter. In the morning take out half a pint of the sponge into a glass jar, sprinkle over it half a cup of granulated sugar, cover loosely and keep in a cool place for next baking. Now salt your sponge, add a spoonful of lard and flour to knead. Work until smooth and velvety. Cover and keep warm. When real light push down and let rise again, then make out into loaves with as little handling as possible. When loaves have increased to twice original size put in oven with low fire for first fifteen minutes, then increase heat and bake until done, time depending on size of loaves. This yeast will last indefinitely if used once a week or oftener.

For keeping sausage for summer use I pack the raw meat in gallon jars and bake three hours (slowly), then cover with melted lard. The product is as good as when made way into August or as long as it can be kept from eaters. —Alice Elizabeth Wells.

Potato Yeast.

To the Editor:—I read the Home page every time the paper comes and enjoy it very much, as it always has such good instructions and helps the housewife so much.

I read in the last paper that someone wanted a bread starter. Here is one that I have used for a long time, "potato yeast." Two quarts boiling water, four or five large potatoes, one-fourth cup salt, three-fourths cup sugar, four and one-half cups flour, one or two yeast cakes dissolved in lukewarm water. Mix together the salt, sugar and flour. Boil the potatoes in the two quarts of water and when done pour the boiling water

over the dry ingredients, stirring meanwhile. Mash the potatoes at once and strain through a sieve to avoid lumps. Mix the potatoes with the other mixture and cool lukewarm before putting in the yeast. Let rise overnight.

A cupful of this may be put in a jar for next time. Put about half a cup of sugar on the top. If kept in a cool place it will keep a long time.

A good way to freshen your starter is by saving a little dough to add to the next baking or a little potato water.

Interested in Better Babies.

To the Editor:—I am much interested in better babies and am glad to see anything about babies in farm papers, so am sending a picture of our boy.

Richard Miner Blackburn is six and a half months old, weighs twenty-one and three-fourths pounds and is twenty-seven inches tall. He is a happy, healthy boy, is nursed regularly and never keeps anyone awake at night.

I enjoy reading other mothers' letters and hope this part of the Home Department may continue.

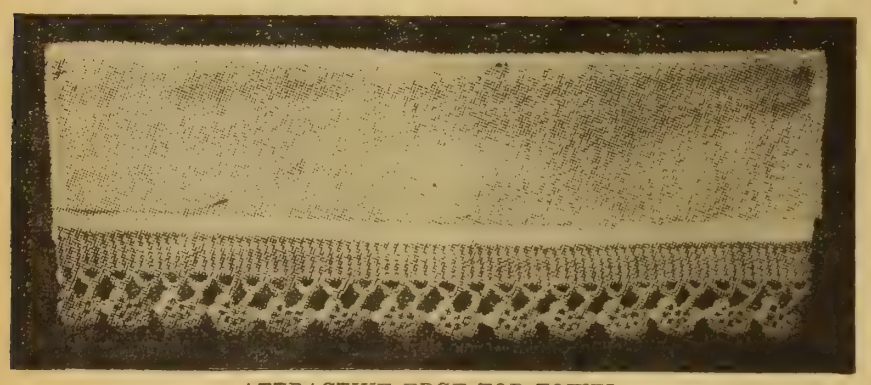
Mrs. Susie Blackburn.

Edge For Bath Towel.

Chain seven, turn, single crochet one in each stitch, chain one, turn, single crochet in each stitch, taking up back stitch to form rib. Make two and one-half ribs, or five times across. Chain five, catch back in first rib; chain one, turn, single crochet ten over five chain. Make two and one-half ribs. Chain five, catch back in first rib, single crochet five over five chain; chain nine, slip stitch in fifth stitch from hook, chain four, one treble in loop *, chain two, one treble in loop. Repeat from * four times.

AUGUST LENZ.

August is six months old and is the son of Mr. and Mrs. Ed Lenz. He weighs twenty-two pounds and his mothers says he is a "wild west" baby, because his home is in South Dakota.



ATTRACTIVE EDGE FOR TOWEL.

making six holes in loop. Slip stitch in first scallop, chain one, three trebles, one single crochet in each hole, making six small scallops. Five crochet over chain, five single crochet over chain. This completes one scallop. Repeat across towel. Fasten scallops together as shown in picture. Use No. 3 cotton.

Sends Three Recipes.

To the Editor:—I am sending you my way of putting up sausage, which is perfect if properly done. Also I am sending a recipe for starter for bread which never fails me, and an appetizing cabbage pickle.

We pack our seasoned sausage tightly in jars, large and small. Sometimes we pour warm lard over the top of the sausage, as it will keep better if the weather "turns soft" before we can fry it. We work the little cakes firm like a biscuit. Fry until the cakes press firm with a fork. The meat must be done or it will not keep. We reheat slowly and brown as we like them when wanted for the table.

The little cakes we pack in gallon stone jars, being sure the glazing is perfect. Then we pour the sausage grease on as far as it goes. Allow two inches of lard over the top of the sausage. I have tried less, but have found that the top cakes were sometimes moldy. This lard is not wasted, as we like the flavor very much in biscuit.

My mother always fried her sausage this way and I have myself for thirty years. I do not like the oven frying as it makes the meat dry. Keep in a cool place, but not in the cellar.

For a bread starter boil three medium-sized potatoes. Use the potato water and enough more water to make about three pints in all. Stir in two tablespoonfuls of sugar and a yeast cake that has been previously soaked. If it is kept warm for a few hours the potatoes will foam on top, but the next morning they will not show.

Take out one pint for starter. I keep mine in glass jars. In what remains stir flour to make batter. In a little while it will be all foamy. Sift one full sifter of flour into it, add salt and four tablespoonfuls of sugar. Work in flour until dough is right. It must not be sticky. If yeast and all is kept at the right heat it comes very quickly.

An appetizing pickle can be made with a nice firm head of cabbage and a few onions. Cut the cabbage in pieces, boil in clear water with salt to taste till cabbage can be pierced with a straw. Drain. Have very best cider vinegar. To a quart of vinegar add about four tablespoonfuls of sugar, pickle spices to flavor, or a few cloves, a little allspice, celery seed if liked. Bring the onions just to a boil in this. Then drop in the cabbage and take right up. Seal in glass jars.

—Lee.

Calla Lily Will Not Bloom.

To the Editor:—I enjoy reading the Home Department and am coming to you for some help. I am a friend of flowers and like to have geraniums in bloom in the house during the winter, but I do not have good luck with them. They look fine, but will not bloom very much. How can I have them in bloom? I also have a calla lily that is three years old, but it only bloomed the first year. During the summer I lay it under an evergreen tree and before freezing weather in the fall I get it inside and water it freely. Can some of the readers of the Home Department who have had experience with these plants tell me how to care for them so they will bloom?

—A Reader.

Queen Eleonore, of Bulgaria, has spent her entire fortune in relief work for the subjects of her husband and is now penniless.

There are over 2,500 women stockherders and raisers in the United States.

Mayer HONORBILT CUSHION SHOES

Cushion Shoes

Sensitive feet get quick relief. Wear Mayer Honorbilt Cushion Shoes. The quilted soles take up the shock when you walk.

No other cushion shoes equal them. Cool in summer, warm in winter. Easy on the feet from the first day and all the time. Made for both men and women in all styles to suit every taste.

WARNING. Always look for the Mayer name and trade mark on the sole. If your dealer cannot supply you, write to us.

We make Mayer Honorbilt Shoes in all styles for men, women, children; Dry-Sox wet weather shoes; Martha Washington Comfort Shoes.

Milwaukee

Recipes.

Peach Tea Cake.—One large tablespoonful equal parts butter and lard, one-half cup sugar, one-half cup sweet milk, one egg, two cups flour, one teaspoonful baking powder. Cream the butter, lard and sugar, add beaten egg, then milk, and baking powder sifted in flour. Beat well. Turn into shallow pan, cover with sliced peaches (fresh or canned). Sprinkle with granulated sugar and cinnamon. Bake thirty minutes. Apples can be substituted for peaches if desired.

Honey Fruit Cake.—One cup honey, one-half teaspoonful cinnamon, pinch cloves, one egg, two tablespoonfuls melted butter, one cupful seeded raisins, one cupful chopped nuts, one cupful sour milk, one-half teaspoonful soda, two cupfuls sifted flour. Beat well the honey, cinnamon, cloves, egg and melted butter, and then add raisins, nuts and sour milk with soda dissolved in it, and then two cups of sifted flour or more to make cake dough. Bake slowly in bread pan.

Corn Muffins.—One cupful corn meal, one-half cupful flour, half teaspoonful salt, two teaspoonfuls baking powder, one tablespoonful melted butter, one tablespoonful sugar, one cupful milk, one egg, one teaspoonful oil or butter. Sift the flour, corn meal, sugar, salt and baking powder into bowl; add the milk, butter and well-beaten egg; mix well. Brush muffin tins with the melted butter or oil and in each one put one tablespoonful of the mixture. Bake thirty-five to forty minutes in hot oven.

Potato Ribbons.—Wash and peel the potatoes, taking out all eyes and specks. Then peel around and around into thin ribbons. Place in a frying basket and cook in hot fat for five or six minutes. Sprinkle with salt and pepper and serve either hot or cold.

Orange Jelly.—One tablespoon granulated gelatine, one-fourth cup of sugar, one-fourth cup cold water, one cup orange juice, one-half cup boiling water. Prepare in usual way. Sections of orange may be placed in a mold and a little jelly poured in and allowed to harden so as to hold the sections in place, then the remainder of the jelly added.

Stuffed Green Peppers With Meat and Celery.—Take green peppers; cut off top and scoop out. Have ready cold meat—lamb, beef or lean corned beef—one small head of celery, the inside of the green pepper, pinch of pepper, salt and paprika. Chop fine; place inside green pepper; put small piece of pepper back on top; bake in slow oven until done. The pan should have enough water in it to keep it from burning.

Baked Trout or Pike.—Trout is delicious served in the following manner: Take two large fresh trout and place in a shallow baking dish. Sprinkle with salt, pepper and a little flour. Add a sprig or two of parsley, a small onion, a carrot sliced or finely minced, a bay leaf, three lumps of sugar, a tablespoon of butter, an egg and a cupful of white vinegar. Bake the fish forty-five minutes.

Modern Housekeeping.

She fills her fireless cooker
With seven kinds of grub;
Turns on the suds and puts her duds
Into the scrubless tub.
She starts the dustless sweeper
On gear keyed down to low;
Powders her nose and gaily goes
To see a picture show.

This Season's Novelty!

Stylish Angora Style Wool Scarf

You Want One? Read This!

Send us 75 cents only, and get The Housewife for One Year (regular 50 cents) and this Dollar Scarf.

A $1.50 VALUE FOR JUST HALF!

AT LAST fashion has been kind to the women of small means. She has given the scarf, the novelty of the season, to those who cannot afford furs. Comparatively few women can afford really good furs, therefore, they have either had to go without them or be satisfied with a cheap imitation of the real thing. But now comes the scarf, a thing of beauty and chic, which can be wound around the throat with a dashing air lending a smart appearance to its wearer. Scarfs of all kinds and colors are being worn but the most popular and the prettiest variety is the one made of angora wool either in pure white or dainty colors. The outdoor girl first brought the light of fashion's favor on the scarf and showed the fashionable world just how pretty and practical it could be, and now, that cold weather is here it is no longer used just as a pretty piece of decoration, but as a serviceable piece of milady's wardrobe. These scarfs are very warm and easily cleaned, with these two characteristics they are destined to remain immensely popular. The scarf we offer is made of fine wool, angora style and measures 56 inches long by 7 inches wide, it may be obtained in different colors. Each scarf has striped ends of harmonizing colors and is finished with a self fringe. Kindly state color desired when ordering.

Remember, all you need to do to get this Scarf, is to subscribe for The Housewife for a year and remit 75 cents only for both Housewife and Scarf. The regular rate of The Housewife is 50 cents—the usual cost of the Scarf is $1.00.

WE OFFER BOTH FOR 75 CENTS!

Household Hints.

Camphor put in drawers or trunks keeps away mice.

Cranberries are good for malaria.

Old bread or biscuit can be made fresh by moistening and placing in an oven until heated through.

Fat used for frying fish should be used for no other purpose.

A stew boiled is a stew spoiled.

Baked meat should be started in a hot oven.

Nothing much can be done outdoors this month, but a little later it will be greatly appreciated if a hole is now made in the pile of spring sewing and closets and bureau drawers are put in order.

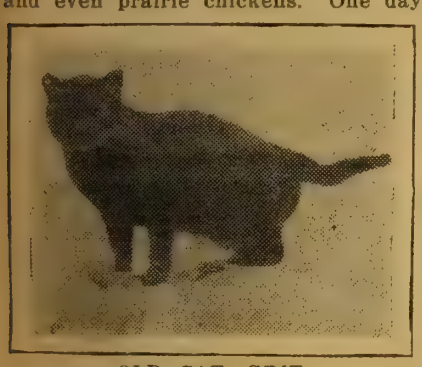
Always put the scrubbing brush to dry with the bristles down. This will save the brush.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Old Cat Grit.

Dear Young Folks:—I want to tell you about our family cat, Grit. We gave him his odd name when he was a tiny kitten. When he was found in the barn with a lot of other kittens Aunt Fannie tried to see which was the bravest by holding them up by the neck as the mother cat did. This little fellow did not cry at all and she said, "I am going to keep him and call him Grit." He has had good care and is now seventeen years old.

When Grit was younger he caught lots of rats, mice, rabbits, gophers and even prairie chickens. One day



OLD CAT GRIT.

when mamma was away he caught a prairie chicken and brought it home alive. Papa said that a whole chicken was too much for a cat and Grit could only have the head. So he skinned the prairie chicken and got a tame chicken to go with it. While papa was cutting it up Grit came up to the pan (he had been sitting by, pouting) and put in his paw and took out a piece of chicken. Then he walked off a little and looked at papa as much as to say, "You took my chicken and I'll take yours." —Sarah.

Kindness to the Rabbit.

Dear Young Folks:—As I have seen so many letters from other young folks I think I will write too.

I am ten years old. I go to school and am in the fifth grade. We live about three miles from school.

I have no special pets, but we have two dogs named Rover and Fido. It might be a lot of fun for a dog to chase a rabbit in a barn, but I think it is not much fun for the poor rabbit. I believe in being kind to all animals.

—Mamie.

Back to the Country.

Dear Young Folks:—I certainly enjoy reading the stories and letters on the Young Folks' page. I am twelve years old and am in the seventh grade. I like my teacher very much. She is very religious and teaches us a great deal about the Bible. I live in town and my school is not far away.

My father is sheriff of our county and we have lived in town for three years, but will move away in one more year. I will be very glad, because I like country life so much better than town life. I was born on the farm and want to get back to it.

My father owns two farms, each consisting of 300 acres. They are called the Blue Ribbon and Prairie View farms. One is two and a half miles from town and the other one is eight miles. We have two very fine horses, a cow, a wagon, a buggy and an Overland automobile, so we never have to walk. We have about sixty-five chickens and three pet cats, and I also have four dolls and a buggy. I love them all very much. I am taking music lessons now, but I can play most anything I want to by ear.

I have two brothers and two sisters. My oldest sister is married and has the dearest little girl baby. Her name is Juanita. She is eight months old. They live in the country and I visit them about every week.

I have a pair of ice skates and a pair of roller skates and have great times skating both in winter and summer. I can do most any kind of housework and my mamma is teaching me how to crochet and tat. —Vera.

Another Friend of Bunny.

Dear Young Folks:—I read a letter by Edward in the February 24th number. I want to tell him not to let his dog Fido kill the rabbits any more. I felt so sad over that part of his letter. I don't think he means to be cruel, but is just thoughtless, for he says he gives his dog a ride on his sled and no cruel boy would do that.

Just think, Edward, of the poor rabbit, after having all out-of-doors for a home, to get caught in a trap. Think how it tried to get out until it was all tired out and sick with fear. Then you drew it home on your sled and gave the poor, innocent creature such a cruel death. Just think if you were caught and cried all night and then a big tiger was left loose to kill you. Dear little bunny did not deserve such a death. My papa takes them out of the trap carefully and holds them up by the hind legs and strikes them just back of the ears. That kills them quickly and they don't suffer at all. Then we eat them.

I have some pretty stories about quail, rabbits and other animals, how they build nests and hide their babies. I would like to have you read some of these. They would teach you many things and would help you grow up into a kind, good man. —Nora.

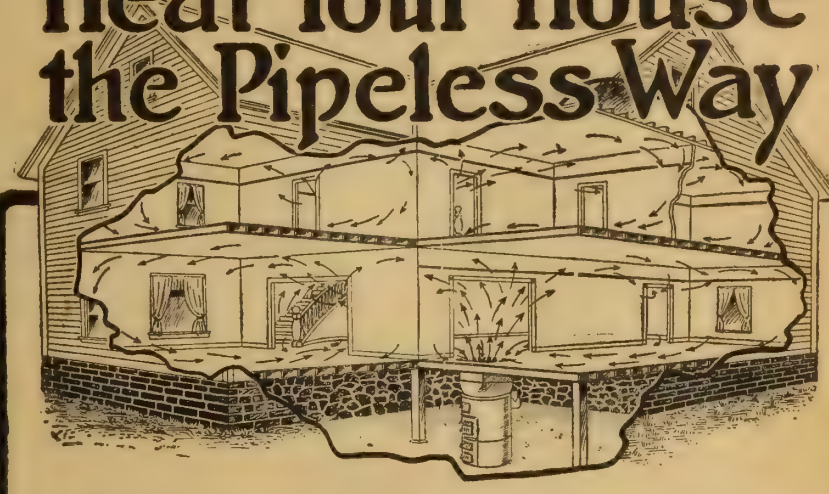
Country people have many advantages over the city dwellers, but sometimes overlook the commonest ones. One is the fact that the early rising on the farm necessitates going to bed early and the latest experiments prove that the early hours of the night give the most restful and health-giving sleep. It is claimed that the first quarter of a night's sleep possesses more rest than all the other hours of the night. "An hour's rest before midnight is worth two hours after" and "Early to bed and early to rise makes one healthy, wealthy and wise," are proverbs resulting from the experience of humanity in the matter of the comparative value of early and late rest.

Between 800 and 900 cars of strawberries will be shipped out of Ozark berry regions during the season soon to open, according to Ashleigh P. Boles, a railroad horticultural expert. Last year the crop was 580 cars. The earliest berries are expected to come from the fields about Van Buren, Ark., which will begin shipping about April 25th.

Select eggs for hatching uniform in size. Extremely small eggs or exceptionally large eggs should not be used.

GIANT PANSIES AND PETUNIAS.
Fashion's finest favorites. I send seed of 50 loveliest Prize Pansies—all entrancingly beautiful, and 40 Varieties Everblooming Petunias—an endless array of colors, shades and markings of wondrous beauty. Large packet of each (worth 30c) for **one dime** to introduce. 3 Pkts. of each, catalog and Premium List for 30 cents. If you order and name this paper I will add my Mammoth 25c Flower Collection free with every 10 cents worth ordered. Tell your friends of this. I want 100,000 new customers and friends. Address, A. D. COOK, Seedsman, Hyde Park, N. Y.—Adv.

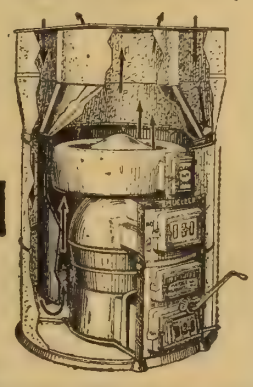
Heat Your House the Pipeless Way



ENJOY furnace heat without the trouble and expense of building pipes or flues into your walls. Keep every room at a comfortable temperature even in the coldest weather. Do away with the drudgery, dirtiness and wasted space of stoves. Lessen your family's likelihood of taking cold. The **Mueller System of Pipeless Heating** is thoroughly reliable and will put olid comfort into any home, old or new, large or small.

MUELLER PIPELESS FURNACE

Heats the whole house from one central register without flues or pipes. Easily installed in any cellar no matter how small; if your house has no cellar, just dig a pit for it.



The one thoroughly practical pipeless furnace. Gives you most heat from fuel. Burns coal, coke or wood. No heat wasted. Continuous circulation of fresh air ventilates your rooms. Doesn't heat up cellar and spoil produce. Thousands of delighted users. Built of cast iron. Easy to tend and clean.

Write today for Free Book describing the Mueller Pipeless and showing what it means to your home.

L. J. Mueller Furnace Co.
204 Reed St., Milwaukee, Wis.

Makers of heating systems of all kinds since 1857. Can supply you with regular hot air pipe furnaces, steam or hot water boilers and vapor heating systems. Give you honest advice on your heating requirements.

International Sunday School Lesson

Lesson for March 19, 1916
(By E. O. SELLERS, Acting Director of Sunday School Course.)

PHILIP AND THE ETHIOPIAN.

LESSON TEXT—Acts 8:26, 40.

GOLDEN TEXT—Understandest thou what thou readest?—Acts 8:30.

Beginning at verse four, chapter eight, we enter upon the second great division of the Book of the Acts. It marks the beginning of preaching outside of Jerusalem and also the employment of lay-preachers. The persecution of the Jerusalem church was chiefly led by Paul (v. 3) and resulted in a wider dissemination of the good news (v. 4). Philip, the deacon, went to Samaria where multitudes heard and saw (vv. 5, 8) and where a remarkable work of grace attended his dealing with Simon Magnus, who thought he could buy the gift of the Holy Spirit bestowed by the apostles (v. 9-24). The apostles returned to Jerusalem (v. 25) leaving Philip to continue his great revival in Samaria.

I. Divine Preparation, vv. 26, 27 a. The marvelous way God leads us; ways we do not comprehend, to accomplish his great designs is nowhere better illustrated than here. Philip's work would seem to demand his undivided and personal supervision, but he exhibits his superior wisdom by at once obeying this new command (Heb. 11.8). The Samaritan road joined the great Jerusalem highway to Egypt in the midst of uncultivated pasture land. Philip carried "sealed orders" and as he came to Gaza he met this man from the region south of Egypt, who was probably a Jewish proselyte, having adopted their religion, and was returning from worshiping at Jerusalem.

II. Diligent Study, v. 27-29. Philip overheard this high official as he was reading aloud from the prophecy by Isaiah, probably from the Greek translation. The Spirit directed Philip to join himself to this evidently honest inquirer, not because of his wealth and position but because he was a seeker after truth (John 7:17, Ps.

Don't skimp on price for
Good Seed Corn

It only takes 6 quarts to plant an acre. Poor seed as a gift would be the most expensive. Look for **Quality**, not Germination only. Go safe by buying from reputable growers with 27 years experience in breeding Seeds suited for Northwestern conditions.

Our supply is limited and going fast. Write us at once for samples and prices. **New Annual Seed Book Free.**

25:9). This statesman gives us a most simple and practical illustration (v. 28 R. V.) of how to study the Bible and to improve the time occupied in traveling. Both Luke, who wrote the Book of Acts, and Philip, the evangelist, seem to accept all of Isaiah without reservation. This method of reading study is the one that will surely secure for us revelations from God.

III. Direct Instruction, v. 30-35. We do not advocate indiscriminate assault upon every passing stranger in our desire to do personal work. Philip took each step as directed by the Holy Spirit. If we are attuned to the Spirit's "small voice" we will surely hear his "Go near" which will send us to those whom we may win for Christ. It is true that this passage from the prophet Isaiah is somewhat obscure, and, apart from Jesus of Nazareth, irreconcilable. "In his humiliation his judgment (justice) was taken away"—a fair trial not given; "his generation who shall declare," (Am. R. V.) i. e., his contemporaries who among them considered that he was cut off out of the land of the living (New Cent. Bible). Prof. G. A. Smith has declared that "none but prejudiced Jews have ever denied that this great prophecy, known as the fifty-third of Isaiah, was fulfilled in Jesus of Nazareth, and achieved all of its details in him alone." Philip's question was a pertinent one; good for this present time, and the eunuch's reply was much more frank than many professed Christians of today would be willing to admit. We have one who is ready to guide even as God met this ruler's need (John 14:26; 16:13; 1 Jno. 2:27). The importance of understanding is great (Matt. 13:19, 15:20, 24:15). The two portraits here presented of the Messiah are seemingly irreconcilable and are still a great puzzle to the Jews. Prince of Peace, despised and rejected; Suffering Savior, King eternal; there are many such seeming paradoxes.

IV. Declared Faith, v. 36-40. The eunuch had doubtless seen the rite of baptism in Jerusalem and at the first opportunity he desired to make public his new found faith. Baptism is confession and a symbol (Rom. 6:1-6) and immediately after the eunuch's declaration of faith (v. 37) Philip at once administered the rite, after which, his work being done, Philip is whisked away while the eunuch journeyed on "rejoicing."

These two men were total strangers, yet this wayside conversation gains one who must have heralded far the Gospel as he witnessed along his journey and in his home land.

Philip made Caesarea his home and twenty years later met Paul in that city (Acts 21:8).

Philip worked without the machinery of an "organized movement" and evidently without any emphasis upon the offering.

Do we look for the Spirit's personal leadings?

Are we ready for every opportunity?

Can we tell men the way of life, how to become a Christian?

How many Sunday school teachers can intelligently use the word of God in answering the inquiry, "What must I do to be saved?"

Meat in some form should be fed the hens in winter and early spring to take the place of grasshoppers, worms and bugs obtained in summer. Beef scraps offer a convenient form of animal food. Fresh ground bones make one of the best.

SPECIAL FOR LENT. Order your supply of Frozen and Salted Fish at once at these low prices. We guarantee Best QUALITY. Fresh Frozen Herring at $3.25 per 100 lbs. Pike $9 per 100 lbs. OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Wisconsin Farmer, Madison, Wis.

7605 Ladies' Middy Blouse.—Cut in sizes 34 to 44 inches bust measure. Made in the simplest manner possible, this blouse slips on over the head, the neck opening being cut down a little to make it large enough. There is a medium size collar as a neck finish. The low shoulder joins the plain sleeve, which is loose and either full length or shorter.

7612 Children's Set.—Cut in sizes 1, 2 and 3 years. In this set we have first suit of rompers made with opening down the back and across the waist and also along the inseam of the legs. There is also a petticoat, with tab in envelope style from back to front between the legs, and there is a pair of small drawers which button along the inseam and are mounted on a band.

7628 Ladies' Dressing Sacque.—Cut in one size. This garment is made of a perfectly square piece of material, with a cross cut for an opening at the neck. The edges in turning back form revers and the slope of the sides is completed by turning up little pointed ends on each arm. A ribbon holds in the front and back and binds all edges.

7589 Boys' Russian Suit.—Cut in sizes 2, 4 and 6 years. This pretty suit has a diagonal front closing, with a deep opening at the neck. This is filled in by a shield with a standing collar and may be worn or not, as preferred. There is a wide collar at the neck, edging the blouse. Bloomers are provided for wear with this blouse.

7627 Children's Dress.—Cut in sizes 2, 4, 6 and 8 years. This little frock has a deep shoulder yoke in front and a plain back. The lower part of the front is plain and there is a band closing. The high neck is finished with a small turnover collar, and a cuff edges the sleeves whether long or short. They are also gathered a little at the shoulder. The skirt is made with a panel front and is side pleated all around.

7619 Ladies' Apron.—Cut in sizes 34 to 44 inches bust measure. This apron is for all practical purposes a dress. It is in bungalow style, made with waist and skirt, the sleeves of raglan type, the front and back of the waist plain with bias front closing. The open neck is trimmed with a turnover collar. The sleeves are short, edged with a trimming band. The four-gore skirt fits neatly at the top and has a side front closing.

7595 Ladies' Skirt.—Cut in sizes 22 to 32 inches waist measure. Made with two gores, this handsome walking skirt closes at the left side. There is a small piecing which fills in the upper part of the front gore, where the material is cut away for the pocket outline. The short belt across the back is a matter of choice.

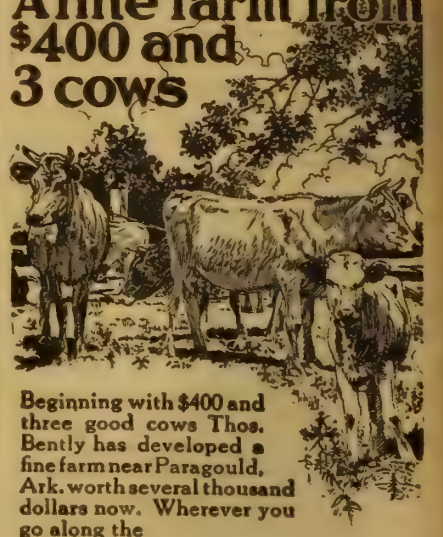
7592 Misses' Dress.—Cut in sizes 14, 16, 18 and 20 years. The feature of this dress is the closing which passes diagonally across the front of the blouse and down the side of the skirt. The high neck may have a high, turnover collar or a wide, flat one, and the sleeves may have a turnback cuff, if short, or a deep plain one, if long. The skirt has three gores and a flounce below the knee.

7602 Ladies' Skirt.—Cut in sizes 22 to 34 inches waist measure. Walking skirts are now made plain and the model shown is ideal for general use. It has four gores, that of the front arranged as a plain panel. The skirt fits neatly about the body and has either raised or normal waistline. The lower edge measures 2⅛ yards in medium size.

7591 Ladies' Dress.—Cut in sizes 34 to 42 inches bust measure. The plain waist closes at the side of the front, the open neck has a chemisette and standing collar and a wide revers trimming. The skirt is made with four gores and has a reversed box pleat in the back. It closes at the left side of the front.

Price of any of these patterns 10 cents each.

A fine farm from $400 and 3 cows



Beginning with $400 and three good cows Thos. Bently has developed a fine farm near Paragould, Ark. worth several thousand dollars now. Wherever you go along the

Cotton Belt Route in Arkansas & Texas

you'll find hundreds of farmers, now well to do, who started just a few years ago with only a little cash.

As H.V. Tull, near Jonesboro, Ark. says "One can start farming here on less capital than anywhere else I have ever been. We paid $25 per acre for this land and made a good crop the first year."

S. M. Jackson, of Piggott, Ark. had the same experience. "We came here a few years ago from Tennessee and bought this place for $700 and have been making money all the time. There is more money here and a better market. Our garden and orchard crops bring us money every month of the year; and our field crops and pastures support our live stock." Down near Jacksonville, Tex., B. E. Barber bought 40 acres of land a few years ago for $365. The first year his crops brought a revenue of over $2000—and in four years time he put $12,000 in the bank from the sale of products raised on his farm, mostly by his own labor.

If you could talk with the farmers from Iowa, Michigan, Illinois, Kansas—from every part of America—who have gone into Arkansas and East Texas with little capital and made good money from the start, you'd realize what your opportunity is there.

Two free books!

A farmer wrote them; and he knows what you want to know about a section new to you. They tell about the character and cost of lands, climate, crops raised, etc., and about schools, churches, towns, social conditions. Brimful of photograph pictures taken on the ground. Send me your name and address on a postal card today and get these free books now.

The Cow at Calving Time.

To the Editor:—As in nearly everything else in life the natural way is the best way when a cow is calving. I have in mind several instances where pedigreed cattle and other almost priceless animals about to give birth were given almost constant vigilance of attendants for weeks ahead. In such cases the young are often born lifeless. The owners will complain and cannot understand why it is that an animal worth half a thousand dollars, having every attention, will fail to produce a live calf, while a lot of scrub cattle without any attention whatever seldom if ever have any trouble.

In this there is a natural cause. To ascertain what this natural cause is we must go to the animal in its natural way, where it has the liberty of a pasture field when the time for parturition draws near. She will watch her chance to evade the other cattle and seek a secluded place as much removed from all living things as she can get. It is very rare that an animal so situated will fail to give birth to a living calf. If not disturbed for four or five hours in a few hours she will easily and naturally eliminate the placenta as well.

As the usefulness of a cow during the period of lactation depends to a great extent on how she comes through the critical period of calving it stands in need to insist on as near as possible absolute quietness. About the best thing one can do at this time is not to do at all, that is, don't get the cow excited. Not long since I was asked to go to a neighbor's barn to see a fine calf just born. The attendant and his dog, a hired man, another neighbor and his dog and myself were all welcome to see this calf only a few hours old. On expostulating with the attendant he said: "Why, the cow is used to seeing strangers and dogs, too, as our dog is around the cows all the time." While she might have been used to having strangers and dogs around her every day, she was not used to having a calf every day and things she would not notice at ordinary times might at this time excite her to a perfect frenzy, thereby causing the retention of the placenta and possibly the derangement of nearly every function of her entire system. Excitement is bad for dairy cows at any time, but it is much more apt to have a harmful effect during and a few days following parturition.

A cow ought to be removed to a box stall away from other animals about one week before she is to calve. Get her accustomed to the new surroundings. Then keep dogs and all other annoyance out of her sight and hearing. I know of several instances where the placenta had to be removed by hand, which, I am perfectly sure, was made necessary because the cows were frightened by dogs following the attendants into the stalls about the time the calves were born.

As to the attendant's desire to help a cow by pulling and tugging at the unborn calf the fact of the matter is with an easy delivery she certainly needs no help and with a hard delivery it is yet more necessary to give more time for the parts to relax. When a cow cannot deliver the calf by her own exertion the calf cannot be pulled away by force without tearing and injuring the cow. Unless it is found to be absolutely necessary I would never do it.

At the first showing the attendant should make an examination to ascertain if the presentation is right. If found to be proper quietly leave the stall and keep out of sight and hearing of the cow for at least three hours. Then if the calf has been born give the cow a pail of water warmed to about 70 degrees and feed her about three quarts of either wheat bran or bran and ground oats. Try all four teats to see if they are open and leave the cow and calf again entirely alone for at least six hours. At the end of this time feed and water her and milk all four teats nearly dry. Do not milk her entirely dry until about the fourth milking, or, if the udder be hot and swollen, it is best not to milk her entirely dry until this has subsided. Give all the warm water she will drink three times a day and feed bran or wheat bran. Increase the feed gradually as she increases in milk, reaching the maximum amount in perhaps two weeks.

In the case of an improper presentation the thing to do is to employ the services of an experienced person just as soon as possible. Likewise, if the afterbirth has not been eliminated naturally inside of eight hours an experienced person should take it by hand. Subscriber.

WITH OUR ADVERTISERS.

The Taber Lined Silo.

IF YOU want a good wood stave silo, you should investigate the Taber Lined Silo advertised on page 23. Only choice lumber is used in its construction, the entire silo is creosoted, and a specially prepared paint is used on the outside. The inside is coated with an acid-proof lining which keeps the silage from injuring the wood. Taber Lined Silos are manufactured by the Taber Lumber Co., Keokuk, Iowa, who will be glad to send you their catalog if you write for it to their Dept D and mention The Wisconsin Farmer.—Adv.

Seed Corn at Attractive Prices.

J. B. ARMSTRONG & SON, Shenandoah, Iowa, are advertising seed corn on page 10 at some very attractive prices. If you do not have good seed corn on hand you should read this advertisement, because you may want some of this seed. The prices run from $2.75 to $5, depending on the variety and whether the seed is shelled or in the ear. Early Yellow Rose is an especially good northern variety because it is both early maturing and big. All the varieties have between 94 and 98 per cent germination. Get your seed corn now while there is a large supply to pick from. A catalog and free samples will be sent to anyone who will write the company named above and mention this paper.—Adv.

A Time-Saving Milking Machine.

"GAIN two hours a day," says one farmer regarding his Empire mechanical milker. Many others agree that the Empire cuts down the time spent in milking, so that they can keep more cows with greater profit or have more time for other work on the farm. The Empire milker is one of the easiest to install and operate, and it requires only one tank and pipe line. The advertisement on page 22 gives a small picture of the machine. If you are keeping cows for profit, you should send for details regarding this milking machine, also regarding Empire separators, gasoline engines and Star feed mills. Ask for catalog No. 56M of the Empire Cream Separator Company, Bloomfield, N. J., and please refer to The Wisconsin Farmer in your letter.—Adv.

A Satisfactory Barn Door Hanger.

WHEN the barn door track gets clogged with birds' nests or snow and ice, and the trolleys refuse to slide, it is certainly an endless source of annoyance. If you have had this trouble, you will be interested in the Louden bird-proof barn door hanger advertised on page 24. Not only birds, but snow, rain, ice and trash are kept from the Louden enclosed track, so that the trolleys run smoothly and easily at all times. They can't rust, clog or jump the track and very little effort is needed to open or close the heaviest door. Booklet No. 5 of the Louden Machinery Company, 1704 Court St., Fairfield, Ia., tells the whole story. Write for it today and kindly refer to this paper.—Adv.

Planting Potatoes by Machinery.

PLANTING potatoes by hand is a very slow and wearisome job and a machine that will save the time and labor required in this work is worthy of our attention. On page 18, is advertised the Aspinwall potato planter, which will plant five to eight acres a day and do the job as well as the hand method. One man can run it alone. The machine opens the furrow, drops seed of any size at any distance desired, covers, and marks the next row. Fertilizer may be sown in the same operation if desired. If you expect to put in a good many potatoes this year, you should have one of these planters. Write to the Aspinwall Manufacturing Co., 457 Sabine St., Jackson, Mich., for their free booklet on potato planters and learn of their proposition. Please mention The Wisconsin Farmer when you write.—Adv.

Profits in Chickens.

THE chickens that roam over the farm, picking a living from scattered grain and waste material which every farm affords, are one of the best sources of farm profits. They will get along without much labor, expense or feeding of high-priced feeds. However, if you decide to raise more chickens this year, you should have a good incubator. It takes too much time to bother with fussy hens that should be laying eggs, and besides they are not always broody at the right time. With an incubator the hatches can be arranged so that the chickens will be ready for sale when prices are highest. But be careful in selecting your incubator. The test of an incubator is in the percentage of vigorous chicks that it hatches. By this test the Ironclad incubator has proven its worth with a hatch of 148 chicks from 148 eggs in a recent hatching contest. These incubators are advertised on page 25 of this paper. By getting an Ironclad incubator now, you can raise a good lot of early summer frys or fall layers. They are sold by the Ironclad Incubator Co., Box 113, Racine, Wis., who will be glad to hear from you. If you write them kindly mention The Wisconsin Farmer.—Adv.

Ponies Given Away

I AM the Pony King of America. I have given away 364 Ponies to Children. Now, I am going to give away more Ponies—some of the finest Shetland Ponies I could pick. I want every family that reads this paper to stand an equal chance. If you are a Boy or Girl, send in your name. If you are the Father or Mother of a Boy or Girl, send in your child's name. I will enter the name in my Big Free-for-all Pony Club, and send you a copy of my Pony Picture and Story Book. Every child in the country should have one of these books.

Children—Write your name and address below, cut it out and mail it to me. You will surely get the Pony Book and maybe get a real Pony besides.

Parents—Don't miss this chance to get this Free Pony Book. Children love to read it. Besides, your child may get one of the Ponies.

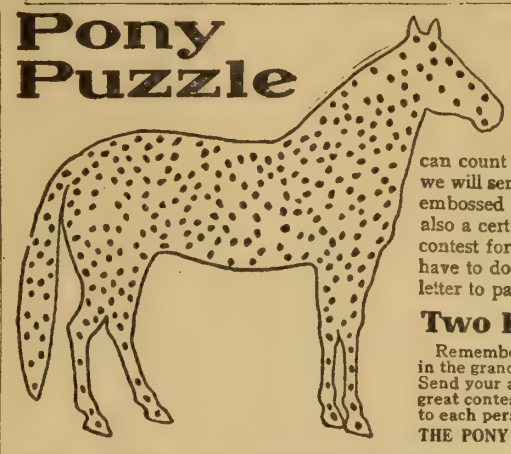
Pony Puzzle



Count the Dots and Win a Prize

Here is a Shetland pony covered with dots. By being careful any boy or girl can count the dots on this pony. If you can do this we will send you as a prize, a packet of five beautiful embossed postcards lithographed in rich colors, and also a certificate for 1500 Free Votes in our grand contest for two beautiful Shetland ponies. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

Two Beautiful Ponies Given

Remember the Ponies will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in this great contest. In case of a tie for a pony one will be sent to each person so tied. Full particulars by return mail.

THE PONY MAN Dept. 201 Des Moines, Iowa

Uses a Harley-Davidson.

THE farmer who owns a Harley-Davidson motorcycle can find more uses for it than he ever dreamed of before. A quick trip to town for machinery repairs, a visit to the neighbors to look at a calf or colt for sale, a ride to a public live stock sale and return by chore time, or a refreshing spin between supper and bedtime, these are some of the uses of a Harley-Davidson, the three-speed, master motorcycle. For many farmers the question isn't, Can I afford a Harley-Davidson? but, Can I afford to be without one? A catalog may be obtained by writing the Harley-Davidson Motor Co., 1179 A St., Milwaukee, Wis., and mentioning The Wisconsin Farmer. See page 13.—Adv.

Read This Free Offer to Tire Users.

THE Firestone Tire and Rubber Co., Akron, Ohio, will send a fine waterproof tube bag free to tire users who will send them their dealer's name and address and the make of tires they use. When you send, ask also for the free book, "Care and Repair of Tires" No. 17. The Firestone Tire and Rubber Co. are makers of Firestone Tires, which have the color combination of a red side wall and black tread, that stands for sturdiness and wearing quality; also, of Firestone Red Tubes, which have always given motorists full measure of mileage and security. Don't fail to take advantage of this unusual offer, and please mention The Wisconsin Farmer when you write. See page 7.—Adv.

Farm Help Wanted in Western Canada.

A FIELD of great opportunity for farm workers lies in the Province of Manitoba, Canada. It is estimated that from 3,000 to 3,500 men are needed at wages running from $25 to $45 per month, in order to supply the keen demand for foodstuffs caused by the European war. Farmers are wanted, and no military duties whatever will be forced upon persons going there. Railroad companies are offering reduced rates to passengers from all points on the International boundary line and northward who are going West in Canada. This offers an opportunity to see western Canada at a small cost, and will permit first hand inspection of the cheap lands which are still available in this region. Read the advertisement on page 14 and if interested, write to the Manitoba Immigration Office, 323 Jackson St., St. Paul, Minn. —Adv.

Water-Proof Concrete on the Farm.

THE Sandusky Portland Cement Company are advertising on page 13 Medusa water proofing, which is used to make concrete water tight. This material is put in a mixture at the rate of eight pounds of water proofing to every barrel of Portland cement. Waterproof concrete is especially desirable on the farm—in concrete silos, the walls should not allow the silage juices to penetrate; on concrete feeding floors, dampness is very undesirable and soaking in of manure or lodging of disease germs should be avoided; and in concrete barns and houses damp walls are a cause of much annoyance. Therefore, Medusa water proofing will likely have a wide use. When desired, it may be obtained already mixed in proper proportions with cement. Further information is contained in the booklet, "How to Make Concrete Water Tight," which may be had by writing the Sandusky Portland Cement Company, Room G-4, Engineers Building, Cleveland, Ohio, and mentioning The Wisconsin Farmer.—Adv.

Shekleton's Stallions.

F. P. SHEKLETON & SONS, Lawler, Iowa, write as follows: "Stallion business with us the past week has been fine and we are having a great many inquiries, and we expect the demand to run far into the spring months. Our stallions are all doing fine, on our different farms, and we are still able to supply the prospective buyer with a first-class stallion of the different draft breeds. During the last week we sold to Mr. George Wagner, of Monona, Iowa, the sorrel chestnut Percheron stallion, Pink Borodino. This stallion is one of the best of the breed, being sired by the champion Percheron stallion, Pink, and out of a champion mare. Pink Borodino at the time of sale weighed 2,340 pounds and was seven years old. Mr. Wagner paid $2,500 cash for him and felt that he secured a bargain. Clayton county is noted for its draft horses and Mr. Wagner means to keep up its reputation by buying this stallion. Mr. Wagner has given to Clayton county and the adjoining counties a rare opportunity to breed to one of the best sires of the breed, as this horse stood in Illinois at the head of a herd of eighty full-blooded mares and has already made his mark as a breeder. Farmers of Clayton county should appreciate Mr. Wagner's efforts in making their county noted for its heavy horses and should patronize this stallion freely. Joe Nystle, Jerico, Iowa, takes the good thick-set three-year-old bay Belgian stallion, Sir Oost. Mr. Nystle was looking for a stallion to put on the stand and selected this horse on account of his thick conformation and he should make good as a breeder. To John Hansen, Ostrander, Minn., goes the Percheron Lawler stallion. This is a very toppy, stylish horse weighing a trifle over a ton and is a typical Percheron. He is a tried sire and will make good on the stand. George Beenkin, of Germania, Iowa, visited our barns after an exhaustive search for a stallion. He is a discriminating buyer and would buy nothing but the best. He finally selected the two-year-old black Percheron stallion, Oise. This colt has the heavy, flat bone and wide, deep build of a 2,400-pound stallion, weighing at the time of sale a trifle over a ton. Mr. Beenkin will be proud of his purchase and this colt properly fed will make a great drafter. Buyers of stallions will do well to write to us for particulars or visit our barns and see for themselves before buying." See page 39.—Adv.

Live Stock Items and Commercial Notes

Gathered by Representatives of The Wisconsin Farmer

A Great Wisconsin Jersey Herd.

A HERD of Jerseys that is recognized as one of the very best in the state of Wisconsin, is owned by Fred Stubley, Black Earth. Mr. Stubley is a breeder in the strict sense of the word. Of the 100 head of females that goes to make up this great herd, all have been bred by him with the exception of perhaps twenty head that he imported. His cattle have size and capacity and more desirable than the little island type. A bull that has done a great deal of good in this herd is Golden Maid's Viscount. He is sired by the noted imported bull, Golden Maid's Prince, and traces through his dam to a bull that is known to all admirers of Jersey cattle—Golden Lad. Several young bulls, around a year old are being offered for sale, sired by this bull. Another bull doing service in this herd is Noble of Avaranch, a son of the world's famous sire, Noble of Oakland. This bull is siring some of the best things on the farm and a young bull by him would add prestige to most any herd. The dams of the young bulls now being offered are high testing cows, many of them having high advanced registry records. One of the good young bulls is out of a daughter of Blue Belle's Eminent, that is a half brother to Noble of Oakland. She has a record of 453 pounds butter as a three year old. A dam of another one is an imported cow that weighs over 1,100 pounds and made 474 pounds butter in eleven months. As above mentioned, this good herd contains 102 head, about twenty imported cows and more than twenty are in the register of merit. In buying from this herd you get individuals backed up by eighteen years of conscientious breeding on the part of Mr. Stubley. We are glad to recommend this herd to all Jersey admirers, for they will find in this herd animals suitable to all surroundings. Black Earth is located on the C., M. & St. P. railroad, twenty miles west of Madison. Shipping facilities are good in any direction.—Adv.

A Heating System for the Farm Home.

THE disagreeable side of farm life is gradually falling away. By sound judgment and wise spending, the farmer of today can afford his family most of the conveniences of the town home—and it pays in most cases. One of the worst hardships on the farm is to get up before dawn on a cold winter morning and build a fire in a smoke and ash spouting stove to take the icy chill from the house. A good heating system will remove this hardship and increase the efficiency and comfort of everyone in the house. Then it pays financially, too, if you get the right system. American radiators and Ideal boilers are said to pay for themselves in the yearly fuel savings, aside from a big labor-saving. In order to be informed on this important subject, you should write to the American Radiator Company for their free booklet, "Ideal Heating," as suggested in their advertisement on page 9. You will not be obligated in any way and will receive some valuable information. Address American Radiator Company, Dept. F-39, Chicago, Ill. Mention of The Wisconsin Farmer is always appreciated.—Adv.

An Advantage of the Overland Six.

MOTOR car experts say that a six-cylinder motor is superior to a four chiefly in that it gives greater range of speed on direct drive—requiring less gear shifting. But you must choose the right six, as not all have this advantage. The Overland six does. It will creep along in the overcrowded city streets or take long, steep hills on "high" with seldom a need to shift the gear. That is one reason why it satisfies the most discriminating buyers. The Overland six is priced at $1,145—some say underpriced because it ranks with motor cars of much higher prices. If you are interested in cars write for The Willys-Overland Company's catalog which describes both their sixes and fours. See advertisement on pages 20 and 21, and address the Willys-Overland Company, Dept. 471, Toledo, Ohio, and mention this paper.—Adv.

Caloric Pipeless Furnaces.

IF you wish to install a furnace in your home without putting in a lot of pipes and flues, you should get a Caloric pipeless furnace. To install, a hole is cut in the floor just above the furnace and the warm air circulates through the house. These furnaces are made with a special ribbed firepot of great radiating surface and allowing free circulation of air and complete utilization of coal. The picture in the advertisement on page 15 will give you an idea of the heating plan of Caloric furnaces. Full information may be obtained from any Caloric dealer or by writing direct to the Monitor Stove & Range Co., 255 Gest St., Cincinnati, Ohio. Please say you saw the advertisement in this paper.—Adv.

Kirkpatrick Brothers' Holsteins.

KIRKPATRICK BROTHERS, Reedsburg, Wis., are offering registered Holstein cattle at very reasonable prices on page 38. They have a fine herd of about forty animals and have been using excellent sires, one a grandson of King of the Pontiacs, that has 175 A. R. O. daughters, eleven of which have records ranging from thirty to forty-four pounds of butter in seven days. For pictures, pedigrees and further information in regard to these animals write to the above address.—Adv.

Red Polled Heifers and Bulls for Sale.

THE Red Polled cow is gaining in popularity as time goes on and well she should, for they are a very desirable breed of hornless cattle. Of the dual-purpose cattle, a Red Polled cow has the world's record which far exceeds many records that are made by dairy cattle. The Bennetts, of Black Earth, Wis., are pioneer breeders of the state. They have stayed by this breed for over twenty years. The senior member of the firm has retired and his son, E. L., has purchased the entire herd, and will continue to keep up the reputation established by his father. At this time he is offering yearling and two-year-old heifers for sale, some bred and others open. They are in excellent condition smooth, excellent lines and are from good ancestors. Many of the cows in this herd are granddaughters of the great sire Corporal, probably the greatest bull the breed ever produced. Others trace to the great show and breeding bull, Falsetto 1807. The Bennetts have never followed the show circuits but they have bred cows that have been winners for other breeders. Their cattle are of a uniform type, uniform in color—the deep red—and the fact that they have been in business twenty years goes to show that they have produced good stuff. The bull heading the herd is Buster 26260 by Jackson, a grandson of Falsetto. You will like the class of stock this bull is siring. The young bulls by him are outstanding. Get into communication with Mr. Bennett, he will sell you some heifers and a young bull that will make a grand foundation for a Red Poll herd. Write and mention this paper. See page 38.—Adv.

Frank Iams New Catalog.

WE are in receipt of Frank Iams' catalog for 1916 and it is replete with interesting things to all lovers of Percheron and Belgian horses. The Iams catalog always was one of the best that has been issued by the importers and breeders here in the West, and this year it is again in the front of the procession. It is beautifully illustrated from cover to cover with pictures of many of the stallions and mares that he is now offering for sale. It tells you all about how Frank Iams can and will sell you a stallion or a pair of mares for as little money as any man in the business. The main reason why Frank Iams has been able to do this is that he sells for cash or a good bankable note that your home banker will take without discount, and, therefore, his customers get the benefit of this cash method. If you are thinking of buying a Percheron or a Belgian stallion or mare you will be interested in seeing this catalog. Write Frank Iams, St. Paul, Neb., and kindly mention this paper. See page 39.—Adv.

Wenham's Short-horns.

BATES milking Short-horns are bred by George Wenham & Son, Fort Atkinson, Wis., and their herd is one of the best in the middle West. They have been very careful in the selection of herd sires and have developed a herd of cattle that are both good milk producers and test a high percentage of butter fat. At the present time they are offering some extra good daughters of Clay Buttercup, a son of Imp. Duke Buttercup, eight of whose daughters gave from 9,000 to 11,000 pounds of milk in a year. They are also offering some choice yearling bulls ready for immediate service, sired by Oxford Duke I, a son of Wild Eyes Duke. These two lines of breeding will be recognized as among the best in the breed. For pedigrees and further information in regard to these animals write to the above address. See page 38.—Adv.

The Mueller Pipeless Furnace.

THE Mueller pipeless furnace may be installed in your house without the trouble and expense of building pipes and flues into your walls, and it will keep the house warm even in the coldest weather. It can be used in houses that have no cellar by digging a pit for it. One register placed just above the furnace will heat the whole house. The Mueller Pipeless is a practical, fuel-saving furnace made by a company that has been making heating systems of all kinds since 1857. If you will write to the L. J. Mueller Furnace Co., 204 Reed St., Milwaukee, Wis., they will give you honest advice on your heating requirements. Their advertisement appears on page 33.—Adv.

Puls' Holsteins.

MANY fine seven-day and yearly records have been made by the Holstein cows in the herd of John Puls, Hartford, Wis. As he states it, "The yearly record is the only record that shows the true value of a cow," and for this reason he contemplates putting yearly records on every animal in his herd. He has a herd of close to 100 animals that are choicely bred and of good dairy type. Most of the herd of milking age are daughters of Aaggie Cornucopia Pauline 13th, a grandson of Aaggie Cornucopia Pauline, the world's champion four year old. This cow in seven days gave 659 pounds of milk and made 34.32 pounds of butter. The first two-year-old daughter of this bull to finish her yearly record gave 16,155 pounds of milk and made 710 pounds of butter. He now has five cows that have finished yearly records and eighteen more will finish soon. Among the other cows in the herd are Springdale DeKol 2d Vale, that made 28.23 pounds of butter in seven days and is now making a creditable yearly record. Springdale Roena Vale has just completed a yearling record with 16,000 pounds of milk with an average of 4.2 for the entire year. She made 24.50 pounds of butter in seven days. Mr. Puls is now advertising a two-year-old son of this cow for sale on page 38. He is sired by Johanna Sarcastic Lad, a grand individual weighing 2,510 pounds. He is a son of Sarcastic Lad, champion bull at the St. Louis Fair. The dam of Johanna Colantha Sarcastic Lad is Johanna Colantha, that made 26.50 pounds of butter in seven days and 796.7 pounds of butter in a year. This bull has a large number of A. R. O. daughters with large seven day and yearly records. For extended pedigree and further information in regard to the animals offered for sale write to the above address.—Adv.

Special Cream Separator Offer.

FARMERS and dairymen who are looking for a high-grade cream separator at a reasonable price should investigate the Melotte advertised on page 40. This separator is of Belgian make and has been a prize winner all over Europe and, since the high tariff of cream separators has been removed, is being introduced into America on very liberal terms. A thirty days' free trial is offered every prospective purchaser, and if the separator proves satisfactory it can be paid for in small monthly payments if the purchaser so desires. Before buying a cream separator send for the Melotte catalog and free book, "Profitable Dairying." Address The Melotte Separator Co., Dept. 4483, 19th St. and California Ave., Chicago, Ill., and mention this paper.—Adv.

FRANK RILMA 21901, Guernsey bull owned by Allie Knudson, Brodhead, Wisconsin.

Time Saving Grain Drills.

FARMERS know that time is worth money, especially in the spring during seeding time, and time saved is money made. That's why the Buckeye grain drill advertised on page 18 is a good investment—it saves time usually wasted in repairing. The disk bearings are easy to get at with no rivets to cut, and they wear so long that the company's guarantee to replace them is seldom needed. This drill has many other distinctive features that may be learned from the Buckeye drill catalog which will be sent on request. Address the American Seeding Company, Springfield, Ohio, and mention The Wisconsin farmer in your letter.—Adv.

Holt's Jerseys.

WHEN on a tour of the state a few weeks ago the writer had the pleasure of visiting the farm of Henry Holt & Son, Oconomowoc, Wis. They are breeding registered Jersey cattle and have an excellent herd of about forty head. It is evident that they have used great care in selecting their breeding stock for the animals are all of good type and the cows in milk show exceptionally good udder development. Several of them have recently freshened and they would make pictures worthy to be shown in any album of Jersey pictures. The bull at the head of the herd is Sage's Victor, a strongly bred St. Lambert bull of good type and from a heavy producing dam. His dam made twenty pounds of butter in seven days. The junior herd sire is Inez Rosaires Oxford, a son of G. F. Oxford's Pride and out of the cow, Inez Rosaires, that made 720 pounds of butter in a year. Register of merit work has been done in this herd and many creditable records made. Queen of Ellendale made 400 pounds of butter in a year and had an average test of 5.89 per cent fat. She is a daughter of Badger St. Helier by Marigold St. Helier, a St. Louis World champion. Broadway Belle, a full sister to the above cow, gave thirty-eight pounds of milk in a day. At the present time they are offering yearling bulls for sale out of these two cows and sired by Sage's Victor. For pedigrees and further information write to the above address. See page 38.—Adv.

Basse Brothers' Guernseys.

BASSE BROTHERS, West Allis, Wis., have a fine herd of Guernsey cattle, headed by Maple King, a big, typey, well-bred individual. His dam, Queen of Fairview, was owned by Fruit Bros., Waukesha, who state that she was a fine individual. She was sold when on test to parties in Minnesota, so never completed an A. R. record, but Fruit Brothers state that she could easily have made 500 pounds of fat. The sire of Maple King has two A. R. daughters that average 586 pounds of fat at two and a half years of age and there are several now on test which are making exceptionally good records. The sire of Maple King won first at the 1910 National Dairy Show, when fourteen months of age. Basse Brothers are now offering Maple King for sale and two of his yearling sons, as well as registered and high-grade females. For pedigrees and further information in regard to these animals write to the above address. See page 38.—Adv.

Duroc Spring Gilts.

BURN BRAE FARM, Rosendale, Wis., is offering Duroc spring gilts for sale on page 39. These were sired by Burn Brae Distinction and are bred for March and April farrow to Burn Brae Golden Model. Mr. Peterson is one of Wisconsin's progressive Duroc breeders and has nominated his herd for the Wisconsin Futurity to be held at the state fair next fall. Litters from any sow of this herd will be eligible for competition in this futurity by conforming to the requirements. This is a valuable factor to consider in the purchase of breeding stock, as this futurity promises to be a most important event in Wisconsin Duroc circles. The gilts offered for sale are of good type, well grown and are carrying litters by this excellent Golden Model boar and their litters with proper care should be excellent futurity prospects.—Adv.

Miller's Holsteins.

HOMESTEAD JUNIOR DE KOL 2D is the sire of the yearling bulls offered for sale on page 38 by William Miller, Jr., Menomonie, Wis. This bull is one of the most choicely bred animals raised or owned in Wisconsin. He is a son of Homestead Junior De Kol, that has sixty-nine A. R. O. daughters, five with records above thirty pounds of butter in seven days. His dam is a daughter of De Kol Burke, that has seventy A. R. O. daughters, seven with records above thirty pounds. This combination of breeding has produced many of the highest producing cows ever owned in the state. Mr. Miller is advertising yearling bulls for sale sired by Homestead Junior De Kol 2d and out of A. R. O. cows with creditable records. For pedigrees and further description of these animals write to the above address.—Adv.

Birchwood Guernseys.

THE Birchwood herd of Guernseys is one well worth while to visit. It consists of close to seventy registered animals of various ages. They are well bred and of high production ability. Advanced registry testing has been done for several years and a large number of very creditable records have been made. They are now offering registered Guernsey heifers and yearling bulls ready for service, sired by Dairymaid's King 12898. He is a full brother to the great cow, Dairymaid of Pinehurst, that made 910 pounds of fat in a year. The heifers and young bulls offered for sale are out of A. R. cows of choice breeding, which have made creditable records. Mr. Welles issues a sale list,

Field Men for The Wisconsin Farmer.

Fred Multhauf & Son Rubicon, Wis.

which he will gladly send on request. For list and further information write to Mr. M. L. Welles, Rosendale, Wis. See advertisement on page 38.—Adv.

Little's Durocs.

THE writer recently visited the farm of B. W. Little, Janesville, Wis., and while there looked over his excellent herds of Duroc swine and Bates Shorthorn cattle. Mr. Little is one of the pioneer breeders of Rock county and has been instrumental in making Rock county one of the leading Duroc and Short-horn centers of the state. He recently owned a son of the noted boar, Defender, the only boar of the breed to twice win grand champion honors at the International. This boar was named Defiance, and he was in every way a worthy son of his noted sire. He is considered by many one of the best boars ever owned in Wisconsin and his offspring of which Mr. Little has a large number, are of the same type and quality. Another boar used in this herd was Ohio King, an excellent individual of choice breeding, whose offspring would make him noted had he been a poor individual himself, for they are the large, heavy bone, smooth type that are profitable for both the breeder and feeder. The boar in service at the present time is Critic Top Notcher, half brother to the grand champion at the 1912 Nebraska State Fair. He is, I think, the best boar for his age I have ever seen in Mr. Little's herd, and he promises to surpass these other noted boars as an individual. Mr. Little is offering spring gilts bred to Critic Top Notcher for March and April farrow. See page 39.—Adv.

Cook Brothers' Holsteins.

ONE of the many good Holstein bulls in Wisconsin is that at the head of the herd of Cook Bros., Burlington, Wis. He is both a good individual and well bred. His sire is a half brother to the $50,000 bull, King Segis Pontiac Alcartra. His dam's sire is a brother of King of the Pontiacs, which now has 175 A. R. O. daughters, eleven with records from thirty to forty-four pounds of butter in seven days. He has ninety-one with records of from twenty to twenty-nine pounds, making 102 with records over twenty pounds. Butter Boy Mink Pontiac is the bull owned by Cook Brothers. He is a grandson of King Segis Pontiac and Pontiac Almeda Korndyke that was by Pontiac Korndyke, that has 116 A. R. O. daughters, five with records from 33.76 to 38.03. He is a great grandson of King Segis De Kol 2d Butter Boy 3d and Pontiac Korndyke, a combination of great producing blood. Cook Brothers are advertising sons of the above bull that are out of A. R. O. dams. They have bulls ready for service and younger. For pictures and extended pedigrees write to the above address. See page 38.—Adv.

Serviceable Short-horn Bulls.

THERE appears on page 38 of this issue of The Wisconsin Farmer the advertisement of R. Connor Company, Marshfield, Wis., in which they are offering several choice young registered Short-horn bulls for sale. These animals are of serviceable age and are located on a farm at Auburndale. They are sired by Imp. Brilliant Bandsman and are a choice lot of animals, which they wish to dispose of this spring. They also have for sale one registered Holstein bull coming three years old. —Adv.

Build With Natco Hollow Tile.

IT is a noteworthy fact that a large number of the state agricultural experiment stations which are making careful experiments on the handling and storing of silage have adopted the Natco imperishable silo made of vitrified tile. Also, that farmers are using them and throughout the middle West and in live stock dairying regions of the East these handsome glazed tile silos mark the farms of prosperous, far-seeing farmers. Handsome as they are, their great value lies in their absolute resistance to wind, fire, frost and decay, and complete preservation of the ensilage so that it keeps sweet, juicy and nutritious in all parts of the silo. Natco hollow tile is also used for houses, barns and outbuildings. Read the advertisement on page 23 and if you expect to do any building, send to the National Fire Proofing Company, 1123 Fulton Building, Pittsburgh, Pa., for their silo catalog and information on the use of the Natco hollow tile for farm buildings. Kindly mention The Wisconsin Farmer when you write.—Adv.

A New Milwaukee Separator Catalog.

DAIRYMEN and farmers should get the beautiful new catalog of the Milwaukee Separator Co., and learn of the distinctive features of the Sanitary Milwaukee cream separators. Some of the features brought out are: Non-rust aluminum disks, which can be drawn and tapered to the exact shape required for greatest skimming efficiency; widened skimming space, giving quicker and cleaner skimming; and fewer disks than most separators, yet with greater skimming power. You can get this catalog by writing to the Milwaukee Separator Co., 245 Madison St., Milwaukee, Wis., and mentioning this paper. Their advertisement is on page 23.—Adv.

Truttschel Brothers' Holsteins.

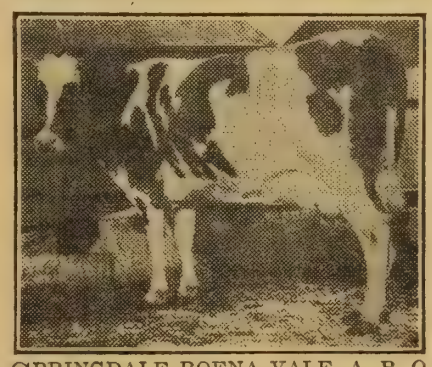
A 26.30-pound Holstein bull is advertised for sale on page 38 by Truttschel Brothers, Sheboygan Falls, Wis. He is three years of age, a good individual, well marked and choicely bred. They are also offering a yearling bull, born May 27, 1915, out of a cow, that made 24.48 pounds of butter in seven days are good, straight individuals and are being priced very reasonably. For pedigrees and further description write to the above address.—Adv.

A Valuable Free Book.

A VERY valuable book, "How to Judge Engines," has been published by the Witte Engine Works, which should be in the hands of every man expecting to buy a kerosene or gasoline engine. It discusses the construction and operation of different types of engines very thoroughly. The book is free to readers of this paper who will write for it to Ed H. Witte, Witte Engine Works, 2711 Oakland Ave., Kansas City, Mo., and mention the advertisement on page 24.—Adv.

The Oliver Power Lift Tractor Plow.

THE Oliver No. 78 power-lift tractor plow will plow as efficiently as the horse plow, yet with all the speed and comfort of the tractor and power-lift gang. The bottoms are raised or lowered at will by pulling a trip rope. A combined rolling coulter and jointer turns under all weeds so that the field is soon cleared of them. The plow is furnished with either two or three fourteen-inch bottoms. Ask your dealer to show you this plow or write to the Oliver Chilled Plow Works, South Bend, Ind, for information. Their advertisement appears on page 14 of this paper. —Adv.



SPRINGDALE ROENA VALE, A. R. O. record 24.87, dam of the bull advertised for sale on this page by John Puls, Hartford, Wis.

Eagle Ensilage Cutters.

IN order to give satisfaction, an ensilage cutter must be safe, simple, durable, clean cutting and light running, with blower that will not clog. large capacity and speed are also desirable. Any other kind of an ensilage cutter is a poor investment at any price. The Eagle Mfg. Co., claim to have an ensilage cutter that will meet these requirements. They are advertising on page 17 of this issue. If you expect to be in the market for one of these machines, you should send for their catalog. Address Eagle Mfg. Co., 693 Winnebago St., Appleton, Wis., and kindly mention The Wisconsin Farmer. —Adv.

Lorenz's Holsteins.

TEN registered Holstein heifers, one to four months of age, and two registered cows are advertised for sale on page 38 by Adam Lorenz, Sheboygan Falls, Wis. Mr. Lorenz is one of the leading breeders in Sheboygan county, which has long been noted as one of the greatest dairy counties and the home of many fine herds of Holsteins. The writer recently inspected this herd and saw the animals offered for sale. They are good individuals, well grown and are well bred. For pedigrees and further information write to the above address.—Adv.

TOO LATE TO CLASSIFY.

Burn Brae Farm
ROSENDALE, WIS.
CHAS. A. PETERSON, Prop.

Foot Comfort in Cushion Shoes.

THE full satisfaction from well-made, comfortable shoes is hard to estimate, and our readers will likely be interested in the advertisement on page 32 of the Mayer cushion shoes. A soft quilted felt shoe, inside cork filling, full kid lining, solid oak tanned outer sole and extra strong steel instep are some of the distinctive features of these shoes. They relieve sensitive feet and take up the shock in walking. If your dealer cannot supply you, write your wants to F. Mayer Boot & Shoe Co., Milwaukee, Wis., and mention this paper.—Adv.

A Silo of Steel and Wood.

PUFFER-HUBBARD MFG. CO., 3205 Twenty-sixth St. East, Minneapolis, Minn., are advertising on page 23 their Minneapolis Panel Silos, built of steel and wood. These silos are constructed so that they rest uniformly on their foundation and will not collapse when empty. They require no tightening of hoops and the seams and joints are made so that no rain or moisture can get in to start decay. A catalog and complete information on these steel and wood silos may be obtained by writing to the company named above and mentioning The Wisconsin Farmer.—Adv.

HOLSTEIN-FRIESIAN CATTLE.

BONNIE MEAD STOCK FARMS

Offer a few choice sons of King Pietertje Hengerveld Ormsby, a full brother to 35 pound cow, Pietertje Maid Ormsby, from A. R. O. and untested cows of Alacartra, Johanna and Ormsby breeding.

Hutchinson Bros. & Burbach **Randolph, Wisconsin**

Purebred Registered

HOLSTEIN CATTLE

Holsteins, the best dual purpose breed. The Michigan, Iowa and Nebraska State Experiment Stations report that in their competitive tests the Holsteins made a larger gain per steer at a less cost per pound of either roughage or grain than any of the other breeds. As voluminous and profitable milk producers and as valuable beef animals when their milking days are over, purebred Holsteins are firmly established as the world's leading dual purpose cows. Investigate the big "Black-and-Whites."

HORSES.

IMPORTERS AND BREEDERS OF

PERCHERON, BELGIAN AND CLYDESDALE STALLIONS AND MARES

WE now have in our barns more big-boned, rugged draft colts, from yearlings to 4 and 5 years, of the different breeds than ever before. We have two-year-olds that weigh over a ton—herd headers and show propositions.

Five farms over 1,000 acres devoted to the horse business. We do all our own buying and selling, grow all our own feed. Our economical way of handling stallions saves money for the purchaser. We guarantee all horses sold and can sell you a high-class stallion cheaper than any other firm in America.

We are located in North Central Iowa, 20 miles from the Minnesota line, on the C. M. & St. P. Ry., midway between Mason City and McGregor.

Send 20c in stamps for large Horse Hanger which shows our Main Farm and sales stables. Correspondence a pleasure. **We have a horse for every purse.**

FRANK P. SHEKLETON & SONS, LAWLER, CHICKASAW CO., IOWA

GREATEST
Cream Separator Offer

Imported Direct From Belgium

THE MELOTTE—the wonderful Melotte—the Great Belgian Cream Separator—the prize winner all over Europe—now to be shipped anywhere in the U. S.—and on the most sweeping introductory offer. The *best* of all separators in Europe or America—*yours* on this *Rock-Bottom* free trial offer. The Melotte, recently introduced, swept the country even with the duty on. Those who knew cream separator values were glad to pay it. Now you pay the same price you would pay in Belgium, plus only $1.75 for water freight.

Duty Free—$15.25 Off

The high tariff has been cut right off—the great Melotte comes in absolutely free of duty! *You win! The American farmer can now get the world's best—the grand prize-winner of all Europe—at a price $15.25 lower than ever before.*

For the first time in the history of cream separator selling in America the price of this famous imported Belgian Separator machine is cut. No duty now. The free tariff enables us to make a cut to you which gives you the one opportunity you have been waiting for to get the world's greatest machine at the price of an ordinary separator.

You cannot compare any other separator to the Melotte—the latest and most improved in design, construction and operation. The tariff and patent arrangements have kept it off the American market. Now it is here and sold on the most liberal free trial offer ever made.

Good News From Belgium

The wonderful Melotte Cream Separator factory, which is only four miles from Liege and which has not been injured in the war, is now again able to export to the United States. Every possible concession is made to American farmers. You get the rock-bottom price, the same price that the Melotte factory has charged direct on its own shipments in Europe, plus only the ocean freight of $1.75.

We do not know how many of these Belgian separators we can get. Two shipments have arrived. Write at once for booklet explaining our great offer.

30 Days' Free Trial Sent Without a Penny Down!

Your simple word that you would like to see this cream separator in your own barn or dairy house brings it to you instantly. We send you the Melotte without a bit of quibbling or hesitancy. We neither ask nor want you to send a penny. No C. O. D., lease or mortgage. You set up the Melotte and give it a thorough test with the milk from your own cows. We give you a free trial that *is* a free trial in every sense of the word.

Some people *pretend* to give you a free trial, but they ask you to give them your money first. We are not afraid to let our separator speak for itself. Test the Melotte Cream Separator in every way, watch your profits go up, watch the increase of the amount of cream, then if you do not believe that you ought to have a cream separator, just send it back at our expense. If, however, you decide to keep the genuine Melotte, we will allow you extremely easy

Make This Test

Before you decide to buy any Cream Separator arrange to test a MELOTTE alongside of the machine you now think is the best separator in America. We want you to do this.

You'll know which machine turns easiest—which machine is the best made. You'll know which skims the closest. You'll know which will make you the most money. Send for our special offer today.

Monthly Payments

These monthly payments are so small that you will hardly notice them. You only pay out of your increased profits. You don't need to be without a cream separator when you can have the separator right in your dairy house while you are paying for it. In reality you do not pay for it at all. It pays for itself.

That is what we want to demonstrate to you. We want to demonstrate and prove beyond all peradventure that the Melotte Cream Separator *does* pay for itself. After only a few months' use the separator will pay for itself. It does not cost you a penny because the increased amount of cream has paid for the machine. Let us send you our free catalog telling all about the Melotte and just how it is made.

Wonderful Record of the Belgian Melotte Separator

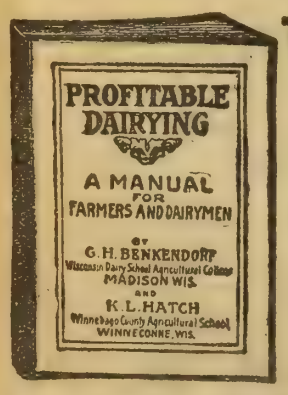
Half a million Melottes are in daily use all over the world. Recognized as the world's best separator. One Melotte has been running at Remincourt, Belgium, the equivalent of 54 years of actual work without appreciable wear. Think of it!

The reasons for its superiority are plain. The Melotte bowl hangs down from a single perfect bearing and spins like a top. It will continue spinning for half an hour after you stop turning crank unless you apply brake. Patented self-balancing bowl is entirely automatic. You can't get it out of balance and so perfect is the balance that it is impossible for it to vibrate and affect the skimming efficiency like other separators. The bowl chamber is made of special cast iron, porcelain lined with white bath tub enamel. The Melotte is easiest to clean, perfectly sanitary and will last a lifetime. **Absolutely guaranteed for 15 years.**

For 25 Years the World's Grand Prize-Winner

Here are a very few of the hundreds of world's grand prizes the Melotte has won. The entire list would cover this page.

1888—Brussels—International Exhibition—Progressive Prize.
1894—Medal of Higher Merit.
1895—Vienna—First Prize.
1897—Brussels—World's Exhibition—First Prize.
1898—London—First Prize.
1900—Paris—Gold Medal and First Prize.
1903—London—Gold Meda and First Prize.
1904—St. Louis—Gold Award.
1906—Milan—First Grand Prize.
1907—Amsterdam—First Prize.
1911—Brussels—Grand Prize and First Gold Medal.



Valuable Book Free! "Profitable Dairying"

Place your name and address on the coupon, cut it out and mail it at once. Then we will send you our great free book, "Profitable Dairying," telling you everything about cows and dairying, butter and cream—how to feed and care for cattle, how to make them more valuable than they are now, how to make more money than ever before out of your cows. This book is written by two of the best known dairy scientists in the country—Prof. B. H. Benkendorf, Wisconsin Dairy School Agricultural College, Madison, Wis., and K. L. Hatch, Winnebago County Agricultural School, Winneconne, Wis.

The Melotte Separator
19th Street and California Ave.
Dept. 4483 — Chicago, Ill., U. S. A.

Without any obligation on me send free and prepaid your booklet, "Profitable Dairying," and your special free-tariff prices on the Imported Melotte Cream Separator. Also full details of your free-trial, monthly-payment, no-money-down offer on this special war shipment.

Name .....

Address .....

.....

Send This Coupon—Now!

We will also send our Free Catalog, describing fully the Melotte Self-Balancing Bowl Cream Separator and telling all about our liberal terms. Find out about these wonderful, liberal terms anyway, even if you don't expect to buy a cream separator *just now*. Remember no money down, free trial and easy payments on the greatest European separator—and we let the separator tell its own story. You see with your own eyes why we can afford to guarantee this separator for 15 years. The most sensational offer ever made in connection with a cream separator. Our catalog tells all about it. **Mail the coupon right now!**

WHO'S AFRAID?

Profit and Pleasure in Game Farming

YOU do not need to be told that there is a great demand for game birds in this country—a demand much larger than the supply. You probably know that game birds of many kinds bring high prices in city markets. But has it ever occurred to you that, by means of game farming, *you* can help supply, and profit from, this demand?

You are well equipped to raise game birds for the market, for your table, and for sport. You have the necessary land. You and your family have the experience gained in raising stock and poultry. You may conduct a game farm on either a small or a large scale, as conditions and your own inclinations warrant. The expense involved in time and money is not great in either case, while with reasonable care, success is almost certain to follow.

Proved by Experience

The experience of others verifies this statement; for while game farming has not been carried on as extensively in this country as in Europe, we have many well conducted and profitable farms in all parts of the United States. The owners of these game farms not only receive good prices for eggs and for birds but some of them also rent the shooting privileges on their land to those who are very willing to pay for the sport

For your information on this important subject we have prepared a book called "Game Farming for Profit and Pleasure." It gives detailed information regarding the raising of game birds, their habits, foods, etc. You will find it well worth reading.

Write today for a free copy of this book. Use the coupon below.

This Lever Controls Entire Row

With West Bend Automatic Swinging Stanchions you can lock up or release 2 to 50 cows at one throw of a lever as easy as you can operate one stanchion with other equipment. This is only one of the many valuable, time-saving, labor-saving features of West Bend Equipment.

The West Bend line includes Steel and Wood Stanchions (automatically and individually operated), Feed and Litter Carriers, Watering Bowls and complete systems. *Write today for free catalog showing entire line.*
West Bend Barn Equipment Co. 231 *So. Water St., West Bend, Wis.*

Solve This Puzzle and Win a Prize

Here are seven sheep in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this, we will send you as a prize, *a surprise package of beautiful season and greeting post cards,* lithographed in rich colors, and also a certificate of entry in our grand contest for an Overland Automobile. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

Overland Auto Given Away

Remember the Overland will absolutely be given away at the close of the grand contest. In case of a tie an Overland will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars by return mail.

THE AUTO MAN, Dept. 46 Des Moines, Ia.

CURRENT EVENTS

AFTER a week of preparation, United States troops, under command of General Pershing, with General Funston over all, crossed the border line into Mexico and began the hunt for Villa, the bandit, last week. At last reports the American command was penetrating further into the Mexican mountain regions, having encountered no serious obstacles, although there were repeated rumors that the Carranza forces might join hands with the Villa forces and make the expedition one of intervention rather than one of the administration of justice. About 20,000 regular soldiers have massed at the Mexican border, but their movements are being shrouded in secrecy, as the commanders wish to take Villa by surprise if possible. It was expected that three columns would march down into Mexico, converging slowly, so as to seize Villa somewhere between the three lines. Whether this is being done or not has not yet been made public. President Wilson and Secretary Lansing sent ample assurances to Mexico that there was no intention whatever of intervening in Mexican affairs and that the expedition was solely to capture Villa, dead or alive. At the same time, no man can forecast Mexican affairs a day in advance and the most serious trouble the two countries have ever known may result before the expedition returns.

THE status of Verdun, the French stronghold, remained unchanged the first of the week. Another strong German attack was delivered against the outposts the latter part of last week, but the assaulting forces were driven back, with heavy loss, according to French official advices. So far the Germans, whether from sheer exhaustion or for other reasons, have not attempted to follow up their successes west of the Meuse, even their bombardment slackening. Meanwhile the French reserves, which, in the opinion of some critics, are kept much too far in the rear out of the reach of the curtain of fire, came up and won back most of the lost ground, according to reports from the scene of the fighting. Terrific fighting is undoubtedly in progress, but no appreciable advantage has been won by either side as yet.

BOTH houses of congress took cognizance of the serious international situation last week by passing a bill authorizing the recruiting of the regular army to full strength, which means the addition of about 20,000 men, bringing the total fighting strength up to 120,000 men. Unofficial reports said prospective recruits were flocking to the colors all over the land. Department officials were elated. Of late army recruiting has lagged, the wave of prosperity, officials say, making it difficult to obtain men for the regulars. The war department is swamped with telegrams and personal callers offering volunteer services should the country need them. Several members of the national guard who called on Secretary Baker assured him the men of their states were ready and eager for a call. Individuals also wished to enroll. The Mexican trouble has resulted in a widespread wave of patriotism, such as was evident when war with Spain was declared and when President Wilson sent the bluejackets to Vera Cruz a couple of years ago.

THE Norwegian ship, Silius, en route from New York to Havre, France, with seven Americans aboard, was torpedoed without warning, being the first ship carrying Americans to suffer this fate since the new Austro-German submarine warfare on armed merchantmen went into effect the first of March. All the Americans were saved, but three of the crew were drowned. Secretary Lansing is securing the facts, in order to file a strenuous protest with the Teutonic powers, inasmuch as the safety of American lives was affected. That the Silius was unarmed was generally taken for granted, since it was a neutral ship of commerce. This fact, in itself, officials said, may make the case more serious than any that has confronted this government since the war began. No government ever has even hinted that noncombatants, either neutral or belligerents, have not the right to travel on the high seas aboard neutral vessels. Even if the submarine commander afforded the crew the measures of safety which Teutonic powers have assured the United States would be given in case of warranted attack on belligerent passenger ship, the United States, it can be authoritatively stated, will not be satisfied. If the attitude of the president and Secretary Lansing, as frequently expressed in formal notes to the Teutonic nations, has not changed, and officials grimly declared it has not changed "one iota," the United States must insist on disavowal, reparation and condign punishment for the offending submarine commander.

ONE OF THE best-known aviators of the country, W. C. Robinson, of Grinnell, was killed last week while attempting to establish a new altitude record. He had ascended in his flying machine between 13,000 and 16,000 feet when the rarified air weakened his heart, so that he lost control of his machine, falling in long spirals to the ground, where his gasoline tank exploded, burning Robinson to a crisp. Robinson was one of the most careful American fliers. He held the long distance record for an unbroken flight, traveling from Des Moines, Iowa, to Hammond, Indiana, a year ago. He had set out for Chicago, but lost his way in a storm and landed near Hammond, establishing a world record which has not yet been broken. Robinson's death simply emphasizes the dangers which still attend aerial navigation, whether the aviator be careful or foolhardy.

THAT congress is not giving the attention to the gasoline situation it should, and particularly to that phase of it which relates to the continued existence of Standard Oil control of the oil and gasoline business, was emphasized before the house committee on rules in a hearing on the resolution of Representative Dowell, of Des Moines, for a congressional investigation of the high prices of gasoline. Robert L. Welch, formerly of Iowa, now of Chicago, counsel for independent oil jobbers, appeared along with Mr. Dowell and urged the resolution. While the committee did not act, Mr. Dowell said he was hopeful of favorable action.

ORDERS aggregating 4,000,000 tons, valued at $240,000,000, have been placed in the steel market since January 1st, and the crest of the boom has not yet been reached, according to statements made by leaders in the industry. The orders placed in the last two months indicate profits to the mills of $80,000,000, half of which is expected to flow into the coffers of the United States Steel Corporation. Even this tremendous tide of prosperity, it is declared, will be surpassed before the close of the year. It is pointed out that prices have advanced $5 and $10 since New Year's day, and further advances are looked for in the near future, which will eclipse the record of 1899 and 1900.

FOUR of the largest munitions plants in the East are working on rush orders for steel shells and rifles for the United States government, according to statements made at Philadelphia by officials of these companies, who added that they are in a position to supply the further needs of this country without interfering with their foreign orders. The Remington Arms Company, it was stated, is making 2,000,000 rifles for the army, the Eddystone Ammunition Corporation 2,500,000 shells and the Baldwin Locomotive Company 1,000,000 steel forgings, while the Midvale Steel and Ordnance Company is also working on large orders for the United States in addition to its foreign contracts.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

PUNISH THE MURDERERS.

IN THE early days, before law and order came to a community, it was the custom (and it was necessary) for the settlers to band together for mutual protection, administering law and justice with a rude hand and swift. Thus we had anti-horse thief associations, and he who robbed a settler knew full well the dangers he ran, but until a sufficient number had paid the penalty crime flourished for a time. Later on, organized courts came to deal with offenders, and the days of lynch law and rude justice, administered by an unorganized people, passed away.

I am minded of those old days and those old ways by the situation as we find it now on our southern border, where almost a score of our citizens were murdered by Mexican bandits a fortnight ago. Because there was much red tape to cut before the regular soldiery could be had in support, because the men who attacked them, burned their farm homes, carried their farm women into a slavery worse than death and pillaged, were even lower than the bad men of the states a half century ago, the citizens along our Mexican border have, for a long time, been wont either to band together to take the law into their own hands (as we did here in the new-settled states a half century ago) or to bow their heads before the inevitable, praying for the coming of a better day. Now that a foul deed—the massacre of almost a score of American citizens at Columbus, New Mexico, recently, by Villa bandits—has aroused the nation and precipitated a crisis, the regular army of Uncle Sam comes in, as the law and the courts came to us here in the northern states after those early days of lawlessness, with an inexorable determination to bring the guilty to justice, be the cost what it may, even in lives.

My voice has always been raised against war, and always will be, but this is not war, it is simply the administration of justice. When a murder is committed we set ourselves to apprehend and punish the murderer, taking no thought of what the trial will cost the county or the state, in dollars and cents. We send the sheriff and his deputies hot upon the trail, realizing that one or even more of the officials may be killed in the attempt to arrest the man whose life is in the forfeit. The murderer must be arrested, even though another life be lost in bringing this about. Law, order and justice demand that he be punished; the future security of society depends upon it. We cannot say: "Let him go," no matter what the cost in dollars or in human lives.

This is the situation between the United States and Mexico today. The United States is the outraged family, the sancity and security of which have been rudely shattered by the bullets of the assassins. A member of the great national family has been shot down; shall we fail to make every effort to arrest, try and punish the assassin, simply because much money must be spent, perhaps many lives sacrificed, in the administration of justice? Never will I raise my voice for war; but justice is another matter entirely.

I have always been against intervention in Mexican affairs. It is neither called for nor warranted. It is being urged, for the most part, by those who have large mining or land interests in the southern country and who want Uncle Sam, even at the cost of many lives, to make it easier and safer for them to make money. The man who invests his money in Mexico does so at his own risk; the man who leaves the sheltering folds of the stars and stripes and seeks another land, lured by the lust of lucre, is aware of the risk he is taking; no nation should ever be plunged into war because he sought to make money more quickly or more easily than it can be made at home, here in the United States. But it is an altogether different matter when Mexican bandits steal across the line and murder innocent ranchmen and townsfolk, for no other reason than racial hatred or blood passion. To follow after the murderers, arrest and try them is neither intervention nor war; it is justice, that and nothing else. That is why I am glad, beyond words, that the authorities have acted so decisively and that our troops are already well on their way, following up the bandit-murderer who must be captured and punished, at whatever cost. Anarchy must not be permitted, nor lawlessness, in any part of our land.

Some of our brave soldier boys are going to lose their lives in Mexico before this thing is over; perhaps many of them will. But they must go ahead, to the very end, doing their full duty, no more quitting it before the murderer is found and tried than we would want our sheriff or any of his deputies to quit the search for a murderer here in the peaceful grain belt because he feared he could not catch the miscreant easily. It is justice we demand; not war.

TRADE CONDITIONS TODAY.

ONE of the banks of the grain belt issues a monthly letter on trade conditions. The current issue strikes me as being splendid reading. If anything were needed to convince us that 1916 bids fair to be the banner year of general prosperity it is to be found here. I have no desire to inflict a mass of uninteresting data upon you, for I realize that figures are not as interesting to all people as they are to me. Yet I cannot refrain from passing on to you some of the inspiring facts I find in this bank's trade letter, based upon statistics gathered from various sources.

To begin with, what of the bank clearances today, as compared with a year ago? The first of the year I had occasion to use some facts in regard to the state banks of the grain belt, so I wrote to the various examiners and was immensely surprised at the reports I secured. I found that in the last year, in the ten states of the grain belt, the number of state banks had increased 273, while the deposits in this class of banks alone (saying nothing of all the national banks) had increased $237,758,262.80 in a year, almost a quarter of a billion dollars' increase in round numbers, due, in large part, so all the authorities agreed, to the bumper crops of last fall and the good prices prevailing for our farm products. Now, from this bank trade letter, I find that the bank exchanges at 162 principal cities, in January, were $7,000,000,000 more than they were a year ago, while the actual money in circulation the first of February was $35,000,000 more than the same time last year. The circulation per capita on February 1st was $38.67, a new high record, almost $2 in excess of the per capita circulation one year ago. Realizing, as all of us surely do, that bank deposits are the best financial and industrial barometer the country knows, here we have such indisputable evidence of present prosperity as to be most reassuring and convincing to us all.

But do not let us stop here. Bank deposits might testify to a spirit of miserliness as well as of enterprise. Let us see how our rapidly-increasing deposits are being utilized.

Building operations during January in 139 leading cities totaled $53,000,000, as against $44,000,000 in January, 1915, a gain of 20 per cent. Mill shipments of western pine in December were 93,000,000 feet, as against 76,000,000 feet the year before. The southern pine output in January was 409,000,000 feet, compared with 329,000,000 feet in January a year ago. The net earnings of 169 railroads in December were $102,000,000, compared with $59,000,000 the year before, an increase of 73 per cent. In the face of a large decrease in the cotton movement, southern roads are showing gains in gross earnings today, whereas a year ago they were recording losses, in spite of a heavy cotton movement, which would apparently indicate that general business conditions influence railroad earnings quite as much as crop movements. The net number of cars idle in the country on February 1st was 21,485, compared with 46,955 on January 1st of this year and 279,411 on February 1, 1915. In other words, a quarter of a million more freight cars are in operation today than there were a year ago, testifying to a tidal wave of shipping prosperity. Moreover, there were orders placed during January for 30,327 railroad cars, compared with orders for only 3,300 new cars a year ago. Certainly the railroads would not be thus adding to their equipment if they could not foresee a continued demand for such rolling stock, with which to move the bumper crops confidently anticipated for 1916, and the building materials so eagerly demanded all over the country, to say nothing of the war supplies being frantically rushed to the fighting armies abroad.

I hope these figures have not bored you; to me they are intensely interesting, for they tell a story which can be told in no other way; a story of American pluck, progress and prosperity the like of which was never before known. Realizing that every other industry is so prosperous, is straining every muscle to the limit to win every reward of the golden opportunity, shall we not resolve to make farming keep pace with the other great industries of the nation, to the end that 1916 shall be our greatest crop year, surpassing every other one of its brilliant predecessors?

ACRES OF DIAMONDS.

MANY of my readers have probably heard Dr. Russell H. Conwell deliver his famous lecture, "Acres of Diamonds," at some Chautauqua assembly, for he has delivered it over 5,000 times, and is a great favorite on the Chautauqua platform here in the grain belt. Dr. Conwell tells the origin of this famous lecture in the current issue of one of the large national magazines. To me the story is intensely interesting.

The idea was originally given to Dr. Conwell by an Arab guide, who retold an old story of a man who left his home and searched the world for diamonds, only to give up and drown himself in despair, while all the time the richest diamond field in the world—Golconda itself—was located on the place he had left to start his fruitless world-wide search. When the Arab guide had told this legend to Dr. Conwell the latter replied with a story of similar point, bringing the lesson nearer home to us here in this country.

It seems that a man who owned a farm in Pennsylvania decided to sell it and get a job collecting coal oil for his cousin up in Canada, where the first oil on the continent had just been discovered. He wrote to his cousin for employment and his cousin replied: "I cannot hire you, for you know nothing about oil." So the old farmer said: "I will know," and he set himself to study the whole subject. Then he sold his farm for $833 and went up to Canada. He had scarcely gone from the place when the new owner went out to arrange for watering the cattle in a brook back of the barn. He found that the old farmer, years before, had placed a plank edgewise across the surface of the brook to throw off a scum that collected on the surface and kept the cattle from drinking. He became curious and his investigations resulted in the discovery of a tremendously rich flow of oil. Dr. Conwell concludes the story thus:

For twenty-three years the man who went off up to Canada to make his fortune in the oil business had been damming back a flood of coal oil which geologists have since declared to be worth a thousand millions of dollars. The city of Titusville now stands on the territory which this man, who had learned all about oil, sold for $833.

Would that Dr. Conwell or someone like him, preaching a similar message, could come into every farm home in the grain belt to show us the acres of diamonds within our grasp, no matter how barren and unfruitful seem the soil and the life about us. Dr. Conwell adds a story which all of us might well take home to ourselves. He says:

Too many people are satisfied if they have done a thing "well enough." That is a fatal complacency. "Well enough" has cursed souls. "Well enough" has wrecked business enterprises. "Well enough" has destroyed nations. If perfection in a task can possibly be reached, nothing short of perfection is "well enough."

Governor Talbot, of Massachusetts, got his high office because General Swift made a happy application of the truth, in saying to the convention: "I nominate for governor of this state a man who, when he was a farmer's boy, hoed to the end of the row." That saying became a campaign slogan all up and down the state. "He hoed to the end of the row! He hoed to the end of the row!" When the people discovered that this was one of the characteristics of the man, they elected him by one of the greatest majorities ever given a governor in Massachusetts.

There is another story he tells of still another farm boy, who, by the force of an indomitable will, finally made good, against great obstacles. Here is the story:

I am thinking of a young Connecticut farm lad who was given up by his teachers as too weak-minded to learn. He left school when he was seven years old and toiled on his father's farm until he was twenty-one. Then something turned his mind toward the origin and development of the animal kingdom. He began to read works on zoology, and, in order to enlarge his capacity for understanding, went back to school and picked up where he left off fourteen years before. Somebody said to him: "You can get to the top if you will!"

He grasped the hope and nurtured it, until at last it completely possessed him. He entered college at twenty-eight and worked his way through with the assistance that we were able to furnish him. Today he is a respected professor of zoology in an Ohio college.

Is there not an inspiration here, for all of us, in these stories of men who made good, in the face of apparently insurmountable obstacles, men who made good even in the little circle where their lives were cast? It is not always necessary to go out into the busy, unheeding world to get ahead in life, to win fame and fortune; there are acres of diamonds all about us, in the country and in the city, if only we will rub the scales from our eyes and see, while there is yet time.

The Wisconsin Farmer Started This Farmer Right.

ALMOST every farmer in Wisconsin knows about Dodge county grains and seeds and the neighborhood around Beaver Dam. This neighborhood has become famous for the gold medals which its farmers have carried away at district, state and national grain shows. Among the farmers in the Beaver Dam neighborhood who have won many ribbons at grain shows is J. L. Krause, whose letter giving experiences in growing clover for seed appears in the Farm Forum department of The Wisconsin Farmer this week.

At the same time Mr. Krause sent The Wisconsin Farmer the brief and modest statement of his farming experiences he also addressed to the editor the following letter:

Beaver Dam, Wis., March 9, 1916. The Wisconsin Farmer, Madison, Wis. Dear Sirs:—I am today sending you particulars on my method of growing clover seed. . . . . I can trace my success directly to articles on clover in copies of The Wisconsin Farmer in 1911.

And the excellent seed secured that year and the premium won at Columbus, Wis., with the lecture of Prof. R. A. Moore, were directly responsible for my entrance into the short course and my continued success thereafter in that line.

We have been sowing from seventy-five to eighty acres of clover the past few years for fall pasture and future crops of clover, and it has paid us very well. Yours very truly,

(Signed) J. L. KRAUSE.

When a successful farmer like Mr. Krause gives The Wisconsin Farmer credit for the inspiration which has resulted in his success, we feel as though we were coming very close to fulfilling our mission as an agricultural publication. Of course we realize that Mr. Krause is responsible for his success. An agricultural paper might preach the right kind of doctrine for years, but unless this seed falls upon good ground it will never result in a farming success. It is a source of great gratification to The Wisconsin Farmer that Mr. Krause was able to get his first ideas on clover for seed in this paper. And we are very proud of the fact that Mr. Krause has seen fit to make the best of his opportunities. The Wisconsin Farmer feels that its mission is to teach better farming and better living and evidence of this character proving the success of our ambitions are gratifying in the extreme.

New Life For Wisconsin Holstein Association.

IF NO other one thing results from the recent convention of the Wisconsin Holstein-Friesian Breeders' Association at Watertown than the employment of a field man, as proposed at that time, the meeting will go down in history as one of the most beneficial ever held in Wisconsin by the lovers of the "black and white." The Wisconsin Farmer believes this a wise move on the part of the association, one which will be of immense value to the Holstein interests of the state, and we trust the plan as outlined and explained in detail in our report of the convention last week will be carried out.

The plan is to hire an experienced man to represent the association and also act as secretary. He will be paid a salary, devote all of his time to the association, and boost at all times for the promotion of the breed in Wisconsin. Just what the expense of such a man will be is not known, but many breeders believe that he can be employed for about $2,000 a year; that his traveling and office expenses might be another $1,000 and that $3,000 would cover the total expense. Certainly such a field man, capable and always on the job, would be worth the expenditure. Just how this money is to be raised is another question, as the association does not have the needed funds, and a committee was appointed to devise ways and means. This committee will report in May, and a special meeting will then be called to take further action.

There are about 2,000 breeders of pure-bred Holstein cattle in Wisconsin. Of these about 1,200 are members of the national association, but less than a tenth of the national members belong to the state association. Why? That was one of the big questions which the convention endeavored to solve, and it was agreed that a field man who could give all his time to the work ought to interest practically every breeder, especially those with pure breds, in the state association, and in a short time make it the foremost organization of its kind in the country. It is probable that the breeders will be asked to contribute to a fund for the support of a field man. If each of the pure-bred breeders would donate $2 such a man could be hired and put to work immediately. This is not a big task if every breeder will put his shoulder to the wheel and work to make the state association occupy a position second to none. This field man would be to the Holstein industry of the state what the county agricultural representative is to his county. Wisconsin produces as fine Holsteins as any state, and if the breeders do not secure the prices to which they are entitled they are at fault in not creating a demand, providing other conditions such as to market, etc., are right. A field man could do this by bringing before the world the superiority of Wisconsin Holsteins. Furthermore, he could increase the membership of the association and enlarge its scope of work and so direct its energies as to accomplish the most good.

Waukesha county Guernsey breeders are considering the field agent plan for the one county. If such a man would be of value to the breeders of one county he would be worth far more to breeders from the state at large. There is much that he could do, and if a field man is employed the Holstein interests of the state should gain much therefrom. Every breeder of the "black and white" in Wisconsin should belong to the state association. Instead of 200 breeders at a state convention there should be 2,000 or even more. The man with grades has just as much to gain through such an association as the man with pure breds—probably more. A field man could do much to get all of these breeders into the organization, and when the association includes a majority of the breeders in the state it will be a mighty force, not only in Wisconsin Holstein affairs but in national Holstein affairs.

Getting Ready For the State Fair.

THERE is every indication that the 1916 Wisconsin State Fair at Milwaukee will be of greater interest to farmers of the state than any previous state fair. Commissioner C. P. Norgord, Sec. O. E. Remey and the advisory board are all awake to the agricultural possibilities of the fair and are doing all within their power to make the coming fair the best agricultural show yet staged in Wisconsin.

At a recent meeting of the board in Milwaukee final approval was placed upon many projects of importance to the farmers. The premium list which will be ready for circulation within a few weeks, was approved. Provision was made for substantial increase in premiums on live stock, corn, grains, poultry, etc. With competition open to the world this year and more money offered in live stock classes than ever before, it is probable that the live stock show will be a record breaker for Wisconsin. Many new divisions have been added. One of particular importance is a cow-testing competition for which $500 in prizes has been offered. The best ten cows and the poorest ten cows in the ten cow-testing associations with the highest producing cows will be brought to the fair in this competition and will afford the dairymen a splendid opportunity to study production, feeding, etc. Each cow entered will be assured at least $30, which will doubtless bring out some strong competition. A baby beef class has also been added.

This will attract much interest because of the contest being conducted by the Wisconsin Live Stock Breeders' Associations, co-operating with eight county fairs in the beef producing sections. In the boys' and girls' department the premiums have been increased and a boys' stock judging contest with liberal prizes has been added.

The board has made it possible for the Wisconsin fair to have a good corn show, by ruling that any corn harvested since the preceding fair may be shown. This means that 1915 corn may be shown at the 1916 fair and that exhibits at the state winter grain show and other shows held during the winter may be shown at the fair. The premium list on corn has been increased $300, and with more money for grains and grasses the 1916 corn and grain show should prove a record breaker. Special attention will also be given the county exhibits and horticultural departments.

The board decided definitely to eliminate the "pike," and in its place there will be a western show free from objectionable features. About $14,000 will be spent for music and free attractions. The fair will open Monday but to accommodate thousands of visitors who always come on Sunday a sacred concert by the Tavia Concert Band, assisted by the singing societies of Milwaukee, will be given on Sunday afternoon. Exhibits will be released on Friday night, but on Saturday automobile races will be held, and on Wednesday and Thursday there will be night shows.

The Milwaukee Automobile Dealers' Association also arranged for another automobile show in machinery hall, which will be the first show of the season displaying the 1917 models. It has not been definitely decided whether the 10-cent admission charged last year will be continued or the show made free. The board decided to cut the issuance of passes and proposes to deny this honor to all except employes and those who donate some service to the fair. State officials and legislators will be cut off under this ruling.

Alfalfa Grows Sickly on Acid Soils.

THE process of determining whether a soil contains too much acid for a thrifty growth of alfalfa or not is comparatively simple and it is reasonably accurate. Purchase a few cents' worth of blue litmus paper from any druggist and you are then ready to proceed with the test. Place a small strip of this paper in a ball of moistened soil taken from the field that is to be tested. It is usually a good plan to dig down four or five inches and secure a representative sample. The soil should be moist enough so as to make the paper damp, but it need not be wet enough to make a mud ball. If the soil is acid it will turn the paper pink in a very short time. If there is only a trace of acid the paper may be slightly but not entirely changed in color, and such soils will invariably produce good alfalfa, if they are properly inoculated. We have repeatedly examined soil that showed a trace of acid and yet at the same time the field from which it was taken was producing a good crop of alfalfa. However, if the paper is turned completely pink one may rest assured that there is a soil that will not produce good, thrifty alfalfa.

And there is good reason why the crop does not thrive under those conditions. It involves the problem of germ life that is present on the roots of a thrifty alfalfa crop. Those germs do not thrive in the presence of acid and the alfalfa crop does not make a thrifty growth if these root organisms do not prevail. In such a case it is absolutely necessary to sweeten the soil by the free use of lime. Sometimes tile draining land will greatly improve it and it will sweeten of its own accord under a regular crop-growing system. However, where there is a desire to obtain a stand of alfalfa without delay it becomes necessary to resort to the use of lime. Ground limestone rock answers the purpose ideally. It may take a ton per acre or even as much as two tons to bring about a favorable condition of the soil. Of course, it will only be wasting time and seed and energy to undertake to establish alfalfa if the soil is not reasonably well drained by natural processes or by tiling.

Little Things That Count in Handling Brood Sows.

SWINE breeders pocket an enormous loss every year because they raise so small a percentage of the pigs that are farrowed early in the spring. This applies particularly to pigs farrowed in March. We have known many instances where sows did not save more than an average of two or three pigs per litter, and where this is the case it goes without saying that most of the profits are eliminated right in the beginning.

We realize that some of the trouble is due to the fact that satisfactory living quarters are not provided for the sows, with the result that the little pigs become chilled and, therefore, drop out one by one. Where only a few sows are kept it should not be a difficult matter to provide at least one farrowing pen that can be made comfortable even during periods of cold weather. This is where the individual hog house comes in well. A little building 6x8 feet can be constructed at a cost not to exceed $15. It can be placed in a small yard and the sow should have access to it two or three days before farrowing. Let her go in and out at will but do not try to force matters. By putting a little feed in the new house the sow can be coaxed into her quarters without arousing her resentment. If the sow is satisfied with her surroundings this in itself is half the battle because the way is then paved for the little attentions that are often needed when the pigs are young.

We recognize the fact that unless the individual hog house is well banked up during periods of cold weather the little pigs might become chilled even in such quarters. In that case the owner can well afford to give a little personal attention to the situation and in no way can so much be accomplished with a small amount of effort as by supplying a little artificial heat at farrowing time. Sometimes one or two lighted lanterns will supply enough heat to answer every purpose. The objection to this plan is that the lanterns will sometimes befoul the air, and our own preference is to use hot bricks. One can take half a dozen or even a dozen bricks, thoroughly heat them in the stove or furnace, put them in a metal vessel and place the vessel in the farrowing pen. It is amazing how this will moderate the temperature during a cold spell. It takes the chill off the air so that the young pigs are given a warm reception rather than a cold one as they start upon life's journey. In most cases it is sufficient to supply artificial heat for a few hours only because after that if the pen is dry and a reasonable amount of bedding supplied the little fellows will be able to shift for themselves.

There is one other matter to which attention should be given. We refer to the plan employed in feeding the sow. We believe in a light ration immediately preceding the farrowing period and

ht feeding for twenty-four or possibly forty-ght hours afterward. This is particularly im-rtant where one has to deal with a heavy milk-g strain of sows. If such are fed milk-making ods the little pigs are apt to be scoured, par-cularly in cold, damp weather. This causes more ss among young pigs than all other ailments mbined and it usually can be avoided by feeding ghtly at the critical time. It is important, also, exercise care in the use of slop when the pigs re young, particularly slop containing milk. This a fertile cause of bowel trouble in the little llows and it is much better to err on the other ide by feeding only dry grain than it is to risk hrowing the little pigs out of condition by using et foods.

Utilize the Manure to Advantage.

MANURE is the most valuable by-product on the farm, and yet a very large percentage of the annual accumulation is llowed to go to waste. To obtain the full value rom the manure it ought to be hauled to the field s produced. Unfortunately this is not always racticable, for one reason or another, but it is ossible to prevent large accumulations and allow-ng it to be wasted both through fermentation and eaching.

During the winter and early spring months the wheat field offers a splendid opportunity for sav-ing the manure by spreading it over the growing crop at the rate of six tons to the acre, by means of a manure spreader.

The soluble constituents which the manure con-tains immediately get to the roots of the plants and much of it becomes available as plant food in a very short time. There are few wheat fields that are not improved by a light dressing of stable or yard manure; and, in fact, there are few places where it will do more good than on the wheat field.

Such top dressings are also of great value to grass and clover fields intended for hay, while pas-tures are greatly improved thereby. By all means get the manure away from the yards where from 25 to 50 per cent of its fertility value will be lost in a very short time. Good barnyard manure is worth $2 per ton, and no one can afford to allow any of it to go to waste, even in a small way. A field that has been well covered with manure will show the effect thereof for several years after-wards.

Poor Economy Not to Paint Buildings.

THERE is probably nothing that sells better than paint or brings a fairer price. Not in cans or kits, however, but rubbed in and onto the surface of various things. The real es-tate man buys a poor, run-down farm. He has a man go over the place and straighten up a few fences. Boards are nailed up where most needed. A few of the most obviously necessary things are done, then it is paint, paint, paint. Eventually paint sells the farm at a profit. Paint sells more goods of the secondhand sort than any other one agency. The reason is simple enough. It covers defects and imperfections and lends attraction to the object it covers. It adds newness. Not only does it cover these imperfections but paint makes them last longer, and it is a curious fact that many people would rather pay an unreasonable price for an inferior article that is well painted than to buy the same article unpainted and paint it themselves.

Twenty-five years ago a farmer whose barn was painted was considered quite well off in most communities. Today the man who fails to paint his barn, house or other buildings is considered a poor manager. It is the custom now on most farms where public sales are held to repaint every implement offered. It is a good practice, for not only does the paint attract the attention of the prospective buyer and add to the value, but on a farm where everything is kept painted and in first-class condition this painting of such offerings is in keeping with the general scheme of the farm. It gives the place a prosperous appearance. It gives the air of well-kept-upness that nothing else will do.

More and more inside painting is being done each year. The scarcity of hardwood and its con-sequential rise in price has led to the substitution of cheaper softwood grades as inside finishing in many instances. This is usually painted or enam-eled. The same is true of many articles of furni-ture. For several years "packing box" furniture has been much in vogue, and as most of this is made at home and of the poorer grades of wood, paint is necessary for it. It is not a difficult task to paint either inside or outside work. Practically all colors and types of paints can be purchased ready mixed, and for second coat work and finish-ing they are superior, as a rule, to the home mixed. For the first or prime coat the home mixed paint is the best of the two because one can add the re-quired amount of oil. Woodwork that has stood the weather for long requires much more oil than new woodwork. This is especially true of build-ings that have stood the elements for several years unpainted. For such work, or for new work, the oil of the prime coat should be rubbed well into the wood to insure permanency. Second coat or inside priming that will be well protected will take less paint and need less attention in this respect.

Inside work can be painted at any time, and it is a mistaken idea that everything must be re-moved from a room in order to paint it. By spreading old pieces of carpet or newspapers over the floor even a ceiling may be painted without damaging anything in the room if one is careful. Outside work had best be done in May or June, for it is then that the dust and flies make the least trouble.

Location of Farm Buildings and Farm Work.

SEVERAL of our experiment stations have been making investigations for the purpose of ascertaining the amount of labor that can be saved on a farm annually by the proper loca-tion of farm buildings as compared with a location that is awkward. The North Dakota station calls attention to the fact that in the case of one farm studied in detail a distance of fifty-three miles was covered in a year in carrying water. Later a modern water system was installed, and by pip-ing it to the house and to the farm buildings the task of carrying water was entirely cut out.

It was found in one case that in carrying the wood for the home a distance of twenty-two miles was covered annually, whereas under a new ar-rangement this was reduced to eight and three-fourths miles. It was found by this station that on many farms a saving of more than 100 miles a year could be made in caring for the hogs. The replanning of one farm resulted in a total saving for the year of 217 miles. Not only was this distance covered in performing farm tasks under the old plan but in most cases the worker carried a load at the same time, so that a mere enumeration of the mileage does not con-vey a proper idea of the amount of labor per-formed.

We understand perfectly that where buildings are located it is not a simple matter to change them, because in many cases a very large expense will be involved. We are going in the right direc-tion, however, by studying these matters, and one of the first things on the average farm that should receive attention is the water supply. What can be more laborious than the task of pumping a large supply of water by hand each day and the carrying of the same in buckets not only into the home but also using it for live stock. Usually our cattle and horse water troughs are handily lo-cated, but in many cases an enormous amount of labor is involved daily in the feeding of the hogs. The mixing of slop alone is a big undertaking where many hogs are kept, and in this connection attention should be called to the fact that some of our experiment stations are getting notably good results in the raising of hogs without any slop. They are using the self-feeders so that the hogs balance their own ration, and when they are af-forded an ample supply of water the amount of care they require is reduced to a minimum.

Cost of Automobile Service.

FIGURES have just been published by the United States Department of Agriculture in regard to the cost of running automobiles. They are based upon nineteen months of contin-uous service on the Washington-Atlanta Highway, over which the office of public roads and rural engineering has supervision. Three low-priced cars were used in the test. The cost of operation —including gasoline, grease, oil, tire casings, other tire cost, storage charges, and miscellaneous ex-penses—for car No. 1 averaged 4.63 cents per mile; for car No. 2, 3.91 cents; and for car No. 3, 3.90 cents. The average cost for all was 4.13 cents per mile. These cars ran from twenty-eight to forty-three miles a day for thirty days a month over the nineteen-month period. An average for all the cars during the whole period shows that the cost of transportation was 21 cents per mile per month. Similar figures for the use of livery show a cost 62 cents per mile per month, which makes a very favorable showing for the automobile with-out taking the element of time-saving into con-sideration.

The average cost of the gasoline used in these tests was 18.1 cents per gallon; the average miles run per gallon was 17.6, the average miles run per pound of grease was 423, and the average miles run per quart of oil was 66.4. The various costs per mile run were distributed as follows: For gasoline, 1.4 cents; for grease, .04 cents; for oil, .23 cents; for tire casings, .65 cents; for other tire costs, .18 cents; for storage charges, .52 cents; and for miscellaneous expenses, 1.47 cents—total, 4.13 cents per mile. It will be seen that storage charges were much higher than they would be on the farm—over one-third the cost of the gasoline. Considering these facts in regard to economy of operation and in addition to the element of time saving one can readily understand why the auto-mobile continues to grow in popularity.

Seed Corn Proclamation.

WHEREAS, The department of agri-culture has called my attention to the serious shortage of good seed corn in Wisconsin due to the unfavorable ripening season last fall; I, therefore, deem it necessary to acquaint the public with the following facts:

Many germinating tests have shown that little of the seed corn has sufficient vitality to make it safe for planting without securing a germinating test of each ear. However, much of the seed saved, though low in germination, contains many ears of high vitality. These can be found and saved by a simple test of each ear.

Many of Wisconsin's improved home-grown and acclimated strains of corn that otherwise might be destroyed and lost to the state, can in this way be saved and profitably used. Greatly decreased stands and yields, with much waste of time, money and effort will surely follow if the seed on hand is planted without proper testing. The situation is so serious and the need for immediate action so imperative that I deem it advisable to publicly call attention to these conditions.

To this end, I hereby proclaim the week from March 27th to April 1st as seed corn week. I urge that during this period every farmer thoroughly test each ear of his seed corn and eliminate all ears not showing high germination. I also urge that business men of all classes encourage farmers in this work and that they render assistance in obtaining acclimated seed of high vitality. In witness whereof, I hereunto set my hand and cause the great seal of the state to be affixed this 10th day of March, 1916.

EMANUEL L. PHILIPP,
Governor.

By the governor:
JOHN S. DONALD,
Secretary of State.

One-fourth of the Land in Legumes

ACCORDING to a bulletin recently prepared by the United States Department of Agri-culture, the productivity of a farm is not being kept up on a permanent basis unless annu-ally at least one-fourth of that farm is made to grow legumes which are either plowed under as stable manure or green manure. A few of the rules relating to maintenance of fertility given in this bulletin are, first, do not, unless under excep-tional circumstances, grow corn in the same field more than two years in succession; second, keep one-fourth of the land in legumes in order to main-tain a proper supply of humus and nitrogen in the soil; third, feed as much grain as possible to live stock on the farm.

The results of experiments at the Illinois station are cited, these having been carried on since 1879. Where corn and oats were grown alternately the average yield of corn has been 38.1 bushels per acre. On the other hand, where a rotation of corn, oats and clover has been carried on the average yield of the corn during the same period was 57.2 bushels per acre.

A great many different kinds of ration may be practiced to meet varying conditions, according to this bulletin. "The most common one covers a four-year period and uses the following crops, corn, oats with clover seeding, clover, and wheat. In connection with this rotation it is suggested that if the clover fails an annual legume such as cow-peas or soy beans may be used to fill in. Where clover precedes wheat the first crop is used for hay and the second one cut for hay or seed." As a matter of fact, on rich land, following clover, wheat is not the most profitable crop, as it is liable to lodge, while, on the other hand, it is im-possible to get a soil too rich for corn. Practically speaking, where wheat is in the rotation best re-sults in the long run will be obtained from a five-year rotation. In that case there will be two crops of corn followed by a crop of oats, then winter wheat, this to be seeded down to clover.

Where it is the intention to build up a soil rapidly the shorter rotation may be resorted to. In that case winter wheat or fall rye may be sown in the cornstalks and clover sown at the same time or the following spring. In this case there will be a crop of wheat or rye the second year, and in all probability a good growth of clover in the fall. The third year one or two crops of clover may be cut and the last one plowed under in prep-aration of the land for corn the following year. Of course, the short rotation is costly in one re-spect, inasmuch as the land would have to be seeded down every third year and clover seed seems to have reached a permanently high value.

In the rotations mentioned above nothing has been said of the pasture, and this is, after all, one of our most important crops. Pasture is a great conserver, and where a top dressing can be used periodically land can be built up very quickly if left in grass, particularly if legume seed has been used freely in seeding it down.

Sixteen hundred tons of cherry pits, now a source of annoyance and expense to canneries, can be made to yield two valuable oils and also a meal for feeding cattle, according to specialists of the United States Department of Agriculture. In ad-dition 105,000 gallons of cherry juice now wasted in seeding cherries can be turned into desirable jelly and sirup, or even into alcohol. A saving of these valuable by-products from cherry canning may make possible the domestic manufacture of substitute for almond oil and bitter almond oil, now imported, and at the same time establish a new industry in the cherry packing districts of western states.

In and Around Wisconsin

Wood County Guernsey Breeders Elect Officers---Breeders Associations Making Plans For Their Summer Picnics.

Vilas county boosters are at work for a county fair and Sayner, the geographical center of the county, probably will be selected as the place for holding the fair.

The new $6,500 barn on the Oneida Indian reservation near DePere has been completed and congress has been asked for an appropriation of $10,000 with which to buy pure-bred cattle for the school farm.

S. M. Prout and Prentice C. Warmington, of Honey Creek, and Frank Squires, of Burlington, have been announced as the three winners in the county farm management contest conducted in that county during the past year. From these three the county winner will be chosen.

The Stevens Point Fair Association has completed plans for the 1916 fair and announced the standing committees on whom rest much of the responsibility for the success of the fair. R. K. McDonald, A. E. Bourn, G. L. Park, A. D. Barnes, M. E. Bruce and J. J. Normington were chosen to get up the premium list.

Paul Weisner, of Patch Grove, recently told at a meeting called to organize a cheese factory of his experiences in starting such a factory some years ago at Patch Grove. As a result of the factory he says that there are less than 200 of the original cows left in that territory; that land values have risen from $50 and $60 to $80 and $85 an acre and in his opinion nothing is better for a district than a factory to take care of the dairymen's product. He praised the milking machine highly and said that with the milking machine a man can milk twenty cows an hour and in this way the labor question which confronts the owners of large herds is solved.

The annual meeting of the Central Wisconsin Holstein Breeders' Association was held on March 15th at Vesper, Wood county, and was well attended. A full account of the meeting will appear in these columns in a later issue.

The Wisconsin Live Stock Breeders' Association has turned back to the Wisconsin Panama commission the sum of $4,239.46. This represents the unexpended balance of the fund of $5,000 set aside for Wisconsin stockmen for an exhibit at the Panama-Pacific Exposition, which, excepting horses, was called off on account of the foot-and-mouth embargo.

The Wild Rose Poultry Association has decided to add a junior department to its 1917 show and the boys and girls are urged to get busy immediately and raise some good stock for the next show. The association at its annual meeting recently elected A. M. Holman president; C. A. Smart, vice president, and C. G. Corning, secretary.

The annual meeting of the co-operative creamery association of Jackson county was held recently at Black River Falls and all the old officers, excepting the president, were re-elected. T. R. Kittelson was forced to retire from the presidency, as he is leaving the county. In his place Oscar Flugstad, of North Bend, was chosen. J. H. Harmer, of Albion, was chosen vice president, and L. A. Sly, of Sechlerville, secretary.

Indications are that Upper Wisconsin will be well represented at the banker-farmer conference which will be held in Madison March 28th-29th. Several counties have already selected delegates, although anyone is at liberty to attend. The Rusk County Bank, at Ladysmith, agreed to pay the expenses of a man chosen by the Ladysmith creamery and E. C. Steubs was chosen. Other banks are contemplating similar action.

Plans for the summer meeting and picnic of the Northern Dunn and St. Croix County Holstein Breeders' Association were discussed at the annual meeting recently at Glenwood City. It was decided to hold the picnic at Boyceville some time in June, the date to be announced later. It is the intention to make this picnic the big social event of the year for that community and Frank Meyers, E. H. Radke and S. B. Peck were appointed members of a committee to make the arrangements. A. H. Parrott, official tester of the county cow-testing association, will also assist this committee. The association also decided to offer a prize to the owner of the cow in the association territory which produces the most butter fat during the year. No regard to breed will be paid in awarding the premium which will go to the best producer.

About thirty breeders of Holsteins in Washington county met recently at West Bend and organized the Washington County Holstein-Friesian Breeders' Association with Walter Schroeder as president; W. Meuschke as first vice president; J. Buckley, second vice president; John W. Gehl, secretary, and Henry Schowalter, treasurer. The constitution and by-laws will be approved and other unfinished business transacted at a special meeting on March 24th, called for this purpose. Dues were fixed at $1 per year for breeders with only grade cattle and $2 for those with pure breds. This is a splendid step by the Washington county breeders who expect through co-operative effort to advertise the Holsteins in that community and draw the attention of buyers to the many fine herds in Washington county. Township representatives were appointed as follows: Addison, And. Endlich; Barton, Chr. Rosenthal; Erin, Harry Malloy; Farmington, Wm. H. Gruhle; Germantown, Ira Gettelman; Hartford, C. Eifert; Jackson, John A. Joekel; Polk, Chas. Eckert; Richfield, Martin Groth; Trenton, Herbert Schroeder; West Bend, Paul Horlamus; Wayne, J. C. Meyer; Kewaskum, Wm. Quandt.

The annual meeting of the Wood County Guernsey Breeders' Association was held recently at Vesper and it was decided to hold the summer picnic and meeting at Arpin. The breeders will be the guests of Charles Tomfohrde, a prominent Guernsey breeder, and plans are already being made to make this the biggest summer meeting ever held. June 21st was selected as the date. The recent meeting was well attended, despite the stormy weather, and a picnic dinner was served by the women who were afterwards elected honorary members of the association. J. Ross Porter was chosen president; Charles Tomfohrde, vice president; A. P. Bean, secretary, and William Burhopp, treasurer. Mr. Burhopp, Mr. Bean, Mr. Paulson and Mr. Porter were elected members of a committee to arrange the program for the summer meeting.

The surest and cheapest way to secure a most profitable dairy herd is to raise it.

Peerless Fencing Increases Value of the Farm.

THE arguments for the Peerless gates and fencing are: They will add to the value and good appearance of your farm; prevent possible injury to animals; eliminate chances of live stock destroying crops; save time spent in repairing ordinary fences; last longer than ordinary fences; and permit complete use of forage by pasturing stalks and stubble. The Peerless line includes hog, field and poultry fences and Peerless self-raising gates as advertised on page 10. The material and workmanship used throughout are of the best. Anyone expecting to buy fencing or gates should send for the big, free Peerless catalog, which may be secured by writing the Peerless Wire Fence Co., 216 Michigan St., Adrian, Mich., and mentioning this paper.—Adv.

Your Discontented Boy

Montana Offers Great Opportunities for Young Men

If your opinion of Montana was formed ten years ago it is worthless now. It is not in minerals nor in cattle ranges that Montana is richest—it is in *farm products.*

An average of 18,000 families a year are pouring in on this fertile land. Yet in this mighty state there are still millions of acres of rich virgin land that can be bought cheaply. A chance for you or your son to own your own farm.

Send for literature now. Study it well this winter, then in the spring buy a round trip excursion ticket and go out and investigate.

The Mark of Good Barn Ventilation

NO ventilation system can give you the service you should have unless its plan is positively right. It must be planned to meet the exact conditions of the building. And it takes years of experience to know how to design the right plan. That's why we give you the services of the King Board of Experts—a staff of men who have designed plans for thousands of farm barns. You profit by their experience.

KING

System of Ventilation

Planned Individually for the Building It Goes Into

The King Aerators, which set on the roof, are the first part of the King System; they can be had with or without a complete system. You can install King Aerators at once with the idea of installing a complete King System now or later.

No other ventilators work as well with the King System as King Aerators; therefore, if you are not ready for the complete system be sure to get King Aerators and be started right.

In using King Aerators alone you ventilate the haymow or upper part of the barn as well as add beauty to the building.

TWO BOOKS

Write for our catalog and, if you wish, enclose 10c for PROF. KING'S BOOK, the recognized authority on ventilation.

King Aerator
The first part of the King System of Ventilation

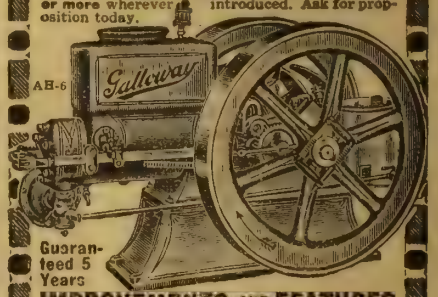
WAIT!

DON'T DO A THING

ABOUT BUYING AN ENGINE

Until you have seen this **new 1916 250-p. book** that tells all about **Galloway engines** and explains my **new extra special advertising distribution offer.** If you answered all the engine advertisements ever published you would not find an offer fairer, squarer or more in your favor. You owe it to your **pocket-book** and the **satisfaction** that you demand in the operation of the engine you buy to **answer this advertisement** and learn the particulars of this new 90-day offer to distribute 10,000 more Galloway Masterpiece Engines from 1 3-4 h. p. to 16 h. p.

The **great Galloway chain of factories** are running **day and night.** We are turning out more **Masterpiece engines** than ever and the reason is that we are building this engine **so good** from such a highly perfected design, of such good materials, and by such thoroughly skilled workmen, that every Galloway Masterpiece sells **one or more** wherever introduced. Ask for proposition today.



Guaranteed 5 Years

IMPROVEMENTS AND FEATURES

include valves in the head; extra cooling surfaces, large water pot; frost-proof cylinder; adjustable bearings, economy carburetor; uses any fuel; large perfectly balanced fly wheels; built-in magneto; Hercules water-cooled cylinder head, cannot blow off; easy to start, no cranking; needs no batteries; independent of weather, hot or cold, wet or dry. **A mechanical masterpiece!** These features and many others make Masterpiece engines power kings in their field. **Ask today for this new book** printed in four colors. It will solve your power problems. A postal gets it. Engines shipped from Waterloo, Council Bluffs, Kansas City, St. Paul, Chicago. **Wm. Galloway, Pres.**

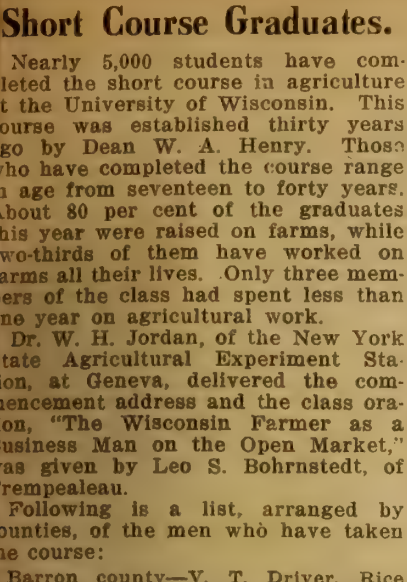
Short Course Graduates.

Nearly 5,000 students have completed the short course in agriculture at the University of Wisconsin. This course was established thirty years ago by Dean W. A. Henry. Those who have completed the course range in age from seventeen to forty years. About 80 per cent of the graduates this year were raised on farms, while two-thirds of them have worked on farms all their lives. Only three members of the class had spent less than one year on agricultural work.

Dr. W. H. Jordan, of the New York State Agricultural Experiment Station, at Geneva, delivered the commencement address and the class oration, "The Wisconsin Farmer as a Business Man on the Open Market," was given by Leo S. Bohrnstedt, of Trempealeau.

Following is a list, arranged by counties, of the men who have taken the course:

Barron county—V. T. Driver, Rice Lake; E. R. Phillips, Comstock. Bayfield county—E. A. Bresette, Bayfield; R. E. Wittwer, Cable. Buffalo county—Wayne Adams, Mondovi; F. Rosenthal, Mondovi. Clark county—W. H. Crothers, Neillsville; E. L. Dyre, Greenwood; E. M. Peterson, Curtiss; F. D. Wood, Owen. Columbia county—A. M. Derr, Columbia. Dane county—S. C. Bathum, Madison; A. H. Chalfant, F. P. Currier, W. H. Goth, B. A. Hamm, Madison; Donald Heffron, Waunakee; G. R. Lalor, Oregon; A. J. Voitn, Sun Prairie. Dodge county—R. B. Caniff, Juneau; A. Isken, Brownsville; N. O. Pahlke, Juneau. Door county—R. W. Bavry, Egg Harbor; W. R. Swenson, Sister Bay. Douglas county—R. W. Findlay, South Range; H. D. Ward, Solon Springs. Dunn county—T. M. Curran, Menomonie; Milford Dodge, I. Langseth, Harrison Metzger, Menomonie. Eau Claire county—E. C. Frye, Eau Claire; V. W. Jackson, A. M. Tinker, R. B. Wilson, Eau Claire. Fond du Lac county—L. N. Bush, Waupun; V. C. Grennell, Brandon; C. E. Schmoldt, Rosendale; M. T. Schea, Campbellsport; Hanry Stanz, Fond du Lac. Grant county—L. L. Chitwood, Blue River; W. G. Hudson, Boscobel; E. B. Morse, Mt. Hope; W. B. Patten, Boscobel; Leo Pink, Lancaster; E. J. Runde, Sinsinawa; E. C. Swenson, Mt. Horeb; Oscar Weinberger, Platteville. Green county—F. R. Hinkamp, Monroe; Kenneth Turnbull, Monroe. Iowa county—W. G. Lauper, Hollandale; H. L. Shannon, Avoca; W. E. Swenson, Hollandale. Jackson county—P. E. Olson, Northfield. Jefferson county—V. M. Bauer, Jefferson; R. W. Bridge, Lake Mills; C. G. Huppert, L. W. Huppert, Harry Lowe, L. F. Lowe, Ft. Atkinson; F. G. Northey, Palmyra; W. A. Woelffer, Waterloo. Juneau county—F. L. Cuenot, Mauston; J. M. Nowicki, Mauston. Kenosha county—G. G. Kerkoff, Bassett. Lafayette county—J. R. Chapman, South Wayne; E. H. Helms, Belmont. Langlade county—Albert Oldenburg, Antigo. Manitowoc county—F. C. Kiel, Manitowoc; A. F. Mandel, Two Rivers; E. T. Rogney, Valders; F. C. Sampe, Manitowoc. Marinette county—Ray Remington, Marinette. Marquette county—H. E. Martl, Packwaukee. Milwaukee county—C. H. Angelroth, E. N. A. Benecke, O. F. Kossman, E. H. Stuckert, Milwaukee. Monroe county—A. E. Verken, Norwalk. Outagamie county—S. I. Jamieson, Appleton, E. M. Masche, Hortonville; E. C. Rahmlow, Appleton; F. D. Williams, Bear Creek; F. W. Tubbs, Seymour. Pierce county—C. P. Alton, River Falls; E. L. Preston, Ellsworth; H. V. Goodwin, Prescott. Racine county—O. T. Bartos, Racine. Richland county—E. H. Jewel, Richland Center; Harry Turgasen, Richland Center. Rock county—A. Howarth, Janesville; L. A. Kramer, Edgerton; L. B. Shaw, Orfordville; L. H. Strouse, Edgerton; F. J. Eldeman, Janesville. St. Croix county—Emil Meinke, Somerset; Theo. Pederson, Glenwood City; Fred Thome, Hudson. Sauk county—Raymond Metcalf, Spring Green; P. C. Thomas, Baraboo. Sawyer county—J. H. Monson, Hayward, Shavano county—R. B. Johnson, Rose Lawn; F. S. Pleshek, Shawano. Sheboygan county—C. G. Rock, Donald Rock, Plymouth. Trempealeau county—Leo S. Bohrnstedt, Trempealeau; C. W. Burns, Galesville; G. E. Chappell, Trempealeau. Vernon county—J. K. Davis, Viroqua; B. Eckhart, Viroqua; Pearl Getter, Viroqua; J. A. Gianoli, Genoa; A. N. Johnson, Westby; Ray McMullin, Viroqua; Kenneth Miller, Viroqua; F. T. Sebion, Westby; P. Shumway, Genoa; R. S. Welch, Viroqua. Vilas county—Karl Baackes, Sayner. Walworth county—Lloyd Ames, Elkhorn; Geo. Brennan, Lake Geneva; H. C. Kuenzli, Lake Beulah; C. J. Poster, Whitewater; P. J. Thomson, Genoa Junction; R. A. Westphal, Elkhorn. Washburn county—Sigvart Melby, Spooner. Washington county—A. A. Ebling, Richfield; H. C. Joeckel, Jackson. Waukesha county—Roy Bowe, Oconomowoc; H. E. Hensel, Dousman; L. E. Husten, Eagle; C. H. Kuhtz, Waukesha; LeRoy Lean, Dousman; Herman Lewandoske, Oconomowoc; L. F. Lobdell, Mukwonago; W. M. Longley, Dousman; L. M. Lajeskie, Waukesha; A. G. Miller, Oconomowoc; Peter Nelson, Oconomowoc. Waupaca county—E. C. Boyce, Waupaca; D. A. Daniels, New London; J. F. Harlan; New London; Wm. Knapstein, New London; C. G. Knutson, Ogdenburg; H. E. Stichtman, New London; O. A. Tubaas, Iola; H. A. Weinnmann, Iola. Waushara county—C. E. Simonson, Wautoma; E. N. Thompson, Wautoma; H. H. Thompson, Wautoma; F. L. Tibbitts, Plainfield.



DR. W. H. JORDAN, NEW YORK.
Speaker at short course graduation this year.

Calf Gains and Rations.

To the Editor:—There are now forty-one entries in the Rock county calf contest. Each contestant is keeping a monthly feeding record. The highest gains for February are as follows: Sixty-six pounds, sixty-three pounds, fifty-five pounds, fifty-three pounds, forty-eight pounds and forty-six pounds.

The calf which gained sixty-six pounds received 522 pounds of skimmed milk, fifty-eight pounds of grain, nine pounds of calf meal and alfalfa hay.

The calf which gained sixty-three pounds received 464 pounds of whole milk, twenty-five pounds of grain and twenty-five pounds of hay.

The calf which gained fifty-five pounds used 480 pounds of skimmed milk, thirty-four and a half pounds of grain and eighteen and one-third pounds of hay.

The calf which gained fifty-three pounds used seventy pounds of whole milk, fourteen pounds of calf meal, twenty-two pounds of grain and hay.

The calf which gained sixty-six pounds is a Durham grade.

The calf which gained sixty-three pounds is a pure-bred Short-horn.

The calf which gained fifty-five pounds is a grade Holstein.

The calf which gained fifty-three pounds is a grade Aberdeen Angus.

All of the contestants show excellent interest in keeping the records and the contest on the whole is exciting a good deal of comment.

L. A. Markham.

Rock Co., Y. M. C. A., Janesville, Wis.

[Editor's Note.—The calf contest in Rock county under the auspices of the Rock County Stock Breeders' Association, was announced in The Wisconsin Farmer, December 16, 1915. The contest began in January, the calves being taken at birth. The calves are to be cared for until June 1st, the purpose being for each boy to personally care for his own calf for a period approximating five months. In awarding the prizes the breed, gain, cost of gain and the character or record kept by the boy, will all be taken into consideration.]

DR. DAVID ROBERTS, WAUKESHA.
Recently elected president, Wisconsin Ayrshire Breeders' Association.

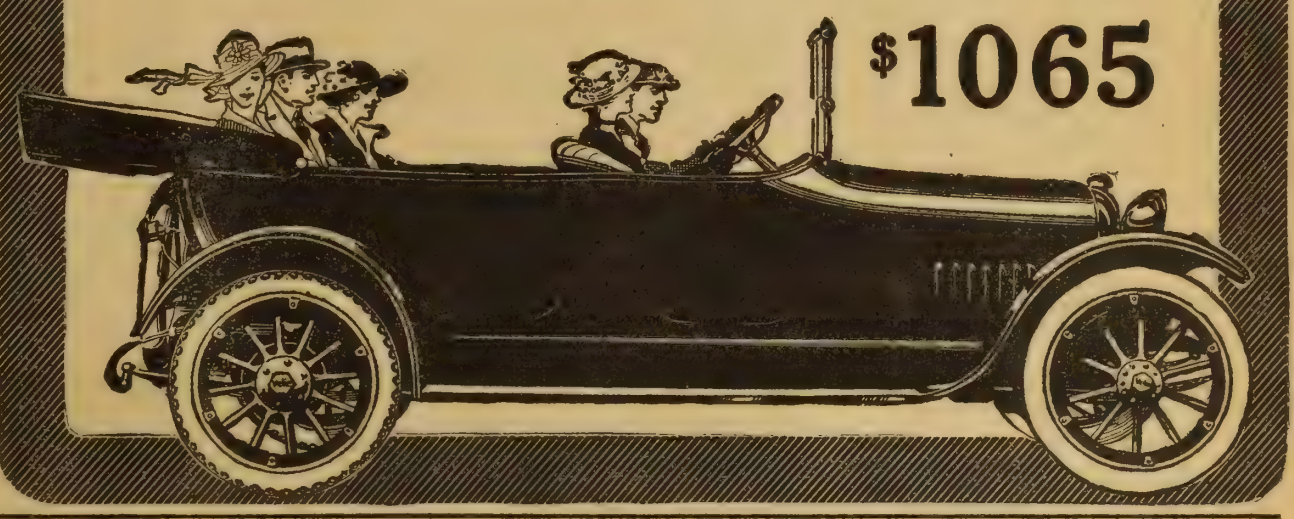
Velie Six

On Immediate Orders At Our Present Low Prices

We can positively insure you the delivery of your car on the day you want it. We are protected against the general shortage of materials and shipping facilities, and will maintain the regular price for the present, at least—and immediate Velie purchasers have the benefit.

But if you could obtain today any car in the light Six class, you could not surpass Velie Values at any price and you could not match it at anywhere near $1065—in power, in refinement, in luxury, in equipment and in economy. See your Velie Dealer—come to the factory direct—or write for catalog.

Velie Motor Vehicle Co., 118 Velie Place, Moline, Illinois



ALL I do is to put in the hot suds—then the clothes—clamp down the cover—and turn on the power. No back-breaking washboard scrubbing for me—no arm-breaking wringing.

Triumph Power Washer With Swinging Wringer

does all the washing—all the wringing. Dainty lingerie—baby's clothes—heavy bed clothes, all come out clean, sweet, not a thread broken. Rapidly reversing dolly swirls the garments at high speed in the tub. Suds forced through clothes—carries all dirt, grease with it. Wringer takes 4 positions—no tub changing. Try the Triumph for 30 days. Write for special circular today. Dept N139

THE VALUE OF THE SIRE.

A WORLD-BEATING TYPE OF SHORT-HORN.

A "DEEP-RIBBED, DEEP-FLANKED, FULL-THIGHED" HEREFORD.

OF ALL THE investments on the farm none has so much potency for good as the good sire. It has so often been said that the sire is half the herd that it has become so common as to merit but little attention. If he is truly worth half the herd, why do we keep sires which in actual money value are worth less than the individual female? Why do we keep the scrub sire, that nondescript creature with no breeding, to head our herd? Head of the herd, it is to laugh, the head of herds kept on so many farms. It would appear to be the chief function of most to get the cows with calf. How foolish, how unutterably lacking in good, common sense is such a practice.

Let us look at him for a minute. underfed, angular without the angularity of good dairy type; beefy without the form and substance of the good beef sire; masculine without that masculine look that is found in prepotent sires. He is no head of the herd. Rather, he is a part of the herd and a minor part at that, only he has the power for so much evil and lacks so much the power which he ought to possess, the power to improve his get. A scrub sire, and scrub is the word. He surely is a worthless brute. Who wants to associate with him? Who wants to own him? The head of the herd, indeed!

Why are so many such sires kept? So many stockmen do not appreciate the value of breeding. If they do they keep him because it is the easy way. They breed them young, letting him run with the cows in the pasture. No trouble, no bother, no money invested and, yes, no returns but a wasted life caring for scrub stock. Put money in a good sire. Breed don't count, they say. If it doesn't they ought to have the best animals in the world, but they haven't. They have the worst.

Let us look at this magnificent fellow. He only cost $200, but what an animal. He weighs nearly a ton. What depth, what length, what vigor. Masculine, intensively so. He looks as if put in a ring with other bulls they would not survive a minute. Head of the herd, he. Of course he is and he knows it and you know it. He fears nobody. No cut up, shallow middle there. He has capacity. He has good digestion. His sleek coat lies close over his mellow hide. If dairy, he has the angularity of his type; if beef, he has that smoothness of hip, that covering of flesh and depth so characteristic of the good beef sire. Deep ribbed, deep flanked, deep, full thighed. Even if you do not need him you want to own him, to possess him, to feed and care for him and to use him. He is worth having. He is a jewel without price. There is money in him. He may make you a fortune.

NO CUT UP SHALLOW MIDDLE IN THIS TYPE OF ABERDEEN ANGUS.

But you can't afford to pay $200 for him, you say. You cannot afford to be without him. Better pay some other farmer to keep the scrub sire at $100 a year and use the good sire. You will be money ahead. Let us see, you have forty cows between you, you and your neighbor; you get thirty-six head of calves each year; you raise and sell all of them for beef at two years old. They weigh 1,200 pounds. One hundred and eight head in all; a total selling weight of 129,600. All right. Take your scrub bull and use him. Look at his get. They lack uniformity of color, of shape, of growth. They are angular, some are cat-hammed, coarse in the head. Contrast them with the product of a good, well-bred, prepotent Angus, Hereford or Shorthorn bull. Without considering the cheaper gains, what have you? You have uniformity of color, size, shape. Any buyer will readily give you 1 to 2 cents more for such cattle. One cent difference is $1,296, 2 cents would be $2,592. The extra weight would add another $1,000. Does it pay to pay $200 for a good sire, or does it pay to use the scrub with his immaturity and lack of vigor, size and shape? It is up to you.

Take the case of the pure-bred dairy bull. Such a one must have individuality of the right sort. His dam must have not a week's record nor a month's record, but a yearly record, or, better still, years of records for high production. Use a scrub sire with common cows and you get common stock, no better and often worse than their dams. You do not increase production. But if we cross a good dairy sire whose dam has a production of 400 pounds or over with the common cow of 160 pounds butter fat or less we are apt to get some increase. Take your pencil and figure it out. Thirty females from sixty cows means ninety females. These, when grown, take the place of the common cows and stay on the job on the average eight years. A gain of 100 pounds of fat is possible, fifty pounds is an assured fact. Fifty pounds increase means $15 at 30 cent valuation for butter. Multiply by eight year factor and you get $120. Multiply that again by ninety females and you have $10,800. Against that you have a little more interest on money invested in sire, a little extra cost in feeding, a larger loss if animal is sold for beef. As a matter of fact, he is the one to buy to head your herd, that is, if your neighbor owns him now.

Even at that the story is not told in either the beef or dairy sires. What about the value of the impulse to proper and more profitable beef form, the impulse to greater dairy production in the second and third generation? What about the stimulated interest of your children in better stock and better farming? What about the results of breeding a poor bull with high-producing females? The sire is half the herd. He is more. He makes or unmakes a herd. His full measure is not found during his lifetime and often good sires are discovered too late. There are some bulls sold for beef whose value cannot be measured except in numbers with three figures.

In buying bulls get a good one. Pay as much as you can pay and with each new sire increase the price and further improve. Buy the tried bull, buy health, buy size, buy masculinity, buy beauty of form, buy production as indicated by form and records of dam. Large farms don't and can't afford to use an untried bull. They must see what he will do. They keep him until they know. Life is too short to use a bull because he is a male. He must have centuries of purpose; if beef, cheap beef costs; if dairy, cheap dairy costs. One cannot any longer on high-priced land afford to saw wood with a hammer or even use a poor hammer or a dull saw. You do when you use the scrub or poor sire.

John Bower.

PURE-BRED DAIRY BULLS OF ANY OF THE BREEDS MUST HAVE INDIVIDUALITY OF THE RIGHT SORT.

The Farmers' Open Forum

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Corn Experiment in Rock County.

To the Editor:—My experiments with Wisconsin No. 8 began in 1914 when I carried on an ear test on a small plot. The result of the first year's work demonstrated that it was well suited to my locality. Therefore, we planted the acre crop with this variety the past season. The field in which it was planted had grown clover the previous year. It was well manured during the winter and plowed in the spring. The land was well disked and harrowed until a fine seed bed was secured. The corn was planted in drills about May 2d. The cultivator was put to work as soon as the corn appeared above the ground, beginning with narrow shovels on the cultivator and finishing with the horse hoe, throwing the ground into the rows when the cultivation was made. The object at all times was to keep up a soil mulch. The corn was fully matured September 12th and was husked by hand when well cured. It yielded at the rate of three double wagon boxes to the acre, or about seventy-five bushels shelled corn per acre. This is the largest ever made in this neighborhood. I attribute my success with corn not only to the fact that it is a good-yielding variety but to the careful selection of the seed, the testing of each individual ear and good cultivation. Every ear that did not show strong germination qualities was discarded, so that each kernel planted produced a good, strong stalk. The product of the best-yielding row grown the previous year was planted on one side of the field. The results proved that like produces like in corn as well as in live stock. The yield was far greater on this part of the field and there were more and better seed ears. The Wisconsin No. 8 corn grows to a height of seven and eight feet and has a stalk of sufficient strength to withstand the storms that generally cause corn to grow down just before ripening. It has plenty of leaves; therefore, it is an excellent corn for fodder. It is a good yielder, as the results of two years have proven and its early maturing qualities make it an ideal corn for our locality.

A. Austin.

Rock Co., Wisconsin.

Wisconsin Farmer Article Gave Him His Start.

To the Editor:—In the spring of 1910 I seeded a five-acre piece to a good grade of medium red clover, the stand obtained being rather thin, but very healthy appearing. The summer of 1911 an article on clover appeared in The Wisconsin Farmer of which I took careful notice and got my first good points on handling clover from print. The first stand was cut for hay and a very good grade of clover hay was obtained. The second stand was left for seed and cut when nearly all the heads had ripened well and cut in the morning while damp with dew. To prevent shelling, the raking was also done in the morning, but the stacking was done in the afternoon when perfectly dry. The return from these five acres was about thirty-one bushels of seed that sold in the local market here at $11.50 per bushel as it came from the huller, one peck being shown at the bankers' association grain show at Columbus, Wisconsin, uncleaned as from the huller, winning first premium. The lecture of Professor Moore interested me sufficiently at the time to cause me to enter the short course in December, 1912, which I finished in 1914.

A. AUSTIN, ROCK COUNTY—SHOWING OF MR. AUSTIN'S GOLDEN GLOW CORN.

My contention is that clover, as well as all grains, should never be sown too thick to get the best seeds of good weight. I sow four or five quarts of clover seed to the acre and always get a good stand. As nearly as possible, I cut the hay when all blossoms have opened and for seed when all are as nearly ripe as possible. For seed the cutting is done when the clover is damp and is also raked damp to prevent shelling as little as possible. The stacking and hulling is done when the clover is as dry as possible. I have never obtained another yield of six bushels per acre. Two to three and a half bushels are about the average. After a good cleaning this clover seed has not only won premiums at bankers' association grain shows but at county and state fairs and farmers' institutes and four times in succession at the Wisconsin Agricultural Experiment Association grain show and once at the Fifth National Corn Exposition at Columbia, S. C., 1913. It all depends on the care and attention you give your grains, corn or clover, especially if you desire to exhibit them, then it only pays you to have the best. This is proven by the fact that I was awarded six premiums on seven exhibits made at the Wisconsin Agricultural Experiment Association grain show this year.

Dodge Co., Wis. J. L. Krause.

A Tractor on Every Farm

Keep fewer horses. Let the Eagle Tractor do your plowing easier, quicker, cheaper—and you'll need less hired help. Then when you require Belt Power the EAGLE GAS TRACTOR will be right on the job. It is the famous Eagle two-cylinder engine built for tractor service.

In the EAGLE TRACTOR you get superior engine qualities—3 bearing crank shaft—Cylinders cast in pairs—Valve-in-Head action, which gives more power and cleaner combustion for both tractor and belt work. You get *compactness* which specially fits it for small farm work.

Why buy for tractor work alone? Why buy a portable engine? You can get *both* in the EAGLE GAS TRACTOR. Why do without a tractor when you can get one built to fit Wisconsin farm conditions at a reasonable price—and save money by using it?

Every EAGLE TRACTOR has four wheels with two drivers; also radiator, pump and fan, sliding gear shift and four-block clutch applied at rim of pulley. High tension magneto with impulse starter does away with batteries. 80

Kirstin ONE-MAN STUMP PULLER

Makes Land Clearing Easy, Economical, Practical

You can't realize the wonderful *strength, speed and power* of the new Double Leverage Model Kirstin until you see one at work. Compound leverage gives any man the strength of a giant—enables him to quickly pull biggest stumps with ease. The Kirstin way is quickest, easiest and cheapest way to clear stump land. No heavy cumbersome machines to pull around, tip over or get stuck in boggy places. No sweeps to break, no horses to risk, no dynamite, no danger. With a Kirstin you simply walk into your stump field and "clean it up" in no time at all. You can

Try The KIRSTIN For Ten Days

Used Anywhere—Hills, Swamps, Rough Ground or Thick Timber.

Prove to yourself that it clears your land cheaper. Let the Kirstin's superior features demonstrate their value right on your own farm. Less weight—greater strength—lower cost—greater speed—all these valuable qualities are made possible by the Kirstin Quick-Detachable Connections, Auto Release, Non-Twisting Cable and other Kirstin patented features.

Write Today For The Big New Kirstin Catalog

which gives you full details about the Improved Double Leverage Kirstin One-Man Stump Pullers, Kirstin Service, Free Information Bureau, Time Payment Plans, etc. *Agents Wanted.*

PONIES FREE

BOYS! GIRLS!

Let me send you a Shetland Pony, Free.

"My Name Is Hero"

Did you ever dream of owning a real, live Shetland Pony? One that you could ride or drive anywhere That's the kind of a pony I want to send you, free. I have already made hundreds of boys and girls happy all over the country, by sending them beautiful Shetland Ponies. I want you have "Hero". So if you haven't a pony, and want this cute little fellow, **send me your name and address today, for my easy plan.**

Don't Send Any Money--Just Your Name

On a postcard say: "**I want you to send me a shetland pony and buggy, free**". Address:

UNCLE BOB, The Pony Man,
K-601 Second Ave. So., Minneapolis, Minn.

FREE to a Few Men. Suit made to measure in latest style and chance to make money in spare time. For samples and offer write KNICKERBOCKER TAILORING CO., Dept. 374, Chicago

Price---Dependability---Roominess

The Pullman's dependability---sturdy, clean-cut chassis, powerful motor, smart lines, and luxurious appointments are known and recognizable features.

But do you know that the Pullman is the roomiest car of its class on the market? No car gives the roomy comfort that a Pullman gives for $740.

Leg space is ample in driver's compartment and the rear seats are so built that there is no chance of crowding or cramping. The seats are real leather over real curled hair. A Pullman seat is the easy chair of the road.

As optional equipment to the Pullman, the C-H Magnetic Gear Shift may be had for $110 extra.

Write Dept. 5.

SPECIFICATIONS: 114-inch wheel base; 32-H. P. four-cylinder motor; Batavia non-skid tires all four wheels; cantilever rear springs; Independent electric starting and lighting systems; Dixie high-tension magneto; honeycomb radiator; one-man top; full floating rear axle.

Pullman Motor Car Co., York, Pa.

ADD $1000 to the Value of YOUR FARM with PEERLESS FENCING and GATES

THERE is more than one way to save money besides putting it in the bank. One of the best ways is to improve your farm. An investment of a few dollars in fencing pays more than 6%. You know it is perfectly safe and relieves worry.

You can replace any bad stretches with Peerless fencing at little cost, save time mending the old fence, save possible injury to animals, and save crops that might be ruined. *Good fences enable you to get full forage value from all your fields.*

There is a style for every purpose in the Peerless Line.

Hog, Field and Poultry Fences

All made from the best quality of Open Hearth Steel Wire, heavily galvanized by a special process. One-piece cross-bars give the fence upright rigidity and the special knot prevents wire slipping in any direction. Poultry fences are close spaced and are designed to stretch up straight and true without top or bottom rails.

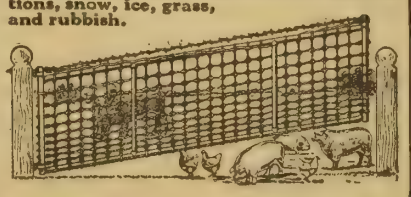
Peerless Gates

You are not saving money by using board gates. They may be a little cheaper in first cost, if you don't consider your time worth anything, but they are more expensive in the long run. Peerless steel and wire gates, with their big frames, heavy wire filling, handy and efficient fittings, last many times as long as any wooden gate and improve the looks of the place. There are many different styles, and you can find one to just suit you.

Before you buy a rod of fence or a single gate you should send for our big free catalogue and get full details about Peerless fencing and gates.

The Peerless Self-Raising Gate

Is one of the best selling styles in our entire line. It is no longer necessary to lug around the old-fashioned sagging, dragging, heavy gates. The Peerless lifts automatically and swings over all obstructions, snow, ice, grass, and rubbish.



In addition to being self-raising, it is extra heavy in both frame and filling. Big, massive frames of 1⅝-inch tubing and close woven all No. 9 wire, close mesh filling, insures long life.

Every part heavily electro-galvanized—no paint to wash or wear off in a year or two.

PEERLESS WIRE FENCE CO., 216 Michigan St., Adrian, Mich.

Cow-Testing Reports.

Chilton Dairymen Organize.

The Chilton Co-operative Cow-Testing Association is the latest addition to the list of cow-testing associations in Wisconsin. This association, whose members reside in Calumet county in the vicinity of Chilton, began work on March 10th with Oscar Kassman, of Sheboygan, as official tester. A fee of $1.15 per cow will be charged by this association. John Salm was elected president; John P. Koehler, vice president; Edwin T. Weeks, secretary-treasurer, and Lewis McGrath and Nick Bernard, directors. This is the second association for this county, as one has been operating at New Holstein for several months. The members and the number of cows entered follow:

John Salm	30
Lewis McGrath	20
J. P. Koehler	15
Nick Bernard	20
E. T. Weeks	18
Arthur Peik	18
Harry Merrill	15
Walter Seefeld	15
Cornelius Schmidt	15
Bert Classen	16
Alex O'Donnell	20
John Fox	15
E. Frank Davis	20
Henry Roach	15
Frank Nennig	25
John Bittner	14
Hertel Bros	16
Robt. Bittner	15
Julius Bowe	18

Ortlieb Bros.	20
Alex Pilling	18
O. C. Pilling	20
B. H. McCabe	20
Jos. Koehler	15

Winnebago Records.

February closed with some fine records in the Wisconsin County Cow-Testing Association, according to a letter to The Wisconsin Farmer from Archibald R. House, official tester. Cows throughout the association show a fine record. The forty-found list, however, is a little below that for January. The highest average in February was earned by the H. B. Mosely herd. He had six that averaged 50.6 pounds of butter fat. Milton Mackie was second with seven cows averaging 49.3 pounds of butter fat. The February report is as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent fat	Pounds B. fat
C. H. Slayton					
Fin Dell, G. G.	6	12-1-15	1104	8.1	89.4

A. R. House, Official Tester.

Grade Holstein Leads.

The report of Ivor Jones, tester for the New Richmond Co-operative Cow-Testing Association, for the month ending March 4th shows that a grade Holstein in the herd of Alvin C. Kruschke led with a production of sixty-two pounds of fat. This cow during the last three months gave 5,157 pounds of milk. The tester's report follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent fat	Pounds B. fat

Saves Time and Hard Work

IN Apex Fence, the "swinging joint" allows the line wires free play—prevents binding or buckling. Easier to put up—lasts longer and holds its shape better than any other good fence that we know of. Fence your farm the "Apex Way" and have the best looking fence that any man could own. Uphill and down dale, the fence fits the land smoothly—every line wire tight—every stay wire standing erect. Made of best grade, open hearth steel wire—full gauge, thoroughly galvanized.

APEX
Steel Drive Posts

Save Post Hole Digging—Add Years of Life to Your Fence

Made of elastic, carbon angle steel—the strongest and toughest post material known. Drive right into any soil, gravel or soft shale. Think of the work saved in a busy season.

Burn fence rows clean—ground the lightning and protect your stock.

Write for the Free Books and read how you can save money, time and hard work.

Janesville Barb Wire Co.
633 S. Franklin St., Janesville, Wis.

Fence Posts

The Century "T" Steel Drive are rigid. Made of heavy high carbon "T" steel like illustration; strongest known shape in steel—means a fence for life. Means strength, durability and economy. We are the originators of the Century "T" Steel Post.

The home-raised heifers generally develop into better and more profitable cows than most of those which can be purchased.

HYATT

Roller Bearings

In the Best Farm Machines

That farm machine is best which is always ready for work and which requires the least attention.

Hyatt Roller Bearings in an automobile, a tractor or any machine used on the farm mean a maximum of bearing service with a minimum of attention and care.

Hyatt Roller Bearings practically eliminate friction, thereby making power available which otherwise is wasted.

Hyatt Roller Bearings keep gears and shafts in constant alignment, thereby preventing wear and tear and frequent breakdowns.

Hyatt Roller Bearings require no attention save occasional lubrication.

Make sure your Automobile and your Tractor run on Hyatt Roller Bearings.

"More Wagon for the Money"

—that's the policy that has increased the sale of the Light Running West Bend Wagons every year. And for the same reason the West Bend should be your choice.

WEST BEND WAGON

25% Lighter Draft Guaranteed

When you buy the West Bend you get a high grade wagon that is honestly built of the best materials and will give you real wagon service. And the price is right. Quality considered, it is lower than you would expect to pay.

Ask Your Dealer to show you a Light Running West Bend wagon. Write us for catalog showing full line of wagons for every farm purpose. Mailed free—write today.

Schmidt & Stork Wagon Co., 123 Mill St., West Bend, Wis.

Like Springs of Steel

Gives But Doesn't Go Down

The wavy strand wires in **Square Deal** Fence are specially drawn in our own wire mills. They never lose their elasticity. They give under sudden strain, but don't stretch out of shape. They are like springs of steel—full of life, but never brittle. They keep—

Square Deal Fence

tight and trim the year 'round. The Square Deal Lock double grips the one-piece stay wires to the strand wires—prevent slipping, bagging, sagging and buckling.

FREE to Landowners Only—Kopp's New Calculator—a 160-page book (worth 50c) answers almost every problem arising on the farm. This valuable book and our latest catalog FREE.

Keystone Steel & Wire Co., 638 Industrial, Peoria, Ill.

HORTICULTURE

Disinfection of Seed Potatoes.

The treatment of seed potatoes with formaldehyde or with corrosive sublimite has been recommended for many years as a preventive of scab and other diseases carried on the tubers.

Such treatment is, on the whole, profitable, but has several limitations which should be clearly recognized to prevent disappointment, according to the specialists of the United States Department of Agriculture. The object of disinfecting seed potatoes is to destroy the germs of scab and other surface parasites which might otherwise be planted with the seed and infect the new crop. Only surface infections are reached by this method. It is only partially effective against deep pits of common scab. Formaldehyde is less effective than corrosive sublimate against the black sclerotia or resting bodies of Rhizoctonia or russet scab, and against powdery scab. Neither chemical, as ordinarily used, will destroy silver scurf. Either one will kill surface infections of blackleg, but neither will reach the internal infections common in tubers from blackleg hills. Neither fusarium wilt nor late blight infection in potato tubers can be reached by any seed treatment, nor can any of the nonparasitic diseases of potatoes, such as mosaic, leaf roll and curly dwarf, be prevented. See farmers' bulletin 544 for description of these troubles.

Clearly, therefore, the most important precaution against these diseases is to select clean, disease-free seed potatoes from healthy, vigorous plants, as determined by field inspection during the growing season and at harvest. Seed treatment should then be applied as an additional precaution. It will not be effective, however, if the soil where the potatoes are to be planted is already full of disease.

Soil conditions have an important relation to potato tuber diseases and many of these are widely spread throughout the country, perhaps native to some soils. Common scab is favored by a neutral or slightly alkaline soil and seldom gives trouble in acid soils. It is, therefore, increased by liming and by fresh stable manure, wood ashes and alkaline fertilizers, such as nitrate of soda and ground bone, while acid phosphate and sulphate of ammonia tend to diminish scab.

Rhizoctonia occurs to some extent in nearly all soils, but appears to attack potatoes most when the conditions are unfavorable to the best development of the potato plant. Bring the land to an ideal state of tilth to minimize loss from Rhizoctonia.

Powdery scab is worst on cold, wet or poorly drained soils. Blackleg, on the other hand, is carried by infected seed. No potatoes showing a deep brown discoloration at the stem end should be planted.

Sulphur tends to prevent common scab. It is not a substitute for corrosive sublimate or formaldehyde, but is a good drier for cut seed. Applied to scab-infected soils at the rate of 500 pounds per acre it reduces the scab, but such heavy applications cannot be generally recommended as profitable. Preliminary experimental trials are advised.

The formaldehyde treatment consists in soaking the potatoes, before cutting, for two hours in a solution made by adding one pint of formeldehyde to thirty gallons of water. The solution can be used repeatedly. The gas treatment is no longer recommended.

Corrosive sublimate is used at the rate of 1-1,000 for one and one-half to two hours. Dissolve two ounces of the salt in hot water and dilute to fifteen gallons. This is a deadly poison. Use with great care. It must also be kept in wood, porcelain or glass vessels, as it attacks metal. It is more effective than formaldehyde, particularly against Rhizoctonia and powdery scab. Do not use the same solution more than three times, as the strength diminishes with each lot of potatoes soaked.

To treat large quantities, set several barrels on a slightly elevated platform. Fit a plug in a hole in the bottom of each barrel, fill with potatoes, cover with solution, let stand two hours, draw off solution and pour into another barrel. Increase the number of barrels in proportion to the quantity to be treated. Another method is to use a large wooden vat or trough, into which the potatoes in sacks are lowered by a rope and pulley and later hauled out, drained and dried on slatted racks.

Seed potatoes may be treated several weeks before planting, provided they are not re-enforced by storing in old containers or storage bins.

Sprouted potatoes are injured by

treatment, but will throw out new sprouts. In general, however, potatoes will not be injured by following the above directions. Many growers believe germination is improved by treatment.

Best Varieties to Select.

To the Editor:—For the best results in fruit growing, selection of the best varieties and those best adapted to our climate is required first of all.

In selecting apples the Jonathan, McIntosh, Wealthy, Snow, Shiwassee Beauty, Rawles' Janet and Northwestern Greening are fine for local trade as well as commercial purposes. The McMahon and Wolf River are profitable varieties and demand a good price when shipped to large cities. The soil should be kept rich and full of humus; trees should be kept well trimmed, leaving only three or four main limbs from the trunk. The branches should be well thinned out so as to have the fruit all of uniform size, as it is the large fruit that possesses the best quality. The trees should be well sprayed for scab and curculio as soon as the fruit buds begin to show pink, then every ten days or two weeks until fruit is an inch thick. One and one-half gallons commercial lime sulphur to fifty gallons of water, with three pounds arsenate of lead, is a good formula to use.

Early Richmond and Montmorenci cherries do best and must be well sprayed, and, like plums, for best results the soil must be rich and well cultivated.

Raspberries and blackberries must have winter protection and be well mulched during the growing season to be brought to perfection. This may be done by laying the canes down one way and turning a back furrow over them, then cover the ground with a mulch of straw. As soon as the ground thaws in the spring the straw should be removed, the furrow worked down level and the mulch placed back around canes. Keep on in this way until all is level and mulched. Then the canes should be cut back one-third of the previous year's growth and cultivated between the rows, which should be nine or ten feet apart.

John T. Wood.

Richland Co., Wis.

Plant Food in Screenings.

It takes the same kind of plant food to make weeds as to produce the grain crops. In an eight years' investigation of wheat and screenings at the North Dakota Experiment Station, a determination was made of the plant food removed in the screenings. This data applied to the screenings in the 1915 wheat crop, as marketed, shows that these screenings contained enough plant food to produce 5,500,000 bushels of wheat.

The weed seed that make up the screenings in oats and barley would increase this amount considerably. A large proportion of the weed seed shatters before the grain is cut, when it is being cut and when the cut grain is being handled. The plant food used up by weeds would produce a good many million bushels of grain.

SCENE IN JOHN T. WOODS' ORCHARD, RICHLAND COUNTY, WISCONSIN.

SINGLE CLUSTER McMAHON APPLES, GROWN BY JOHN T. WOOD, RICHLAND COUNTY, WIS.

A Successful Meeting.

To the Editor:—The most successful meeting in the history of the Marathon County Order of the Wisconsin Experiment Association was held at the court house at Wausau, Saturday, March 4th. About fifty members from all parts of the county were in attendance.

The following topics were discussed: "Experimental Plots of Corn and Alfalfa," by H. H. Humphrey, county field man; "Prospects for the 1916 Fair," by J. D. Christie, secretary of the Marathon County Fair; "Projects for the Season," by Prin. A. G. Burg, of the agricultural school; "County Exhibits at the State Fair," by L. H. Cook.

A large number of the farmers will sow experimental trial plots of alfalfa the coming season. The large shipment of pure-bred Wisconsin seed corn brought into the county by the agricultural school also found a ready market from the members of the association. Sufficient orders for limestone to make up a carload order were also taken. The pure-bred Wisconsin grains and corn are now thoroughly established in Marathon county and are being rapidly disseminated by the members of this order and steadily grow in popularity. Golden Glow and Wisconsin No. 8 are the leading varieties of corn and the Pedigreed Oderbrucker barley, Wisconsin Pedigreed No. 1 oats and Swedish Select Pedigreed No. 5 are the most popular varieties of grain.

A very pleasant feature of the meeting was the banquet given at noon to the members of the association by the business men's organizations of Wausau. In addition to the members about thirty of the leading business men of the city were present and no one present failed to be impressed by the hearty spirit of co-operation between the business men and farmers. Mr. A. L. Pradt was toastmaster and Mayor John Ringle, Senator Albers, J. D. Christie, F. J. Bandy among the speakers.

The following officers were re-elected unanimously for the following year: F. J. Bandy, president; Herman Amhaus, vice president; A. G. Burg, secretary-treasurer.

H. H. Humphrey.

Marathon Co., Wisconsin.

About 150 young men and young women will be graduated from the school of agriculture at University Farm, St. Paul; March 29th. These young men and young women will have completed three years of study and practical work, six months of study out of each year being spent at the school and six months in practical work on farms and in farm homes.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Follow Instructions in Handling Incubator.

To the Editor:—In poultry raising what a large field to work on if you put your heart and hands in it and lots of work, yet without work we have nothing and we must not expect a dollar for every lick or step we take, for there is many a step and hour put in without returns. In the end, however, we have a fine flock of chickens if we keep at it. Just at present is such a busy time for the farmer's wife, with garden coming on and housecleaning and the poultry. She must have good health and strength if she wants to keep ahead or even up with her work.

If we want any early chicks now is the time to do your licks, as the early bird catches the worm. We not only have early fries but also good fall and winter layers, which means a whole lot. If you use hens set several at once. Look the eggs over every few days. If they are dirty and some have been broken, clean at once. Then when they hatch give to one or two hens and there won't be so many hens to look after.

If you use an incubator tend it as per instruction. Don't be afraid to air them a plenty, as that gives strength. About the eighteenth day take a few eggs out of the incubator and put them under as many hens as you will need and when they hatch those they will take all the chicks you give them. I never put in the brooder, as I think the hen much better and according to nature and we can't improve on that.

I always keep whole black pepper on hand and as soon as I see a hen or chick sick or droopy I give black pepper, to the hens a teaspoonful and to the chicks one kernel. It is a tonic and quite often helps. As a rule I don't believe in doctoring chickens, for you hardly ever succeed. The best way is to prevent all the trouble you can by giving proper care.

For keeping down mites and lice I have found no equal to coal oil and crude carbolic acid, two parts of coal oil and one of crude carbolic acid. Spray roosts and nest once a month and you will not be bothered with either. Keep fighting vermin and disease and put in lots of hard work and good will. Discouragements will come, but don't let it get the upper hand and you will succeed. S. M. R.

Homemade Brooder.

To the Editor:—In your March 9th issue W. S. wants directions for a homemade brooder. His plan of putting a stovepipe up through the middle of a box with a lamp under the box will not be very satisfactory, as the heat in the box will not be distributed very evenly and most of the heat will escape through the pipe. A better plan will be to take a box about two feet square and a foot deep or larger, according to the number of chickens, cut a round hole five inches in diameter three inches from the top in one end and a three-inch hole four inches from the top in the opposite end. Get your tinner to make a three-inch pipe long enough to extend through the box with an elbow at each end and about six inches of pipe on one elbow. Also a five-inch pipe long enough to extend into the middle of the box with one elbow and a short piece on the elbow. The three-inch pipe goes inside the five-inch pipe. The lamp is placed under the elbow having the short piece of pipe and other elbow turns down, the object being to prevent too much heat from escaping through the pipe. The object of the five-inch pipe is to provide ventilation. There will be a constant stream of fresh, warm air entering the brooder through the space between the pipes and a few holes should be bored through the box near the floor to allow the foul air to escape. The box will have to be set up a little from the floor to have room for the lamp and the lamp must be a few inches lower than the opening in opposite end of pipe to provide draft. The small pipe can be made the right size to fit on lamp burner and with a small hole covered with mica opposite the flame no chimney is needed. Glass and doors can be put in the top or sides to suit and exercising compartments added if needed.

H. E. Roberts.

Tells why chicks die

Write today for the poultry expert's valuable free book, "White Diarrhoea and How to Cure It." This book contains scientific facts on White Diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 95 per cent of every hatch. The valuable book is free. Send your name and address for it now. E. J. REEFER, 8483 Reefer Building, Kansas City, Mo.

I Will Tell You How to Make Poultry Healthy, Make Hens Lay, Make Chicks Grow

Now that mating time has arrived, it's up to you to see that your poultry get a tonic and internal antiseptics to make them vigorous and free of disease. *Therefore, feed Pan-a-ce-a.*

In that condition your hens will lay better, you will get more healthy, fertile eggs and the chicks will stand a better show of reaching maturity. *Therefore, feed Pan-a-ce-a.*

And, before the hatches come, I want to warn against gapes, leg weakness and indigestion, for these ailments are responsible for half the baby-chick losses. *Therefore, feed Pan-a-ce-a*—it will save you these losses.

Dr. Hess Poultry PAN-A-CE-A

It's a Tonic—Not a Stimulant

Here are a few of the valuable ingredients in Pan-a-ce-a to meet the requirements of your poultry which I have just stated: *Nux Vomica*, a nerve tonic; *Carbonate of Lime*, a shell former; *Hyposulphite of Soda*, an internal antiseptic; *Quassia*, an appetizer; *Iron*, to enrich the blood, and other valuable ingredients, all well known and recommended by the highest medical and veterinary authorities.

Perhaps the strongest argument in favor of Pan-a-ce-a is the fact that it has been on the market for 22 years and is growing in favor each year. Read the guarantee in the right-hand panel—that is your protection. There is a Dr. Hess dealer in your town, a man whom you know, a man who stands back of my guarantee and will return your money if Pan-a-ce-a fails to make good. 1½ lbs. 25c; 5 lbs. 60c; 25-lb. pail, $2.50 (except in Canada and the far West).

25-lb. pail, $1.60; 100-lb. sack, $5.00
Why pay the peddler twice my price?

Your stock need this tonic now to harden and condition them after the confined heavy feeding of winter. There's nothing better to put horses in trim for hard spring and summer work. Milch cows need it just now to prepare them for the heavy milking season ahead. Dr. Hess Stock Tonic makes all stock healthy, keeps them toned up and expels worms. Sold under money-back guarantee. 25-lb. pail, $1.60; 100-lb. sack, $5.00; smaller packages as low as 50c (except in Canada, the far West and the South). Send 2c for my *new* free Stock Tonic book.

Dr. Hess Instant Louse Killer

Kills lice on poultry and all farm stock. Dust the hens and sprinkle it in the nests, or, if your fowl are provided with a dust bath, sprinkle Instant Louse Killer in the dust bath every other week—the hens will do the rest. Also destroys bugs on cucumber, squash and melon vines, slugs on rose bushes, etc. Comes in handy, sifting-top cans. 1 lb. 25c; 3-lb. can 60c (except in Canada and the far West). I guarantee it.

Gilbert Hess M.D., D.V.S.

If you have a sick or injured animal, write Dr. Hess, tell symptoms, enclose 2c stamp for reply, and he will send you a prescription and letter of advice free of charge.

Wisconsin Wins In Big Hatching Contests Every Year

Why Pay More

For only $10 you can get these two prize winning machines, delivered, freight paid east of the Rockies. You take no risk—money back if not satisfied. You can order direct from this ad. Ask the publisher about us.

Both Machines $10 Freight Paid For Only

Wisconsin Incubators have long proved their wonderful hatching qualities. Competing with every make known, they won in the five big annual National Hatching Contests. Think of it. Five consecutive victories. That certainly proves you can't make a mistake. Shipped on **30 Days' FREE Trial**

MONEY BACK IF NOT SATISFIED

10-YEAR GUARANTEE

We also furnish 180 Egg Incubator and 180 Chick Brooder both for only..$12

Wisconsins have hot water heat, double walls, double glass doors, copper tanks and boilers, self-regulating. Nursery under egg tray. Made of finest, select, clear **CALIFORNIA REDWOOD**, not pine, paper or other flimsy material. Incubator finished in natural color—not painted to cover up cheap, shoddy material. Incubator and Brooder shipped complete with thermometers, egg tester, lamps, everything but the oil. This is the best outfit you can buy. If you don't find it satisfactory after 30 days' trial, send it back. Don't buy until you get our new 1916 catalog, fully describing this prize winning outfit. WRITE FOR IT TODAY. You can't make a mistake in buying a Wisconsin. On the market 15 years.

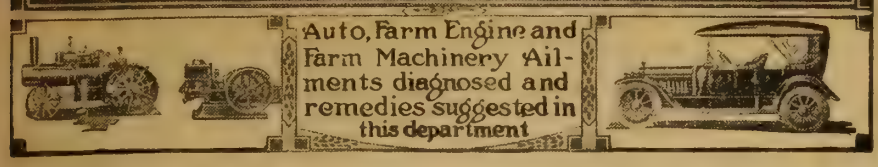
FARM MECHANICS



QUESTIONS AND ANSWERS.

Making an Ammeter.

I would like to have you explain how to make a practical ammeter.

Answer.—It is not practical to make an ammeter on the farm. An ammeter is a delicate instrument and special costly apparatus is necessary to make it and to adjust or "calibrate" it.

Engine Overheats.

I have a thirty-horse-power Waukesha motor in a tractor. The motor was giving fine service until all at once it failed. The trouble is that it boils around the cylinders and the valves stick; it pops in the carburetor and loses power, almost stopping. The valves have been ground and the cylinders cleaned. The water pump seems to work all right and the water in the radiator seems cool. The spark is set correctly. The motor is not overworked. It runs all right for two or three minutes until the cylinder becomes hot. What is wrong?

Answer.—Possibly your fan belt is too loose or your fan is not working properly. There may be sediment in the bottom of the radiator that hinders the water circulation. You may be using too much gasoline. The most probable trouble is that the spark is not properly timed, occurring too late. Carbon deposits also cause overheating.

Speed of Tractor.

I am planning making a tractor, using a Ford engine and differential, placing twenty-five-tooth sprocket wheels on the axles in place of the auto rear wheels and driving a thirty-six-inch sprocket on the bull wheels from the twenty-five-tooth sprocket, which is ten inches diameter. The bull wheels are forty-eight inches diameter. At 900 revolutions per minute, what would be the speed of the tractor on high and low, and what would be the draw-bar pull?

Answer.—The Ford gear ratio is 3.636 to 1 on high and 9.96 to 1 on low. Your speed on high would be about nine miles an hour; on low about two and one-half miles per hour. While the Ford motor will deliver twenty-two horse power at high speed its power at 900 revolutions per minute would probably not exceed twelve horse power. As considerable power is always lost in transmission, you could not count on over seven horse power at the drawbar. At two and one-half miles per hour this would correspond to a pull of 1,050 pounds; at nine miles per hour the pull would be only 300 pounds.

New Engine Lacks Compression.

I have bought a new five-horse-power engine. After trying it out I find that it lacks compression. I have twice notified the dealer that sold it to me and each time he sent out an "expert" to put it in working order, but after he got through with it the engine was no better than before. The expert told me the engine had not run enough to have compression. When he took the piston head off I noticed a lot of carbon on it. It looks to me like the piston is secondhand with new rings, and I think the cylinder is also secondhand. I told the dealer to either give me a new engine in exchange or my money back, but he refused to do either, saying that if the engine had no compression in three years he would give me a new cylinder and piston. Please tell me what to do.

Answer.—In the first place, we would advise you to avoid business dealings with the above dealer. No reputable dealer would care to unload a worthless, secondhand engine upon a customer. Every good engine is lapped in and tested at the factory and should have good compression when it reaches the customer.

In the second place, since you have the engine on your hands, give it a fair trial. If the rings are new your compression will become better after the engine has run for some time. Make sure that the valves are seating. It may be that the valve stem guides are too long, holding the valves off the seats or that the push rods are too long, also holding the valves off their seats. The carbon is probably due to too much oil working past the poorly fitting rings.

Benzine as Engine Fuel.

Will benzine work satisfactorily in a two-horse-power marine engine?

Answer.—It would not excepting under very favorable circumstances. Benzine freezes at 43 degrees Fahrenheit.

Generator Proportions.

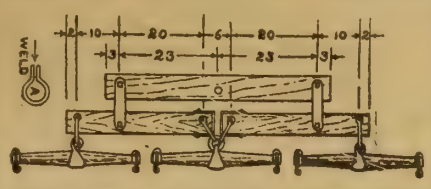
I am constructing a ten K. W. 220-volt fifty-ampere generator to run at 1,600 R. P. M. I am puzzled about the winding. The generator has four poles. The frame is made of one-half-inch by six-inch wrought iron, sixteen inches in diameter on the inside. Each of the four field cores are one and one-half inches by four and one-half inches. They are made of wrought iron. The pole pieces are wrought iron, five inches long and four inches wide. The armature is five and one-half inches in diameter. It is made of thin sheets of soft iron, and has thirty-six slots, one inch deep and about five-sixteenths of an inch wide at the top. I have a book that says to allow 500 circular units for each ampere flowing; and that only one-half the current is found in any one wire at any time. According to this rule, number nine wire would be the right size to use. The book also says to allow thirty to thirty-six inches of wire for each volt. By this rule, twelve turns in each slot would be enough. Is this right? How many ampere turns should the field coils have? What size wire? Each bobbin has a winding space two and one-half inches deep and four and one-half inches long on each side.

Answer.—You would get better results with your frame made of one-inch by six-inch iron. No. 9 B. and S. gauge wire is all right for your armature. You should have about twenty-four wires in each slot, but you will probably not have room for more than eighteen. Each pole will require 400 ampere turns. Use No. 16 B. S. G. wire.

A Three-Horse Evener.

Please give me the measurements for making a three-horse evener for a riding cultivator. Please give the measurements of the doubletrees and all the strap irons.

Answer.—The figure shows how such an evener may be constructed. All the length dimensions of the doubletrees are shown in the figure. The singletrees should be twenty-eight inches long. The singletrees



should be about two and three-eighths inches in diameter at the middle and about one and three-fourths inches in diameter at the ends. Hickory is the best wood for both doubletrees and singletrees. The two short singletrees should be about one and three-eighths inches thick, three and three-fourths inches wide. The long doubletree should be about one and three-fourths inches thick and four and one-half inches wide. In order to prevent the ends from splitting it is best to bind the ends of the doubletrees with strap iron about one-eighth of an inch thick, fastening it with a bolt or rivet five-sixteenths of an inch in diameter. These straps are particularly essential at the inner ends of the short doubletrees to keep the clevis pins from pulling out.

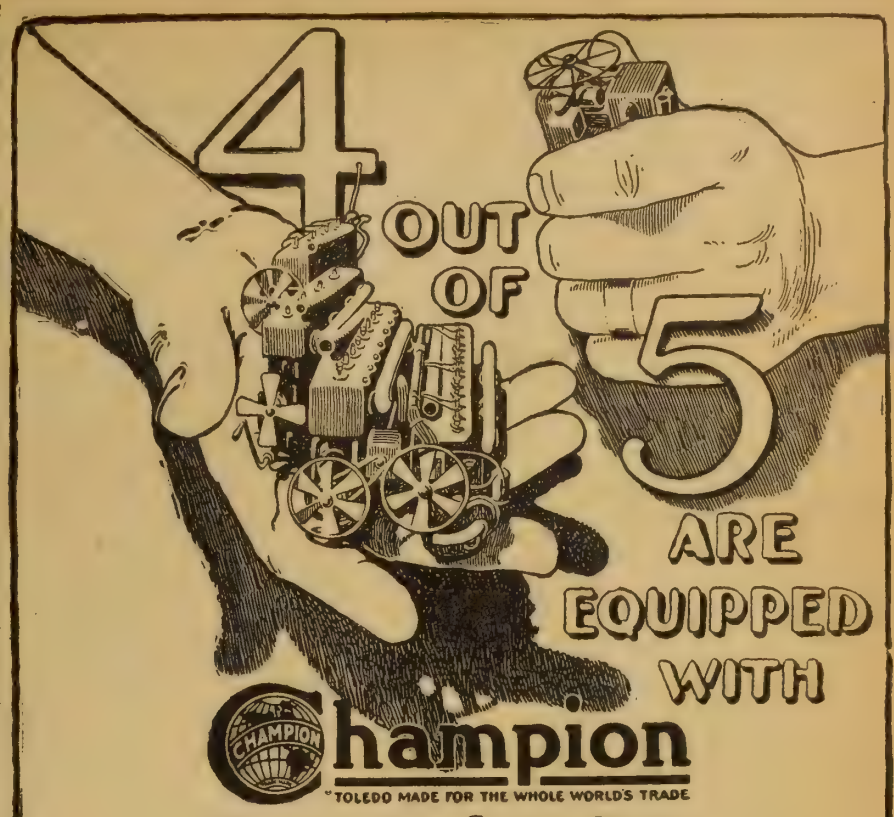
The ends of the singletrees should be protected by ferrules. These may be made of strap iron one-eighth of an inch thick and one and one-half inches wide, bent as shown at A in the figure and the two ends welded. These ends then form a lug through which a hole should be punched to retain the hooks. The hooks should be made of three-eighths inch round iron or steel. The center clips and ring should be made of one-half inch round iron or steel. To forge, upset and flatten out the middle first; then scarf the ends, bend to shape and weld. The clips for the two end singletrees are given a quarter twist, as shown in the figure. The connections between the singletrees and short doubletrees are ordinary one-half inch clevises. The straps between the doubletrees may be three-eighths of an inch thick, two inches wide and ten inches long. Use two straps at each end, one on top, one below. Use five-eighths inch machine bolts to fasten the straps.

Some House Wiring Questions.

Which is the better, solid or split knobs? Is double braid wire better than single braid? To what are the heavy electric light fixtures fastened to keep them from falling from the ceiling? Will a 110-volt lamp burn out on a 220-volt circuit? Do sharp corners do any harm in wiring for electric lights? Do lighting plants having 220-volt circuits also have 110-volt?

Answer.—It is a matter of personal choice as to the type of knob. The writer favors the solid type. Double braid wire is often preferable. There are several ways in which fixtures are fastened to the ceiling. They may be screwed to a gas pipe or conduit, using an insulating joint; they are sometimes fitted with a little foot or bracket that is fastened to the lath or joist by means of screws; or the outlet box may have a plug and the fixture screwed on the plug. A 110-volt lamp will burn out on a 220-volt circuit unless two lamps are connected in series. Many power plants use a three-wire system. The voltage between either outside wire and the middle wire is 110 volts, while the voltage between the two outside wires is 220 volts. Thus by making proper connections either 110 volts or 220 volts may be taken from the main lines. Sharp corners do no harm if they are not sharp enough to injure the wire mechanically.

"Try-a-bag" of fertilizer. Our brands are soluble and active, and not only increase yield, but improve quality and hasten maturity. Agents wanted. Address American Agricultural Chemical Co., Cleveland, Cincinnati, Detroit or Baltimore.



Dependable Spark Plugs

THE *official estimate* of the AUTOMOBILE CHAMBER OF COMMERCE on automobile production this year is—

One million four hundred thousand cars.

Of these, over a million will be Fords, Overlands, Studebakers and Maxwells, equipped with Champion Dependable Spark Plugs.

The Manufacturers of *over one hundred other cars* will equip this year *exclusively* with Champions. *Their production will exceed 120,000 cars.*

So of all the automobiles produced this year it is apparent that more than four out of five will be dependably equipped—with Champions.

Champions have been selected by these hundred and more manufacturers because their exhaustive tests have shown that the Champions designed for their motors *give the best results.* Remember *their* conclusions when *you* replace the plugs in *your car.*

Three Thousand New Wisconsin Farmers.

To the Editor:—Men who can read the alphabet no longer question the farm development of Upper Wisconsin. Any section of any state that exhibits an increase of 200 per cent in value of all farm property during a period of ten years furnishes ample proof of productiveness by this item alone. That northern Wisconsin is opening up into an agricultural region of excellence and promise is seen in the fact that 1,300 families located along the lines of one railroad in 1915. These were all new settlers going on the land. The true worth of Upper Wisconsin and its possibilities for the production of cereals, potatoes, fruits and a wide variety of feeds for stock is rapidly becoming understood and further enrichment is chiefly a matter of presenting these opportunities to homeseekers with the means to settle and cash in on the crops.

And the division of immigration of the Wisconsin Department of Agriculture is in touch with a large number of prospective settlers possessing the financial ability to convert these uncultivated lands into productive farms. Last season about 3,000 new farmers were added to the upper counties, a very good showing in view of the widespread prevalence of the foot-and-mouth disease. In ever-increasing numbers we are hearing from those residing in the high-priced sections of other states. In Illinois—aside from Cook county—these districts include Rock Island, Winnebago, Sangamon, Dupage, Kane, Lake, La Salle and Champaign counties, while in Iowa, Blackhawk, Cerro Gordo, Dubuque, Linn, Marshall, Polk, Woodbury and Scott counties manifest the greatest interest in Wisconsin. Southern Minnesota and Indiana also have supplied the Badger state with a large number of excellent farmers.

The welfare of the new settler is the welfare of the commonwealth, so what can the state do to make the prospective homeseeker's venture a success? In the first place, the state can advise that the newcomer buy no more land than he can use. Those familiar with development will agree that too many purchase more land than can profitably be handled—sometimes paid for. Admitting the amount to buy depends upon the capital and individuality of the prospect, it is nevertheless true that in most parts of the north settlers are found who have burdened themselves with land beyond their means. Eighty acres makes a nice-sized farm and is sufficient for the man who proposes to develop and work the land himself.

The state also can insist that homeseekers locate on land that is productive and well situated as to roads. The farmer who goes in and spends his time, money and effort in developing the cut-over country is justly entitled to good land to begin with, not gravel ridges, coarse sand nor undrained swamp. To help in making that selection no state is so well supplied with information as Wisconsin. The soils department of the college of agriculture has made an extensive study of the subject and the entire northern part of the state now has been surveyed as to types of soil and soil maps are offered to any person who cares sufficiently for them to write a postal.

The crops especially suited to the various soils also are briefly outlined in publications issued by the department of agriculture, while methods of preparing the soil, seed selection, cultivation of crops and harvesting receive full discussion in bulletins of the agricultural college. The crop statistics division of the department of agriculture will furnish data on the acreage and production of all crops in every county of the state.

The location of the new lands, their fertility conditions, their situation with reference to market, how to open up the farm, what crops to grow and how to grow them. These are subjects with which every prospective settler should become familiar. To do so practically insures his success. And these are topics that may be understood before he locates, and, better still, before he invests his money.

Timothy With Alsike.

To the Editor:—Some six years ago we started raising clover seed by selecting the very best seed that we could get at that time. This seed we sowed with a nurse crop of oats which was cut when fully ripe. The clover had an excellent stand at the time. The field was pastured lightly during the fall months and at the time winter set in there was enough growth to hold the snow. The following year found that alsike will lodge very badly when there are heavy rains after the blossoms appear. We believe it is better to have a high percentage of light seed to overcome this. We now sow about fifteen to twenty pounds of timothy seed with the alsike. The timothy will help to hold up the alsike, which will then ripen out more fully. In harvesting the crop we have found the presence of timothy a great help, as it holds up the alsike so that the mower will cut below the heads. It also slides off the windrower more easily than the alsike alone would. Another advantage of the mixture is the quality of the straw after hulling. The straw is clean and brighter and cattle eat it more readily. We have also found that alsike seed will be larger and more plump when grown with a mixture of 15 to 25 per cent of timothy, than it would if grown alone. After our seed is hulled we reclean it. We find no trouble in cleaning out all but 2 to 5 per cent of the timothy.

Timothy can all be cleaned out of the alsike, but, of course, it is a much slower job than cleaning down to 2 to 5 per cent of timothy seed. The timothy and light alsike which is cleaned out will make excellent seed to sow on cut-over lands for pasture. We have sowed it on our fields for hay with excellent results.

DAIRY

Looks of Animals Deceive.

When the inexperienced dairyman undertakes to buy cows he is very often deceived. In many cases he has to pay dearly in the transaction. This may be in paying overvalue for a useful cow, or what is more expensive still, for cows that prove to be very unproductive. Such cows not only give a small flow of milk, but if resold must be dispensed with at a great sacrifice.

Some men who are unacquainted with the features possessed by a good cow may think that the largest, finest-looking animals are the best to buy, but this is more often untrue than otherwise. They may bring fine, big calves. Indeed, the poor milkers generally produce the largest and handsomest-looking calves. They may be tempting to purchase, but no one should let this be an influence when selecting good milk producers for dairy purposes. Quality and quantity of milk are the most essential points to be considered and if the cow meets one's desire in these respects her looks do not amount to much, provided she is in good health and not too old. Cows having a handsome appearance may be desirable, but those possessed of the greatest milking capabilities are often unattractive.

In starting out to buy cows for the dairy if one is not a good judge himself it will pay him to enlist the services of a competent man who is enabled to select good milkers.

It is not an easy matter to find good cows and when found they cost a good deal, but no one should stand back on the price unless it is out of reason, for the purchaser will be well repaid for money thus invested. By breeding the kind of cows wanted the difficulty in finding animals of the desired sort can in time be overcome. The better class of cows from high-producing dams should be retained and bred to pure-bred dairy bulls. The first calves from such cows will be one-half pure, and, gradually, by the persistent and successive use of such sires, the original native blood will be so diluted by pure blood that the resultant animals will be practically pure bred.

Simple Method of Testing.

Every dairyman ought to have a Babcock testing outfit of his own, or at least himself and a neighbor or two own one between them. There are, however, many who haven't got a tester, nor have their cows been tested by someone else. By the following simple method they may test their cows so as to get a comparative idea of their value.

Get as many small-necked bottles as there are cows in the herd and immediately after milking each cow perfectly dry weigh her milk to get the number of pounds. Then stir or pour it from one vessel to another until it is thoroughly mixed and from the milk of each cow fill one of the bottles full and set it away in a cool place until the cream has risen. The amount of cream showing in the neck of the bottles will show at once which cows give the richest milk.

It is important that the bottles are all of the same size and make. Long-necked bottles in which soft drinks are sold or bottles in which catsup has been packed for sale in stores will make good test bottles for this purpose. A label should be pasted on each bottle on which is written the name or color of the cow from which the milk came. You know how many pounds of milk each cow gives and which one's milk is the richest. Take the milk obtained from the best cow and that from the poorest one to a creamery and have it tested, being sure to mix the milk thoroughly from each cow before taking the samples for testing. If a dairyman closer than the creamery has a testing outfit the samples can be taken to him.

The Babcock tester will show exactly what each cow is doing and from observing the difference in the various test bottles a very close estimate can be made of what any cow in the herd is doing. The man who makes a careful test of his cows often meets with a surprise in finding that some members of his herd are getting their board without having to pay anything for it. When he finds this to be true he will, of course, lose no time in getting rid of them and putting better ones in their places.

When the Tester Comes.

To the Editor:—Farmers and dairymen usually gain a great deal of information from the association tester when he comes on his monthly trips. One time the writer spent a night at a farm home in southern Minnesota in company with the tester for the cow-testing association of that locality. Literally it would have seemed that all members of the family had been saving up questions for a month. The good housewife told of her experience with butter and with the cream. She asked whether it paid best to sell butter or cream. The tester was able to give her suggestions from his own experience, from what he had seen in the twenty-five other homes on his circuit.

The good woman was delighted, and after her queries on dairy subjects had been satisfied he propounded further questions on garden and features of homemaking.

Finally milking time came. Twenty-five or thirty cows were to be milked. Almost the whole family was on the job. There was the farmer, his two well-grown sons and the mother doing the milking and two or three small children assisting in one way or other. Many topics were brought up for discussion as the milking progressed. Always they referred to the tester to give them some enlightenment. One of the boys was very anxious to know whether their cream separator was skimming clean. The tester promised that he would try out a sample of skimming milk from the machine the next morning. Every member of the family was interested in knowing the weight of milk from each cow as it was determined. The testing had then been progressing for half a year.

After the milking was finished the father had remarked that he had been considering the advisability of changing the separator to another location. Certainly a corner of the barn was a poor place for it. He had known that for a while, yet had not been sufficiently interested to think of mowing it. The tester agreed that it would be desirable to move the machine. He was tactful and agreeable. Together they planned to remodel a small building already on the farm and to make it a very satisfactory little milk house.

At the supper table there was a general good visit. The tester told of the neighbors with whom he had spent the month. In turn the various members of the family told him what they had been doing since his preceding visit. Truly the tester was welcome at this farm home every time he would come. Doubtless he should have been welcome twice each month or even once each week.

Later in the evening the farmer said: "I've been looking over the records of the herd. Some of the cows aren't making any money. It looks as though it may be necessary to dispose of some of them. Maybe I need to feed differently. The boys think we ought to have a silo another year." The tester went to his suitcase and brought forth a copy of Henry's Feeds and Feeding. The four of them discussed all manner of feeds and combinations of feeds. In the end they seemed to have agreed that two feeds would be highly desirable on the farm, namely: Silage and alfalfa. The evening was very profitable to the farmer and his sons, so they said. At eleven we retired.

The tester said: "Every family is just like this one. They simply cannot ask enough questions in an evening."

In Utah the young man that was hired by a testing association was called a "dairy missionary." Doubtless that was one of the most perfectly descriptive terms ever applied to a young man on that sort of a job. He was a missionary of better dairying and so is every other who is employed as a tester if he is at all suited to that line of work.

H. E. McCartney.

When Is a Cow Old?

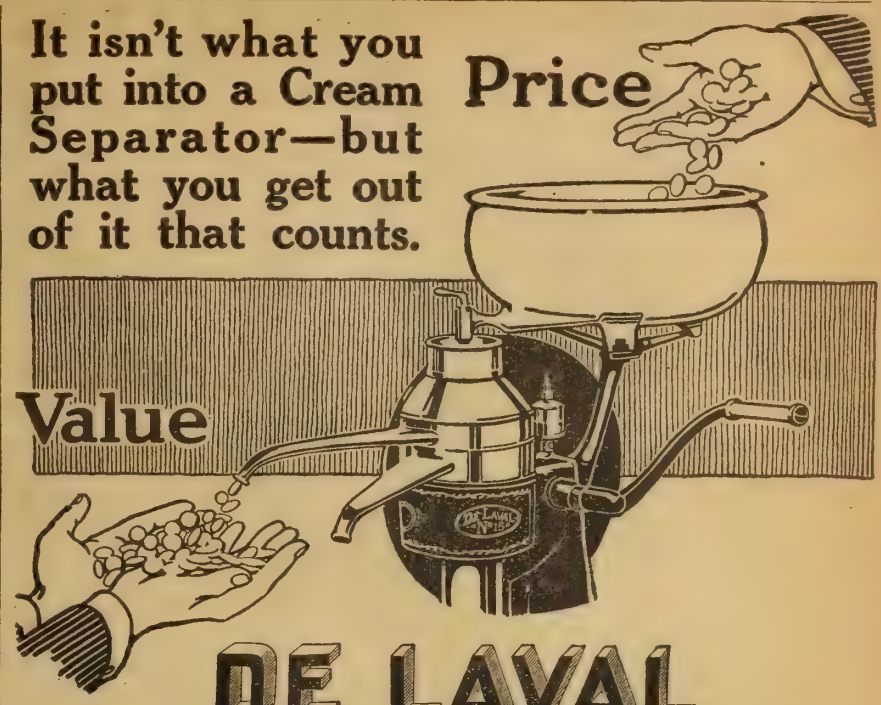
To the Editor:—Some men seem inclined to draw a line, hard and fast, and say, "We never ought to keep a cow after she is so old." It may be ten years, it may be eight. No matter what a cow may be doing when she comes to that dead line she is done and might as well be turned off. She never will do anything more worth while.

I had a Jersey cow that was just as good when she was thirteen years old as she was when she was six and she was the best cow we ever had on the place. She seemed determined to give milk the year 'round. It was almost impossible to dry her off and her milk stood the highest when we made our tests of any in the herd. For a number of years after the old cow had her calf we would say, "Maybe we had better turn her off next fall. She is getting pretty old now." But she would do so well and her calves were such good cows that when it came time to shape up the herd for another year we were pretty likely to say, "She has done well this year; her teeth are all right. We would like to have just one more of her calves!" So she went along until the wrinkles on her horns reached thirteen. And even then she was a pretty good old cow.

The fact is thousands of real good cows are turned off too soon. If instead of getting rid of them at a certain age we were expecting them to stay with us right along we could get several more years of good service from them.

Sometimes it seems as if it were not worth while to be fair with a cow that is getting along in years. She is coming up to the dead line; drop off some of the feed; don't groom her any more. What is the use of fussing with her when we can put a younger cow in her place? So we think and so we act. It is a mistake. What we need to do is to bestow a little extra care on the cow as she grows old. Put a bit more good, hearty grain in her manger. Curry her a bit more carefully and baby her more than you do the other cows. If she ever had it

It isn't what you put into a Cream Separator—but what you get out of it that counts.



DE LAVAL

Cream Separators are by far the most economical

REAL economy is never short-sighted. It never confuses PRICE with VALUE.

PRICE is what you pay for an article—what you put into it.

VALUE depends upon the amount and quality of service the article gives you—what you get out of it.

You get by far the greatest actual VALUE for your money when you buy a De Laval—BECAUSE it will give you much better and longer SERVICE than any other separator.

From the standpoint of its greater durability alone the De Laval is the most economical cream separator to buy, and when you also take into consideration its cleaner skimming, easier running, greater capacity and less cost for repairs, the price of the "cheapest" machine on the market is most exorbitant compared with that of the De Laval.

And there is no reason why you should let its FIRST COST stand in the way either, because the De Laval may be purchased on such liberal terms that it will actually pay for itself out of its own savings.

A De Laval catalog to be had for the asking tells more fully why the De Laval is the most economical cream separator, or the nearest local De Laval agent will be glad to explain this and many other points of De Laval superiority. If you don't know the nearest local agent, simply write the nearest De Laval main office as below.

"Good News for Farm Women"

Orange, N. J., March 1, 1916

Dear Mrs. Dairywoman:—

The bearer of good news is always welcome; and I have some very good news for farm women. We've a new separator at our house and it's a wonder.

One splendid feature of this new invention which must have been planned with the comfort of the dairy woman in mind is the knee-high supply can. This does away with the hard, high lift no woman should be asked to endure day after day. It's only a few inches to lift and a tilt of the pail, even for a small boy. This is *one* item of good news.

Cleanliness is the beginning, middle, and end of good dairy work. You know how quickly the separator shows the effect of any slight letting up in this direction. With dishes to wash three times a day, cooking utensils, calf pails, milk pails, etc., a big pile of separator disks is just about the "last straw", isn't it? But with our new Sharples there are only three pieces to clean, not one heavy, bulky, or fussy. This is the *second* piece of good news.

Formerly, a slight slowing of speed in turning the handle of the separator meant a loss of cream—and money. One's attention had to be strictly on turning the crank at an unvarying high speed, which was trying to both mind and strength. My *third* and best piece of good news is that

THE NEW SHARPLES SUCTION-FEED

Separator draws up into the bowl just the right amount of milk—always in proportion to the separating force. If you feel out of sorts, you may turn slowly and the bowl will drink up just enough milk for clean skimming and no more. If you feel spry and want to get through to sew, to trim a hat, or to visit a neighbor, turn as fast as you please and the bowl will take up proportionally more milk, yet the cream will be of the same thickness. Smooth, even cream, such as the Suction-feed gives you makes quality butter that brings top prices.

The separator has only one thing to do while you have many tasks. The separator has always been a tyrant which insisted on being turned at regulation speed, whether you were well or ill, worried or happy, rested or worn out. But this new Suction-feed Separator *meets your moods.* Its speed is your speed and yet, it *gets all the cream all the time.*

Why don't you drop a postal to the Sharples people for their new book? Then, you can show your husband that this new invention will be a money saver for him as well as a labor saver for you.

Yours truly,

A Dairywoman

What this farm woman says in her letter is absolutely true. There are many other pieces of g od news in our new book, "Velvet" for Dairymen, which fully describes this wonderful separator. Send for your copy today. Address Dept. 44.

The bowl is easy to wash. There are only three parts, and *no disks.*

in her to respond to good, kind treatment she will do it now.

In still another way favoritism is all right toward the old cow. If she has been accustomed to being the leader of the herd see to it that no strange cow is introduced into the herd that may prove her master. I have seen old cows fight to the very limit under such circumstances. They seem to have some pride about the matter. They want to hold the seigniory. It distresses them to be cowed and outfought. So they fight day after day until they are actually spoiled so far as good work in the dairy is concerned. It is never wise to permit such fights to go on. Either put the contestants in separate pastures or remove one of them from the farm. Quarrels of this sort not only affect unfavorably the two which are concerned in them, but the efficiency of the entire herd is lowered by the excitement that is kept up. There is such a thing as good government and discipline among cows. A wise master does all he can to further this, for he realizes that there is money in it.

Feeding Silage to Dairy Cattle.

The Silo Is a Necessity if Maximum Profits Are to Be Made From Dairying---By H. H. Kildee.

THE value of silage was first realized by dairy farmers, for nowhere is the silo so much a necessity as upon the dairy farm. And no dairy farm is complete in its equipment that does not have at least one silo for winter feeding and one with a smaller diameter for summer feeding.

While dairy farmers are not the only ones who now recognize the fact that silage is absolutely necessary if they are to receive the greatest possible profit from their farms and live stock, we find the largest number of silos in the older dairy sections.

The characteristics of good corn silage make it preeminently a feed for dairy cattle. It is palatable, succulent, bulky, beneficial to the digestive tract, and economical. These are among the leading characteristics of the ration which is essential to the largest and most economical flow of milk. In fact, most dairy farmers in the corn belt realize that to secure the largest possible profits from a herd of cows they must feed corn silage. In regions where corn cannot be grown successfully for silage, many dairy men have silos in which they cure other crops.

GOOD EQUIPMENT COUNTS FOR MUCH IN DAIRYING.

Experiments carried on at the different experiment stations show conclusively that silage is far superior to shock corn or hay in milk production. Silage-fed cows produced from 10 to 13 per cent more milk than cows fed fodder from the same acreage.

Contrary to the opinion formerly held, the milk from silage-fed cows is not inferior in flavor or odor to the milk from cows fed dry feed. The condensed milk companies which formerly did not favor milk from silage-fed cows, are now advising their patrons to put up silos.

Great care should be taken, however, to prevent the odor of silage from contaminating the freshly-drawn milk which takes up odors very quickly. It is best to feed the silage after milking and just what will be eaten up clean at that feed. The silos should be shut off from the barn proper. The idea still held by some, that corn silage will destroy the teeth and digestive tract of the cow and induce diseases, such as tuberculosis, is erroneous.

The principal reason why a dairy cow increases her milk flow when she is turned out to pasture in the spring is that she is receiving a succulent feed.

We all know the difference between a ripe, juicy apple and the dried product. In the drying of fruit, as well as of fodder, water is the chief constituent taken away, and with it go certain flavoring substances that do not weigh much on the chemist scales but are of great importance in rendering the food palatable. Thus, if we wish to secure a large and persistent flow of milk during the winter months we must feed some succulent feed that will take the place of the pasture grass of summer. The two most common succulent feeds for winter are corn silage and roots. Experimental work has proved that the silage yields more heavily per acre, costs less and gives equal results from similar weights of dry matter.

One of the chief reasons why so many cows are unprofitable is that they lack persistency or do not keep up their flow of milk for a long period. While this is largely due to inherited characteristics, yet if all cows were properly fed on corn silage and other desirable feeds, much less trouble would be experienced in trying to keep cows up to their normal flow. Silage and alfalfa or clover hay should form the basis of our rations for dairy cows in winter. With good silage in the ration less expensive concentrates may be utilized than when these more expensive feeds have to keep the system in tone. A good ration would be twenty-five to forty-five pounds of good corn silage, all the alfalfa or clover hay the cows wish, or ten to fifteen pounds, and seven pounds of grain for each pound of butter fat, or one pound of grain for each two and one-half pounds to four pounds of milk produced, depending upon the amount and richness of the milk.

During the latter part of July and the month of August, the pastures are usually very short, due to hot weather and lack of rainfall. If we are to keep up the flow of milk at this critical time we must supply additional feed.

In fact, as pastures are ordinarily handled during this season of the year they oftentimes prove to be the least profitable acres of the entire farm. This is especially true from the dairy farmer's standpoint, as the grasses usually grown for pastures do not furnish the abundance of green feed needed by milk-producing cows during the dry, hot months. There are many soiling crops which will supply the necessary feed in acceptable form, but most of them require more labor in getting them to the animals than the average farmer can spare at this busy season of the year. Therefore, a silo small in diameter filled for summer use is the most satisfactory and economical solution of this problem, on the average farm. The value of silage at this season does not lie solely in the temporary increase in milk flow, but we know that if a cow once declines in her milk flow it is practically impossible to bring her back to her normal for the remainder of her lactation period.

Silage also plays a very important role in the most economical and efficient ration for young, growing dairy animals. It has a very beneficial effect upon the system in keeping the digestive organs in the best of condition and as an aid in developing large digestive capacity. In attaining this last effect, it is materially aided by alfalfa or clover hay. When these feeds are given it is not necessary to feed very much grain to the animals after the end of the first year.

A good winter ration for yearling heifers is corn silage, fifteen to twenty

"I Thought She Would Never Amount to Anything"

Many cow owners all over the country know what it is to see a cow that they were about ready to sell to the butcher become one of their best producers through a judicious use of the great cow medicine

KOW-KURE

There is nothing mysterious about Kow-Kure; it is simply a medicine for cows that stimulates and builds up the vital organs and makes them perform properly. It has been found especially effective for the prevention and cure of such diseases as Abortion, Barrenness, Milk Fever, Scouring, Lost Appetite, Bunches, Retained Afterbirth

pounds, alfalfa or clover hay, eight to ten pounds, grain mixture consisting of equal parts corn, oats and bran, two pounds.

Dairy farmers are practically unanimous in the opinion that a too liberal ration of silage should not be fed to the herd bull. When so fed, the animal is usually rather heavy middled, sluggish and slow in breeding. The large amount of silage distends the middle unduly and does not supply the balance of nutrients necessary to keep the animal vigorous and active in service.

However, a limited ration of 10 to 25 pounds daily will improve any ration fed the bulls and will decrease the cost of the ration necessary to keep the animal in a vigorous, healthy condition at all times.

In general it may be said that dairy farmers who have given the contents of a properly filled silo a fair trial are the most enthusiastic and their opinions are identical with the writers that after feeding corn silage they would not attempt to feed dairy cows on a corn belt farm without it. And if they were in a section where corn could not be grown they would use one of the substitute crops in filling a silo.

Ex-Governor Hoard Resigns.

To the Editor:—The National Dairy Union at a recent meeting in Chicago passed the following resolutions:

Whereas, In the natural method of making butter, circumstances are often such that without the knowledge or intent of the maker the butter may retain 16 or more per centum of moisture; and,

Whereas, The present method of sampling and assessing fines and taxes upon such butter has worked a grievous wrong on many innocent makers and sellers of butter; therefore,

Resolved, By the directors of the National Dairy Union that we use our utmost efforts with congress and with the internal revenue department to bring about such changes in existing laws and rulings as will properly protect the consumer and at the same time prevent excessive punishment and hardship being imposed upon well-meaning makers and sellers of butter.

On account of advanced age and continued ill health, Hon. W. D. Hoard, ex-governor of Wisconsin, and for a number of years treasurer of the National Dairy Union, sent in his resignation as director and treasurer. The resignation was positive, and for the reasons stated, it was accepted. For singleness of purpose and devotion to agriculture, and his great work for furthering dairy legislation, he stands second to no one in this country. His splendid farm and his most excellent dairy paper (Hoard's Dairyman) is part proof of the above assertion. He was one of the first to advocate that a permanent agriculture depended on some form of animal industry and led the way in dairying.

Following the instructions laid down by the by-laws of the organization, S. B. Shilling, of Chicago, Illinois, was unanimously elected director and treasurer. Mr. Shilling was a former official of the National Dairy Union, and one of its founders, a veteran in the work, and now manager of the Chicago Dairy Produce.

In view of the fact that the oleomargarine interests have already introduced two bills to repeal the present oleomargarine laws, it was unanimously decided that the secretary put in shape the Haugen oleomargarine bill, and have it introduced in congress the early part of March.

Catawissa, Pa. Wm. T. Creasy,
Secretary the Nation Dairy Union.

Raising the dairy herd lessens the danger from contagious abortion, tuberculosis and other infectious diseases.

Users of Champion Dependable Spark Plugs.

THE Champion Spark Plug Co., 506 Upton Ave., Toledo, Ohio, estimate that four out of five cars produced this year will be equipped with Champion Dependable spark plugs. They use the official estimate of the automobile chamber of commerce, who place the total production at 1,400,000 cars. Of this number, over a million will be Fords, Overlands, Studebakers and Maxwells, all equipped with Champions. In addition, manufacturers of over a hundred other makes will equip with Champion plugs. Their production will be about 120,000 cars. The total, then, is over 1,120,000 cars equipped with Champion Dependable spark plugs. When you replace the spark plugs in your car, why not follow the lead of these manufacturers? The advertisement appears on page 15 of this issue. —Adv.

Ask Yourself —

What have I lost through Abortion

—in calves?
—in milk?
—in injury to cows and heifers?

Is it not time for me to clean up my herd, when I can give the treatment myself at small cost?

Cow Abortion Driven Out

Here's the evidence of men in the livestock business. It covers nearly twenty years. You can do what they did if you do as I tell you to do.—*Roberts.*

What is lost on one good calf would pay for the treatment of an average herd.

1898 "My herd of twenty-two cows was afflicted with Infectious Abortion in 1898. After losing a number of calves I began treating them with DR. ROBERTS' ANTI-ABORTION TREATMENT. I feel that they were permanently cured, for I have not lost any calves since that time, five years ago."—(J. A. Griswold, Duplainville, Wis.) "My herd of cows, eleven in number, was troubled with Infectious Abortion. I tried various remedies, without any relief; then I began treating my herd with ROBERTS' ANTI-ABORTION. I had ten live, strong, healthy calves come that year and have not lost a calf since that time—over three years ago."—(Sworn statement of Herman Shirley, deceased, Waukesha, Wis.)

1902 "My herd of twenty-two cows being afflicted with Abortion in 1902, I decided to try DR. ROBERTS' ANTI-ABORTION TREATMENT, which I did with results satisfactory, and I believe if used according to directions is a sure cure every time."—(I. Vandeburg, Kingston, Ill.)

1913-14-15 "In 1913 I applied your ANTI-ABORTION TREATMENT to my herd of forty-two head, and hereby wish to state that I cured my herd entirely and that I haven't had a single case of abortion since that time."—(Jos. F. Jira, Cary Sta., Ill.) "Several years ago we had Contagious Abortion in our herd and with your treatment completely eradicated it."—(Connecticut. Name on request.) "I am well pleased with your TREATMENT FOR ABORTION. I have nine fine calves and one cow left to calve yet. Two of the calves are from cows that aborted last year. I finished your treatment July 15, 1915, two months ago, and have seen no signs of disease since then."—(Iowa. Name on request.)

If your herd is afflicted with Contagious Abortion, and is free from tuberculosis, you can, with the Dr. Roberts treatment, clean up your herd and wipe out abortion. All Abortion Treatments are shipped direct from our laboratories at Waukesha.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Home Decorating.

One of our readers has written to us for some good color combinations, ideas for wall decoration, curtains, draperies, furniture and floor coverings for living room and bed rooms. We are all more or less busy just now along this line and perhaps a few suggetions might be interesting to many.

Simplicity and appropriateness are the two big words in home decoration. It should be the homemaker's chief object to surround her family with good, wholesome and useful objects. The question of money does not enter into the matter so much as does a study of what is most essential to the comfort of the occupants and a knowledge of good taste in color and design.

The list of wall coverings is long and varied and may include kalsomine, papers, burlap, tapestry, grass cloth, cretonne, chintz, etc. Kalsomine is attractive and inexpensive and may be obtained in all shades and tints, burlap is used a great deal in dining rooms, cretonne and chintz are pleasing for bed rooms, but probably the most satisfactory for all purposes is paper. The variety here is unlimited. There are the gray greens, dull browns, tans, reds and blues, either in plain colors or in small, indistinct designs, for the living room. Real tapestry, of course, is expensive, but sometimes tapestry papers may be found that are lovely for living room, dining room or hall. For bed rooms, white and cream papers, or almost any of the dainty colors in delicate shades, are particularly attractive. They come plain or with faint tracings of flowers and vines and dainty borders and drop designs for the angles of the rooms and around the door and window casings.

As to floor coverings nothing is more satisfactory where it is possible to have a hardwood or even a painted floor, than rugs. They are much more easily cared for than carpets and when once one has had them on the floors the carpets never will come back. Small rugs are perhaps best for the bed rooms. The washable rag rugs for this purpose come now in beautiful shades and patterns. It is always best in choosing any floor covering to select either a plain material or one with a small pattern.

The color to be used depends a good deal on the location of the room, its relation to other rooms, light, etc. One very attractive living room we happen to know about has a south and west exposure and the keynote of the color scheme here is brown. The walls are papered with a plain dull brown paper and the ceiling, which is beamed, is a cream. Then there is a narrow border that has in it just a suggestion of dull rose. The rugs are of the same shades of brown with a little of the rose and tan to relieve it. The curtains are a plain cream net with dull rose side drapes. A davenport is upholstered in tapestry of the same shades and just a little green, and the big easy chairs are wicker, stained brown and with soft tapestry cushions and deep magazine pockets at the sides. The piano and table are mahogany. There isn't a thing in this room that isn't useful and comfort-giving and the whole is most pleasing, indeed. There are no nick-nacks to catch the dust and be a worry to the housewife. Pictures, ferns, a pair of candlesticks and a fancy basket or two for flowers constitute about the entire list of decorations.

There are unlimited possibilities in carrying out a green or gray or blue color scheme and each individual taste with a little thought and care will evolve a room that will be a pleasure.

The dantier colors, blue, pink, yellow, light green or gray or cream are all good for the bed rooms. One pretty room was papered with a cream background and a very pale shade of blue in the design. A deep, cut-out border of blue came below a white picture molding. The woodwork had been painted creamy white and the furniture, bed, dresser, a chest of drawers and chairs were the same, and these, by the way, were an old set done over by the housewife herself. The curtains were white Swiss with blue-flowered chintz side drapes and cushions of the same blue chintz made a big willow rocker the most comfortable looking thing in the world. Blue wash rugs of a shade to match the drapes covered the floor. The room was dainty and airy and easy to keep clean.

The same idea can be carried out in any color and the white furniture substituted with anything the individual taste may call for. The main things are harmony and comfort. Add to the ease with which you can care for the room and you are sure to have a home that will be a pleasure to you as well as to the family and to the friends who frequent it.

Double Fireless Cooker.

It would be a good idea now, before the heavy spring work begins, to look ahead to the long, hot days of summer and have the man of the house make a fireless cooker. It will save time, fuel and the strength of the housekeeper. Directions for making a double fireless cooker are given in a recent bulletin and they are so simple that there is no reason why every kitchen should not be equipped with this useful article.

The materials needed include three wooden boxes, one long box and two square ones (the long box must be large enough to hold the other two and still leave three inches of space between all the boxes); five and a half yards sheet asbestos, one yard wide; two covered enamel pails, cooking pails; burlap, denim or canton-flannel, one yard.

To make, first line the bottoms and sides of all three boxes with the sheet asbestos, then in the bottom of the long box lay newspapers flat, or torn into fine pieces to a depth of about one-half inch. Then put two inches of sawdust on top of this layer of newspapers. Then place the two square boxes inside the long one, leaving three inches of space between the two square boxes. Fill all the spaces between all the boxes with sawdust, felt or mineral wools. Then tack a strip of denim or other material from the edges of the square boxes to the outside edge of the long box, also across the space between the two square boxes, so that the strip of denim will cover all the spaces that are filled with sawdust. The outside box must have a wooden lid. Line the lid with sheet asbestos to within a half inch of the edge of the lid. Then put a layer of sawdust one inch deep on top of the asbestos. Then tack a piece of denim or other material over the sawdust, still leaving the edge free and clear so that the cover will fit down tightly. The lid may be lined with asbestos or a pillow made of denim, or canton-flannel and filled with sawdust that will fit tightly down into the top of the box.

New Testament True Creed.

To the Editor:—I would say to "Constant Reader" that I don't see how a church can be true unless the New Testament is its creed. Read the last chapter of Revelations. If a person can be a Christian and be saved without coming into the church by being baptized, why did Christ establish the church? Read Romans, sixth chapter, and I think you will understand that we are to be buried in baptism. In another place He says, "Except a man be born of water and of the Spirit he cannot enter into the Kingdom of God."

I could write a great deal more on the subject, but will only advise "Constant Reader" to read the New Testament from beginning to end.

A Christian.

RUBY, RUTH AND ROLLAND HARKER.

Christ the Church.

To Constant Reader:—While others are giving their views of your question I wish to give mine. I don't think anyone has to put their name on any of the church rolls to be saved. Christ is the church and the only church that will save us. The creeds and denominations are the creeds and doctrines of men. Christ said, "He that believeth on the Son hath everlasting life." So if we consecrate ourselves to the Lord and try to follow in His footsteps as closely as we possibly can, seeking to do His will, we belong to the church and the only church, the body of our Lord Jesus Christ.

We should assemble ourselves to study the scriptures, for the good Bible so says. Can we read where the apostles exacted great price for their work as the creeds are doing? No, the Lord told them, "Go your ways. behold I send you forth as lambs among wolves. Carry neither purse nor scrip nor shoes."

We wonder at the falling away and unbelief that is in the churches of this age. Surely Babylon is falling.

N. R. B.

Why Is Baby Cross?

If the baby cries don't spank him:

Maybe he's cross and tired from being tossed about all day.

Maybe he's too warm or too cold or too wet.

Maybe a pin is scratching him.

Maybe there's wrinkles in his bed clothes.

Maybe he's lying in a cramped position.

Maybe he's hungry and thirsty.

Try rubbing his back gently along the spine, suggest the home economics authorities at Iowa State College. It is often more effective than anything else in quieting the baby. To keep him comfortable during his nap turn him over two or three times. Don't forget to give him a teaspoonful of water once or twice a day.

Babies Most Important.

To the Editor:—As an interested reader of your paper I have been watching the "baby department" to see if Dickinson county, Iowa, was on the map in baby raising. As I have never seen any from this county and for fear people might get the idea that we were too far north to raise babies successfully I am sending a picture of my babies, who have all been born and raised in Dickinson county.

The oldest is a girl, age fourteen, the next a girl, age four, and the youngest a boy, age two. The last two babies weighed four and four and one-half pounds respectively, so you see they have made a great gain. They are all well and happy.

So don't let anyone stay away from northern Iowa thinking we are too far north to raise babies, for it is the most important crop that Iowa has, and Dickinson county has a host of fine babies that are unsurpassed by any county in this state.

My babies' names are Ruby, Ruth and Rolland. As we live on the shore

of West Okoboji they have no trouble getting fresh air.

Mrs. Ellsworth Harker.

Moonlight Schools.

Five years ago Cora Wilson Stewart, a Kentucky woman, launched the idea of "moonlight schools" for the illiterate adults in the mountain regions of her state. In a few weeks she had 1,200 pupils ranging from eighteen to eighty-seven years old, studying in schoolhouses nights when the light of the moon made travel over the rough roads possible. Now the idea has spread to seventeen states and as illiteracy in the United States is largely a question of rural or sparsely settled districts it seems as though one simple little woman had solved a problem that long distressed the masculine mind.

Begin Training Early.

To the Editor:—I am so interested in the mothers' letters that I am sending a picture of our baby, Ralph Henry, age seven and one-half months, weight twenty and one-half pounds.

The picture was taken when he was fourteen weeks old. He is large and

RALPH HENRY SCHWARTZ.

strong and very bright for his age. He is a mother-fed baby and never has been sick. He had two teeth at six months. He eats and sleeps well, goes to bed when I do, at any time, and sleeps all night. I feed him the first thing in the morning and then he sleeps all forenoon, so I get my work all done. I believe in training babies from the time they are very small. I have never had any trouble with my baby. Won't some of the other mothers tell how they get along with their babies? Mrs. F. J. Schwartz.

Strawberries Keep Well.

To the Editor:—I have thought so often of adding my mite to the Home Department and since reading Mrs. H. A.'s inquiry for canning strawberries I have concluded to give her my experience and am sure if she tries it she will never use any other method. By this method the strawberries are just as nice as though just off the vine and they keep splendidly. They do not have the strong, biting taste, but are very mild and light in color.

I usually pick the berries in the morning and immediately float them in a large pan of water while stemming. In this way the dirt sinks to the bottom and the berries rise to the top. Then I fill the jars. I usually use quart jars. Shake the berries down as tightly as possible, but do not press to spoil the shape. A sirup is then made of one and one-half cupfuls of sugar and two cupfuls of water to a quart of berries. Boil a few minutes and fill the jars. Tighten the lids and stand in a bucket or any vessel that is taller than the jars. In the meantime have a kettle of boiling water ready and pour it over and around the jars, letting the force of the water hit the side of the vessel and pouring slowly. Fill almost to the rubber, cover with a lid and a piece of carpet or anything that will keep in the heat and let stand until cold and there you have a beautiful, rich red strawberry fit for a queen.

Now here is something a shade better, "sunshine strawberry preserves." Prepare the berries as above mentioned and when stemming put them into a pint or measuring cup, then into a larger vessel until you have four heaping measures in. I get them all ready, about four vessels at once, as this is about as much as one can do at one time. Then take four meas-

EUGENE AND FLORINEL BALDWIN ON THEIR PONY, TRIXIE.

ures of sugar for each vessel separately with just enough water to dissolve the sugar. Let this boil up, then add a pan of the berries and boil ten to fifteen minutes. Watch closely or they will boil over. Skim, dip out into plates or shallow granite pie pans (never use tin), set in warming oven and about the stove and keep just warm. If they are too hot they will turn brown. Keep a slow fire until evening. In the morning they will be a beautiful jellied mass and you will want to eat them at once. Put into jars and seal. They can be set in the sun if you can prevent the flies from helping themselves. Cherries are also lovely this way, while raspberries are fine canned by the first method. Mrs. Alvira Watts.

Early to Bed.

To the Editor:—I am sending you a picture of our boy. It was taken when he was six months old and he weighed twenty-one pounds. His name is Anthony Eugene Hager. He

ANTHONY HENRY HAGER.

is now one year old and has a sister thirteen months older than he. They are both healthy children and great little playmates. Our children are asleep every night at 7:30 o'clock. We think it a good rule and one that should be taught to all children.

Mrs. J. A. Hager.

A Quick Method.

To the Editor:—In reply to Mrs. H. A.'s request for recipe for canning strawberries will send mine. I use two cups of sugar to one cup of water. Boil this to a sirup. Then drop the strawberries in the sirup and let come just to a boil, then can. They will keep their rich color and are excellent. Mrs. John P. Voss.

Like Fresh Berries.

To the Editor:—I want to tell Mrs. H. A. how I can strawberries. Pick the berries over, put them in a colander, pour cold water over and let them drain well. Then put them in an enamel kettle or pan, put on what sugar you wish and let them stand a few hours, or overnight. In the morning set on the stove and just let them get good and hot through, then hurry them into the cans and when sealed lay the cans down and turn every once in a while till cold. This keeps them from rising to top of can. Then wrap in paper and set in a dark, cool place and they will be just as nice as fresh berries. Mrs. A. J.

Care of Irons.

To the Editor:—I wish to answer N. N. in regard to what to do with her flatirons to keep them from staining the clothes. If she will get a small limb from a cedar tree and rub the irons on it while they are hot, then on a damp cloth, I think she will have no more trouble. Mrs. W. E. Snepp.

Recipes.

Oyster Bouillon.—Chop one quart of oysters (washed and freed from bits of shell); add the liquid strained through a cheese cloth, six cups of cold water, two slices of onion, two stalks of celery and a bit of mace; let heat over a hot fire to the boiling point and boil five minutes, then strain and press out all the liquid; add two cups of chicken broth, about a teaspoonful of salt and half a teaspoonful of paprika. Serve hot with a tablespoonful of whipped cream on the top of the soup in each cup. Use the oysters with fresh fish (white) for croquettes or a creamed dish.

Individual Chicken Pies.—Cut tender cooked chicken into pieces about an inch long. For a cup of meat melt two tablespoonfuls of butter; in it cook two tablespoonfuls of flour and one-fourth teaspoonful each of salt and pepper; add two-thirds of a cup of chicken broth or milk, or half of each, and stir until boiling. Have ready some small baking powder biscuit, turn the chicken into an individual serving dish and set three or four of the small biscuits above.

Custard Pudding.—Spread slices of stale sponge or plain cup cake with strawberry or raspberry jam and lay them lightly in a buttered pudding dish. Beat three eggs; add half a teaspoonful of salt, two tablespoonfuls of sugar and two cups of milk, mix and turn over the cake. Let bake in a moderate oven until the center is firm. When cold turn from the dish and serve with whipped cream. Use a quart mold; line the mold neatly with buttered paper, then dredge the butter with granulated sugar.

Egg Toast.—Break five eggs in a shallow dish or pan, add a pinch of salt and a cup of sugar. Beat up well. Dip slices of stale bread in and fry in lard, not too hot.—E. F.

Always Delightful

GUNZ-DURLER Chocolates fill candy lovers with joy. Not only are they pure but they have exquisite flavor. Pure ingredients, thick, velvety coatings and freshness that makes candy superlatively good.

Gunz-Durler Chocolates

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Another Fairy Tale.

One of our little readers, Victoria Kellgren, says she has been reading the stories for the Young Folks, but one of her favorites she has not seen and she wants us to tell you the story of Hans and Grettel.

Hans one day took his sister, Grettel, by the hand and said, "Since our poor mother died we have had no happy day, for our new mother is not good to us and when we go near her she pushes us away. We have nothing but hard bread to eat and the little dog that lies by the fire is better off than we, for sometimes he has a nice piece of meat thrown to him. Oh, if our poor mother knew how we are treated! Come, we will go and travel over the wide world."

They walked all day long over the fields until in the evening they came to a great wood. By that time they were so tired and so hungry that they sat down in a big hollow tree and soon were fast asleep. In the morning when they awoke the sun had risen high above the trees and was shining warmly upon the hollow tree.

Then Hans said, "Sister, I am very thirsty. If I could find a brook I would go and drink and fetch you some water, too. Listen, I think I hear the sound of one." So Hans got up, and, taking Grettel by the hand, went to find the brook.

But their cruel stepmother was a fairy and had followed them into the woods to do them harm and when they had found a brook Hans stooped down to get a drink. But as he did so Grettel thought she heard the brook say, "Whoever drinks here will be turned into a tiger." Grettel was frightened and cried, "Oh, brother, do not drink or you will be turned into a wild beast and tear me to pieces."

Hans was very thirsty, but he listened to Grettel and went on in search of another brook. But when they came to the next brook Grettel again thought she heard a voice say, "Whoever drinks here will become a wolf." And again she begged her brother not to drink. Hans was a little vexed by this time, but he yielded, saying "I will wait for the next brook, but there I will drink, say what you will."

When they came to the third brook Grettel listened and heard the voice say, "Whoever drinks here will become a fawn." "Oh, brother," she cried, "do not drink, or you will become a fawn and run away from me."

But Hans was already at the brook and as his lips touched the water he became a fawn. Grettel cried bitterly and the fawn lay beside her with tears streaming from his eyes. Grettel comforted him and vowed she would never leave him, and she took from her neck a golden necklace and put it around his neck. Then she gathered some rushes and plaited them into a soft string to fasten to the chain and by this she led him farther into the woods.

Thus they traveled a long, long way until they finally came to a little cottage. It was empty and Grettel decided they would live there. She gathered leaves and moss to make a soft bed for the fawn and every morning she went out and gathered nuts, roots and berries for herself and sweet shrubs and tender grass for the fawn, which ate from her hand and was very happy.

They lived this way for a long time until one day the king of the country came to the wood to hold a great hunt. The fawn heard the dogs bark and begged his sister to let him go and see what was happening. Grettel finally let him go, making him promise to come back to her in the evening. "I shall shut up the door," she said, "and when you say 'Sister, let me in' I shall let you in."

The king and his men saw the beautiful fawn and followed him, but were unable to take him, and when it grew dark he returned to Grettel's little house and said, "Sister, let me in," and she opened the door and he ran in.

The next morning he heard the dogs again and the horns of the huntsmen and was so anxious to go that Grettel again let him out, making him promise to come back in the evening.

Soon the king and his men spied him and gave chase, but he was too quick for them. One of the huntsmen, however, wounded him in the foot. This huntsman followed close behind the fawn as he ran to the little house, and he heard him say, "Sister, let me in." And when he saw the door open and the fawn jump inside he returned to the king and told him what he had seen. "Tomorrow," said the king, "we will have another chase."

Grettel was very much frightened when she saw that the fawn was wounded, but she sent him to bed and made him comfortable.

The next morning when the hunters' horn blew the fawn wanted to go but Grettel was so afraid they would kill him that she begged him to stay at home. The fawn would not listen to her and ran away into the woods where the king and his men soon gave chase. The king followed him all day and in the evening he saw him return to the little house, tap on the door and say, "Sister, sister, let me in." The door opened and the fawn jumped in.

Then the king tapped on the door and when Grettel opened it she was greatly surprised to see a king. "Will you come and be my wife?" asked the king. "Yes," answered Grettel, "but the fawn must go with me." The king agreed to this and took Grettel to the palace where they celebrated their marriage.

The king and Grettel were happy for a time, but when a little son came to them the wicked fairy was so angry at Grettel's good fortune and happiness that she set about finding a way to harm her. She had a very ugly daughter and she managed to put this daughter in Grettel's place and kept the king from knowing of the change. She thought this was a fine idea, but one night the real queen, Grettel, stole into the palace to look at the baby and the fawn which lay in one corner of the room. The nurse saw her and told the king what had happened.

The next night the king himself watched and when the queen came in he recognized her as his lovely wife and this broke the spells woven by the wicked fairy.

When the king heard of all the wicked things the fairy had done he ordered that she and her daughter should die. With their death the fawn changed again into Hans, which made Grettel very happy.

International Sunday School Lesson.

Lesson for March 26, 1916
(By E. O. SELLERS, Acting Director of Sunday School Course.)

Review—the Great Multitude.

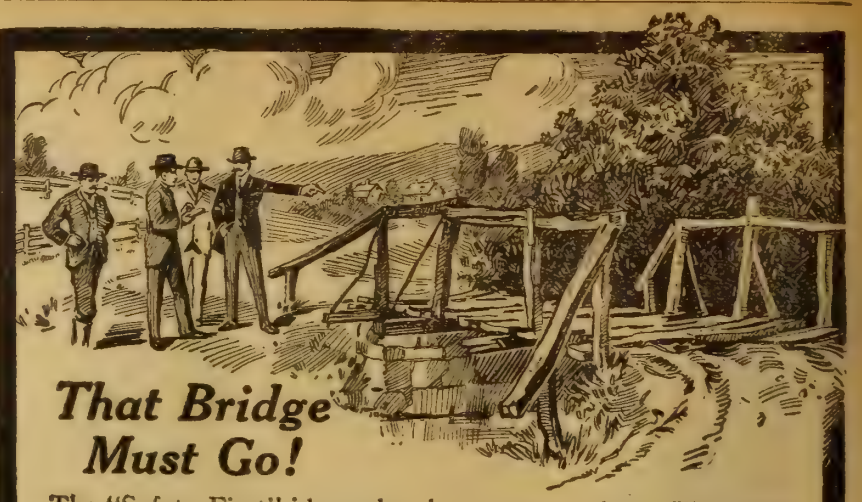
READING LESSON—Revelation 7:9-17.

GOLDEN TEXT—They shall hunger no more, neither thirst any more; neither shall the sun strike upon them, nor any heat; for the lamb that is in the midst of the throne shall be their shepherd, and shall guide them unto fountains of waters of life; and God shall wipe away all tears from their eyes.—Rev. 7:16, 17.

I. **General Information** — Omitting lessons 4, 7 and 11, all of the past quarter's work has to do with the early, the apostolic church, covering a period of time from A. D. 30 to perhaps A. D. 37, six or seven years. The chief events are the resurrection of Jesus, the coming of the Holy Spirit, the change in the apostles, particularly Peter, the conversion and baptism of 3,000 believers, fellowship and wonders worked among these believers, the beginning of persecution, the selection of seven deacons, Stephen's testimony and death, the dispersion of the Christians, the work of Philip, great growth in the early church.

Historically these lessons have to do with the things that Jesus began and continued to do after his resurrection through the power of the Holy Spirit. It is, therefore, a story of the power of the risen Christ. The principal characters are of two classes. (1) The leading workers. Of these are: Peter and John, apostles; the 120 disciples, Barnabas, the seven deacons, particularly Stephen and Philip; the Ethiopian eunuch and Gamaliel, who gave some friendly assistance. (2) The chief enemies: Those who falsely accused the apostles, the rulers of the Jews and the temple, Ananias and Sapphira, Saul and Simon Magnus.

It is not difficult to paint a word picture of the events of the past quarter. This may be done by assigning to separate pupils such questions as: Where, when and why did the event



That Bridge Must Go!

The "Safety First" idea rules the country today. The public is demanding that the highways be made as safe as the railroads and traction lines. Wooden bridges must give way to

"ARMCO" IRON CORRUGATED CULVERTS

These culverts are not only absolutely safe but moderate in first cost, inexpensive of installation and entirely free from up-keep costs. The fact that they are made of "ARMCO" IRON insures unequalled rust resistance and life-time service.

Specify "Armco" (American Ingot) Iron and insist on seeing the Triangle Trade-Mark on every section. This is your assurance that your taxes are being spent for the public benefit.

For full information on "Armco" Iron Culverts, Flumes, Sheets, Roofing and Formed Products, write the manufacturer in your vicinity, or

Ponies Free

YES, a beautiful, gentle, little Shetland Pony like this sent free—the most wonderful playmate a child ever had. How can we do it? Why that is simple. Just send your name and address and we will tell you. We will also send you a book with pictures of many of the 364 Ponies we have given away; pictures of the children riding and driving them; pictures of their homes, and letters from these children thanking us for the Ponies we have given them.

Pony Picture and Story Book

One little boy wrote us this: "If all little boys and girls could only have a Pony like my 'Tip', I am sure they would all love him as dearly as I do 'Tip' and have as many good times as I do. I can never thank you enough for sending 'Tip' to me."

WOULDN'T YOU LIKE TO HAVE A PONY, TOO?

Wouldn't you like to have your name entered in our next club, so you would stand the same chance to get a Pony as any other child? Of course you would. It doesn't cost a cent, and you might get one of these Ponies we are soon going to give away. We pay all shipping expenses, and throw in a Buggy, Harness, Saddle, Bridle and Blanket.

Send us a postal card or letter, or get your parents to do it for you, and mail it right away. Just say, "I want a free pony and your big free Pony Book".

of this lesson occur? To another pupil assign the task of telling what he thinks the scene looked like, and to still another to name the chief persons mentioned in each lesson. Let these assignments omit lessons 4, 7 and 11, which do not chronologically fit into the work of this quarter. The remaining pupils should be primed to supply any omitted facts and to correct any mistakes.

I. **The Coming of Power.** Lesson 1. The ascension of Jesus is one that shows us the risen Christ as the giver of the Holy Spirit and He is the All Powerful One who has carried forward the things Jesus "began to do." Lesson 2. This is very much the same except that it suggests the man side of this transaction. As the early disciples obeyed, they received. In like manner the Spirit is given today to those that "ask him." Lesson 3 shows what effect we may anticipate when we proclaim the fact of the risen Christ.

II. **The Use of Power.** Lesson 5 (omitting No. 4) has to do with the daily walk and work of those who had so recently received this newly bestowed power. Through his servants, Jesus, by the power of the Spirit, heals and makes strong the lame man at the temple gate—a case of "applied Christianity," the power of practical social service. As a result of this service Peter and John (Lesson 6) had opportunity to give their testimony to the rulers, the result of which confounded the enemies who thought they had conquered Christ at Calvary—the use of power in testimony. The further evidence of how this new power was using men is that given in lesson 8, the Christian Brotherhood at Jerusalem.

III. **The Test of Power.** Stephen (lesson 10) was one of those who had been separated for the care of the temporal affairs of the early church, yet his testimony and martyrdom easily makes him more famous than most of the apostles and forever exalts the layman in the Christian church.

One other (lesson 12) of those seven deacons, Philip, was also so signally used and blessed that his name and deeds are almost as familiar to us as is the work of Stephen.

In the first case this newly bestowed power filled the witness with a calmness and courage that will always remain an inspiration, while in the second illustration Philip so gave himself to the direction and leadership of the Spirit as to go where he was sent; and when to human judgment his presence was essential to the carrying on of a great revival, he obeyed the new command and left the multitude to deal with a single individual.

Jesus makes no reference to the "mass consciousness" and the Holy Spirit's power receives no greater or more far-reaching test than that which had to do with its dealings with the individual soul.

Each teacher should see to it that each scholar reads these eight chapters several times, if possible, before the review occurs, in order that they may see the quarter's work as a whole, for it is indeed one story; the story of the risen Christ winning men to Himself and equipping them to go forth in obedience to his last command (Luke 24:46-49; Acts 1:8).

EARLY PEANUTS—SUGAR WATERMELONS.

Boys, Girls, Everybody. Here are two grand Prizes. Very early and enormous yielders everywhere. You can grow Peanuts by the bushel and treat all your friends, and Sugar Melons by the cart load. They are sweet as honey and easy, sure growers. Don't miss them. Large Packet of each and 300 Varieties of Flowers—all for **one dime** to introduce, or 3 of each and 3 Flower Collections, Catalog and Premium List for 30 cents. Tell all your friends. Name this paper. Address A. D. COOK, Seedsman, Hyde Park, N. Y.—Adv.

The "Velie Six."

THE well-known "Velie Six" is advertised on page 7 of this issue. For big values and efficient service the Velie car can't be beaten. The powerful, silent, supple Continental motor of full forty horse power is equal to any road or grade; the beautiful, roomy, boat streamline makes motoring a pleasure indeed; and the automatic ignition, spiral gears in axle and complete electrical apparatus are special values in the full line of automobile equipment. When the spring weather opens up you may get the car fever—if you do a "Velie Six" will make a wonderful cure. Write today for catalog to the Velie Motor Vehicle Co., 118 Velie Place, Moline, Ill., and kindly mention this paper.—Adv.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Wisconsin Farmer, Madison, Wis.

7668 Ladies' Waist.—Cut in sizes 36 to 44 inches bust measure. A perfectly plain waist and yet there are interesting touches of detail that will set off the garment when made up. The full blouse has front closing and so deftly does the insertion outline this closing that we see an inset vest suggested.

7574 Girl's Dress.—Cut in sizes 6, 8, 10, 12 and 14 years. The side front closing relieves the plainness of the blouse of this dress and there is also an ornamental Quaker collar at the high neck. The plain sleeves are full at the wrist with Quaker cuffs. The skirt is gathered and has the lower portion of differing material.

7679 Ladies' Waist.—Cut in sizes 34 to 40 inches bust measure. This ladies' dress, with a dressy tone but with a simplicity that appeals, has a one piece gathered skirt. The waist, in fullness that is the mode, has collar and stylish revers in pointed effect. The long loose sleeves are finished with a dainty frill.

7676 Girl's Dress. Cut in sizes 6, 8, 10 and 12 years. Embroidered flouncing and plain material are used in making this pretty dress. The dress closes at the back and has a separate blouse and skirt. Sleeves may be in long or short length.

7642 Ladies' Shirt Waist.—Cut in sizes 34 to 42 inches bust measure. Popular because of its practical lines, this waist is made with two plaits at each side of front; the closing at center is visible and made with buttons; a smart collar and neat cuffs bring out its lines for simplicity of style, with a bow tie to give just the right dash to such design.

7654 Ladies' Dress.—Cut in sizes 36 to 42 inches bust measure. This very pretty design shows a dress which has a plain bodice closing at the center of the front. At the neck is a small, square collar. The sleeves are full length. The four gored skirt is attached to a body lining.

7663 Ladies' Chemise.—Cut in sizes 36, 40 and 44 inches bust measure. Cambric, batiste or crepe de Chine can be used to make this chemise. The chemise may have round or square neck and the lower portion may be finished in the envelop or regulation style.

7577 Ladies' Apron.—Cut in sizes 34 to 44 inches bust measure. This apron closes in front and the overlap is so great that it is all but double in front and can be let out to accomodate the figure without corsets and drawn in to fit when they are worn. Sleeves are in one with the body, the pieces joined at shoulder and underarm seams.

Price of these patterns 10 cents.

A New Use of an Old Adage.

THE old adage, "Penny wise and pound foolish," has a new application in connection with the use of poor seed. Undue economy at seeding time means smaller crops at harvest. This point is brought out by Henry A. Salzer, La Crosse, Wis., president of the John A. Salzer Seed Company, whom we quote as follows: "At $3 a bushel the cost for seed corn is from 35 to 50 cents an acre; at $5 from 60 to 85 cents. On a yield of one or one and one-half bushels per acre more, the higher priced seed pays for itself. Five bushels more, and it returns from $3 to $5 for every $1 spent. On the other hand, a 50 per cent stand on a bushel of poor seed means a loss of $10 to $15." This illustration by a well-known seed man applies equally to all farm and profit by the use of good seed. See page 12.—Adv.

SEED CORN—TESTED—GUARANTEED

Early Iowa Yellow Dent

See For Yourself ! The quickest way for us to convince you is not to talk, but to show you the corn and let it talk for itself. To do this we have decided for 10c, to cover postage and packing, to send you one ear of corn of any variety, or for 25c three ears of any varieties you may select. Every ear is carefully examined as to vitality, butt and tip ends taken off by hand, and shows a germination test of 94 to 98 per cent. But don't take our word for it. We want to prove it to your own satisfaction.

Every bushel sold subject to your approval and may be returned any time within twelve days if not satisfactory, at our expense and purchase price promptly refunded. We can't make any better proposition than that, can we?

We grow all the best early and medium varieties for the Northern Corn Belt; varieties that will mature in 85, 90 and 95 days and will give you a satisfactory yield; all grown by us from the earliest and hardiest strains.

Early Iowa Yellow Dent.....95 days	Pride of North (Yellow).....90 days
Iowa Gold Mine (Yellow).....95 days	Dakota Bloody Butcher.....90 days
Silver King (White).....90 days	Longfellow's Flint (Yellow).....85 days

All varieties $3 per bushel; in 10 bushel lots and up $2.75 per bushel while our supply lasts. See and examine it for yourself; you be the judge. This offer will not be made again. Free Seed corn booklet on request.

Our Guarantee

Every Bushel of our Seed Corn is sold subject to your approval. If not found as represented and entirely satisfactory, it may be returned to us, at our expense, any time within 12 days and purchase price will be promptly refunded. This gives ample time to inspect, examine and test it to your full satisfaction. YOU RUN NO RISK IN ORDERING SEED CORN FROM US. Order direct from this advertisement. ALL ORDERS SHIPPED SAME DAY RECEIVED.

HEPSEY BURKE--A Sister to David Harum

By G. N. Wescott, the Brother of the Author of "David Harum."

(Copyright 1915.)

CHAPTER XIII.

The Circus.

THE Maxwells were, in fact, effectively stirring up the ambition of their flock, routing the older members out of a too easy-going acceptance of things as they are and giving to the younger ones vistas of a life imbued with more color and variety than had hitherto entered their consciousness. And yet it happened at Durford, on occasion, that this awakening of new talents and individuality produced unlooked for complications.

"Oh, yes," Hepsey remarked one day to Mrs. Betty, when the subject of conversation had turned to Mrs. Burke's son and heir, "Nickey means to be a good boy, but he's as restless as a kitten on a hot Johnny cake. He isn't a bit vicious, but he do run his heels down at the corners and he's awful wearin' on his pants bottoms and keeps me patchin' and mendin' most of the time—'contributing to the end in view,' as Abraham Lincoln said. But, womanlike, I guess he finds the warmest spot in my heart when I'm doin' some sort of repairin' on him or his clothes. It would be easier if his intentions wasn't so good, 'cause I could spank him with a clear conscience if he was vicious. But, after all, Nickey seems to have a winnin' way about him. He knows every farmer within three miles; he'll stop any team he meets, climb into the wagon seat, take the reins and enjoy himself to his heart's content. All the men seem to like him and give in to him; more's the pity! And he seems to just naturally lead the other kids in their games and mischief."

"Oh well, I wouldn't give a cent for a boy who didn't get into mischief sometimes," consoled Mrs. Betty.

At which valuation Nickey was then in process of putting himself and his young friends at a premium. For, about this time, in their efforts to amuse themselves, Nickey and some of his friends constructed a circus ring back of the barn. After organizing a stock company and conducting several rehearsals, the rest of the boys in the neighborhood were invited to form an audience, and take seats which had been reserved for them without extra charge on an adjoining lumber pile. Besides the regular artists there were a number of specialists or "freaks," who added much to interest and excitement of the show.

For example, Sam Cooley, attired in one of Mrs. Burke's discarded underskirts, filched from the rag bag, with some dried cornstalk gummed on his face, impersonated the famous Bearded Lady from Hoboken.

Billy Burns, wearing a very hot and stuffy pillow buttoned under his coat and thrust down into his trousers, represented the world-renowned Fat Man from Spoonville. His was rather a difficult role to fill gracefully, because the squashy pillow would persist in bulging out between his trousers and his coat in a most indecent manner; and it kept him busy most of the time tucking it in.

Dimple Perkins took the part of the Snake Charmer from Brooklyn, and at intervals wrestled fearlessly with a short piece of garden hose which was labeled on the bills as an "Anna Condy." This he wound around his neck in the most reckless manner possible; it was quite enough to make one's blood run cold to watch him.

The King of the Cannibal Islands was draped in a buffalo robe, with a gilt paper crown adorning his head, and a very suggestive mutton bone in his hand.

Poor little Herman Amdursky was selected for the Living Skeleton, because of the spindlelike character of his nethermost limbs. He had to remove his trousers and his coat and submit to having his ribs wound with yards of torn sheeting, in order that what little flesh he had might be compressed to the smallest possible compass. The result was astonishingly satisfactory.

The Wild Man from Borneo wore his clothes wrong side out, as it is well known wild men from Borneo always do; and he ate grass with avidity. Wry-mouthed and squint-eyed, he was the incarnation of the cubist ideal.

When all this splendid array of talent issued from the dressing room and marched triumphantly around the ring it was indeed a proud moment in the annals of Durford and the applause from the lumber pile could be heard at least two blocks.

After the procession the entertainment proper consisted of some high and lofty tumbling, the various "turns" of the respective stars, and then, last of all, as a grand finale, Charley, the old raw-boned farm horse who had been retired on a pension for at least a year, was led triumphantly into the ring, with Nickey Burke standing on his back!

Charley, whose melancholy aspect was a trifle more abject than usual, and steps more halting, meekly followed the procession of actors around the ring, led by Dimple, the Snake Charmer. Nickey's entree created a most profound sensation and was greeted with tumultuous applause—a tribute both to his equestrian feat and to his costume.

Nickey had once attended a circus at which he had been greatly impressed by the artistic decorations on the skin of a tattooed man, and by the skill of the bareback rider who had turned somersaults while the horse was in motion. It occurred to him that perhaps he might present somewhat of both these attractions, in one character.

Maxwell had innocently stimulated this taste by lending him a book illustrated with lurid color plates of Indians in full war paint, according to tribe.

So Nickey removed his clothes, attired himself in abbreviated red swimming trunks and submitted to the artistic efforts of Dimple, who painted most intricate, elaborate and beautiful designs on Nickey's person, with a thick solution of indigo purloined from the laundry.

Nickey's breast was adorned with a picture of a ship under full sail. On his back was a large heart pierced with two arrows. A vine of full blown roses twined around each arm, while his legs were powdered with stars, periods, dashes and exclamation points in rich profusion. A triangle was painted on each cheek and dabs of indigo were added to the end of his nose and to the lobe of each ear by way of finishing touches.

When the work was complete Nickey surveyed himself in a piece of broken mirror in the dressing room, and to tell the truth, was somewhat appalled at his appearance; but Dimple Perkins hastened to assure him, saying that a dip in the river would easily remove the indigo; and that he was the living spit and image of a tattooed man, and that his appearance, posed on the back of Charley, would certainly bring the house down.

Dimple proved to be quite justified in his statement, so far as the effect on the audience was concerned; for, as Nickey entered the ring, after one moment of breathless astonishment, the entire crowd arose as one man and cheered itself hoarse, in a frenzy of frantic delight. Now whether Charley was enthused by the applause or whether the situation reminded him of some festive horseplay of his youth, one cannot tell. At any rate, what little life was left in Charley's blood asserted itself. Quickly jerking the rope from the astonished hand of Dimple Perkins, Charley turned briskly around and trotted out of the yard and into the road, while Nickey, who had found himself suddenly astride Charley's back, made frantic efforts to stop him.

As Charley emerged from the gate the freaks, the regular artists, the gymnasts and the entire audience followed, trailing along behind the

mounted tattooed man and shouting themselves hoarse with encouragement and derision.

As Charley rose to the occasion and quickened his pace the heat of the sun, the violent exercise of riding bareback and the nervous excitement produced by the horror of the situation threw Nickey into a profuse sweat. The bluing began to run. The decorations on his forehead trickled down into his eyes; and as he tried to rub off the moisture with the back of his hand the indigo was smeared liberally over his face. His personal identity was hopelessly obscured in the indigo smudge; and the most vivid imagination could not conjecture what had happened to the boy. It was by no means an easy feat to retain his seat on Charley's back; it would have been still more difficult to dismount, at his steed's brisk pace; and Nickey was most painfully conscious of his attire, as Charley turned up the road which led straight to the village. At each corner the procession was re-enforced by a number of village boys who added their quota to the general uproar and varied the monotony of the proceeding by occasionally throwing a tin can at the rider on the white horse. When Charley passed the rectory and the green and turned into Church Street, Nickey felt that he had struck rock bottom of shameful humiliation.

For many years it had been Charley's habit to take Mrs. Burke down to church on Wednesday afternoons for the five o'clock service; and, although he had been out of commission and docked for repairs for some time, his sublimal self must have got in its work, and the old habit asserted itself. To the church he went, attended at a respectful distance by the Bearded Lady, the Fat Man, the Snake Charmer, the King of the Cannibal Islands, the Living Skeleton and the Wild Man from Borneo, to say nothing of a large and effective chorus of roaring villagers bringing up the rear.

It really was quite clever of Charley to recall that, this being Wednesday, it was the proper day to visit the church—as clever as it was disturbing to Nickey, when he, too, recalled that it was about time for the service to be over and that his mother must be somewhere on the premises, to say nothing of the assembled mothers of the entire stock company—and the rector and the rector's wife.

Mrs. Burke, poor woman, was quite unconscious of what awaited her, as she emerged from the service with the rest of the congregation. It was an amazed parent that caught sight of her son and their scrambling off the back of his steed onto the horse block in front of the church, clad in short swimming trunks and much bluing. The freaks, the regular artists, the gymnasts and the circus audience generally shrieked and howled and fought each other, in frantic effort to succeed to Nickey's place on Charley's back—for Charley now stood undismayed and immovable, with a gentle, pious look in his soft old eyes.

For one instant Mrs. Burke and her friends stood paralyzed with horror; and then like the good mothers in Israel that they were, each jumped to the rescue of her own particular darling—that is, as soon as she could identify him. Consternation reigned supreme. Mrs. Cooley caught the Bearded Lady by the arm and shook him fiercely, just as he was about to land an uppercut on the jaw of the King of the Cannibal Islands. Mrs. Burns found her offspring, the Fat Man, lying dispossessed on his back in the gutter, while Sime Wilkins, the Man Who Ate Glass, sat comfortably on his stomach. Sime immediately apologized to Mrs. Burns and disappeared. Next, Mrs. Perkins took the Snake Charmer by his collar and rapped him soundly with the piece of garden hose which she captured as he was using it to chastise the predatory Wild Man from Borneo. Other members of the company received equally unlooked-for censure of their dramatic efforts.

Nickey, meantime, had fled to the pump behind the church, where he made his ablutions as best he could; then, seeing the vestry room door ajar, he, in his extremity, bolted for the quiet seclusion of the sanctuary.

To his surprise and horror he found Maxwell seated at a table looking over the parish records; and when Nickey appeared, still rather blue, attired in short red trunks, otherwise unadorned, Donald gazed at him in mute astonishment. For one moment there was silence as they eyed each other; and then Maxwell burst into roars of uncontrollable laughter, which were not quite subdued as Nickey gave a rather incoherent account of the misfortune which had brought him to such a predicament.

"So you were the Tattooed Man, were you! Well, I suppose you know that it's not generally customary to appear in church in red tights; but as you couldn't help it I shall have to see what can be done for you to get you home clothed and in your right mind. I'll tell you! You can put on one of the choir boy's cassocks, and skip home the back way. If any body stops you tell them you were practicing for the choir and it will be all right. But really, Nickey, if I were in your place, the next time I posed as a mounted Tattooed Man, I'd be careful to choose some old quadruped that couldn't run away with you!"

"Then you aren't mad at me!"

"Certainly not. I'll leave that to my betters! You just get home as fast as you can."

"Gee! but you're white all right—you know it didn't say nothing in the book about what kind of paint to use!"

Maxwell's eyes opened. "What book are you talking about, Nickey?" he asked.

"The one you let me take, with the Indians in it."

Maxwell had to laugh again. "So that's where the idea for this 'Carnival of Wild West Sports' originated, eh?"

"Yes, sir," Nickey nodded. "Everybody wanted to be the tattooed man, but seeing as I had the book and old Charley was my horse, I couldn't see any good reason why I shouldn't get tattooed. Gee! I'll bet ma will be mad!"

After being properly vested in a cassock two sizes too large for him, Nickey started on a dead run for home, and, having reached the barn, dressed himself in his customary attire. When he appeared at supper Mrs. Burke did not say anything; but after the dishes were washed she took him apart and listened to his version of the affair.

"Nicholas Burke," she said, "if this thing occurs again I shall punish you in a way you won't like."

"Well, I'm awfully sorry," said Nickey, "but it didn't seem to feaze Mr. Maxwell a little bit. He just sat and roared as if he'd split his sides. I guess I ain't goin' to be put out of the church just yet, anyway."

Mrs. Burke looked a bit annoyed.

"Never mind about Mr. Maxwell. You won't laugh if anything like this occurs again, I can tell you," she replied.

"Now, ma," soothed Nickey, "don't you worry about it occurrin' again. You don't suppose I did it on purpose, do you? Gosh no! I wouldn't get onto Charley's back again with my clothes off any more than I'd sit on a hornet's nest. How'd you like to ride through the town with nothin' on but your swimmin' trunks and drippin' with bluin' water, I'd like to know?"

Mrs. Burke did not care to prolong the interview any further, so she said in her severest tones:

"Nicholas Burke, you go to bed instantly. I've heard enough of you and seen enough of you for one day."

Nickey went.

(To be Continued.)

One of the cardinal truths emphasized at the first Northwest Dairy Show and Convention in Spokane, February 24th to 26th, was that the world's greatest economic problem leads to the farm, says August Wolf, in the March issue of Western Union Life Monthly. Grains and grasses, beef, pork and mutton and poultry and fruits and vegetables are the soil builders, the home builders, the town and city builders. More foodstuffs mean factories, more hay means live stock, which, in turn, calls for packing plants; fruits and vegetables demand storage houses and canneries, and creameries follow the milk cow. Great areas of land throughout the Northwest, which once went begging for buyers at from 50 cents to $1.25 an acre, are now bearing enough foodstuffs to raise their value a hundredfold. The land was always worth 100 times more than its selling price, but not to the man who did not or would not improve it. Today there is a new order of things—the farmer who wasted a dozen acres on one steer must hand that land over to the modern dairyman, who will build a silo with his barn and make the land support as many persons.

Big Profit in Poultry Possible.

WITH present prospects of high prices for poultry and eggs, poultry raisers should make some big profits this year. Right now is a good time to enlarge your poultry business. Chicks hatched at this time will make plump frys or broilers in the early summer, or fall layers that will continue laying throughout the winter. Vigorous, early-hatched chicks are money-makers, but to get this kind you must have a first-class incubator. Old Trusty incubators have the name of being perfectly constructed and of getting big average hatches of strong chicks in all kinds of weather. Over 650,000 are now in use and are making money for their owners. They are built by M. M. Johnson Company, Clay Center, Neb. Send to the company for their free "Know-How" book on poultry and you can learn how to increase your profits in the poultry business. Mention of this paper is always appreciated.—Adv.

Are You One of the Losers?

Low Corn King
Low Cloverleaf

SOMETIMES Americans wonder why they get only about half the crop yields from an acre that are produced in other countries. Well, here's one reason—a large majority of the farmers in this country own no manure spreader. One corn belt state lost $20,000,000 last year by the wasting and poor handling of manure. Are you one of the farmers who shared in this loss? If you are, you need an **IHC** manure spreader.

International Harvester spreaders, **Low Corn King** and **Low Cloverleaf**—besides being low, strong, durable, simple in beater and apron mechanism, with good traction, light draft, and plenty of clearance—have a really successful wide-spreading device.

Low Corn King and **Low Cloverleaf** spreaders are low for easy loading and narrow for easy handling in yard, stable or field. From a box 45 inches wide either of these spreaders covers an even strip of ground 8 feet wide, or better. It saves time and labor, and keeps wheels and horses well away from the slippery manure already spread.

See the **I H C** dealer about a **Low Corn King** or **Low Cloverleaf** made to stand by you for years. Write us for catalogue.

Practical Auto School, 69X Beaver Street, New York

The Province of MANITOBA, CANADA
Calls for Farm Helpers

There is a very urgent call for farm workers this spring for the Province of Manitoba, Canada. Owing to the keen demand for all kinds of foodstuffs caused by the war, together with the enlistment of so many thousands of our young men, the farmers of Manitoba find themselves face to face with a serious labor shortage. In order to encourage farmers' sons and other farm workers from the United States to answer to this call the Railway Companies are offering reduced rates to all such passengers from all points on the International boundary line northward, going West in Canada. This will enable anyone who wishes to see Western Canada to do so at a very small cost, and will permit inspection at first hand of the thousands of acres of cheap land which are still available.

The scale of wages for experienced men will run from $25.00 to $45.00 per month according to experience, and it is estimated that from 3,000 to 3,500 such men are needed. In order to allay any apprehension on the question, it may be asserted that absolutely no military obligation of whatever sort is imposed upon anyone coming into or living in Canada.

If you are interested, write or apply personally to the

MANITOBA IMMIGRATION OFFICE
323 Jackson Street
ST. PAUL MINNESOTA

Wanted 50,000 Farm Hands
of experience at once on the farms of Western Canada

To replace the young farmers who have enlisted for the war. Good wages and full season's work assured.

There is no danger or possibility of Conscription in Canada.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Loss In Sheep.

I would like to know what is the matter with my sheep. They get weak, stumble and fall and cannot get up. They froth at the mouth and some lie for days and finally die. The wool also gets loose on some of them. The last one that took sick seemed to get down in the hind parts first, then staggered and fell and hasn't got up yet. Do you think it might be worms? Does salting sheep keep worms down? I am feeding clover hay.

Digestive disturbances are quite common in sheep at this time of year and it is possible your sheep are victims of disturbance of this kind. Look well to the feed and water to see that they are wholesome and clean. Try withholding the feed for twenty-four hours and then feed on good quality of hay. Avoid too much concentrates. A change of feed often overcomes the trouble.

Tumorous Growth in Ear.

I have a four-year-old cow that has a big wart growing from the inner wall of the ear and it is extending out of the ear. It is pear-shaped and on the outside looks like a hardened sponge. It interferes with the animal's hearing and seems to hurt her. When I pick the wart it bleeds and it also bleeds if the animal shakes her head and it seems to make the condition worse and more sensitive. The root of the wart is about at the base of the ear inside.

This condition is not met with very frequently, especially in this exact location. It is possible this tumorous mass may return again even after being removed. Would advise that your local veterinarian cast this animal and cut away all of the growth and some of the healthy tissue so as to be sure none of the growth is left. Then cleanse parts and sprinkle a small amount of arsenious acid over the parts. This may bring about a cure.

Rheumatism In Hogs.

I am writing to ask if you can tell me what ails my hogs. They get stiff. The legs are straight when they walk and they step only half as far as a healthy hog. When they try to run it is sort of a jump. As they get larger and are eating they keep stepping and have their hind feet far under the body. They eat as much as good hogs but grow very little and do not fatten. I sold my hogs recently and the stiff ones weighed from 120 to 170 pounds, while the good ones averaged 265 pounds. In the spring of 1914 the first one to get stiff was about two weeks old and they continued to get that way until about six months old. In 1914 with about forty-five shoats four were stiff, but I lost all of them with cholera. Of the fall shoats I only saved one that was stiff and it died in the wagon, as I was hauling them to market.

The disturbance you describe sounds like rheumatism, but in the last year or two there has been quite wide spread an arthritis which may be the result of an organism (bacillus suscepticus) (streptococcus) or some other organism, and thus far no medical agents have been found that will overcome it.

Scouring in Mares.

I would like to know if you could give me any information as to what causes my mares to scour. I first noticed them three days ago and they are getting worse right along and they are getting to look very shaggy. They are both in foal. The only feed I am giving them is seven ears of corn apiece twice a day and oat straw at night besides running in the stalks. I have five other head that I am giving the same feed, but they are all right.

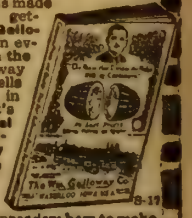
It is very possible your mares are suffering from some digestive disturbance which is causing diarrhea. Just what the cause of the trouble is is hard to say when so few symptoms of the trouble are given. Pregnant mares are most subject to these disturbances than other horses. Would advise you to get a competent veterinarian to look these mares over if one is available. If this is not possible you should look carefully to the feeding so as to be sure the feed is wholesome. It is well to look to the water supply also. If the diarrhea persists you may give one and one-half teaspoonfuls of tincture of gambic and one tablespoonful of fluid ginger. This may be given in one-half pint of water or oat meal gruel. Do not repeat unless necessary.

Ask your neighbor to subscribe for The Wisconsin Farmer.

SPREAD NOW!

SPECIAL PROPOSITION
10,000 GALLOWAY NO. 8 SPREADERS

This extra offer is made with the idea of getting ten or more Galloway Spreaders in every township in the next few weeks. One Galloway No. 8 Spreader always sells from one to a dozen more in the same community. That's why I make this new special offer to distribute 10000 advertising spreaders quickly



LOOK! Our new 250 page catalog. Tells you all about the special patented features on the famous Galloway Manure Spreader; how to make a spreader pay for itself in six months' time; shows why 3 exclusive Galloway patented features make the Galloway Spreader worth $50 more than any other spreader, but cost nothing extra on the Galloway; also shows full line of other Galloway implements and merchandise.

NEW SELLING PLANS

Cash or time—one year to pay—installment plan—note settlement—half cash half note—bank deposit or cash, at prices so low you cannot afford to do without a manure spreader now. We sell direct at less than wholesale from factory to farm at the actual cost of material, actual cost of labor and only one small profit based on tremendous output.

LOOK! 3 GREAT INVENTIONS

They make the Galloway Spreader in a class by itself, are:

1. **Invincible Roller Feed** worth $25 on any other spreader. Exclusive on the Galloway, but costs you nothing extra. One of the secrets of our light draft.
2. **Patented Automatic Stop, Uniform Clean-Out Push-Board** worth $10 on any spreader. Costs nothing extra on the Galloway.
3. **New Steel Everlasting Beater** with **V-Rake** which gives wide spreading and tears the manure into shreds for uniform available **plant-food.** This exclusive feature alone worth $15. Costs nothing extra on the Galloway.

Many other **special 1916 features:** low down; double chain drive; cut-under front wheels; channel steel frame, trussed like a steel bridge; steel tongue; endless force feed apron; top of box only 42 in. high; front wheels under the box, and other special features make it easy for two average horses to handle.

SPREADER PRICES LOWER

Get in on this special distribution advertising offer from now until seeding time.

At the end of twelve months, if the Galloway spreader has not paid for itself, if you have hauled out 100 loads of manure or more, and it has not proven everything I say for it, I agree to take it back, pay freight both ways and return your money, no matter on which plan you buy. Could I make this offer if I was not sure of my ground? Every sale backed by a $25,000 bank bond—an additional guarantee to you! Galloway spreaders have passed a field test in every state and almost every county.

Ask for this new 250-page book and special proposition today.

Spreaders shipped from Waterloo, Kansas City, Council Bluffs, St. Paul and Chicago.

Collected by Representatives of The Wisconsin Farmer

A Holstein Sale of Importance.

THE greatest sale of Holstein cattle ever made in southwestern Wisconsin will be made by the Richland County Holstein-Friesian Breeders' Association, at Richland Center, Wis., Friday, April 7th. Richland county is one of the greatest dairy counties in the state and in order to make this sale a success the contributors have selected some of the best they have. This association expects to hold an annual sale, and, as this is their first sale, they are offering a class of cattle that will please the buyers and cause them to attend the sales in the future. Fifty head have been cataloged, consisting of about fifteen cows that are in milk or soon to freshen, ten bred heifers, ten open heifers and fifteen bulls of serviceable age. S. B. Fries, secretary of the association and a member of the firm of C. C. Fries & Son, consigns about twenty head from their high-class herd. The Fries herd is full of high-testing cows, among them being Aaggie Texal Wayne 2d that has a seven-day record of thirty pounds butter, and she will soon have completed a year test which will be over 1,000 pounds butter. We simply mention this to let you know that you can expect something good in this sale, for they produce the good ones. Heading the Fries herd is perhaps the best son of King of the Pontiacs in the West. An illustration of this bull appears in the advertisement on page 28 of this issue and besides being a show bull, he is siring some wonderful daughters. There will be ten heifers in this sale sired by him from dams with A. R. O. records up to 24.75 pounds butter in seven days. These grand heifers with this breeding should appeal to the particular breeder. There will be cows and heifers in the sale with A. R. O. records. Bulls from A. R. O. dams. Someone wanting a tried sire and one that has made good, should attend this sale and see Johanna Rossela De Kol, a four-year-old bull that sells in the sale. He is by Johanna Pontiac De Kol out of a dam that made twenty-three pounds butter in seven days and with a yearly record of 800 pounds made when thirteen years old. The breeder can find cattle in this sale that will be a credit to this herd and the beginner can find individuals that will make an excellent foundation for a high-class Holstein herd. The catalog is interesting and gives a detailed description of each animal. Everything has been tested for tuberculosis. Write at once for a catalog. Address F. B. Fries, Richland Center, Wis., and please mention The Wisconsin Farmer. Watch next week's issue for further information. See page 28.—Adv.

Distinctive Features of the Sharples Separator.

THE value of a ceram separator depends on whether it will save time, labor and cream; and the more efficiently it does these things, the better separator it is. The new Sharples Suction-Feed separator is surprisingly efficient in this respect, due largely to three distinctive features. One is the knee-high supply can, which does away with the back-breaking high lift, so tiresome at the close of a day's work. The second is that there are only three pieces to clean, not one is heavy or difficult to handle. A separator must be kept perfectly clean, but with the Sharples this work is reduced to a minimum. The third is the section-feed which draws exactly the right amount of milk into the bowl for perfect skimming, no matter what the speed of turning. If you are tired or exhausted you can turn at slower rate or you can turn faster when in a hurry. In either case the suction-feed regulates the separating so that you get all the cream. Few people will turn a separator at regulation speed all the time—and when they don't cream is lost in the skim milk. The Sharples suction feed saves this cream. It will pay you to have the new book, "Velvet." It may be secured free by addressing The Sharples Separator Co., West Chester, Pa., and mentioning this paper. See page 18.—Adv.

Nuttleman's Chesters.

ADOLPH NUTTLEMAN, of West Salem, Wis., is having excellent success with his spring crop of Chester Whites. He now has about fifty February and March pigs and we haven't seen any pigs that look better than these. Mr. Nuttleman has two good boars in his herd. One is Hood Combination sired by Combination 2d, one of the best Chester sires that we have ever seen. His dam, Sophia is by Inspector O. K., one of the good sires of the breed. The other boar is Joy Boy 29637 by White Prince out of a daughter of Correct. This is a very good boar and he is siring a very uniform lot of pigs. He was shown when six months old and was junior champion at that time. Mr. Nuttleman has had a great demand for fall boars and is sold out, but he is offering some very choice fall gilts. Now is the time to buy fall pigs and these will suit the most critical. Write at once and mention The Wisconsin Farmer. See page 29.—Adv.

Son of Carnot for Sale.

J. R. JUSTICE, Galesburg, Ill., announces in his advertisement on page 32 that he has an extra good imported son of the $40,000 Carnot for sale worth the money. He is dark, with size, quality and substance. Mr. Justice has other good Percherons for sale, and will also put attractive prices on some imported Belgian stallions and mares. His horses are a quality, lot all the way through, and he invites the inspection of discriminating buyers.—Adv.

Horsemen's Opportunity.

OWING to the death of J. F. Jones, West Salem, Wis., the estate is offering for sale one Belgian stallion and one Percheron mare. The stallion is five years old, was imported in 1914, is bay in color and weighs over a ton. This is one of the best Belgian colts that we know of and if it had not been for the untimely death of Mr. Jones he would not be offered for sale. This stallion has been in the stud for two years and he met with such favors among the farmers that it was impossible to take care of the business that came to him. Few Belgians move as straight and strong as this horse. He has a world of quality and is very sure. We don't know of a better Belgian being offered for sale. The Percheron mare was imported by Fred Pabst. She is gray and nine years old this spring. She is a mare that could easily weigh a ton and has been a good brood mare. She was shipped to North Bend, Wis, to be bred to a Percheron stallion that Mr. Jones considered the best in the state. She will foal in May. Here is an opportunity that should not be overlooked, for it is seldom that one has a chance to buy such good horses at the reasonable figures being asked for this pair. The estate wishes to dispose of these horses by April 1st, so those interested should write at once to J. F. Jones Estate, West Salem, Wis. See page 32.—Adv.

Angus Activities in Wisconsin.

ABERDEEN ANGUS cattle are becoming more popular in Wisconsin each year and well they should, for they must be considered when talking about economical beef production, and Wisconsin needs more good beef cattle. Mr. Orville Rundle, Dodgeville, Wis., has just purchased eleven head of registered Aberdeen Angus cows and heifers and a bull from the noted McKevitt herd, of Bridgeport. We recently saw some of the animals that he selected and we see no reason why he should not be very successful with them. Some of these cows were among the best in the McKevitt's large herd, being regular producers of the good ones. The bull he selected is by Edgerton of Woodcote 143705, and one of the best bulls they had. We would like to see Mr. Rundle finish this young bull and take him out to the fairs this fall, for we feel that he would make a creditable showing.—Adv.

A. T. Cole, Missouri. Address 3900 Holmes St., Kansas City, Mo.

Big Opportunities for Young Men.

DO you want a good job or a chance to buy cheap farming land? You can get either in the Province of Manitoba, Canada. Or you can make a trip to visit the country at low rates. Great opportunities await the farmer in Manitoba because of the keen demand for foodstuffs caused by the war. Wages for farm labor ru s from $25 to $45 a month, and the government estimates that from 3,000 to 3,500 good men are needed in Manitoba alone. To encourage migration, railroads are offering low fares to persons going east or west in Canada from points on the international boundary line and northward. Young man, if you want a good job in a growing country or if you want a chance to be a farm owner, Manitoba is the place for you. The government assures all prospective immigrants that no military obligations will be required; they want workers to develop the resources of the country. If you are interested, write or apply personally to the Manitoba Immigration Office, 323 Jackson St., St. Paul, Minn., where full information will be supplied. See page 26.—Adv.

Motorcycle Type Bicycle on Easy Terms.

AN opportunity to get a new motorcycle type bicycle on small, monthly payments is advertised on page 23 by the Arrow Cycle Co. Riding is a great pleasure on this bicycle because of the wonderful conveniences with which it is equipped. An easy motorcycle saddle, coaster brake, motorcycle pedals, stand and luggage carrier and long motorcycle handle bars are part of the equipment. If you are interested in bicycles, you should have the 1916 Arrow catalog. Write for it today to Arrow Cycle Co., Dept. 4483, California & Nineteenths Sts., Chicago, Ill., and please refer to this paper.—Adv.

McKevitt Bros. Have Excellent Angus Herd.

IN Grant county, Wis., there is a herd of Aberdeen Angus cattle that is second to none in the state. This herd is owned by McKevitt Bros., of Bridgeport, and we understand that they have one of the oldest established herds in the state. At this time they have a few bulls for sale, from six to sixteen months old, several of which are outstanding individuals. There are four that we saw, around a year old, that with proper care would make a creditable showing this fall at some of the fairs. They are very smooth, well grown and of the most popular breeding, being sired by Edgerton Woodcote, a Pride bull of great individuality. A feature that impressed us was the size of the females in this herd, combined with their milking qualities. No cow is maintained in this herd that will not raise her own calf. Such families as the Queen Mother, Pride, Erica and Ruby are represented. These gentlemen will price a few cows and heifers, bred to calve in the spring and we are glad to recommend this herd to any one wanting cattle of this breed. Their prices are reasonable and you get the worth of your money. Besides raising Angus cattle, they also keep Percheron horses and at this time they have six head that they will sell. One black five-year-old stallion has been used in the stud and they can show you some choice colts sired by him. He is a stallion of great breed character, an excellent top and underpinning, in fact is a horse that will do someone a great deal of good. A roan two year old and a yearling out of the same mare are good prospects. The yearling is very growthy and in our estimation is a colt that has a great future if someone will take care of him. He has a great frame, good bone and is large for his age. They are also offering their Shire stallion. He is a bay, ten years of age and an excellent sire. In view of the fact that they have used him in the stud for several years, they cannot use him to advantage any longer and for that reason they are offering him for sale at a moderate price. A weanling stallion and an aged mare completes the offering. An attractive price will be made on one of the lot. Write these gentlemen for information relative to their Angus cattle and Percheron horses. Please mention this paper. See page 32.—Adv.

A Great Labor Saver on Wash Day.

ALL farm women will welcome the Triumph Power Washer with swinging wringer which relieves the drudgery of wash day. Very likely the farm washing has been the cause of more backaches, more colds and sickness than any other work on the farm. When a labor-saving machine which will do this disagreeable work can be purchased at reasonable cost, every farm should have one. A Triumph Power Washer will wash the finest lingerie, as well as the heaviest bed clothes, without tearing. All that is necessary is to put the hot suds in the washer, then the clothes, clamp down the lid and turn on the power. Triumph power washers are constructed with the idea of saving labor and at the same time washing the clothes thoroughly. Let it do your washing for thirty days on trial. If you are not satisfied, the company will take it back. See the advertisement on page 7 and write for the special circular. Address Montgomery Ward & Co., Dept. N139, Chicago, Ill., and please mention this paper.—Adv.

Opportunity in South Dakota.

TO the young men who wish to become farm owners, South Dakota offers unusual opportunities. We have traveled extensively in this state and have seen many prosperous farmers who began with nothing and grew up with the country. Good bargains in land are still available, but the rate at which the state is being settled up would suggest that low-priced land will not continue for a great length of time. Big crops and healthy live stock are common in South Dakota, and these mean money for the farmer. Why not visit the region and see for yourself? The Dakota book will give you some reliable information on this subject; read the advertisement on page 6 and send to the Chicago, Milwaukee & St. Paul railway, Geo. B. Haynes, General Passenger Agent, Chicago, for a copy of the book.—Adv.

Seed Corn.

THE Vermilion Seed Co., Vermilion, S. D., reports having sold a lot of seed corn throughout the northern country, as well as considerable to buyers further south. This company was fortunate in securing a large quantity of high-class seed. Much of their seed was rack dried by artificial heat and has, practically, perfect germination test. Those who have bought this seed from them and have tested it are all reporting that they have had the very best of results—they are more than pleased. This is northern grown seed, dried under perfect conditions—every ear should be perfect. Their great capacity makes it possible for them to handle an immense business. The writer has been familiar with their methods of doing business for several years and he has yet to learn of a single buyer who was not satisfied and pleased. See page 12.—Adv.

Cement as Lasting as the Pyramids.

THE use of Portland cement on the farm has long since passed its experimental stages. It has proved its great worth, and sooner or later you will be using it. When you want good, substantial, serviceable cement get the Marquette brand, which is as lasting as the pyramids of Egypt. Every bag of Marquette Portland Cement is labeled with a green zig-zag tag as shown in the advertisement on page 16. If your dealer does not carry it, send your dealer's name and address to the Marquette Cement Manufacturing Co., Chicago, Ill., and they will advise you the nearest point where it may be obtained. —Adv.

Absorbine as a Farm Remedy.

EVERY farmer should keep a bottle of good liniment on his place to use in case of live stock injuries. It may prevent a minor injury from becoming fatal. A bottle of Absorbine, costing $2, is an excellent liniment to keep on

hand. It has been found valuable in relieving soreness, bruises and strains and in reducing pain from these ailments. Absorbine Jr., costing $1 a bottle, is recommended for bruises, cuts and wounds of mankind. Both of these remedies are made by W. F. Young, P. D. F., 101 Temple St., Springfield, Mass., who is advertising on page 26. Write for his free book on Absorbine and say you saw his advertisement in this paper.—Adv.

Game Farming for Profit and Pleasure.

DO you know that game farming is a profitable business? Many game farms scattered over the United States are money-makers for their owners. In Europe they are quite common. There is a big demand for game birds at high prices in the cities, and the farmer who has the facilities can supply this demand. Pheasants, mallard ducks or wild turkeys can be raised almost as easily as poultry and they sell at much higher prices. You can get a very interesting free book on "Game Farming for Profit and Pleasure" which will tell you all about this new industry. It is advertised on page 2 and may be obtained by writing to the Game Breeding Dept., Room 196, Hercules Powder Co., Wilmington, Del. Please mention The Wisconsin Farmer when you write.—Adv.

Get Fine Short-horns From Iowa.

MACMILLAN & MACMILLAN, of Lodi, Wis., were bidders at the Prichard-Jackson Short-horn sale held at Avoca, Iowa, last week, and the top of the females sold, Victoria Jen, November, 1907, was purchased by them. These well-known Wisconsin breeders went to the Iowa sale to select the best and they also purchased Victor's Queen, December, 1913, the second highest-priced female sold. The price paid for the former of these two high-class females was $525 and for the latter $500, being the two big purchases of the sale. MacMillan & MacMillan also bought other excellent females to add to their Lodi herd, paying from $275 up to $500. They bid only on the very highest class females offered, and took a big part of the pick of the offering.—Adv.

Three Features of the Pullman $740.

LOW price, absolute dependability, and plenty of room are three important characteristics of the Pullman $740 motor car. Low price means the best material and craftsmanship possible for $740; dependability means a sturdy, clean-cut chassis, powerful motor and strong parts throughout; plenty of room means a wide, comfortable rear seat and ample space in the driver's compartment. Many other features make the Pullman a highly desirable car. Read the specifications in the advertisement on page 10 and for further information write to the Pullman Motor Car Co., Dept. 5, York, Pa. Please refer to The Wisconsin Farmer when you write.—Adv.

A Car of Power, Comfort and Beauty.

HAVE you ever ridden in an Inter-State car? We have, and can testify to its good qualities. Before buying a car, we suggest that you investigate the Inter-State $850. It has power in abundance and will take the steepest grades quietly and easily. The Inter-State motor, built for power, is the overhead valve, removable cylinder type with all movable parts enclosed, yet easily accessible. Besides power, you want comfort in a car. The smooth, easy riding qualities of the Inter-State are unexcelled. The springs, underslung on the rear axle and shackled at both ends, take up all the jar and jolting from rough roads, and the extra wide seats and deep Turkish cushions add all that can be desired for complete comfort. While power and comfort come first, it cannot be denied that the beauty of a car adds much to the pleasures of motoring. Makers of the Inter-State have realized this and have built a well-proportioned car embodying the latest stream line design and possessing grace and refinement throughout. See the advertisement on page 24 and write for the catalog to Fowler Motor Sales Co., 445-449 Jackson St., Milwaukee, Wis.—Adv.

Prichard Offers Percherons.

THE Percheron stallions advertised on page 32 by W. E. Prichard & Sons, Ottawa, Ill., are a strong, rugged lot, with bone, substance and conformation, and will be priced worth the money. They have a few imported horses and some American-bred colts that are as good as any of the imported animals. If you are in the market for a horse get in touch with Prichard & Sons. They are a reliable firm and they handle reliable horses.—Adv.

Low Speed Ensilage Cutters.

THOUSANDS of Papec ensilage cutters are being operated on four to eight-horse-power engines—they do not require greater power because they run at low speed, 600 revolutions per minute. Though they save power they do not sacrifice efficiency. Few parts, perfectly adjusted cutting blades, greater blowing power from six fans, instead of four, all make for efficiency. Many other advantages of these machines may be learned by reading the advertisement on page 19 and writing for the 1916 catalog of the Papec Machine Co., Box 71, Shortsville, N. Y. We appreciate mention of this paper to advertisers.—Adv.

Nehrling's Holsteins.

THE Holstein herd of J. C. Nehrling, Plymouth, Wis., is one of special merit. The cows are well bred, of the best dairy type, and with large, well-developed milk producing organs. Official testing is being done and many creditable records have been made in the past, and prospects for the future are exceptionally bright. The herd is headed by a twenty-three-pound bull of great individual merit. The junior herd sire which has recently been put

into service is of the Colantha Johanna strain, coming from the great Fred Field herd at Brockton, Mass. Mr. Nehrling has a few young bulls for sale which he is offering at very reasonable prices. One is eight months old, a very fine individual and almost white in color. His sire is a twenty-three-pound bull and his dam as a two year old made sixteen pounds of butter in seven days. Look for Mr. Nehrling's advertisement on page 31 in the Shebaygon County Holstein Breeders' page advertisement.—Adv.

Percherons at Homewood Stock Farm.

A LOT of good Percheron stallions and mares, both imported and home bred are for sale by S. Metz & Sons, Homewood, Ill. They have some extra good two, three and four-year-old stallions and mares on which they will make very attractive prices and make terms to suit the buyer. Their advertisement appears on page 32.—Adv.

Plan Potato Show.

The potato interests of Wisconsin met at Eau Claire on March 15th to perfect preliminary arrangements for the convention of the Wisconsin Potato Growers' Association, which will be held at Eau Claire November 21-24, 1916. Leading potato growers, potato dealers, railroad men, commercial interests, county agricultural agents and many organized agricultural associations in Wisconsin were represented. This conference was arranged by the Wisconsin Potato Growers' Association in co-operation with the civic and commerce association, of Eau Claire, and the bankers' agricultural committee, of Eau Claire.

A definite organization of committees was completed to handle local conditions at Eau Claire and to make the necessary local arrangements. The committee chairmen are as follows:

On transportation—Mr. George Wallas, freight agent of the Omaha railroad.

On publicity—Mr. W. L. Swift, of the Eau Claire Press Company.

On entertainment and reception—Secretary R. F. Kaiser, of the Eau Claire Civic and Commerce Association.

On finance—Mr. W. S. Woodruff, chairman of the bankers' committee, the First National Bank, of Eau Claire.

The general arrangements for the convention will be handled through the office of the civic and commerce association, of Eau Claire, of which Mr. Kaiser is chairman.

The outlook for the greatest convention Wisconsin has ever held is promising. Eau Claire is within 150 miles of all important potato-growing sections of Wisconsin. The state association has organized work in twenty-five counties of the state. With a favorable season this year the exhibits should double those of the last convention, which was the largest gathering of potato interests and potato exhibits ever assembled in this country.

The state association is just issuing an attractive, special bulletin on "Potato Development Work in Wisconsin," completely illustrated throughout with all of the views of the last state convention held at Marinette and containing a summary of all the addresses delivered at that convention. This bulletin also contains special announcements relative to important phases of potato development work in Wisconsin.

A special edition is being printed in co-operation with commercial interests of the state.

LAW QUESTIONS.

Administrator—Settlement of Estate.

A Subscriber, Black River Falls, Wis.—A was the owner of real and personal property in Wisconsin and died leaving a widow and children. The widow was appointed as guardian of the children. B was appointed administrator of A's estate. (1) Can B sell the personal property without the widow's consent? (2) Can he collect all debts due to the estate, and pay all bills against it, without giving the widow statements thereof? (3) What are B's duties about the estate, and when does the law require him to settle it?

Answer.—(1) B can sell the personal property by permission and order of the county court without the widow's consent. (2) B, as administrator, is required by law to collect debts due the estate and pay claims allowed against it and he is not required to make statements thereof direct to the widow, but is required to make reports of his acts to the county court, where the widow may examine them. (3) B's duties as administrator are to collect debts against the estate, preserve and take care of the property, pay debts and settle up the estate without unreasonable delay. He should finally settle the estate in about fifteen months, but for good cause shown the county may extend the time for six months or a year if necessary.

It will cost most dairymen less to raise heifers than it will to buy cows.

HORSES.

FRANK IAMS'

"Peaches and Cream" Horses are "Town Talk"

Horsemen—1916 is the **"Get Rich Quick"** year for **Horse Breeders** and **Stallioners.** Get into the **"Money-Making Game"** of Breeding Draft Horses. **Europe "doffs"** her **"War Cap"** to **U. S. Horses. Europe** buys **500 Horses daily of U. S.** (at $125 to $200). Europe will buy **"a MILLION"** Horses of U. S. You make **more "Easy Money"** in **Breeding Horses** than any other business for **next ten years.**

His 34 years of success in *Importing, Breeding* and Selling *5,640 registered horses*—his "50 trips" across the ocean—make Iams *a safe man* to buy *stallions from.* His *"old customers"* are *"best Page advertisers,"* his *Breeding Guarantee* backed by *"1-2 Million Dollars."* *Iams' Imported* and *Home-bred horses* are *"classy, model big drafters"* of *large bone, fine form, quality, finish,* and *flash movers.* Several European **"Gold Medal and State Prize-Winners,"** *"Iams' kind,"* and in the *"Pink of Condition."*

Bought at *"bargain prices"* and *must be sold.* *"Iams sells horses on honor."* A lady can buy as cheap as a man. *Iams is not in "stallion trust,"* and is *selling more pounds of "model draft horse"* for the *money* than any *competitor.* *Iams* is *cutting the middle* out of *high prices* on his choice collection

POLAND CHINA SWINE.

Silver Cup Big-Type Poland Chinas! The greatest prize-winning herd in the state. We proved this by winning 61 ribbons at Wisconsin State Fair. This included 3 champions and 1 grand champion. At the Northern Wisconsin State Fair, we made a clean sweep, getting 1st and 2d on all the herds. We have for sale boars and sows of all ages. This stuff has the size, bone and quality out of big prolific sows that weigh up to 800 pounds, litters averaged 10. Can furnish you sows and boar not related. Pedigrees furnished. Write your wants.
J. D. McDONALD, **NORTH BEND, WISCONSIN**

BIG-TYPE POLAND CHINAS
SPRING GILTS. Some now bred for March and April litters. Others will be bred for April and May litters or will be sold open as desired. There are daughters of **King Jumbo** by Long Jumbo, that weigh 1106 pounds. **Fall Yearling Gilts,** bred for spring litters to **Big Wonder,** first prize under six months boar at 1915 Minnesota State Fair. **Some Fine Yearlings and Spring Boars** that will do you a lot of good. **SHORT-HORNS. 10 Fine Yearling Bulls,**—roans, red and whites, sired by **Highland Sultan,** a grandson of Whitehall Sultan. **25 Cows and Heifers** from six months old and up. These are of Scotch and Bates breeding. Most of them are of heavy milk producing strains. If you want Short-horns of big size you can get them here. My Short-horns won all first prizes but one at the 1915 Beaver Dam Fair against heavy competition.

What Is Gained by Testing Cows

Testing your cows tells whether they are earning money for you. By the Register of Merit work you can now build up your herd from animals of known production. Science is driving guesswork out of the dairy business. Government records show that the average net profit per cow was increased 129% in eight years by testing. Selection based upon actual dairy merit will produce like results in your herd. Our booklet, "What is Accomplished by Testing Cows," will help you. Send for it now. It's free.

The American Jersey Cattle Club
338 West 23rd Street

LEFEBURES' ROYAL BELGIANS

Best and Largest Collection in This or Any Country

WONDERFUL animals; large, strong, exceptional weights. Average weight of above group of twelve stallions March 14, 1916, 2,214 pounds. We have first-prize group of five Belgian stallions at 1915 Iowa State Fair, Minnesota State Fair and 1915 San Francisco World's Fair. We won more prizes at above fairs than did any other exhibitor. We have twenty-one Belgian stallions that weigh twenty-one tons. Every one sound and guaranteed sure breeders. Our noted herd stallion, Jules Remi 6166, weight 2,400 pounds, an exceptionally sure and strong breeder, is offered for sale to men who can appreciate his value, which we prove by the string of great colts we have here on our farms. If interested, come and spend a day with us and grant us the pleasure of showing them to you. Come now, don't wait. There is not one-tenth enough of our kind to supply this spring's demand. Mention The Wisconsin Farmer and address

H. LEFEBURE & SONS - - FAIRFAX, IOWA

Eight miles from Cedar Rapids. Hourly interurban service. Phone for auto to meet you at Lefebure Crossing.

IMPORTERS AND BREEDERS OF

PERCHERON, BELGIAN AND CLYDESDALE STALLIONS AND MARES

WE now have in our barns more big-boned, rugged draft colts, from yearlings to 4 and 5 years, of the different breeds than ever before. We have two-year-olds that weigh over a ton—herd headers and show propositions.

Five farms over 1,000 acres devoted to the horse business. We do all our own buying and selling, grow all our own feed. Our economical way of handling stallions saves money for the purchaser. We guarantee all horses sold and can sell you a high-class stallion cheaper than any other firm in America.

We are located in North Central Iowa, 20 miles from the Minnesota line, on the C. M. & St. P. Ry., midway between Mason City and McGregor.

Send 20c in stamps for large Horse Hanger which shows our Main Farm and sales stables. Correspondence a pleasure. **We have a horse for every purse.**

CURRENT EVENTS

HEAVY fighting was still in progress around Verdun, the French stronghold, at last reports, the Germans making slight gains, but at a tremendous cost. Both the French and the German are shelling the countryside in the most terrific artillery bombardment the world has ever known and men are being sacrificed, on both sides, literally by the thousands. Verdun still remains intact, although some of the outlying towns and forts have fallen before the Germans. The Russian offensive against the Germans in northwest Russia has increased in intensity and fighting is in progress day and night. The latest official statement from Russian general headquarters says that desperate infantry fighting is proceeding north of the town of Postav, where the Germans launched violent counter attacks in an attempt to dislodge the Russians from trenches which they had previously completed. Respecting this operation, the Berlin communication says that at this point the Russians delivered their attack and their losses reached "extraordinarily high figures, even for the number of Russians in action."

THE American troops, some 5,000 strong, in command of General Pershing, were still pursuing the Mexican bandit, Villa, in Mexican territory, at last reports. Conflicting rumors have been rife that various Carranza chieftains have revolted and have either openly joined Villa or have declared war against the United States on their account, so that the authorities at Washington are considerably worried, for the situation becomes more complicated and threatening every day. One of the first Carranza chiefs to revolt was General Luis Herrera, commander at Chihuahua, who has 2,000 men (the best fighters in northern Mexico) behind him. Gen. Luis Herrera was one of Villa's brigade commanders from 1913 to 1915. He, with his brother Maclovio Herrera, were born in southern Chihuahua and raised a brigade of troops from that region which attained great prominence in the early Villa campaigns. Maclovio Herrera, the younger of the two, was the active leader in the field and was regarded as one of the most dashing of Villa's leaders, while Luis Herrera's services were freely used in an administrative capacity in the territory captured by Villa. At one time last week Villa was said to be caught in a trap, the Carranza forces hemming him in at the south and the American troops at the north. It is not likely, however, that the sly bandit who defied Diaz and his soldiers for eight years, even with a heavy price on his head, would have been caught so easily. Serious trouble looms ominous and imminent in Mexico these days.

AIR raids over the English seacoast towns and cities continue, usually with the loss of numerous lives. The last raid resulted in the killing of nine persons and the injuring of thirty-one others. A British airman brought down one of the four German raiders, the German observer being killed in the action. The first bomb, dropped on one of the coast towns, fell squarely on an automobile, killing the driver and setting fire to the gasoline tank. Pieces of the bomb fell among children on their way to Sunday school, killing four of them. Other bombs hit a business block, a barber shop and several residences. One bomb fell through the gable of a hospital to the floor below, but nobody was injured. The weather was clear and the attacking machine flew very high. A dozen bombs were dropped in Dover, and four persons were killed there. One of the missiles crashed through the roof of an orphanage, causing extensive damage and injuring a nun. The children in the institution suffered no injury, having been taken to the cellar at the first alarm. The terrible part of these air raids is that women and children suffer most heavily, paying the penalty of war, although not participating therein and absolutely unarmed and helpless.

COLE YOUNGER, the notorious outlaw of border days, died last week at his home in Lees Summit, Missouri, at the age of seventy-two. He was one of the last of the members of the notorious robber bands that infested western Missouri during and after the civil war. He was a member of the Quantrell band of guerillas and with his two brothers took part with the James boys in bank and train robberies in Missouri and neighboring states that netted the looters more than $100,000. Among the notorious robberies of the decade following the war that were laid at their door were: The raid on the Liberty, Mo., bank in 1866; one bank defender shot dead and $72,000 stolen. The looting of a Russellville, Ky., bank in 1868 for $17,000. The Gallatin, Mo., bank robbery of 1868, in which the cashier was shot and killed. Raids of Lexington and Savannah, Mo., banks in 1867. Ten thousand dollars stolen from the Kansas City Fair Association in 1871, while 1,000 persons looked on. The Corydon, Ia., bank was robbed of $40,000 the same year.

PEACE rumors were revived last week, but there seems little foundation in fact for the revival. The stock market was seriously affected for a day or two, but quickly rallied, because of the absence of any official confirmation of the reports. Germany's enemies, by not taking advantage of the announcement of Chancellor von Bethmann-Hollweg on December 9th, that Germany would consider peace proposals whenever her foes are willing to ask terms, have lost the day of grace. This is the conclusion to be drawn from a leading article in the semi-official Lokal Anzeiger, of Berlin, in which it is declared flatly the time has now come to carry out the chancellor's warning of December 9th that if the enemies of this country did not ask for peace in a reasonable period they would have to pay more dearly for it. In the meantime, the French and English papers and some of the high officials, are maintaining that victory is in sight for them, for practically the first time, in view of which the peace talk would hardly have emanated from them.

NO TEMPORARY chairman for the republican national convention, to be held in Chicago in June, was elected at the meeting of the committee which has this matter in charge last week. When the committee adjourned the three candidates most favored appeared to be Senator Warren G. Harding, of Ohio; Philander C. Knox, of Pennsylvania, and Congressman James R. Mann, of Illinois. Dr. Nicholas Murray Butler, president of Columbia University, New York, telegraphed asking that his name be not considered. It is thought likely that Senator Knox will be the ultimate choice, provided his selection is satisfactory to Senator Penrose, of Pennsylvania. The matter will be definitely settled at a postponed meeting of the committee in April.

THE interstate commerce commission has ordered a nation-wide inquiry into railroad rates on live stock and all live stock products. The investigation, which is intended to be the most exhaustive yet made by the commission, will reach into every direction. Representatives of Chicago packers predicted yesterday that a year's time would be consumed by the commission in gathering the testimony. Hearings will be held in all sections of the country under the personal direction of Commissioner Hall. Luther Walters, attorney for the Chicago packers in the western rate advance case, said that it would probably be two months before the preliminary arrangements could be made for the hearings.

Give Alfalfa a Try-Out.

By mixing alfalfa with timothy and clover at the rate of two pounds to the acre farmers may, without any great outlay of money, easily get an idea of how alfalfa is suited to their land.

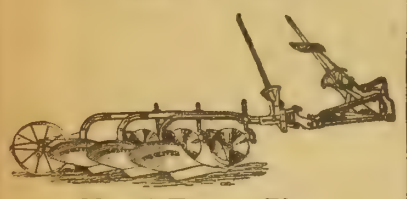
Sown in this way alfalfa will not only prove the quality of the hay crop but will inoculate the soil for future crops.

Nearly one-half of the alfalfa failures in Wisconsin last year resulted from lack of lime and inoculation. Sowing small amounts of alfalfa in with this spring's seeding will help put the land in proper shape at a cost of less than 50 cents an acre. It's worth trying out.—[Wisconsin Bulletin.

Finding Good Seed Corn.

In the early part of February the several Y. M. C. A. groups in Rock county arranged for meetings at ten points in the county. Illustrated lectures were given showing the value of seed-corn testing and as a result of these meetings about 500 persons were reached. A great many of that number have agreed to give all their corn the ear test this season. As a result a considerable amount of real good seed is being discovered. The Y. M. C. A. work in Rock county is in general charge of L. A. Markham, superintendent.

OLIVER



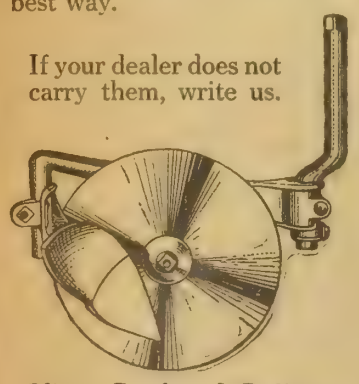
No. 62 Tractor Plow

The Oliver No. 62 tractor plow equipped with the combined rolling coulter and jointer rivals the work of master plowmen.

Plowing must be done this year so as to put weeds on the bottom of the furrow deep enough to prevent the harrow teeth from pulling them out, otherwise the danger from weeds will be great.

The No. 62 and the combined rolling coulter and jointer does this work in the best way.

If your dealer does not carry them, write us.



Oliver Combined Rolling Coulter and Jointer.

10000 NEW 1916 GALLOWAY SANITARY CREAM SEPARATORS

Special Proposition from Now till Grass—in addition to my new low prices. My way of opening new territory and making further sales, as one separator sold in a neighborhood always sells from one to twenty-five more. Every customer boosts—their statements coming from my lips would be called "exaggeration." Every Galloway Separator is equal to if not better than other separators selling for $75 to $96.---users say "way ahead." I only ask one thing—before you buy a separator of any make, kind or at any price, get my big book—pick out the separator you want, try it 90 days—180 times—at my expense. If you decide to keep it (you don't have to) I'll give you the choice of 5 open, fair and square selling plans and guarantee my separator for 10 years against defective workmanship and material! A $25,000 bank bond backs every sale!

NOTE THIS BUILT-IN QUALITY

Heavy, high carbon steel gear shafts and bowl spindle; extra long bearings; strong, sanitary bowl, discs not fastened together; oil bath lubrication; big, roomy, seamless, pressed steel supply tank; both gear shafts and both spindle bearings supported by one solid casting; heavy sanitary tinware; low bowl speed reduces wear on bearings and gears. No raw, sharp edges in the bowl to cut up the globules of butter fat.

MY NEW 1916 250-PAGE BOOK FREE—

Handsomely printed, beautifully illustrated in four colors. Tells all about my new 1916 Sanitary Cream Separators, how I build them; gives my 4 new low prices on 4 good sizes, also my 5 easy selling plans, cash or terms, etc. I'll also send my special proposition on 10,000 Galloway Sanitary Cream Separators. Drop me a postal today.

Separators shipped from Waterloo, Kansas City, Council Bluffs, St. Paul or Chicago.

Plow Corn Faster! Save Time And Labor Using Daisy Shields

Dont waste time and labor with old-fashioned cultivator shields. Put Daisy Revolving Shields on your cultivator—and plow the smallest corn as fast as you "lay by" the biggest.

BEST CULTIVATOR SHIELDS MADE

Daisy Shields beat them all—the best that money will buy. Save you one-fourth the time plowing and enable you to grow more corn on every acre. Absolutely prevent clods from falling on the corn—no stops to uncover corn. Fine dirt passes right through the Daisy Shields and covers the weeds and grass all round the hills. These shields revolve like a wheel over the ground; do not pick up trash and cannot get out of adjustment. Save their cost in time and labor over and over again in one season and are good for lifetime service.

A PAIR FOR YOUR INSPECTION

Investigate Daisy Shields. Write for folder and send dealer's name—We'll send a pair for your examination. Write today.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE BLAME FOR HIGH PRICES.

HARDLY a farmer, on any trip to town, but hears himself blamed by some consumer for the high price of living. Is he to blame? Let us look at the question impartially for a few minutes.

I have just finished reading a very interesting and enlightening article entitled "The Costly Corner Grocery." The writer of this article has investigated the matter thoroughly and has come to the conclusion it is not the farmer but the corner grocer, in town, who is most to blame. Let us follow his line of argument. To begin with, it costs the farmer something more than the mere price of production to get his produce to market. There is the expensive item of hauling. Dr. Clyde L. King, of the University of Pennsylvania, asserts that:

> The average cost of hauling produce from farms to shipping points in the United States as a whole ranges from 7 to 44 cents per 100 pounds, with an average of 11 cents. It costs the United States $75,000,000 annually to haul its produce for twelve main crops from farm to shipping point or market.

This, then, must be deducted from the price which the farmer receives for his produce, to secure his actual net earnings. The ordinary city man to the contrary, it is not all profit to the farmer, this price which he receives for his produce.

But the matter does not rest here. The magazine writer whom I am quoting is authority for the statement that in New York the corner grocer adds 16.9 per cent to the wholesale cost of creamery butter, 30.42 per cent to eggs, 71.5 per cent to fresh milk, 57.81 per cent to potatoes, from 60 to 110 per cent to fresh vegetables, from 40 per cent on oranges to 125.2 per cent on bananas to fruits, 70 per cent to choice and 34.5 per cent to cheap cuts of beef, 45.45 per cent to pork, 31.1 per cent to lamb, 25 per cent to poultry, 25 to 180 per cent to fish, 33.3 per cent to sugar, 20 per cent to flour, 23 per cent to coffee, 111.87 per cent to tea, 50 per cent to macaroni, 31.8 per cent to lard, 114.2 per cent to dried codfish, and from 20 to 81.8 per cent to various canned goods. The New York Food Investigating Commission estimates that, while the wholesaler adds 10 per cent to the cost, the retailer adds 33 per cent.

We must not make the mistake, however, of saying that there is no excuse for this added profit; in many cases there is much excuse. The fault is not the grocer's (nor any retailer's, for that matter) so much as it is the system's. Why, for instance, should the ultimate consumer be obliged to pay the expense of duplicating delivery wagons which traverse the same route, day after day, sometimes as many as twenty different firms making deliveries in one city block? Why do not more towns and cities adopt the idea of co-operative delivery, which has supplanted the old-style, every-body-for-himself method, with its duplications, rivalry and excessive cost? I am delighted to be able to state that this plan was first tried out here in the grain belt—in Waukesha, Wisconsin, to be exact—where it proved so successful that other wideawake Wisconsin towns investigated and imitated, Depere, Beaver Dam, Janesville, Green Bay and other progressive communities now having adopted the plan.

The idea originated, I am advised, in the fertile brain of Mr. Charles A. Ham, of Waukesha. He could not see either sense or economy in having a butcher wagon drive alongside a grocery wagon, with the delivery van of a dry-goods merchant trailing close behind, all three covering the same ground to deliver three little packages, possibly all to the same person. He advised a plan of communal delivery. In the beginning, eight Waukesha merchants joined hands (deliveries, rather) in a sixty-day try-out of the plan. At a certain hour they turned in their delivery wagons, seventeen in number. By co-operative delivery ten wagons were found ample to do the work of the seventeen. Each delivery man was assigned a route and a schedule. He went to certain stores, brought the goods to be delivered to a central house or station, where they were distributed much as mail is distributed; then he set out, carrying a little bit of everything from tooth paste, needles and rib roasts to shirt waists and garden rakes.

At the end of thirty days it was learned that the total cost for the service was 3½ cents an order, about half the old cost. The merchants did not wait for the sixty days to elapse. They organized the Waukesha Co-operative Delivery Company, which today has twenty members and ten wagons. These wagons make five trips a day, running over a regular route on a regular schedule, distributing on an average of 1,200 packages a day. One day last winter the ten wagons delivered 2,500 packages, and not one driver was late at the close of the day's work. Recently a freight and dray service has been added and the company now handles local freight and the largest shipments for transport. A substantial dividend declared the first year (the plan was started in June, 1914) has been allowed to remain in the treasury to buy motor cars before the present year is out.

The idea was so successful in Waukesha it was not long before twelve merchants at Depere adopted a similar plan, the first six months showing 100,000 deliveries, or about 650 a day, on six routes. At Green Bay motor trucks are used. At Beaver Dam eleven merchants joined the organization and five wagons do the work. At Janesville there are seventeen merchants in the organization and ten outside stores are operated with fourteen motor trucks. The merchants like the new idea because it saves expense and useless duplication. The customers like it because there are five deliveries a day and the wagons come as regularly as the postman and over twice as often.

Why cannot this idea be adopted generally throughout the entire country? If it succeeds in Wisconsin why should it not succeed in Massachusetts and California? Here is another grain-belt reform idea which I believe is destined to work wonders in reducing the high price of living and lifting the blame from the farmer's shoulders, where it never belonged.

After all, it is the abuse of any system with which our quarrel lies, rather than with the use. Let us look about, see where we can remedy things and work together to make conditions better, rather than sit down helplessly and lay the blame altogether on farmer, corner grocer or any other one man, cogs in a wheel without which we would be in a sorry position, indeed, both producers and consumers.

FARM MACHINERY AND WAR.

MY RECENT article setting forth the statement of a magazine writer that the chief reason why the prejudice of the Russian peasant has been aroused against the Germans is because the Germans have introduced improved agricultural machinery into Russia seems to have aroused considerable interest, judging from the number of letters I have received. Here is a very interesting and enlightening one, written to me by Mr. John J. Kizler, cashier of the Hillsboro State Bank, of Hillsboro, Kansas:

> I had some personal experience in Russia with harvest hands and heard them say that in one locality where the reaper was then being introduced some of the itinerant laborers, figuring that the machines would take away their jobs, went and drove iron stakes in the wheat fields that were about to be harvested, in order to thus ruin the machines in resentment of their intrusion.
>
> That was a little over thirty years ago, but a country that had no public schools could likely have stood still in respect to such matters for this length of time.
>
> At that time, though, Germans were highly respected where I was. But I understand that there was a systematic agitation of the Russian population against the Germans, who were settled there in great numbers, and the peasants were easily taken in by such agitators because the Germans, as progressive farmers, became in a short time large landowners and their prosperity excited the envy of the Russians.
>
> I for myself cannot see where there would be any benefit to the world at large were the Russian arms to prevail in the present conflict.

Here is first-hand information on the subject which is of marked value, tending to corroborate the claim of the magazine writer heretofore quoted. I can only repeat my former statement: Any war which has no greater principle at stake than prejudice against farm machinery is so useless, inexcusable and un-Christianlike as to stand condemned in the eyes of every man. Rather than taking up arms, in a flare of national passion, against a people who are trying to make them more prosperous and progressive (through the general use of agricultural implements) the Russian peasants would far better be striving to free themselves from the serfdom in which the ruling classes have held them for all too many years, a serfdom which the revolutionizing of labor methods would overthrow more quickly than almost any other thing. Another one of my correspondents, Mr. L. B. Hetrick, of Elwood, Indiana, raises this very point when he says:

> Now the hateful and dirty thing revealed in the facts you have so masterfully presented is this: The very owners, landlords and ruling elements of Russia, the very ones that profit most by the use of labor-saving devices, are also the very demons that shout into the ears of the peasant class about improved machinery being detrimental to the laboring element of society. Machinery should be a blessing for all and should not mean gluttony for one class and abject poverty for another.

The introduction and invention of labor-saving devices has done more than any other one thing to put farming in America ahead of farming in any other land. We who have been quick to adopt time-saving and labor-saving appliances—having almost two billion dollars invested in farm machinery today—are the ones who have brought agriculture to its highest pinnacle of general production and prosperity. It would be a shame, indeed, if millions of men were at each others' throats, like so many snarling dogs, for no other reason than that a downtrodden people should object to being freed by the riding cultivator, the binder and the threshing machine.

HARVESTS IN WAR TIME.

PERHAPS it is because I have myself seen the most menial labor of farming, even in peace times, being performed by the women of Europe—particularly of the southern countries—that I am so interested in the reports which tell of the way farming operations are being carried on, now that the able-bodied men of almost every nation of Europe, literally by the millions, have been called to the colors. If it had not been for the women the harvest fields last fall would not have yielded the grain which had been brought through to maturity in the face of almost insurmountable obstacles and heartbreaking difficulties.

I read, recently, a very graphic picture of the harvest fields in Galicia (the Austrian crown lands) last fall. Between the first trenches of the Austrians and the first trenches of the Russians there was a strip of land about a mile wide, and here, while the enemies watched each other like hawks and "sniped" whoever was venturesome enough to thrust his head above the fortifications, the Galician women went calmly about the harvest, gathering the precious stalks, by hand, as though they were so many pretty flowers, to form a bouquet. Here is the way the writer described it:

> Up out of the field where they had been mowing, came a little company of barefooted peasant women with their bundles of gleanings on their heads and talking in that sing-song monotone of theirs, as detached as so many birds, they went pat-patting across the bridge. If one of these women could but write her impressions of war!
>
> They had done their part, these peasant women and old men and children left behind. All over Galicia, round the burned villages, right through barbed wire entanglements up to the very trenches, stretched the yellow wheat. Somehow they had plowed and sowed and brought it to harvest and now with scythe, with knives even sometimes, they were getting it under cover.
>
> At home we know gleaners generally only in rather sentimental pictures; here we saw them day after day, barefooted women and children going over the stubble and picking up the forgotten wheat heads and arranging them in one hand as if they were a bouquet. There will be no wheat wasted.

Has not war undergone a great change, indeed, when, instead of pictures of dashing cavalry charges, with sabres flashing in the bright sunlight and foam-flecked horses bearing the "gallant 600" to fame and the Victoria cross, we have men hiding behind embankments of earth and sand, "sniping" the unwary, artillery bombarding positions for days at a time, with never a sight of the enemy many miles away, and wrinkled peasant women gathering wheat heads by hand, like so many children picking flowers in the spring, but with none of the childish enthusiasm and gayety? The war in Europe is being fought to a finish at a great, an awful cost, but it is being fought in such a manner as to take away, for all time, all glamour and romance which made it appeal to those who thought only of the heroics and not of the sacrifices and suffering. By the time peace shall have been declared there will be few left to whom war has any appeal whatever, a consummation devoutly to be wished and one which will make a repetition of the present titanic struggle hardly to be considered, in my opinion.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Good Seed Grain For Wisconsin.

SEED grain selection and treatment of the seed is one of the important works of Wisconsin farmers at this season. It was never more necessary to treat against smut, as this disease had a free hand and a favorable season last year. This matter has been discussed previously in these columns, and unless the small grain grower take the necessary precautions against smut by treating the seed they are liable to disappointment in their crops this fall.

No farmer can afford to grow scrub grains. Records of the experiment station shows that it pays to grow the pure-bred seed grains, and after sixteen years of breeding work in Wisconsin splendid seed is to be had at fair prices. So it is not necessary for any farmer to hang back on the question of price, as the pure-bred seed costs little more than the scrub seed, and the yields will be far better and much greater.

No. 1 and No. 5 oats, experiments have proved, often yield twice as much as the common kind, and other varieties yield from ten to twelve bushels more per acre than the common kind. No. 1 is recommended for the red soils and No. 5 for the worn and light soils, and the increased yields will far more than compensate for the small additional cost of good seed.

In using formaldehyde it should be remembered that it is not a cure-all for every disease. The grain diseases controlled by formaldehyde are oat smut, barley smut, and the leaf stripe disease and the sticking smut of wheat. Formaldehyde will not prevent loose smut in wheat; the blotch disease of barley or rusts of various kinds. Wisconsin farmers who are growing pure-bred grains for seed purposes find it very profitable, while those who use the pure-bred seed for the crops they produce have learned that the increased yields make good seed a paying investment.

Making a Wisconsin Barn.

ATTENTION of our readers is called to the illustrated articles on pages six and seven, telling about the Glenn Keyes barn in Richland county. This barn is not set up as a sample of just what every dairy farm in Wisconsin should have, but it has some very attractive features. The Wisconsin Farmer is anxious that its readers get the benefit of experiences in such construction and hopes that they will profit thereby. Not every farmer who builds a barn will decide on the same character of construction or the same material. The use which Mr. Keyes has made of cement, of metal lath, of a special system of ventilation, and of barn equipment throughout, is the result of careful study on his part, and every farmer who intends to erect a new dairy barn should give the same careful thought and study to the work. Our barn buildings are a source of great pride, but that should not be the chief end in view in erecting a barn. Service is the chief item, and permanency is another which should be taken into consideration. The days of "barn raisin's" in Wisconsin have long since passed away. The farm barn now is planned. Advice of experts is asked for. It is not advisable to spend a large sum of money on a barn unless one has selected a plan.

Value of the Farmers' Clubs.

AS COMMUNITY builders we know of nothing better than well-organized, properly-conducted clubs. Every farming unit should have a farmers' club; every small town a commercial club; every community an organization of some kind which can work for the upbuilding of the community as well as for the enjoyment of the members.

Wisconsin is rapidly forging in the organization of farmers' clubs, and the great value of a successfully organized and conducted club was demonstrated again recently in Walworth county by the Lakeview Farmers' Club in the town of Linn. Walworth county has some of the strongest farmers' clubs in the state and they do not seem afraid to undertake anything. The Lakeview Club recently held a "corn and dairy week," the average forenoon attendance for the four days being 160 and the average afternoon attendance 250. Everything of interest to the farmer-dairymen was discussed by competent speakers during this week, and those who attended contend it was one of the most successful affairs ever held in Walworth county. During this week a cow-testing association was organized and 445 cows were signed up, with the result that testing will begin within a few weeks.

The Lakeview Farmers' Club is a young organization, but it is distinguishing itself for doing something. Such a club as this is a tonic for the community, and enthusiasm is kept constantly at fever heat. Neighbors are brought together for the common good, and where a community has begun to run down and enthusiasm is dying out a successful and properly-organized club will fill a long-felt want. The Lakeview club has a community hall at Zenda which the writer visited last year, and it stands as a monument to the progressive spirit manifest in that neighborhood. It is not necessary that a club have its own quarters. The schoolhouse makes a good meeting place but the important point in organizing is to get everyone interested; take particular pains to see that no one is slighted or overlooked and then pull together. The holding of meetings such as that held recently by the Lakeview club is a matter to be worked out after the club has been started and should not be undertaken too soon by a new organization. These clubs can be social as well as instructional. They are what the members make them, and once started on the right track and with the proper amount of interest and enthusiasm they become important factors in the social and agricultural development of their respective communities.

Our Bright Rural Scholars.

STATE SUPT. C. P. CARY is responsible for the statement that the average country boy and girl can complete the prescribed high school course in considerably less time than the average city boy and girl. Statistics which he has compiled show that it takes the average city boy and girl 4.22 years to complete the course. It takes the average country boy and girl only 3.68 years. To arrive at these figures records were taken on over 200 students in each group. While this is not a very considerable number of the school population of Wisconsin, the result obtained bears out previous investigations which have been conducted along this line.

We feel sure that the farmers of the state will be interested in the following, clipped from a recent letter sent out by Superintendent Cary:

> If the country pupil in the high school does outrank the city pupil on the average, and there seems to be a good deal of evidence that he does, there are no doubt reasons for it, but the burden of explanation is on the city schools. The difference, if any exists, is scarcely worth mentioning, except for the fact that we have in Wisconsin a small group of city men who seem to be abnormally interested in what they call the deplorable condition of the country schools. That they know nothing about the actual conditions, except from heresay, is true enough, and their ignorance of the laws of the state in relation to education is evident to anyone who listens to them.
>
> Nevertheless, this persistent reiteration, if treated by school men with the silence it deserves, is apt to do the state of Wisconsin rank injustice. Word reaches this department from time to time that some public speaker within the state or outside the state quotes these irreponsible statements of irresponsible men to the disadvantage of Wisconsin.
>
> In striking contrast with this periodic wail was the statement a few weeks ago by a United States government official, whose business it is to study country schools, to the effect that no state in the Union had made more advancement in her country schools in the past few years than has Wisconsin. In a subsequent statement he made it even stronger, and said that no state had done as much as had Wisconsin for the improvement of her country schools in the past ten years.

The Wisconsin Farmer believes in good country schools. We believe the rural children are entitled to the same advantages as the city children. When they have the same advantages we know that the rural children will make records which will cause some of our city "educators" to sit up and take notice.

It Pays to Improve Farm Land.

SIX years ago J. H. Harris bought 100 acres of land near Elkhorn, Wisconsin, at $90 per acre. Last week he sold the property at $250 an acre. This is a profit of $26.67 per acre every year that Mr. Harris owned the farm. It means a total profit of $16,000 in six years. In addition to the value of the land sold, Mr. Harris had also accumulated a considerable amount of personal property, which he sold for $7,000 and which was added to the deal. The purchaser is D. E. Davis, a young man of Monroe, Wisconsin, who expects to still further develop this fine dairy farm.

Two important items entered into the advance in value of this land from $9,000 to $25,000 in six years. Of course, the difference in the two selling prices may not represent all profit by any means. Mr. Harris believed in improving his place and he spent a considerable amount of money in improvements. He also spent considerable money in fertilizers. It is fair to presume that he paid for a considerable part of the improvements out of the profits of the farm. If he paid for all of the improvements in this way he certainly made a nice profit. It is fairly representative of the value of money properly invested in Wisconsin dairy farms, to say that Mr. Harris' $9,000 earned him nearly 30 per cent a year.

Buyers will pay well for farm property provided the soil has not been robbed and the improvements have been kept in good shape. The right kind of improvements on Wisconsin dairy farms will earn big dividends, and it is a mistaken economy to stand back and assert that the old methods and old equipment of dairy farms will do. Mr. Harris not only kept about seventy head of cattle on this 100 acres and used the fertilizer to the best advantage, but he also used commercial fertilizer and reports say that he considers his investment a profitable one.

Wisconsin Farmer-Banker Meeting.

WISCONSIN farmers and bankers who were so fortunate as to attend the banker-farmer meeting at Madison this week doubtless returned home with new ideals, greater enthusiasm and a better knowledge of their state than they had ever had previously. This meeting, scheduled to open Tuesday and close Wednesday evening, was arranged so that the bankers of the state might get together and learn at first-hand the great things in agriculture which are being undertaken in Wisconsin. The bankers have been anxious to co-operate to improve our farming conditions. Farmers were invited that they might meet the bankers on common ground and learn of these accomplishments and the plans of the bankers. The valuable man in any business or in any community is the man who can and will co-operate with other men. So the banker-farmer movement, which is nothing more than co-operation between banker and farmer, was discussed fully and in detail. In addition to discussing these matters the bankers and farmers present at the meeting were privileged at the university farm to see stock demonstrations, etc., which should prove of great value in promoting a better agriculture.

Mr. B. F. Harris, president of the First National Bank, of Champaign, Ill., and chairman of the agricultural commission of the American Bankers' Association, was a guest of the meeting and one of the principal speakers. Sometimes it takes an outsider to point out the good points about a state, just as it is often necessary to go away from home to appreciate how fine home really is. This Mr. Harris, an outsider, was enabled to do, and he gave those present a splendid insight into the existing conditions in Wisconsin. In the following few paragraphs he summed up Wisconsin's present greatness:

> You have a model state, with agriculture far and away the dominant interest. I know of no real agricultural state whose agricultural interests are any better balanced or diversified. I note the sum total of your eleven chief agricultural products (dairying, hay, corn, oats, potatoes, barley, tobacco, rye, wheat, poultry and vegetables) aggregates over $286,000,000 annually—almost half of this sum, not including live stock, coming from the three single items, dairying, eggs and poultry, and vegetables. These are the three things that take away least of soil fertility. You have in addition over $180,000,000 invested in live stock and it consumes not a little of your crops and still further adds to soil fertility.
>
> You have perhaps the very largest percentage of owners among your farmers that is found in any state of your class, and while many of them carry large mortgages, or a large per cent of mortgages, statistics show that your mortgaged farmers are in many respects better equipped and doing better than those otherwise situated, and finally, while Illinois leads you and all the states in the great middle section in the value of all crops produced per improved acre, having such an average production of $13.37 per acre, you lead all these states in the value of all live stock products per improved acre, your average being $10.
>
> When crops and stock per improved acre are added together, Wisconsin total $22.46, leading all the twelve great northern central states. Illinois follows with $20.81; Iowa, $20.30; Ohio, $20.19; Indiana, $20.16; Michigan, $19.77; Missouri, $17.47; Minnesota, $14.20; Nebraska, $13.14; Kansas, $12.02; South Dakota, $11.22; North Dakota, $10.02.
>
> Your average dairy income per farm is $304.12, followed by an average income of $187.14 in Minnesota, $143.73 in Iowa, and $125.73 in Illinois.

Mr. Harris' tribute was only one of many and those present could not have gone home without a new realization that Wisconsin ranks with the best. Elsewhere in this issue we are printing Mr. Harris' address on "Diversification—Co-operation," which is a tribute to the diversified live stock farming of this state. Others extolled Wisconsin's agricultural wealth, and in our next issue will appear a complete report of the banker-farmer meeting.

Wisconsin Man's Idea on Treatment of Foal.

THERE is a heavy mortality among young foals every spring, and unquestionably the loss could be materially cut down if the caretakers of the foals could be persuaded to take certain precautions. This subject was taken up in detail in Circular No. 13, published by Dr. A. S. Alexander, of the Wisconsin Experiment Station, and from this bulletin we quote:

> Attend to the navel cord as soon as the nose of the foal has been cleared of afterbirth. If possible, avoid tying the navel cord. It is best for it to break off naturally. If it fails to break and the mare is lying down, make her get up and the cord may then break.
>
> If found necessary to tie the cord use a clean, disinfected string. A dirty string may cause infection. Soak the string in a 5 per cent solution of lysol or carbolic acid, or a 1-500 solution of corrosive sublimate (bichloride of mercury). Tie the cord

one inch or a little more from the belly; then sever the cord with a clean knife.

Saturate the stump of the navel cord immediately, whether tied or not, with the following disinfectant: Powdered corrosive sublimate, two drams; boiling water, one pint. When it has cooled, color the solution with two drams of tincture of iron, label the bottle "poison" and keep it out of the way of children. Repeat the application twice a day until the cord shrivels up, drops off and no raw spot remains. To keep the solution from blistering the foal's belly smear carbolized vaseline or unsalted lard around the navel before making the first application.

A good way to use the solution is to put some of it in a shallow, wide-necked bottle, then hold the bottle against the foal's belly with the navel stump immersed so that it will be completely covered by the fluid. If the navel cord has been tied remove the strings as soon as possible, squeeze out the blood clot and instantly soak the navel stump with the corrosive sublimate solution. Use the solution twice a day until the navel is perfectly healed. Remove sloughing portions of the cord each morning, so far as possible, to allow the solution to wet all raw parts of the cord.

A strong foal will be on its feet and trying to nurse in less than an hour from birth. Such a foal needs no help, but a weak one will have to be held up to suck until strong enough to do so without help. Wash the udder of the mare with a lukewarm 2 per cent solution of coal tar disinfectant and then rinse off with warm water before the foal is allowed to suck for the first time. The external organs (genitals), tail and hind parts of the mare should be washed with a similar solution once a day for the first week or so after the birth of the foal.

Keeping the udder free from infective matter in this way tends to prevent the foal from scouring, for that condition of the bowels often is due to germ infection of the intestinal tract by way of the mouth. Disinfection of the navel cord also tends to prevent scouring. At birth the intestine of the foal contains a sticky mass of fecal matter. This should come away promptly and usually this is accomplished by the first milk which possesses purgative properties. To assist nature, either insert a small tallow dip candle (made for this purpose) in the foal's rectum, or, within an hour from birth, give an injection of either warm water, warm slippery elm bark tea, flaxseed tea, sweet oil, or a mixture of equal parts of cream, molasses and warm water, and repeat in twelve hours if required. Harm may be done by injecting a large quantity of strong, soapy warm water with an ordinary "horse syringe." A fountain syringe is to be preferred and small, hard rubber nozzle, or a small, clean rubber hose and funnel. Smear vaseline or lard on the nozzle and in rectum before giving the injection. If the bowels do not move within twenty-four hours from birth and the foal seems sick, shake up two to four tablespoonfuls of pure castor oil in milk, or a mixture of equal quantities of castor oil and sweet oil, according to size of foal, and give as one dose. Then continue the injections at intervals of six hours.

In the same bulletin from which the above is quoted attention is called to the importance of having an absolutely clean foaling place. Dr. Alexander advises cleaning and scraping the floor, and recommends that a coal tar disinfectant be used freely. A good disinfectant is also made by adding four ounces of sulphate of copper to one gallon of water. It is even a good plan to cleanse the ceiling, and so much the better if the walls of the stalls can be whitewashed, to each gallon of which has been added one-third of a pound of chloride of lime. The aim to be attained is to prevent infection, and it follows naturally that the removal of the filth is the first step to be taken in attaining this end while, secondly, the sensible use of disinfectants becomes an absolute essential.

Weeds Cut Tremendously Into Profits.

IT WOULD be interesting to ascertain what proportion of the average person's time during the growing season is devoted to the task of fighting weeds. In the case of intertillage crops two results are attained at the same time from cultivation, particularly during dry seasons—namely, the destruction of weeds and the creation of a mulch. In wet seasons, however, we must perform just as much labor, or even more, in fighting weeds as would be required to keep an effective mulch on the surface.

In a bulletin published by the national department of agriculture last year on the control of weeds it was acknowledged that the full reason why weeds reduced the yield of crops is not definitely known. The author of this bulletin, Mr. H. R. Cox, points out that it is well recognized that weeds deprive crops of moisture, plant food and sunlight, and by these means cause decreased yields. Experiments have shown, however, that even where there is a supply of moisture and plant food sufficient for the needs of both the weeds and the crop, weeds still exert a detrimental effect. This may be due in part to the weed roots giving off substances which are poisonous to crops. The fact that weeds do harm in more ways than has been supposed is all the more reason why the farmer should make strenuous efforts to subdue these invaders. Land that should produce sixty bushels of corn may yield no more than twenty bushels if weeds are not kept down by adequate cultivation, and the net profit to the farmer is relatively much less for the resulting poor crop than these figures on yield show.

Another loss results from the presence of weed seeds in crop seeds, according to Mr. Cox. This necessitates much labor in separating or results in dockage by dealers if the separation is not made. Wheat containing wild-onion bulblets is sometimes docked as much as 50 per cent, and in some cases there is no sale at all for such wheat. The agricultural experiment station of Minnesota estimates that in that state alone the damage to wheat due to weed seeds amounts to $2,500,000 yearly.

There are other cases of damage resulting from weeds, which in some cases are important. The harvesting and curing of crops are sometimes made difficult by the presence of weeds. Russian thistle, bindweed and Canada thistle usually are a source of great annoyance at harvest time to the growers of small grains. Again, some weeds harbor fungous and insect troubles which attack near-by crops; the clubroot of cabbage is fostered on the wild-mustard tribe of weeds, and the Colorado potato beetle lives also on nightshade and henbane. Furthermore, some weeds are poisonous or otherwise injurious to man, live stock or live-stock products. Poison ivy, sumac, jimson weed, and the seeds of corn cockle are poisonous to man; wild onion and bitterweed spoil dairy products.

It is difficult to estimate the damage of weeds, but it is probable that they cost the American farmer several hundred million dollars every year.

Good Covering For Grass Seed Essential.

A CONSIDERABLE number of farmers adopt the plan of sowing grass seed early in the spring so that it is covered by the process of freezing and thawing. This is entirely practicable where fall-sown crops like winter wheat and rye are seeded down. Where this plan is followed the freezing seldom, if ever, injures the seed, but, on the other hand, the frost performs a real service in cracking the hard shell so that when favorable conditions of heat and moisture are present the germ starts into a lively existence.

Where spring grains like oats or barley are used as a nurse crop, the plan of seeding early cannot be carried out. For example, it is impracticable to go into a cornfield and sow the grass seed while the ground is frozen, because in that case the seed will be distributed very unevenly. It will roll from the high to the low places, so that the plants will be bunched and, on the other hand, large patches will be bare. Because of this some work on the surface with tillage implements must be done before seeding, and the question comes up as to when the grass seed should be sown so as to insure a covering that will most ideally favor germination.

We do not favor the plan of sowing the grass seed after the crop is in, trusting to the rains to perform the covering task. Sometimes when this plan is followed a fair degree of success is attained, but ordinarily it is a little risky. A much better method is to sow the grass seed before giving the surface a good harrowing. If, for example, cornstalk land is double disked and the grain and grass seed are then sown with a broadcast seeder the harrowing of the surface will usually give fairly satisfactory results. Some of the seed in this case may be covered as deeply as an inch, but this is not too much. Under certain conditions clover seed will come up through two or even three inches of soil.

Unquestionably the most ideal plan of sowing timothy and clover is to put in the nurse crop with a drill after properly preparing the soil, and at the same time using a grass seeder attachment. When this plan is followed the grass seed will be scattered between the grain rows and the disk drill will cover the seed sufficiently, but it will not bury it deeply enough so that the plants will never get through the surface. There is some advantage in having grass seed come up between the rows of grain, because in that case the soil from which the timothy and clover plants draw their nourishment is not so thoroughly dried out as it is in the immediate vicinity of the rows of grain.

Two Effects of Lime on Soils.

MOST of the experiment stations of the central West have published bulletins in recent years on the question of liming soils. Of course, it has long been known that under certain conditions the growth of crops was greatly improved by an application of lime, althoug the practice of liming soils has not been strongly indorsed until recent years because lime was not regarded as a plant food but rather as a stimulant. However, since farmers of the central West have begun to grow alfalfa a new interest has been created in the practice of applying lime to land.

There are two reasons why an interest in lime is created in the minds of those who attempt to grow alfalfa. In the first place, alfalfa is a greedy lime crop, taking from the soil large quantities at every cutting, and, in the second place, lime neutralizes soil acidity. The latter is an important function because when a soil is sour root organisms cannot thrive, and in the absence of certain forms of germ life legume crops like alfalfa cannot sustain anything like a lively existence.

In a bulletin from the Missouri station lime is classified as a soil builder and a soil destroyer. Its application for the purpose of favoring the growth of legumes which, in turn, increases the nitrogen content of soils, constitutes the building up process. On the other hand, the destructive process resulting from liming consists in the more rapid decomposition of organic matter and liberation and reduction of the stock of plant food material stored in the soil. A rank crop of clover that results from liming means that this larger crop is drawing heavily upon other plant food ingredients, more particularly phosphorus and potassium. Indeed, lime acts chemically in a way that liberates these elements so that they become available. In this sense it is a stimulant, and for that reason where lime is used one must be prepared to carry out the policy of soil replenishment. It almost goes without saying that where large crops are produced this means a heavy draft upon the mineral matters in the soil. In turn, these must be supplemented either in the form of commercial fertilizers or by using farm-yard manure liberally.

Of the many forms of lime that might be considered, none are so well adapted to general use as ground limestone. Professor Hopkins, of the Illinois Experiment Station, has investigated this matter thoroughly, and as a result of his experimental work he recommends this form.

As to time of applying lime it has been ascertained by the Missouri station that better results are obtained when it is added to the land before planting or sowing a crop. Other things being equal, it is preferable to apply it to plowed land, after which it should be thoroughly worked in by the use of surface-stirring implements like the disk or the harrow. On light soils spring application is advised, but, generally speaking, good results will always be obtained on certain types of soil by adding lime at any time.

As to the amount of lime required to bring a sour soil into good condition, it may be said that this varies greatly according to conditions. A thousand pounds of finely-ground limestone will sometimes have a very noticeable and beneficial effect, and this amount may correct a certain degree of acidity. Generally speaking, however, one ton per acre is needed, and in the case of very sour soils even two tons per acre may be required to bring a soil into condition to produce alfalfa.

Mistakes in Oat Sowing.

WITHIN a short time teams will be in the field in certain localities preparing cornstalk ground for oats. In the very necessity of the case there is a great difference of opinion among farmers regarding the best way to prepare ground for oats. In the following communication one of our subscribers takes up the question and describes the system of soil preparation which he has found to give the best results. He writes:

Having observed many mistakes in the seeding of oats, I decided to try out different methods of preparing the soil for this grain, on corn-stubble land, to ascertain the relative merits of these various systems. As a general statement, it may be said, that oat seeding is not given the careful attention it deserves, and, as a result, the yield of this important grain is far below what it should be.

On one strip of ground, in the above-mentioned experiment, I disked the land once, sowed the oats, at the rate of from three and a half to four bushels of seed to the acre, and followed the seeding with a thorough working of the spike-tooth harrow.

Another strip of land on the same field had the seed applied to it at the same rate, but they were sown on the ground without any preparation of seed bed whatever (as we often see farmers do). Following the seeding, the ground was given a double or lap disking. That is, at each "round" of the disk, one-half of it was allowed to tap over onto the ground which had been disked the previous "round." A good harrowing followed the seeding, as with the other strip of ground.

With the first system of seeding, the ground was not worked sufficiently to form a good seed bed; in fact, there were small strips of ground all over the field (points between where the two sections of the disk ran) that were not worked up at all. Not only this, but most all of the seed which fell on these strips bounced off. Thus many strips across the field had no oat plants whatever on them, giving a streaked appearance, and cutting down the yield materially. On the other hand, much seed fell into the furrows cut by the disks running near these skipped strips of ground, and here some of the grains were covered too deep for a "surface" growth like oats. Besides, when all the oats came up there were too many of them along these furrows to promote proper development.

Again, this single disking left a ridge thrown up where the two outside disks turned the soil outward, and this very rarely was entirely smoothed down by the subsequent harrowing. Also, this was another point at which there was apt to be a thin stand of oat plants.

On the second strip of land in this experiment, the stand of oats was more uniform than on the first, because of the fact that every inch of the ground was worked up evenly. Still, many of the seeds were covered too deep by the double working of the ground, and in case the weather was cold and damp for any great length of time about the time oats were sown, rot would be sure to set in with much of the deep-covered seed.

Many farmers disk the ground and cross disk in sowing oats, but this is less desirable than the lap disking, since the latter method leaves the ground smoother for subsequent working and harvesting of the grain, while the former (cross disking) leaves it rough and uneven.

After many experiences with variou methods of seeding oats I employ one plan exclusively, as follows:

The ground is lap disked, double worked, before the seeding (not seeded, then disked, as many do). This gives a surface which, while evenly worked, still contains depressions of about the proper depth for the seed to lodge in and be harrowed under. The method also insures a more uniform stand of plants than any of the others, thus giving a heavier yield of grain; while the smoothness of the ground for the promotion of harvesting is another point in favor of this method of seeding.

The lap disking also furnishes a much better surface for the teams to walk over than the other plans; in fact, there is one-half the time during which half of the horses walk on unworked ground. This rests them greatly. Ease of riding for the driver is an important item in this connection, also.

This plan of lapping half the disk in preparing corn ground for oats has much to recommend it and unquestionably the labor involved will pay handsomely in increased drop. Sowing by broadcast method without first putting work on the surface means invariably a very uneven stand. There will be plenty of bare places in a field so prepared, and it may be depended upon that where no oats make their appearance there will be plenty of weed growth. It is true, however, that where the drill is used we can sometimes get along by doing less work on the surface because the disk drill will burrow down and find a lodging place for every kernel that is seeded.

KEYES BARN ATTRACTIVE.

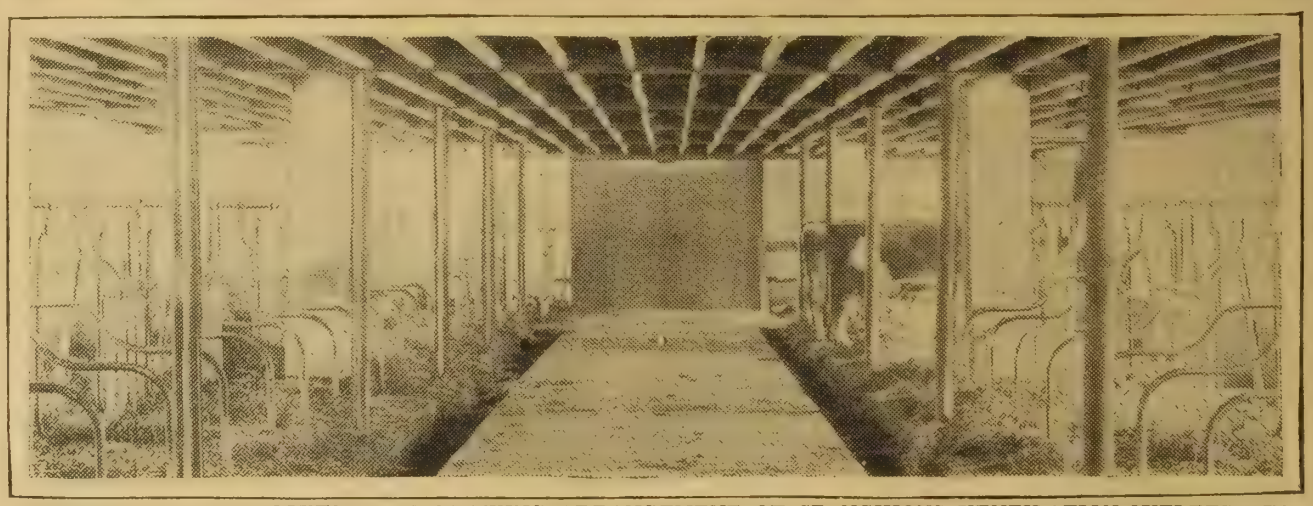
Richland County Son of Successful Farmer-Father Builds Dairy Barn Along Unique Lines—Has Ventilation System and Modern Barn Equipment—Something About the Construction.

THE NEW CEMENT STUCCO FINISH BARN AND SILO OF MR. C. GLENN KEYES, RICHLAND COUNTY, WIS.

WHEN son succeeds father on the home farm one usually looks for those changes and improvements inspired by youthful enthusiasm. Not that the old home, the old barn, the old cows, are not good enough for the son. But youth remembers "father's start" and father's success after years of constant effort. And youth is anxious to give expression to his ideals just as father did, and, in short, to "make a success on his own hook." Just a year ago C. G. Keyes, better known to his intimate friends and neighbors as Glenn Keyes, succeeded his father, C. B. Keyes, on the old Keyes farm in Richland county, a few miles from the county seat, Richland Center, Wis. After thirty years of service on this farm Mr. Keyes has retired to the city to enjoy the fruits of his labor and his son has taken up the work where he left off. This work Glenn Keyes assumed with considerable pleasure, as in passing to him the farm passed to the third generation. His grandfather cut the Keyes farm from the woods in the pioneer days of Richland county. Born and reared on this farm, Glenn Keyes takes therein great pride. His years of experience as a boy under the direction of his father he has supplemented with a course at the college of agriculture. Today he has the opportunity to apply his own ideas and adopt his own methods while his father sits by and watches him work out his own success.

THE SILO.

The farm consists of 345 acres, lying in the fertile valleys that abound in Richland county and 170 of these 345 acres are under the plow. From the day that Mr. Keyes can remember there have been milk cows on this farm, his father starting with the old Durhams, while the son is working rapidly to the strictly dairy breeds, having chosen the Holstein. The elder Keyes succeeded admirably with corn and grains, but it remains for the son to start the alfalfa fields and adopt the newer things in agriculture that are expected to increase the farmers' profits. Seven acres of alfalfa last year yielded about three and one-half tons per acre in three cuttings. Mr. Keyes desires more alfalfa, say twenty acres, and this he will use to supplement the corn and grain crops which will be continued, for these are indispensable on any farm. So it was with many new ideals that Glenn Keyes assumed the management of the farm, and it was a very pleasant afternoon which an editor of The Wisconsin Farmer spent recently with Mr. Keyes on his farm. One of the first improvements planned and carried out was the building of a new dairy barn. The old barn which had housed the good old productive Durhams of his father was no longer sufficient to house his rapidly increasing herd of Holsteins. The elder Keyes had left this task to the son and when the son went at it he determined upon one thing—that the new barn should be as comfortable a cow home as it is possible to build.



INTERIOR VIEW OF KEYES BARN, SHOWING ARRANGEMENT OF STANCHIONS, VENTILATION OUTLETS, ETC.

ONE OF MR. KEYES' TWO HERD BULLS.

Mr. Keyes went at the barn-building game with two things in view. One was to erect a modern, well-ventilated, well-lighted, commodious barn. The other was to make this barn artistic and pleasing to the eye and an ornament to the farm, and this he accomplished without much added expense. First his barn must be practicable and substantial and secondly pleasing to the eye. So many lose the artistic touch in barn construction that it is indeed a pleasure to see a barn well designed and architecturally correct. The usual thought is that a barn is merely to shelter the stock and little attention is paid to the exterior appearance. But with Mr. Keyes it was different. He desired a barn which would attract attention.

His first decision was to make the exterior of cement in the pebble-dash finish. Then he decided that instead of putting all the loft windows in the gables that he would put in dormers in the roof at the top of the pitch, as this would lend much to the artistic outward appearance. Then came the correct location of the silo and proper treatment of the windows. The result is a stucco finish barn that is something out of the ordinary and one of the show barns of Richland county.

Mr. Keyes, in building this barn, broke away from many of the established ideas, and after a winter's use he is convinced as to the practicability of his own plans, worked out according to his own ideas. One departure from the majority of the barns is the foundation, which does not extend to the top of the windows, as is so frequently the case. This foundation is only eighteen inches deep and eight inches thick and the basement walls are of the ordinary house construction. The foundation is of concrete and on top rests the 2x6 studding, eighteen feet high, which forms the wall.

For an outside wall there is metal lath, nailed directly to the studding and plastered with cement which is finished in the pebble-dash effect. This is built the same as residences finished in cement exteriors.

The inside wall is of tar paper, lath and plaster, the same as a residence wall. The tar paper is nailed directly to the studding, covered with a patent

lath and this plastered with a wood fiber plaster that is white and easy to care for. This inside wall finish is carried to the basement ceiling and thus provides a basement wall with a six-inch dead air space. Double glass single window sash are used, which

THE KEYES HOMESTEAD, COMFORTABLE AND HOMELIKE.

not only tends to keep the barn warmer but keeps the frost off the glass. The construction, with the dead air space, Mr. Keyes found very satisfactory during the past winter, which was unusually cold, and with perfect ventilation the barn was kept warm and entirely free from frost and odors of any kind.

The exterior cement wall carries up to the roof, but it is not finished inside about the floor of the hay loft. Eighteen-foot 2x6 studdings were used with 2x8's doubled for the main posts. The

THE BARN AND SILO FROM ANOTHER ANGLE.

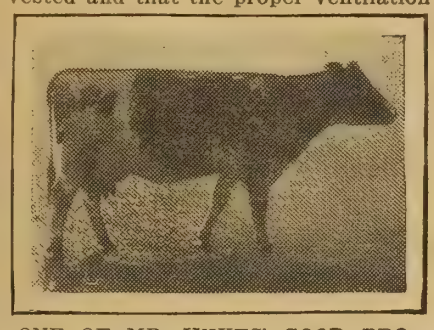
studding rests on the eighteen-inch concrete foundation and on top of the studs rests the eighteen-foot rafters that form part of the hip. The barn is 36x98 feet, inside dimensions, and the silo, built of concrete, is of the double wall type and is thirty-six feet high and fourteen feet in diameter. A ladder on the outside assists in going to the top whenever this is found necessary. The exterior of the silo is also finished in the pebble-dash stucco style.

Mr. Keyes told the writer that the cement stucco finish was not so expensive as he presumed it would be and he urged every farmer considering building to figure on cement exterior as well as other materials. "I estimate it cost me about $200 more than the next cheapest exterior material," he said, "and this will soon be offset by the fact that the barn does not have to be painted. The painting upkeep expense will be very little, as the trim is all that will require painting."

It must be borne in mind that Mr. Keyes secured his sand from a river a few rods from his barn and did all of the hauling himself. This lessened the expense, but he estimates that the difference would have been less than $700 had he bought all of his sand and gravel and hired the hauling done, as he figured on various kinds of construction. The total cost he estimates at about $5,000.

Ventilation, interior arrangement of stanchions, stalls, feed bins and equipment were next given his attention.

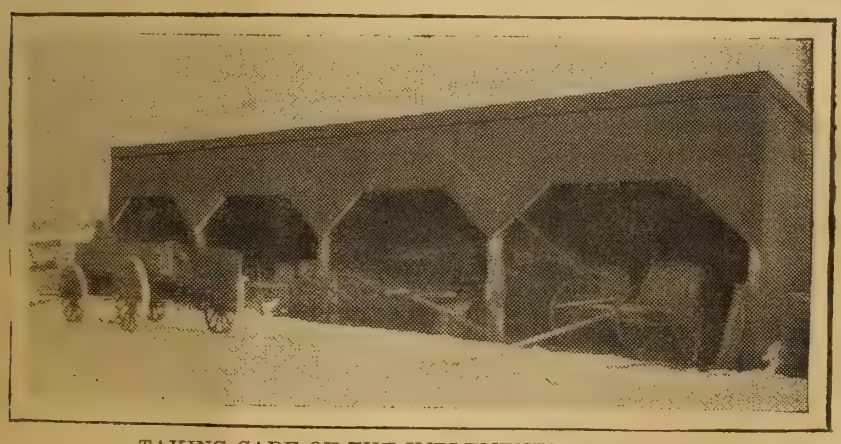
The King system of ventilation is used throughout and it has worked splendidly and to his entire satisfaction. There is the required number of windows for the cow capacity of his barn and six drops connected with the aerators provide the required ventilation, while the windows flood his entire barn with sunlight. It cost Mr. Keyes about $360 to install his ventilating system and he told the writer that he considered this money well invested and that the proper ventilation



ONE OF MR. KEYES' GOOD PRODUCERS.

of his barn was worth far more than the ventilating system cost.

The fresh air is brought into the barn through the outside wall registers, which are shown below the windows in the illustration accompanying this article and the foul air taken out through the aerators. The interior view of the barn, shown herewith, was taken the afternoon the writer visited Mr. Keyes. The photographer used a flashlight and the success of the ventilation system in this barn is indicated by the fact that the barn was cleared of the smoke from the flash-



TAKING CARE OF THE IMPLEMENTS IN WINTER.

light in less than five minutes without opening a single window or door. Our readers who have been present when flashlight photographs have been taken and where ventilation was poor can appreciate this, as it sometimes is an hour or more before a small room can be cleared of the smoke. During the winter Mr. Keyes found it necessary only on one or two days to close any of the registers in the north wall to regulate the cold air and that was when the mercury dropped to 20 degrees below zero. The barn sets east and west and it was never necessary to close all of the north wall registers or any of the south wall registers.

The equipment throughout is modern in every respect and the loft has a capacity for 150 tons of hay. This is in addition to the grain bins which are at the west end, while the silo is at the east end. Chutes operated by slides bring this grain down to the basement so that it is convenient to feed and an elevator has been provided for lifting the grain after harvest into the bins.

Mr. Keyes chose to face his cows to the light instead of towards the center. He has a center driveway which is eight feet two inches from gutter to gutter. Along each wall and back of the concrete feed mangers he has a four-foot feed alley. This manger is separated with steel divisions that lift up so that the entire manger can be flushed and cleaned. The gutters connect with tiling at the lower end and will empty into a manure pit that is the next improvement so that none of the fertility from the barn will be wasted. This summer he plans to build a concrete milk house on the end opposite the silo.

The dormer windows in the roof add much to the outward appearances of the barn and have the added advantage of flooding the entire loft with sunlight. Mr. Keyes figures that they cost more than gable windows, as they are set in on the pitch of the roof and require little extra work to build.

These improvements are not the only new ideas he has carried to the farm. His father sold whole milk, but he is now separating, selling the cream at just as much profit and keeping the skim milk on the farm for his calves. Mr. Keyes is not much of a swine man and believes the only use for the hog on the dairy farm is to eat the swill and the waste, as to his mind the value of a hog is determined entirely by what he will bring as pork.

Mr. Keyes now has a herd of about fifty registered Holsteins. He is gradually getting into the dairy breed entirely and in his herd are representatives of the Korndyke, Ormsby, Johanna and De Kol families. His senior herd sire is Johanna Rosella Pontiac De Kol, a son of Johanna Pontiac De Kol and a daughter of Aaltje Salo Rosella. His junior sire now in service is Sir Johanna Bouheur Ormsby, that is out of Pietertje Maid Ormsby and sired by Johanna Bouheur Champion.

Let These

NORTH DAKOTA Battleships Protect Your Prosperity

Here is North Dakota's *invincible Preparedness Fleet* in one town of less than one thousand population—giant elevators which house the farmers' grain.

Why don't *you* come and enjoy this protection with our North Dakota farmers? PREPAREDNESS with them means more acres of grain, more live stock, comfortable homes, schools and churches. NORTH DAKOTA is coming rapidly into its own. The 1915 crop of grain along the Great Northern Ry. in that state amounted to more than EIGHTY-SIX MILLION bushels. The acreage of corn and alfalfa is increasing enormously every year. This means stock raising, combined with grain growing, for bigger and steady profits. Dairy and live stock products have more than doubled in the past few years.

Are you farming on high-priced lands? Then read of results on low-priced land in North Dakota.

M. C. Crockett, one of our big farmers writes:—"I came from Iowa to North Dakota—came from a good stock country, and I have always kept a good herd of cattle and some hogs, and know that all kinds of live stock can be profitably raised here just as well as in Iowa. I now own 2080 acres which I have added to my homestead as I could pay for it, and I figure my soil and farm just as good as they have in Iowa for $200 per acre. And farm is not for sale."

Medium-Sized Farms Pay Best

Joseph Kasal is a 160-acre farmer in North Dakota. In 1915 he threshed from 127 acres in grain, wheat, 1,743 bushels—oats, 841—barley, 813. Cows, pigs and poultry supply the table necessities.

The Great Northern Railway has no land for sale in North Dakota, but there are hundreds of large farms like Mr. Crockett's and larger—there is a great amount of land owned by non-residents. We are interested in having these large farms divided into 160 and 320 acre working farms.

If you own or rent high-priced land, you will be interested in learning what our North Dakota farmers are doing on land equally productive, but which costs only about one-fifth as much and may be secured on very easy terms. In fact, what is ordinarily paid by renters will make the payments on a North Dakota farm.

Varied Farming and Co-operation

Address by B. F. Harris, of the American Bankers' Association, at the Banker-Farmer Conference in Madison This Week.

THE dawn of the new agriculture has broken on nearly every section of this great nation, and if one of its searching rays, more than another, has lighted up and wakened up most farms and farmers, it is that of diversification.

Diversification is the biggest single factor in soil rejuvenation and maintenance; in the eradication and prevention of soil and crop pests; in insurance against much of the loss and vicissitudes of uncertain seasons, weather and markets.

In practical effect it is simply putting your eggs in a number of baskets; distributing your work and risks through all the seasons and farm opportunities, with no tremendous effort and concentration—no big gain or loss at any one time or in any one thing, but with somethig doing, something going to market and some profit coming in all the time—the steady, sure pull.

Diversification is not narrow or limited in its meaning as is rotation. Rotation in farming simply means changing the character of the crop grown on the soil each year, while diversification means all of this and in addition opens up the great field of animal husbandry and every development and change to which the farm may be susceptible.

It seems to me that the honest, conscientious and co-operative interest of the country banker has done, should and will do greater service to the cause of better agriculture than any one agency. The banker's advice and counsel are sought after, appreciated and usually followed.

It has been demonstrated that no system of rotation alone can build up soil fertility, but that it should have live stock, diversified farming, to bring better results—to make a better farm and profit, a broader farmer, and to interest the sons and daughters.

Of course, anybody is supposed to be able to run a farm whether he can run anything else or not, but I believe it is becoming clearer every day that farming is a man's job—that it takes a bigger man to run a farm to its possibilities than to run the average place of business in the town.

Many farmers are on the dead line—they need the counsel and aid of their banker to help them put their farm on a diversified basis—to make it a profit earner.

It is really up to the country banker to make the advance—to help the honest, capable, industrious farmer get the results that are so near at hand and that should be cashed in for the welfare of the general community, as well as for that of the particular individual.

Every farmer must have one or several cows, if for no other reason than to provide necessary milk and butter. The average cow is nondescript; she does not pay for her feed and her calf is of the same variety. If we cannot have a better cow to start with it is an easy matter, by breeding, to get a cow whose milk will more than pay for her keep and whose heifer calf can follow in her footsteps or the steer calf sell as a yearling feeder at a good profit.

Diversification means, and my whole point is, that the average farmer should not overdo or go too far or too largely into any one crop or feature of farming. No farm work can add to soil and bank reserve like properly conducted and remunerative dairying. Selling butter fat, machine separated, rather than the whole milk keeps practically all the soil fertility at home. The milk separated from the cream does wonders for the pigs and calves, balanced up with other feeds.

The cattle business of this country can't be built up, our meat can't be raised, our shortage made up in any sudden or wholesale way, but only slowly and through the aid of each and every progressive and wise farmer following such a plan.

Present grain farming methods become a liability, eating into the soil reserve and reducing land values, while live stock, or dairy farming in particular, becomes an asset, returning to soil fertility at least 85 per cent of the production.

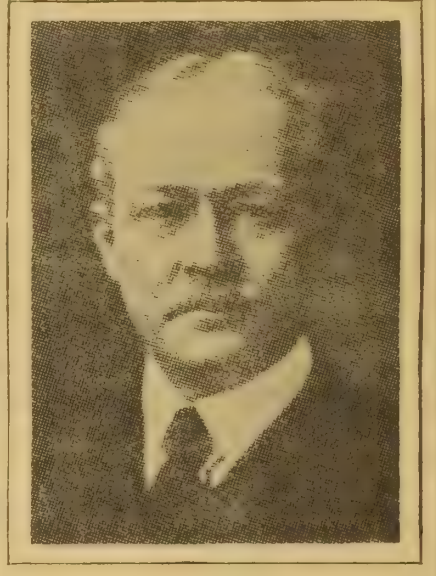
Each farm must be more of a factory—selling less crops and more meat, milk, butter and eggs. A ton of butter carries away but 6 cents from the farm fertility, while selling the feed required to produce the ton carries away $374.67. There are $161.22 worth of soil fertilizing elements in the feed we ship off the farm, which if fed would produce a ton of beef and then only $21.99 in fertility would leave the farm.

The utilization of these facts has helped make prosperous the farmers and doubly fertile fields of Denmark, Germany and other wise nations. The great states of New York and Wisconsin are beginning to appreciate these facts. The average farm in New York contains 102.2 acres, has an average of seven cows and makes a dairy products' income of $360.89. The average Wisconsin farm has 118.9 acres, with 8.3 cows and a $304.12 dairy income.

Every state, every farm neighborhood, has an opportunity to double or treble the number of hogs and cows on each of its farms and add literally millions to its income and soil fertility.

The regular weekly or monthly dairy pay checks help maintain farming on a cash basis and banish much of the rural credit talk.

I have yet to see a dairy community that is not unusually prosperous. It



B. F. HARRIS,
Chairman agricultural commission, American Bankers' Association.

is a crop that does not fail—the element of speculation is eliminated.

The silo, alfalfa, the cows and pigs are the four sure cornerstones of farm profit and fertility. There is nothing to be compared with it.

With all these attractions and profitable processes going on, with the tractor and other interesting labor and profit-saving devices the whole family lends a hand and the old farm comes into its own as the greatest and best place God ever made.

Dairying teaches detail, care and thoroughness—the fundamental principles of every business on earth—and makes a better farmer; it helps bring good roads and gives daily contact with the outside, which helps to break the routine of farm life.

The farmer cannot get along without a separator—that tremendous aid to profitable dairying. There is no substitute for good milk and butter and the demand grows faster than the supply.

Minnesota and Michigan show respectively gains of 96.5 per cent and 74 per cent during the same period, and even old New York, who used to lead, shows 36.7 per cent gain.

Every township should have its farmers' club; every country town its commercial club; and these, with the country bankers in the vanguard, should be working to build up diversified farming and every phase of rural life—for farming is a life as well as a business and must be made more likable, as well as more profitable.

All these agencies should be working to bring in the best breeds of milking and beef stock, horses, hogs and sheep; to encourage the building of silos, the introduction of every modern tool and appliance; and ways should and can easily be found to finance these things.

Such stock, equipment and appliances are all highly productive, bringing an immediate and increasing income, and when manned or backed by a competent farmer or his wife, are excellent security for any merchant or bank and are the advance agents of prosperity and the beginning of real agriculture.

[Editor's Note.—Mr. Harris, who is president of the First National Bank, of Champaign, Ill., is also chairman of the agricultural commission of the American Bankers' Association. He was one of the principal speakers at the banker-farmer conference in Madison this week, a full report of which will be made in the next issue of The Wisconsin Farmer.]

Practical Farm Buildings.

To the Editor:—In spite of its drawbacks, there is very little doubt but that wood will remain the principal material for farm buildings for at least another generation. It is so readily obtainable in most localities and has become so firmly established in the minds of multitudes of people as appropriate dwelling houses, barns and other rural structures that it will probably continue to lead all others for many years to come.

Our forests are receding. Good lumber is constantly becoming scarcer and more expensive and our national losses by fire (resulting chiefly from the employment of wood in construction) are appalling. These facts are responsible for the increasing popularity of brick, stone, concrete and sheet metal and it will be more and more the case that our cities and large towns are constructed wholly from unburnable materials. Conflagrations are one of the horrors of our great cities, and, of course, the close crowding of a great number of buildings multiplies the danger of fire. On the other hand, the almost entire lack of fire-fighting apparatus in the rural districts is responsible for the complete destruction of many buildings, which, having once caught fire, are burned to the ground. Every progressive farmer should build not only his dwelling house but also his barns and sheds with the idea prominently in mind that an attack by the fire fiend is not at all improbable. This means a much greater employment of fire-resistant construction.

A great deal may be accomplished in this direction by the employment of sheet metal roofs even upon frame buildings, since these will not take fire from sparks and brands and will operate to some extent to smother a fire in the interior. Another great improvement over the house-building methods of forty years ago is the use of metal lath in place of the old-fashioned wooden supports for the plastering. Some of the worst fires start as the result of a defective chimney and travel in the interior of the partitions, burning laths and joists, until entirely beyond control. This sort of danger is, of course, wholly done away with by the use of metal lath.

Corrugated galvanized iron is a very practical form of construction as roofing and siding for store houses, wagon sheds and hoghouses. Where these structures are of sheet iron it is often possible to confine a fire to the wooden building originally attacked and to avoid the Belgiumlike desolation of farmsteads, where dwelling houses, barns and sheds have all alike been swept away.

The desirability of sheet metal construction, however, depends upon the length of service which may fairly be expected. Many farmers have good reason to be shy of so-called "galvanized iron." Much of this material by reason of a high content of impurities is viciously attacked by rust and corrosion. Scientific researches of the past ten or fifteen years have clearly established the fact that the secret of the remarkable durability of the iron of 100 years ago was its high purity. Numerous analyses show that material usually had a very low content of such impurities as manganese, carbon, copper, sulphur, etc., all of which are likely to be rather high in the products of modern steel furnaces.

As a result of investigations instituted by the United States Department of Agriculture methods were developed for the production of iron in open hearth furnaces of a purity equal to or greater than that of the old-time puddled iron. This iron has been very extensively employed for corrugated culverts and in this form has given very good service, resisting the corrosive action of the elements in a manner very similar to that of the old-time pure iron. Neither the old or the new is rust proof, but the manner of their rusting shows a striking similarity. The coating of rust which accumulates on a sheet or plate of such material, when deprived of any protecting coating and exposed to the elements is very fine and even and closely adherent to the base. For this reason it acts to some extent as a protective coating somewhat after the manner of the rust which attacks sheet lead. Of course, this protection is not absolute and indeed the new pure iron is for most purposes given a coating of galvanizing. The relation of high purity iron, either old or new, to the ordinary commercial products may be compared to that of a cedar fence post as contrasted from one made of maple or birch. It will give much longer service in any event, but this service is still further increased by a good protective coating which, of course, absolutely preserves it for quite a length of time.

Durable construction is a mark of the progressive farmer. The man who always avails himself of the discount for prompt payment of taxes and who buys tools and materials where spot cash means a saving, who never employs hand labor for anything which can be more efficiently and economically done by machinery is the sort who will build his dwelling of stone or brick, if possible, and roof all his buildings with fireproof and long-lived materials. Paul H. Weston.

Wages of Male Farm Labor.

Farm wages advanced slightly during the past year in the principal grain states and remained stationary or declined slightly in the cotton states. The higher grain prices and lower cotton prices influenced such changes. During the past year there was less scarcity of farm labor than during a number of preceding years. For the entire United States wages per day of male farm labor increased about 1 per cent during the past year and averaged about $1.47 without board and $1.13 with board. For labor hired by the month the rate without board increased during the year 27 cents, to $30.15, as compared with $29.88 last year. Rates with board, which is the more general method of hiring, increased from $21.05 to $21.26, an increase of 21 cents. Wages have been tending upward almost steadily since 1894. The increase in the past five years is about 10 per cent and in the past twenty years about 65 per cent.

Farm wages vary widely in different sections of the United States. Thus, wages per month with board averaged $23.71 in the New England states, $24.78 in the east north-central states, $27.38 in the west north-central states, $33.50 in the far western states, $15.01 in the South Atlantic states, and $16.16 in the south-central states. Generally speaking, the wages tend to increase in going from east to west and in going from south to north. These estimates are based upon reports from correspondents of the bureau of crop estimates.

For Killing Insects.

Formaldehyde is worthless as a fumigant for killing insects, warns J. G. Sanders, state entomologist of the department of agriculture.

Many people have the notion that the formalin of formaldehyde fumigation used in disinfection for infectious diseases also is good for killing household insects and the result has been much waste of time, money and considerable disappointment.

A druggist in one of the cities of Wisconsin recently recommended formaldehyde fumigation for killing moths in a general store. The cost of the treatment recommended would have been about $40.

The storekeeper, however, wrote to the state entomologist for information and as a result saved $40 and made use of a treatment that rid his store of moths.

The state entomologist welcomes all inquiries concerning matters in his department, and all inquiries are given prompt attention.

Keep the Spring Pig Growing.

A Balanced Ration Is the Thing---Digestion Troubles Come From Failure to Comply With Simple Feeding Principles.

MOST of the successful hog raisers have found that the great essential of success is to keep the pig growing rapidly from the day it is weaned until selling time. The care of the sow and pigs before weaning time has no place in this article. Most farmers have good luck with pigs until they are weaned. Often the runts are started on their career of misery a short time after they are removed from the sow. The recipe for making runts from pigs is exceedingly simple and easy to understand. Get the pig's digestive system upset by giving the wrong ration; keep the animal in unsanitary surroundings; give it water once every two or three days and a perfect specimen of a runt will result. But the average hog raiser is more interested in a "growthy" pig than in a runt.

THRIFTY PIGS MAY BE RUNTED QUICKLY BY IRRATIONAL FEEDING METHODS.

Milk makes the best ration for the young pigs after their removal from the sow. If no milk is at hand, or if the supply is not sufficient, a slop had better be mixed. The water used for this purpose had better be lukewarm. Cold slop, especially in chilly weather, is not good for the animals.

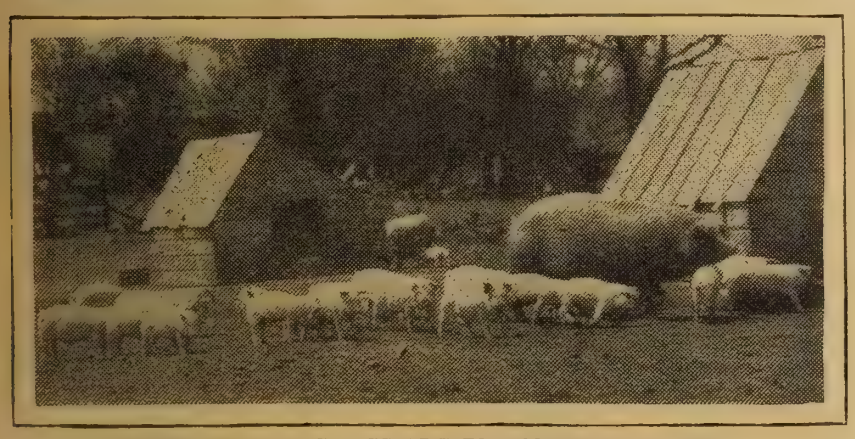
Shorts, bran and oil meal are mill feeds from which a good slop can be made. At first take 70 per cent shorts, 15 per cent bran and 15 per cent oil meal. Mix the mill feed with sufficient water so the slop is not much thicker than milk. It is better to feed a small amount frequently than a large amount at long separated intervals.

After a week or so the pigs will forget they ever had a mother. They should receive corn every day. As a general rule chop is the best for young pigs. A shallow trough filled with shorts and placed where the pigs can reach it easily is an easy method of feeding the chop.

While most hog raisers prefer to give the pigs slop or milk after they have been removed from the sow, many men who have excellent success believe that dry feeding is the better method of feeding after the pigs have become used to doing without their mothers' milk. Giving a balanced ration of dry feed is one of the best methods of feeding.

A balanced ration always gives the greatest amount of growth. One very successful hog raiser gives a balanced ration of dry feed throughout the summer. At the same time the pigs run upon the alfalfa pasture and have an abundance of fresh water. The chances are all in favor of this farmer's pigs making a profitable growth. Some hog raisers feed corn chop, shorts and tankage. This combination is a good one. When giving these feeds they should be mixed in the proportion of about 65 per cent corn chop, 25 per cent shorts and 10 per cent tankage.

There are other farmers who give oil meal in preference to tankage. The usual method of mixing the dry feeds when oil meal is given is to use about 60 per cent corn chop, 20 per cent shorts and 20 per cent oil meal. The farmer can soon decide which ration is the cheapest in his case. Tankage is the highest of any of the feeds as far as price in proportion to quality goes, but it should be remembered that tankage is 60 per cent protein. A small amount at a time is sufficient. Oil meal comes next in line. Oil meal sells cheaper than tankage, but oil meal only contains about 32 per cent protein. Shorts sell cheaper than oil meal, but shorts contain not more than 15 per cent protein on the average. Oil meal and shorts contain fiber and a certain per cent of fat which adds value to their feeding qualities.



GROWTHY YOUNG PIGS ARE THE MONEY-MAKERS.

Alfalfa has the reputation of being the best hog pasture which can be grown, but alfalfa is not a perfect food for hogs. Pigs that are forced to get their living from an alfalfa pasture, no matter how good a pasture it may be, will not make the speedy growth which hog raisers desire. However, alfalfa pasture, when used along with the balanced grain ration, will give at least as good results as any green feed. The more successful hog raisers have a few rules which they take into consideration when pasturing alfalfa. One of these is to fence the alfalfa field into several divisions. It is much better to fence a ten-acre field into three divisions than to have the hogs running over the whole pasture at once. One farmer believes in having several small pastures. He has better success at raising hogs than the average man, so it seems his methods have some system. A little study of the matter will convince any farmer that the small pastures are the best. The hogs can be turned into one pasture, then when they get it eaten down they can be turned into another. The first patch will grow up again while the hogs are pasturing elsewhere. When this method of pasturing is carried out the animals always have a supply of succulent feed and the alfalfa plants do not get killed out by the continual tramping. Alfalfa requires a rest occasionally.

If a farmer has no alfalfa he should not let this fact keep him from raising hogs. There are other crops which make excellent pasture for the animals. For this purpose rape is regarded highly by many hog raisers. There are a few rules which should be kept in mind when sowing and pasturing rape. Rape makes an exceedingly cheap hog pasture. From four to six pounds to the acre will insure a good stand when the seed is sown broadcast.

The variety of rape most widely grown for hog pasture is the Dwarf Essex. The ground should be plowed deeply and thoroughly harrowed before the seed is sown. The best results from the rape crops will be obtained if the plant is sown early. It may be sown about any time during the spring and summer, but early sowing is usually preferable. However, there are many farmers who sow the rape at different intervals. Then they have a fresh pasture for their hogs when the old one is done for. Small pigs can be turned upon the rape while the plants are quite small, but large hogs should never be allowed upon it until the plants are at least a foot in height. However, the other extreme should be avoided, viz., allowing the rape plants to get so large and coarse that the hogs will not eat them.

AFTER A FEW WEEKS WEANED PIGS FORGET THAT THEY EVER HAD A MOTHER.

Some farmers believe it is a good plan to drill the rape seed in rows. These rows may be drilled from twenty to thirty inches apart. When this method of planting is followed about two or three pounds of seed to the acre will be required. This method of seeding has some advantage. If the ground where the rape is planted happens to be foul with weed seed some cultivation can take place between the drilled rows and the weeds be exterminated. When the rape is in rows cultivation can be accomplished after the hogs have the plants eaten down. Rape which is cultivated will grow up much more rapidly than that which receives no cultivation. Some farmers get as much as three good crops from the same patch when careful cultivation is practiced. However, when the farmer has plenty of ground the successional seeding plan will provide plenty of pasture.

Many successful farmers sow a mixture of rape and oats for an early pasture. This is a good plan. Oats are relished by the hogs. Some men seed the two crops at the same time; others prefer to sow the rape seed broadcast after the oats are up and gently harrow them in.

To be profitable pigs should make a more rapid growth than other animals. The men who depend on corn and alfalfa soon find that something is lacking. Their hogs are not developing the size and bone which they should. The absence of protein and mineral matter in the ration is responsible for the slow development of pigs. The successful hog raiser endeavors to have an abundance of protein and mineral matter in the ration which he feeds his pigs. Lime is an important mineral. It is a bone builder. The legume plants are rich in lime. Phosphorus is another important element which helps develop bone. It is found in tankage, wheat bran, etc. The main rule for the successful feeding of pigs is to give a wide variety. What one feed does not contain another will. In this manner each hog will receive the feed elements necessary for a quick and profitable growth.

The successful hog raiser knows that the building up of the pig's body is due to the elements of growth which the animal's digestive organs extract from the ration given. The careful feeder leaves nothing to chance. He studies out the ration which will give the best results in his section of the country.

Exercise and a balanced ration go together. Pure water is another important factor. A hog requires as pure water as any other animal. The successful hog raiser knows the automatic fountain is a sanitary utensil which will pay for itself in a short time. The automatic fountain keeps a supply of fresh water before the pigs at all hours.

1 Year to pay for your Rawleigh
Sixty days FREE trial
You can buy a Rawleigh Engine on 60 days free trial, and if not absolutely satisfactory in EVERY respect, we will take it back and refund every cent you have paid for engine or freight. There's no better engine sold AT ANY PRICE.

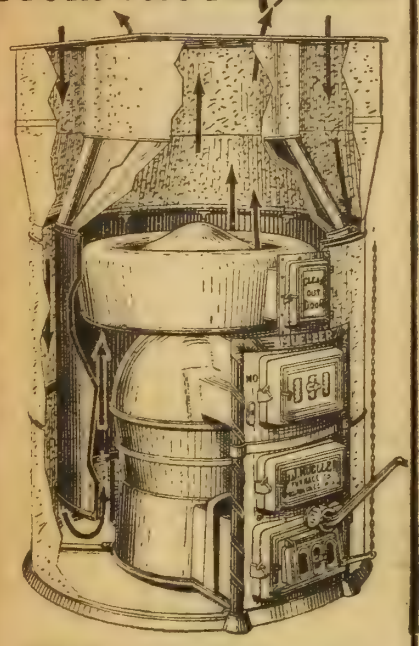
BIG MONEY IN FRUIT
Replenish your orchard; plant your roadside. Write for low wholesale prices on our hardy nursery stock—apple, plum, cherry, grapes, etc. Also how you can, without using any crop land, make from $2.00 to $3.00 per acre extra profit. You also get our 1916
FOUR-COLOR PURE SEED BOOK AND PLANTING GUIDE FREE
Field, vegetable, flower seed; fruits, shrubbery, trees, plants—all kinds. Send postal today.
GALLOWAY BROS. & CO., Dept. 86 Waterloo, Iowa

Heats Whole House From One Register



WITH the Mueller Pipeless Furnace you can heat every room in your house easily and comfortably from one central register. No flues or pipes to waste space and heat. You don't have to tear up your walls.

MUELLER PIPELESS FURNACE

Cleaner, handier, healthier, safer than stove heating—easy to tend—saves fuel bills. Burns coal, coke or wood. Goes in any cellar, no matter how small. (If you have no cellar, simply dig a small pit to put it in.) Constant circulation of fresh air—abundant ventilation. Doesn't heat cellar and spoil foodstuffs. Built of cast iron for long, hard service.

Write for Free Book showing how the Mueller Pipeless will solve your heating problems.

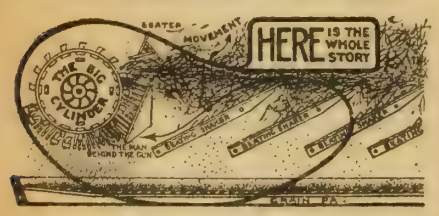
L. J. Mueller Furnace Co. 204 Reed St. Milwaukee, Wis.

Makers of heating systems of all kinds since 1857. Can supply you with regular hot air pipe furnaces, steam or hot water boilers and Vapor heating systems. Give you honest advice on your heating requirements.

FOR NEARLY 3/4 OF A CENTURY

DOMINANT PROGRESS

Has made the Red River Special the Threshing Machine of the Age



Since 1848 the Nichols & Shepard Company has been interested in one line of endeavor only—the making of machinery for threshing grain.

They started their career with a revolutionary improvement in the threshing process that put them in the lead—continued inventiveness of the same bold character has kept them at the front.

WHAT HAS BEEN ACCOMPLISHED?

By **Beating Out the Grain**, a principle that has never been abandoned since originated by this company, more separation, better separation, faster separation, cheaper separation, are all combined in this one machine.

Owning or using a Red River Special rig, you can do more than you can do with any other known make of threshing machine, and it is so written as a part of your purchasing contract.

What do you expect to get when you select another kind?

You ought to read your own neighbor's opinion of a good job of threshing. You'll find it in the Home Edition of the Red River Special paper. Write for a copy and post up. The Big Catalog will be sent also if you ask for it.

BATTLE CREEK, - MICHIGAN

In and Around Wisconsin

St Croix Valley Holstein Breeders and Growers of Pure-Bred Seeds Elect Officers—Other Items of Interest to Farmers.

A report from Walworth county shows 1915 seed corn testing 60 to 100 per cent and the 1914 seed averaging considerably higher.

Rusk county has another cheese factory, the third to be established in that county. It was built by H. W. Flunker, of Plymouth, and will begin manufacturing cheese on May 1st. It is located near Ladysmith.

The Jackson County Order of the Wisconsin Experiment Association re-elected the present officers for the coming year at the recent annual meeting at Black River Falls. C. S. Ristow is president; P. A. Hemmy, vice president, and P. W. Jones, secretary and treasurer.

Fred Wittenwyler, show secretary for the 1915 show of the Watertown Poultry and Pet Stock Association, has been chosen again for the 1916 show. The association now has ninety-six members. Officers elected were: President, W. F. Gruetzmacher; vice president, Arthur Heide; secretary-treasurer, T. J. Berto; directors for two years, Robert Doerr, Albert Zier, Emil Doerr.

William Wedegartner, of Manitowoc, was chosen president of the Cheese Dealers' Association at the annual meeting in Milwaukee. F. T. Pauly, of that city, was elected first vice president; C. A. Straubel, Green Bay, second vice president; A. A. Jones, Fond du Lac, secretary; P. H. Peacock, Sheboygan, treasurer; J. H. Wheeler, P. W. Wagner, B. W. Rowe, Plymouth; A. Newman, Marshfield, and the newly elected officers were chosen directors.

From all parts of Upper Wisconsin come reports of increased interest in better dairy stock and A. J. Wentzel, vice president of the United States National Bank, at Superior, Douglas county, says in a recent interview that he expects many pure-bred sires to be imported into that county this year. Mr. Wentzel reports an active demand by farmers for small loans with which to buy pure-bred sires and better females which shows that the Upper Wisconsin farmers are working for better stock. This bank recently went a step further in aiding the live stock industry by placing in the county two registered Ayrshire sires.

The Pierce County Guernsey Breeders' Association was organized recently with twelve charter members at a meeting held at Spring Valley. George Wild, of Elmwood, was chosen president; Gust Crosman, of Elmwood, vice president; Mehrie Hammer, of Rock Elm, secretary, and Russell Rudisell, of Baldwin, treasurer. Secretary Hammer writes The Wisconsin Farmer that the association starts with excellent prospects and that the next meeting will be held on June 3d at the Rudisell farm at Baldwin. Speakers have been secured and a good program will be arranged. An active membership campaign has been begun and any Guernsey breeder in that vicinity may secure full information by communication with any of the officers.

The Jackson County Journal in a recent issue refers to the experience of Jippe Wielinga, of Midway, Wisconsin, whose corn yields average more than 100 bushels an acre. The Journal notes that he has a ten-acre farm near Midway, in La Crosse county, and the fame of his little place has spread far and wide. If his farm was situated in California undoubtedly it would have long been advertised the country over as a remarkable indication of what could be done with the soil of the far West, but in Wisconsin not so much is said relative to remarkable farming exploits, so that the only advertising his farming operations have received has come mainly from the spread of his reputation as a grower of corn. Mr. Wielinga raises the Golden Glow No. 12 corn, and he has won many prizes at the corn shows. He frequently sells a couple hundred bushels for seed from his little place, the excellence of his seed causing it to bring a high price in the market. The average yield of his corn plats is over 100 bushels per acre.

The Jackson County Agricultural Society at its recent annual meeting chose Sept. 26th-29th as the dates for the county fair at Black River Falls. C. S. Ristow was re-elected president; P. A. Hemmy, vice president; J. E. Dimmick, secretary; W. J. McNab, treasurer, and George Koehler, William Mulry and W. F. Dittinger, directors.

The Central Wisconsin Fair Association, of Marshfield, received an appropriation of $500 from the common council of that city to be used for fair purposes. The early preparations are being made for the fair and this season promises to outdo anything that has been staged previous to this time. The work for this year will include the erection of a new educational building.

Vilas county boosters met recently at Eagle River and organized the Vilas County Agricultural Society, which will hold its first fair this fall at Eagle River. It was organized under the state aid law by which the state pays 80 per cent of the premium awards. Hans Hanson was chosen president; Stanley Korpal, vice president; Oscar Gunderson, secretary, and N. M. Emmons, treasurer.

The St. Croix Order of the Wisconsin Experiment Association met recently at New Richmond and elected R. H. Brunner, of Hudson, as president for another term. Mr. Brunner has been the president of this order since its organization. P. A. Paulson, of Hudson, was chosen vice president; William Schwandt, of Deer Park, secretary, and Charles R. Styles, of River Falls, treasurer. The association now has fifty-two members and an aggressive campaign will be carried on this year among the pure-bred seed growers for new members.

C. J. Galpin, in charge of the community center work with the state university, says there are few communities which have this work better organized than the one at Honey Creek, Wisconsin. This community has a fine hall and a good lecture course has been given the past season. Three basket socials were held within a month and over $200 raised. This money will be expended for community betterment. The village of Honey Creek has street lights which are paid for from the receipts of an annual basket supper and at this supper the baskets bring a good sum.

Wisconsin has added interest in the Mexican situation because a number of her own people are engaged in the fighting along the border. Some of the Wisconsin members who are officers with the army on the Mexican border are: Captain Lorraine T. Richardson, Janesville, with the Twenty-second infantry. Captain Clement A. Troth, Milwaukee, with the Eighth infantry. Captain Edward K. Masse, Green Bay. First Lieut. Charles S. Hamilton, Milwaukee, with the Eleventh. Lieutenants Harley B. Bullock, Appleton, and Jacob Gerhardt, Milwaukee, and Second Lieut. Florian Lampert, Jr., Oshkosh, with the Twenty-third. O. H. Pitz, of Manitowoc county is a lieutenant with General Funston. Joseph Kruetz, another Manitowoc county boy, was stationed at Douglas, Arizona, when the Villistas crossed the border and perpetrated the Columbus, N. M., outrage.

The St. Croix Valley Holstein Breeders' Association held its annual meeting recently at New Richmond, St. Croix county, and elected David Imrie, of Roberts, to succeed himself as president. John F. Cody, of Stanton, was chosen vice president; George H. Kruschke, of Stanton, secretary-treasurer, and John F. Kinne, of New Richmond, and Charles Sette, of Stanton, directors. The meeting was not as well attended as the officers would have liked, but those present were enthusiastic for the breed. Secretary Kruschke reported that the demand for St. Croix county Holsteins had been especially good during the last year and that three carlots had been shipped from that vicinity in addition to many animals sold privately and separately. It was decided not to attempt an association sale this spring, as the breeders do not believe there was sufficient surplus stock in the county to make it successful.

Mineral Elements in Plants.

To the Editor:—Plants, like animals and human beings, live and grow. If they live and grow they certainly must eat. This is a fact—they do eat.

About thirteen elements are found in plants, of which potassium, nitrogen, phosphorus and calcium are the most important.

Potassium is found in the stem of the plant and comes from the soil, in solution in water, into the plant.

Phosphorus also comes from the soil to the plant in the form of a salt, in solution in water. This, and nitrogen, are found in the grain or seed of the plant.

Nitrogen, in the case of legumes, comes from the air, but to other plants from the soil. Of course, legumes take some nitrogen from the soil. Legumes have on their roots little nodules which are a home for a certain kind of bacteria that change the nitrogen of the air to ammonia, then to nitrites and then to nitrates, when it is in a form available for the plant to use. This is called the nitrogen cycle.

Calcium is found in the leaves of the plant. Nitrogen is also in the leaves. Yellow, sickly leaves denote a deficiency of nitrogen.

Light, also, is needed for the growth of a plant. Light contains the coloring matter, called chlorophyll, which gives to plants their rich, green color. Light is needed too for the building up of the carbohydrates of the plant, which are formed of carbon, hydrogen and oxygen. Carbon comes from the air, the hydrogen from water and the oxygen from the air and water. Water is made up of hydrogen and oxygen.

Water is an important thing for plant growth, for besides being a plant food itself it carries most of the other plant foods in solution to the different parts of the plant. Too much water in the soil keeps out the air and air is essential for plant growth.

Now, if the plant is then fed to the animals on the farm, the plant foods will naturally be found in the manure of the animal. Here is a very important phase of farming—save all the manure carefully. The liquid manure contains the nitrogen, while the solid excreta and litter contain the other plant foods. The value of the manure depends on the age of the animal, the kind of animal, kind and amount of litter used and the care of the manure.

Many farmers are very careless in this respect. They do not carefully save the manure produced, especially the liquid manure, which is the best part of it. Losses of plant foods may result from leaching from fields or manure heaps, washing and sale of products from the farm.

Clover plowed under green is a good nitrogen fertilizer, but is expensive in some cases. Commercial fertilizers are good in some instances, but on sandy soil leaching will take place rapidly and on hillsides washing and losses will result.

Iowa Co., Wis. Edward Harrigan.

The grade in a road determines the size of load that can be pulled over it. A good way to learn the effect of grade is to ride a bicycle on the level and up different grades. It will very quickly be found out how grades effect the pull. One argument against going around a hill is that it makes the distance greater. This is not always the case. The bail of a pail is no longer when laying down than when standing up. One bad grade in a road may easily double the cost of hauling over the road. The work of grading down a hill usually costs more than to buy the land required to go around it.

Trials have been made in inoculating alfalfa with soil from a sweet clover field and from an alfalfa field. No difference was noted in increase in growth.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Auxiliary Air Cock.

Would it be advisable to put a pet cock in the intake manifold of my car for the purpose of taking in air after the motor is warmed up?

Answer.—We doubt that there is any benefit to be derived from this scheme if you have a good carburetor properly adjusted.

Coil Trouble.

We have a Buick car that ran fine until a few days ago. While on our way to town, the spark became weak and at the garage the motor would not start. They put a new coil on the dash just above the generator and the engine ran fine. The mechanic said the old coil was worthless. I took it home and removed it from the case and tried it. The engine ran fine with it. Since I put it back in the case, the engine will not run with it. What is the reason it will not work?

Answer.—Evidently your coil is all right. There is some defect in the case, probably a loose connection or a broken wire that is causing the trouble. The trouble may also be due to a "ground" or "short circuit."

Refilling Prest-o-Lite Tank.

Please advise me if it would be possible to make a pump to fill a prest-o-lite tank, using the gas from a carbide generator. My tank holds 220 pounds of gas. The cylinder I intend to use for the pump is a force pump cylinder, two and one-half inch bore, twelve inches long. Would it be possible to pump that amount of pressure with such a cylinder? Should I connect it to the tank by a pipe or a hose? I would use an engine to run the pump.

Answer.—It might be possible, but it would be dangerous and would probably be regarded by the prest-o-lite company as an infringement on their patent. If you wish to try the experiment use strong pipe for connections and be sure the piping is air tight. At best you will be risking a serious explosion.

Speed of Feed Grinder.

I have a four-horse-power McVicker engine with a sixteen-inch belt pulley; also a Storer feed mill having a twelve-inch belt pulley and eight-inch burrs. The feed mill seems to have too great a speed and the engine has to work too hard under load. How high a speed should the feed mill have? Would a ten-inch or twelve-inch pulley on the engine be better? Does a feed mill grind the most grain at a certain speed? If so, what speed?

Answer.—There is a certain speed at which the burrs will do the most work. This speed is a matter of experiment, depending to a considerable extent upon the dressing of the burrs and the grain being ground. Too high a speed causes the burrs to glaze and heat. In some cases the capacity may be increased by deepening the furrows, as a burr with deep furrows has less tendency to glaze. It would be well for you to try a twelve-inch pulley on your engine or a sixteen inch pulley on the mill.

Some House Wiring Questions.

In wiring, when using tubes, could the wires between the tubes be covered with loom to insure greater fire protection? (When a house does not require over twelve lights, would any fuse blocks be required excepting the ten ampere fuse on the main cut out, number fourteen wire being used? The circuit is 110 volts. Are twelve lights all you can have on one circuit? Is that why there must be several circuits, each one having a fuse block? I have read that there should not be over six or eight amperes on one circuit. If six amperes is allowable, would it not be all right to put tweny-five twenty-watt lights on a circuit, as they require only six amperes?

Answer.—It would be all right to cover the wires between the tubes with loom, but it adds to the expense of wiring and is not required where the wires are one and three-fourths inches from the wood. Loom is required where the wires cross a piece of metal, as a gas pipe or furnace pipe. If not over ten amperes of current is used the main fuse is sufficient under the above conditions unless there is some local ordinance to the contrary. You can use as many lights as you wish on one circuit if you do not exceed the capacity of the circuit, say, eight amperes. There may also be local ordinances regulating the number of lights usable. Some cities arbitrarily rate each socket as one-half ampere, in which case only twelve lights could be used on a six-ampere circuit. If you are wiring under such an ordinance and wish to use more than twelve lights it would be necessary for you to have two or more branch circuits, each protected by a fuse.

Removing Wheel From Shaft.

I am writing you in regard to my manure spreader. One drive wheel pulls the apron and the other drive wheel pulls the beater. I wish to take up end play on one of the shafts, but cannot remove the gear on the end of the shaft. If I could get it off, I could put in washers to take up the end play. The gear wheel is keyed on the axle by a square key. How can I remove the gear?

Answer.—First, remove any set screw or pin in the hub of the gear that may be used to hold the gear in place. Then if you cannot remove the gear by hammering the end of a piece of steel held against the hub of the gear it may be necessary to make a "wheel puller" somewhat like Figure 1 or Figure 2. In Figure 1 A is a set screw screwing into a steel bar, B. The two bolts, CC, are threaded at

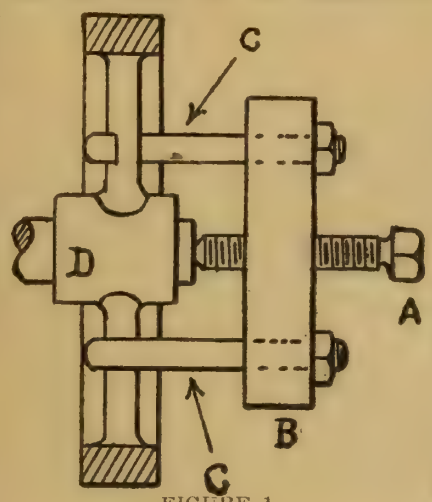

FIGURE 1.

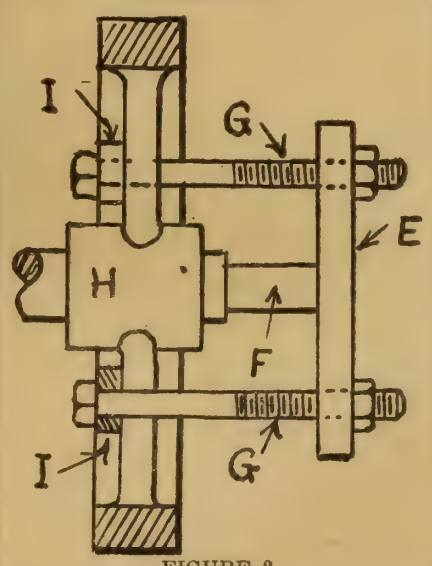

FIGURE 2.

one end and bent like a hook at the other. The hooks catch the spokes of the wheel, D. The apparatus is placed in position as shown, the end of the set screw pushing against the end of the shaft. As the set screw is screwed in the pulley is pulled off the shaft.

Figure 2 shows a somewhat different arrangement. GG are two ordinary machine bolts. II are two pieces of steel with a hole drilled in the middle for the bolts. E is a piece of steel with holes for the bolts and F is a steel distance block small enough to pass through the hub of the gear. The wheel is pulled off the shaft by tightening the nuts on the bolts.

Size of Generator.

I have a four-horse-power, four-cycle gas engine installed in my shop. It runs a sixteen-foot line shaft to which I have belted five different machines. My general store and residence are near the shop. What size generator should I use to light fifteen tungsten lamps of sixteen candle power each? I may want to install a storage battery later on. Could I use a machine strong enough to run a "movie" machine if I use a rheostat to reduce the current for the lamps? How many six-volt, sixteen-candle-power auto lamps can be operated by an eight-volt, ten-ampere generator?

Answer.—Use a 300-watt generator, about one-half horse power. Use lamps of the same voltage that is required to operate your picture machine and no rheostat will be required. Use a generator of the same voltage. It is not economical to run lights through a rheostat.

The eight-volt, ten-ampere generator would operate four fifteen-candle-power auto lights. If you have trouble with your six-volt lights burning out use eight-volt lights.

LAW QUESTIONS.

Partition Fences.

Mr. G. C. Terrell, Bora, Wis.—(1) Can I compel my neighbor who owns land adjoining mine, to build one-half of the partition fence hog tight if he does not use his land for hog pasture? (2) If an adjoining owner does not use or occupy his land, can I compel him to build half of the partition fence?

Answer.—(1) There are various kinds of partition fences declared to be lawful in Wisconsin. Some of them are hog tight and some not. You can compel your neighbor to put in half a lawful partition fence on the line, although he does not use his land for a hog pasture. A description of all the kinds of lawful partition fences is too long for these columns. See chapter 91 laws of Wisconsin, 1907. (2) If an adjoining owner does not use his land and allows it to lie open you cannot compel him to build half of a partition fence.

Establishing Road—Damages.

A Subscriber, Glen Flora, Wis.—I own eighty acres of land lying east and west in the southeast corner of a section. A public road runs north and south along the west end of my land. A neighbor owns forty acres north of and adjoining my east forty. He petitioned for a public road to his place, beginning at the southwest corner of my land, running east half a mile to the section corner, thence north a quarter of a mile to his place. I signed his petition, and said road was laid out four rods wide and takes three acres of my land, for which I paid $30 per acre eighteen months ago. I did not object to the road, but I want reasonable compensation for the land taken. The town board tells me I must take $1 per acre, or nothing. The road is not yet completed. (1) Can I stop the construction of it till I am paid for the land? (2) The road is of no special use to me. Can I compel payment of damages for the land taken?

Answer.—(1) You should have claimed damages or compensation when the proceedings were started to establish the road, but you cannot now stop the construction of it till you are paid. (2) We think you can still recover damages for the land taken from your farm for the road. You will have to employ a lawyer to compel payment of such damages.

Protection for Shoe Leather.

WE wish to call the attention of our readers to P. & V. farm shoe dressing advertised on page 7. This material when applied to work shoes will keep the leather soft, strong and waterproof, and will protect it from barnyard acids which eat leather. Every farmer should use this dressing to increase the life of his shoes and protect his feet from dampness. Cut out the coupon in the advertisement and send it to Pfister & Vogel Leather Co., Milwaukee, Wis., and receive a free sample of this shoe dressing.—Adv.

When writing to advertisers please mention The Wisconsin Farmer.

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Twelve Years' Alfalfa Experience in Wisconsin.

To the Editor:—My experience with alfalfa has extended over a period of some twelve years. The first part of this period was somewhat discouraging, it is true, but I feel that this is perhaps the case with most new undertakings. The early growers of this crop did not have the combined experience of the successful growers of our day to draw upon for information and hence made some mistakes that can be avoided at present by taking the best advice of successful men.

Perhaps the most common mistake in the past was to sow seed gathered from the irrigated districts of the West on soil that was not inoculated with the proper bacteria and too low in fertility. Our present practice is to obtain seed of strong vitality, grown on nonirrigated land and sow it on a well-prepared seed bed not later than May 15th at the rate of sixteen pounds per acre.

If the field to be sown has not grown alfalfa before we would sow considerably more seed than this and always take the precaution to inoculate the land with the proper bacteria. This can best be done by spreading soil from an old alfalfa field or soil where sweet clover is growing. The amount is not so particular as it is to have it evenly distributed.

It is our practice to aim to get a deeply worked, compact and smooth seed bed. To obtain this no implement, barring the plow, is better than a disk harrow. Use this freely on preferably fall-plowed land. Smooth by using a spike-tooth harrow, planker, roller or any tool that will leave a firm, smooth seed bed.

We sow our seed with a seeding attachment, such as is regularly furnished at a small extra cost with most grain drills, and mixed with from three pecks to a bushel of barley. This gives us a very good crop of barley and our stand of young alfalfa is not injured in any way.

The impression has sprung up that alfalfa, although a very desirable crop to grow, takes so much coddling and nursing it is hardly worth the extra care. In our judgment, the alfalfa plant is even more hardy than the common clovers and can be sown and handled in much the same way. Of course, one must pay more attention to having a cleaner field, free from June grass, being sure the soil is inoculated and giving the small seedlings every chance to grow and develop, for while the older plants are very hardy and will stand much abuse the small plants are somewhat tender.

All efforts to obtain a good stand may fail if alfalfa is sown on sour or soggy land, and, as it is quite useless to try to make it grow on the latter kind of soil, land that is well drained should always be selected and if the soil is sour this should first be remedied by liming. Our land is reasonably free from acid and well drained.

P. A. Paulson.

Polk Co., Wisconsin.

Experience with Kherson Oats.

To the Editor:—I have grown Kherson oats for the past eight years. In that time they have always yielded as well as the later varieties and three of these years they were much better. In 1914 when rust and blight caught all the oats in this vicinity the Kherson oats were harvested before they were affected and our yield was ninety bushels to the acre. In 1916 when late oats were lodged badly with late storms the Kherson oats were in the shock. Not only that but they were as good as barley to use as a nurse crop for clover or alfalfa. So farmers who do not wish to grow barley may grow Kherson oats instead. Also where a large acreage of oats is grown the Kherson helps to divide up the harvest, as they are fully two weeks ahead of most oats. They are also good for the rich soils, as they are short in straw. The berry of the Kherson oats is medium size, but has a very thin hull. There is fully 2 per cent less hull on Kherson oats than the Swedish Select. For the past two years because we have been unable to get men to put up good stacks we have done our threshing from the field or shock. Since we have gotten into this habit we have always gotten our grain in in fine shape. The grain is all capped when shocked, with a well-spread bundle. The shocks are made of eight bundles and one cap, making nine bundles in all. Some years we did not profit much by the cap bundle, but in a wet season like 1915 it has saved enough grain to pay for the extra labor of capping for ten years.

THRESHING ON H. E. KRUEGER FARMS.
Threshing from the shock—note the wing-feeders on thresher. The pitchers do not have to go near the machine, but can keep away out of the dirt.

GOOD STAND OF ALFALFA.
This field on the H. E. Krueger farm, Dodge county, produced 106 bushels of Kherson oats to the acres. This picture was taken four weeks after the oats had been harvested.

H. E. Krueger.

Beaver Dam, Wisconsin.

Institute Work.

To the Editor:—The regular winter season of farmers' institutes closed on March 10th. No "round-up institute" was held. That annual feature could be held in one place only and cost the state anywhere from $550 to $750, a sum which would defray the expenses connected with twelve or fifteen regular institutes and reach that many communities. In view of the fact that not all of the places which apply for institutes can be satisfied in any one year it would seem that it would be wise policy to spend the money which was spent upon the "round-up" on at least a dozen of the places which are ordinarily denied institutes.

A new feature of this institute season has been the endeavor to make the institute work more immediately effective by securing the names of farmers who have signified their desire for assistance with special problems. Over 400 names are card-indexed in the office of the superintendent and an effort will be made to assist these farmers specifically with reference to their problems. So far as practicable these projects will become the basis of future demonstration meetings.

A number of letters have come to the superintendent from people who have attended this season's institutes and these letters have commended very heartily the work of the institutes. Almost without exception the desire has been expressed for institutes in these same places next year. The superintendent has received some very thoughtful comments and suggestions looking towards the improvement of the institutes. From these there would appear to be a growing demand for a somewhat different type of institute. Farmers' institutes began at a time when few people thought that there could be any educational work connected with agriculture. Thirty years of preaching better things and better practices among the rural folks have brought about a marked change in the attitude of farmers towards agricultural education, so that now there is coming the demand for knowledge concerning the scientific background of successful practice and for a more intense and specific treatment of farm problems.

It is the desire of the superintendent to try to satisfy this new and growing demand. Before anything like success in this undertaking will be realized we must expect to experiment a little and the experimenting will begin at once. Ten one-day institutes will be held at Necedah, Arkdale, Grand March, Endeavor, Westfield, Coloma, Bancroft, Wild Rose, Plover and Amherst. Only one crop, potatoes, will be considered at these institutes and something specific and definite will be secured in organizing the farmers in these communities to improve potato production to their greater profit. Whatever is started at these institutes will be followed up during the summer and will result in definite education and accomplishments.

This summer the superintendent hopes to assist with several better-colt institutes, to carry on several farm demonstration institutes and to put on several one-day women's institutes during the canning season. These canning institutes will be carried on with the view of saving a great deal of valuable garden food which now goes to waste and to secure a more diversified winter diet on the average farm.

The superintendent desires that the institutes assist in special work like organizing cow-testing associations, breeders' associations, better-poultry clubs, community clubs, colt shows, pig shows, county fairs, and wherever local and special needs appear.

But to inaugurate the new farmers' institutes in accordance with the ideas of the people who have been interested and thoughtful enough to write to the superintendent, the people must signify that a number of people in a community wish a certain special assistance by signing an application for a special institute. People having in mind ways in which the office of farmers' institutes may assist them in special institutes will please write to the superintendent of Farmers' Institutes, Madison, Wisconsin, for application blanks.

E. L. Luther.

Location of Buildings and Work.

To the Editor:—The location of the buildings on a farm has a great deal to do with the time it takes to do the work. It will often pay to move some of the buildings in order to secure a more convenient arrangement. This was done on one farm with the following results. Under the old plan it required walking fifty-three miles a year just carrying in water. Under the new plan the water was piped into the house—no walking required. Bringing in the wood under the old plan required walking twenty-two miles. Under the new arrangement this was reduced to 8¾ miles. The trips made to the machine shed during the year amounted to 57 1-3 miles, by the new arrangement it was reduced to 11¾ miles. By the new arrangement the year's trips in feeding the hogs was reduced 102½ miles, and in caring for the chickens 3 miles saved. The total saving for the year through rearranging the farmstead was 217 1-3 miles.

It was also figured up and found that at giving wages that the time used in walking these 217 1-3 miles was worth $36.74. It must be remembered that it was not only a case of walking these miles but it was usually with something to carry.

W. C. Palmer,
North Dakota Experiment Station.

Had Prize No. 25 Wisconsin Corn.

To the Editor:—I herewith enclose a card showing my No. 25 corn which took first prize at the recent Madison show. This corn was grown on alfalfa sod after having been planted with potatoes for one season. It was cultivated sufficiently to keep free from weeds and retain the moisture. Seed was selected promiscuously from the entire field during husking season, and from this was selected the best ten ears.

MARINETTE COUNTY MAN'S CORN AND TROPHIES.

F. E. Lueke.

Marinette Co., Wisconsin.

Three hundred and seventy dollars in prizes are being offered in the fifth acre yield corn contest to be conducted by the extension department of the North Dakota Agricultural College. Boys who want to enter should write to the extension department for entry blanks and full information.

DAIRY

Rock County Report.

Although February was not an ideal month for dairy cows kept under ordinary conditions, Joseph E. Feinberg, tester for the Rock county association, writes The Wisconsin Farmer that his association that month reported ten forty-pound cows. F. O. Uehling held first place with 54.3 pounds of fat to her credit. The report:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent fat	Pounds B. fat
R. Marquart					
Johnny, G. S. H.	6	1-16	1238	3.5	43.3

Treating Affected Teats.

When a cow doesn't yield her milk in a proper manner, gives bloody milk, etc., the trouble can often be found in some disorder of the teats. In fact, it would be hard to find a dairy herd in which at least one member of the herd is not more or less affected with either leaky teats, blocked teats, sore teats or warts on the teats.

Leaking from the teats may occur when a cow is milking heavily and the periods between milking are not evenly divided, or it may be because the sphincter muscle is not properly performing its duties. As there is no remedy for this trouble, about the only thing that can be done in case conditions warrant is to place a rubber band around the lower part of the teat.

Warts on the teats do not, as a general thing, cause much trouble at first, but after they are well developed they tend to make the teat tender to handle, besides adding to the danger of increasing the possibility of contaminating the milk through infectious material which may be found upon them. The best way I know of to get rid of warts is to tie a piece of waxed silk tightly around the wart as close to the teat as possible. After a few days the wart will drop off and cause no more trouble. For the warts that are too small to tie around with silk an easy way of removing them is to touch them with a feather dipped in butter of antimony. This is very strong and care should be taken not to touch the teat at all with it. Olive oil is also good in removing warts. They are smeared thickly with the pure oil, several applications usually being necessary.

Sore teats are a difficult proposition, as milking opens the sores, and we can't allow a cow in full milk to lay off for a week or so to enable her teats to heal up. Many cases of sore teats are caused by leaving the teats wet after milking and when the cows are turned out into the lot or pasture the wind chaps and cuts the teats. The teats should by all means be thoroughly dried after milking is completed.

Here is a way of treating sore teats that I have tried and found very successful. To one ounce of glycerine add one dram of boracic acid. Mix this in one-half pint of warm water and put in a narrow jam jar. After milking put the teat in this mixture, holding the jar close up to the cow's udder, and let the affected teat soak therein for a few minutes. This mixture may be kept and used again and again. A little touch with a crystal of alum after this bath will help the more obstinate sores to heal, but care must be exercised not to apply anything that will cause the skin of the teat to wrinkle and pucker up when the sores heal. Oxide of zinc ointment, applied after each milking, is also a good remedy for sore teats.

Blocked teats are always a bother, as they interfere with the flow of the milk, and, moreover, make it very hard to strip the quarter clean. They are caused by a little ball of flesh inside. In nature these growths are very much like the warts on the outside of the teats. Some are only attached to the lining of the skin by a little string and can be pushed out of the way by the insertion of a teat syphon. Sometimes they break off and come away of their own accord. I have seen the more obstinate ones removed by the use of a large-sized milk syphon with one side filed to a sharp edge in exactly the same manner as an apple is cored with a patent corer.

The syphon is held in the right hand and the teat held extended in the left. After the syphon is introduced into the teat it is slowly turned around, with the sharp edge against the lump. It is a simple little operation and yet it is easy to lose the quarter in performing it. The syphon must be sterilized in boiling water before being inserted, and every precaution should be taken to insure absolute cleanliness. There will be a little blood come from the teat and this should be milked out and the teat syringed out with a 7 per cent mixture of boracic acid and warm water. The lining of the teat will soon heal, so long as it is kept free from germs. This can only be done by keeping everything spotlessly clean. No one but a competent operator should attempt to cut away these lumps in teats, otherwise more harm is apt to result than good accomplished.

Use A Wood Tire Hollow Wall Silo

Cannot Sag, Blow Down or Rot.

Cures and preserves silage perfectly. Prevents freezing of silage. Easy to construct. A real farm building, permanent and rigid. No hoops to get loose. No guy wires. No staves to shrink or swell, but a smooth, double wall from base to roof, the inner wall being of *California Redwood.*

Guaranteed for 20 Years

"But Lasts a Lifetime" WOOD TIRE—AIR SPACE—INNER WALL—OUTER WALL—

The patented wood "tire" is built up of inch boards, and shipped in sections. The boards overlap in step formation at both ends. When nailed together, these sections form a ring of unusual strength. The silo frame forms its own scaffolding.

Send for our folder which shows how the Wood Tire Silo is built, and also what owners think of them. A postal brings it. Write today.

DON'T BE DEPENDENT ON HIRED MILKERS

At best they are unreliable—often late—not overcareful and always quitting unexpectedly when you need them most. Be independent—install an

EMPIRE Mechanical Milker

One double or two-cow unit takes care of 20 to 30 cows per hour. One man can operate two double units. The Empire milks uniformly, is safe, sanitary and economical. It is operated by natural air pressure and is easier on the cows than hand milking. No dirt, germs or stable air comes in contact with milk. Even nervous cows stand still and in many instances give more milk than before.

MY S. C. REDS won highest state honors. Rose and single comb; eggs $2.00; cockerels $3.00. Wm. Wichern, Baraboo, Wis.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Green Feed For Geese.

To the Editor:—As it is the time of year when geese are beginning to lay I will try to tell you something about my flock. My geese have already commenced to lay. I got the first egg February 27th. I always mark the date on the egg so as to be sure to set first the ones laid first. I keep the eggs in the basement in a pan of oats and turn them every other day and have kept them this way for two weeks and in some cases longer. You can test the eggs after they have been set on for ten or twelve days and if they are clear throw them away or boil them for the young chicks. There is no use in keeping a hen sitting for four weeks on an infertile egg. Some sprinkle the eggs, but I have found it best to leave them entirely alone. After hatching the hen will care for them for awhile, but not for long, as they wander away and do not do well shut up in a small place. Any pasture except clover is good for them Dandelions, beet tops, lettuce, radish tops, etc., are very good for them. When I first started to raise geese I asked a German lady what to feed them and she said "green, green, everything green." That advice I have found to be very good. Feed corn meal night and morning until nearly grown when they eat whole corn. Close them in a small place a month or six weeks before selling and fatten on corn meal. Keep the old geese for breeding purposes and always get the largest and best. Young geese are very tender and must be kept warm and dry and clean, especially where they roost. With a little good care geese are very easy to raise.

Mrs. A. L. Lackey.

GEESE ON MRS. A. L. LACKEY FARM, WALWORTH COUNTY.

Losses by Vermin.

To the Editor:—If through the columns of your paper you can agitate and spur neglectful poultry keepers to the true realization of the woeful loss sustained by the scourge of vermin in their flock of chickens you will indeed be an angel of mercy to the poultry industry and in addition add many dollars to the already billion-dollar output from the hens of the United States.

The duty of keeping poultry free from vermin is as important as it is unlovely. It certainly is one of the very disagreeable pieces of work one must perform if he practices thrift in his poultry raising. Thrift will get you further up life's ladder than any other quality and waste will carry you down faster."

It surely is a great waste to allow lice on the hens or mites in the poultry house.

No doubt there are many good remedies. We have tried a great many things, but we cannot say that we have tried all the good remedies. Sufficient for us that we have found something that does the work effectively and with very little effort compared with others we have used.

Perhaps the best help of all is the fact that we never neglect to look after this trouble systematically and keep eternally at the prevention rather than the cure.

None of us like to believe that vermin has invaded our flock and it takes some time to convince a disbeliever that it really is lice or mites, often both, that are spoiling his profits and consuming the feed that should be making eggs to furnish his table and pay for groceries.

Chickens will leave a henhouse containing mites and roost on fences, wood piles, trees or anywhere to escape the nights of horrid torture by mites.

As the mites stay in the coops and houses, secreting themselves in every crack and crevice, convenient for their night raids on the helpless birds, it is the houses and coops we should doctor for mites. Purchase a good preparation for spraying and a small spray pump. We paid 40 cents for one about six years ago and it is in good condition today. We use a liquid lice killer. It is absolutely sure death to mites and it never freezes nor clogs the spray pump. It is not very expensive and always ready, but it must be used and not looked at, simply.

It takes less than a minute every time the dropping boards are cleaned, twice a week at least, to spray about the walls adjacent to the roosts, the dropping boards and roosts. If this practice is continued the year around there will never be a mite about those premises so treated.

If one begins spraying at once in a perfectly new house as they should do the preparation referred to above may be diluted one-fourth with kerosene, but if your poultry house is infected with vermin use it full strength for a year to be perfectly safe before you begin diluting it.

It is very true that farm flocks, as a rule, are much more free from lice than are those confined in limited quarters.

A hen prefers to be clean. She will take frequent earth baths and delights in the fine moist dirt. If you doubt it prepare a nice bed for flowers or vegetables and then allow your hens to get onto it for a few minutes and see what they will do.

Most hens will rid themselves of lice if given the opportunity.

We can have the largest, finest matured pullet that can be raised and if she becomes lousy, with no opportunity to clean herself, she will become inactive, light weight, eat much more than she would ordinarily and lay but few eggs, if any at all.

It would surprise us to know how much valuable chicken feed goes to satisfy lice and mites every year, when this food should be producing eggs and meat, all because of improper methods and a hopeless inertia to concern ourselves with the proper care of our birds. There are a great many good lice powders on the market and we have used several varieties with more or less success.

The one we use is liquid and is easily applied, does not poison the hen or subject her to the annoyance that dusting her with powder does. This is also a good cure for scaly leg. It removes cancer. By oiling the white spots they will come off in a few hours.

The same liquid also must be applied often for lice if not done carefully the first time. We have found it safe in the flock if used once in three months.

The greatest satisfaction comes in its use with sitting hens. We apply it to the broody hen two or three days before giving her the hatching eggs. We mix it with lard and rub her head thoroughly with it the first and third week while she is sitting. After the chickens are hatched I use the preparation with half lard on the baby chick's head and under the beak on the throat. After such treatment they will go through the season to the end of the year without further trouble provided they are not allowed to mix with other birds in doubtful condition and their coops and roosting shelters kept properly sprayed.

When the hot weather comes again and the birds are not on free range there is apt to be trouble.

We always go through the flock thoroughly before making up the breeding pens. It is safer not to start in the season's business with these lurking terrors to contend with. A thorough search may hold a surprise for you.

If you have not taken the proper precautions and you find your baby chicks have lice on their bodies (because body lice and head lice belong to two different families) sift lice powder over them and work it all through their down, the lice will drop off and this will not leave too much strong powder on the body of the little chicken.

Carry thrift into your poultry raising as you do in all other lines of business that are carried to success, and do not waste your profits in feeding millions of lice and mites every year. Take warning and look out for Mrs. Louse. She is waiting for our 1916 flock of youngsters and she'll say to us what Mike did to Pat.

Mike and Pat had not been on the best terms of friendship and Pat was going away. On the day of his departure, meeting Mike, he said, "Good-by to you, Mike, and bad luck to ye," to which Mike replied, "Good-by to ye, Pat, good luck to ye and may both our prayers miss."

Mrs. A. J. Schloerb.

Winnebago Co., Wisconsin.

Tells why chicks die

Write today for the poultry expert's valuable free book, "White Diarrhoea and How to Cure It." This book contains scientific facts on White Diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every batch. The valuable book is free. Send your name and address for it now. S. J. REEVES, 9483 Reefer Building, Kansas City, Mo

One Gallon Oil

Heat Underneath

DUPLEX Central Heating Plant squarely underneath—heat ascends—takes up proper amount of moisture from X-Ray Generator, is carried to all parts of hatching chamber uniformly. No cold sides or corners. Sparrows and Tuberculosis.

In investigating poultry tuberculosis at the North Dakota Experiment Station twelve sparrows were fed one meal of chopped tuberculosis chicken liver. All the birds died with generalized tuberculosis, two in seventy-three days, two in seventy-five days, one in 100 days, one in 104 days, one in 105 days, one in 118 days, one in 128 days, one in 131 days, one in 186 days and the last one in 202 days.

Fruits and Garden

Tobacco Seed Beds.

Sterilizing tobacco seed beds has been found profitable in Connecticut, Pennsylvania and Wisconsin, and there are many advantages in the practice which recommend it. It is certain to destroy the weeds, and in this way saves much labor by avoiding hand weeding. According to tobacco specialists in the department, it is also the most effective remedy for root rot and other fungous troubles. This disease is receiving much more scientific attention now than in the past, and it has been learned already that the damage which it does is much greater than was formerly supposed. The sterilization of the seed bed effectively protects the tobacco plants in their earlier stages.

The sterilization of the tobacco field itself is, of course, an impossibility in practice. If the plants, however, can be kept free from disease in the seed bed, their power of resistance will be greatly strengthened in the field. In Connecticut it has been found that the cost of sterilizing, when the necessary apparatus for it is at hand, is less than the cost of labor involved in weeding the seed bed. This does not take into account the extra safeguard afforded by sterilization against fungous troubles.

These can be guarded against in the field to a certain extent by crop rotation, but economic conditions do not always make rotation possible in the case of tobacco. This is especially true in New England, where shades erected for the tobacco fields make the use of the land for any other purpose impossible.

In the South an imperfect form of sterilization has been practiced by tobacco growers for some time. It is the custom to burn over the seed bed, and in this way the surface for a depth of two or three inches is sterilized. This method, however, requires much fuel, is likely to damage the soil, and is less certain in results, so that in the opinion of the government specialists it would pay tobacco growers to invest in an effective sterilizing apparatus. In many cases the purchase of the outfit or its operation could be handled on a community or co-operative basis to advantage.

The outfit should consist of a portable steam boiler which will maintain a pressure of not less than ninety pounds, and steam hose with the necessary connections. In addition, there should be a pan six by ten feet square and six inches deep fitted with a nipple for the hose connection. A tight wooden box of about the same measurement is equally effective.

When the seed bed has been fertilized, spaded, raked smooth, and made ready for sowing, the sterilizing box or pan is inverted well into the soil. Steam is then turned on and kept at a pressure of at least ninety pounds for about thirty minutes. In computing the pressure of the steam, however, it must be remembered that the pressure of the boiler is by no means the measure under the pan. The size of the pipe and the distance of the pan from the boiler must be taken into consideration. A convenient way of gauging the actual pressure at the seed bed is to notice whether or not the pan shows a tendency to rise. If it does there is sufficient pressure to force the steam downward through the soil.

Another very simple but effective method of ascertaining whether or not the sterilization has been done properly is to place an ordinary potato from four to six inches under the soil. If this is thoroughly cooked by the steam it is safe to assume that all the other smaller seeds and germs in the soil have also been destroyed. After the portion of the seed bed covered by the pan has been sterilized the pan is moved on and more of the soil subjected to the same treatment. It is desirable to cover the steamed soil with burlap in order to hold in the heat as long as possible.

For some hours after treatment the seed bed is, of course, too hot for planting. It is, indeed, probable that the best results under some circumstances will be secured by not planting for a period of ten days after sterilization. On the other hand, this affords an opportunity for reinfection of the soil unless the beds are effectively covered; and, furthermore, the necessity of getting the crop started may make this delay most inadvisable. Sterilization should never be attempted when the seed bed is wet, as it requires very much more steam under such circumstances than when the land is dry. For this reason it is sometimes necessary to put off sterilization until quite late in the season. On the whole, therefore, it is perhaps better to plant as soon as the bed has cooled off. The plants may not grow well for some days thereafter, but, once started, they will do much better than in an unsterilized bed. It should be remembered that effective steaming causes the surface soil to dry somewhat more rapidly, so that watering just after planting may be necessary.

When apparatus for steam sterilization is not available the treatment of the bed with formalin (two quarts of 1:50 solution per square foot) is sometimes substituted when root rot or other diseases are present. This, however, is not so satisfactory since it cannot be relied upon to destroy the weeds. It is essential that the formalin vapors be allowed to escape before sowing the seed.

Spraying Table.

WHAT?	WHY?	HOW?	WHEN? 1st Spraying	WHEN? 2d Spraying	WHEN? 3d Spraying	REMARKS
Apple	Scab	Bordeaux mixture	Just before blossoms open	Just after blossoms drop	10 days after 2d spraying	
	Codling moth	Arsenate of lead combined with Bordeaux	Just after blossoms drop	10 days later	Last week of July or 1st week of August for 2d brood	1st and 2d spraying same as 2d and 3d for scab; merely add arsenate of lead to Bordeaux
	Oyster shell scale	Lime sulphur 1 part L. S. to 6 of water	March or early April but before growth starts			Do not use lime sulphur, 1 to 6 on growing plants
Cherry and plum	Mildew and shothole fungus	Bordeaux mixture 3—4—50	When leaves are about 1-3 grown	10 to 12 days later	10 to 12 days later	
Currant and gooseberry	Mildew, blight and currant worm	Bordeaux and arsenate of lead	When leaves are fully developed	2 to 3 weeks later		
Grapes	Mildew and Anthracnose	Bordeaux	Before leaf buds open	2 to 3 weeks later	3d, 4th and 5th application at intervals of 2 weeks if required	
Strawberry	Leaf-spot or blight and leaf eating insects	Bordeaux and arsenate of lead	When first leaves appear	After blossoms fall		
Raspberry and blackberry	Anthracnose and fungous diseases	Bordeaux	As above	2 weeks later		Spray new growth after fruit harvest

SPREAD NOW!

SPECIAL PROPOSITION
10,000 GALLOWAY
NO. 8 SPREADERS

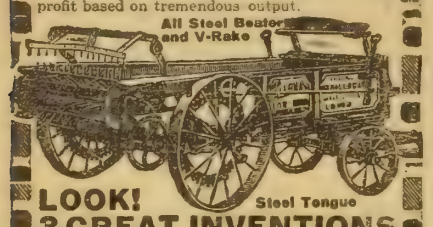
This extra offer is made with the idea of getting ten or more Galloway Spreaders in every township in the next few weeks. One Galloway No. 8 Spreader always sells from one to a dozen more in the same community. That's why I make this new special offer to distribute 10000 advertising spreaders quickly

LOOK! Our new 250 page catalog. Tells you all about the special patented features on the famous Galloway Manure Spreader; how to make a spreader pay for itself in six months' time; shows why 3 exclusive Galloway patented features make the Galloway Spreader worth $50 more than any other spreader, but cost nothing extra on the Galloway; also shows full line of other Galloway implements and merchandise.

NEW SELLING PLANS

Cash or time—one year to pay—installment plan—note settlement—half cash half note—bank deposit or cash, at prices so low you cannot afford to do without a manure spreader now. We sell direct at less than wholesale from factory to farm at the actual cost of material, actual cost of labor and only one small profit based on tremendous output.

All Steel Beater and V-Rake



Steel Tongue

LOOK! 3 GREAT INVENTIONS

They make the Galloway Spreader in a class by itself, are:

1. Invincible Roller Feed worth $25 on any other spreader. Exclusive on the Galloway, but costs you nothing extra. One of the secrets of our light draft.
2. Patented Automatic Stop, Uniform Clean-Out Push-Board worth $10 on any spreader. Costs nothing extra on the Galloway.
3. New Steel Everlasting Beater with V-Rake which gives wide spreading and tears the manure into shreds for uniform available plant-food. This exclusive feature alone worth $15. Costs nothing extra on the Galloway.

Many other special 1916 features: low down; double chain drive; cut-under front wheels; channel steel frame, trussed like a steel bridge; steel tongue; endless force feed apron; top of box only 42 in. high; front wheels under the box, and other special features make it easy for two average horses to handle.

SPREADER PRICES LOWER

Get in on this special distribution advertising offer from now until seeding time.

At the end of twelve months, if the Galloway spreader has not paid for itself, if you have hauled out 100 loads of manure or more, and it has not proven everything I say for it, I agree to take it back, pay freight both ways and return your money, no matter on which plan you buy. Could I make this offer if I was not sure of my ground? Every sale backed by a $25,000 bank bond—an additional guarantee to you! Galloway spreaders have passed a field test in every state and almost every county.

Ask for this new 250-page book and special proposition today.

Spreaders shipped from Waterloo, Kansas City, Council Bluffs, St. Paul and Chicago.

HEPSEY BURKE--A Sister to David Harum

By G. N. Wescott, the Brother of the Author of "David Harum."

(Copyright 1915.)

CHAPTER XIV.

On the Side Porch.

IN THE evening, after his work was done, a day or two after his talk with Mrs. Maxwell, Jonathan went into the house and took a long look at himself in the glass, with the satisfactory conclusion that he didn't look so old after all. Why shouldn't he take Mrs. Betty's advice and marry? To be sure, there was no fool like an old fool, but no man could be called a fool who was discriminating enough and resourceful enough to win the hand of Hepsey Burke. To his certain knowledge she had plenty of eligible suitors since her husband's death. She was the acknowledged past master of doughnuts; and her pickled cucumbers done in salad oil were dreams of delight. What more could a man want?

So he found that the question was deciding itself apparently without any volition whatever on his part. His fate was sealed; he had lost his heart and his appetite to his neighbor. Having come to this conclusion, it was wonderful how the thought excited him. He took a bath and changed his clothes, and then proceeded to town and bought himself a white necktie and a scarf pin that cost 75 cents. He was going to do the thing in the proper way if he did it at all.

After supper he mustered sufficient courage to present himself at the side porch where Mrs. Burke was knitting on a scarlet sweater for Nickey.

"Good evenin', Hepsey," he began. "How are you feelin' tonight?"

"Oh, not so frisky as I might, Jonathan; I'd be all right if it weren't for my rheumatiz."

"Well, we all have our troubles, Hepsey; and if it isn't one thing it's most generally another. You musn't rebel against rheumatiz. It's one of those things sent to make us better, and we must bear up against it, you know."

Hepsey did not respond to this philosophy and Jonathan felt that it was high time that he got down to business. So he began again:

"It seems to me as if we might have rain before long if the wind don't change."

"Shouldn't be surprised, Jonathan. One—two—three—four—" Mrs. Burke replied, her attention divided between her visitor and her sweater. "Got your hay all in?"

"Yes, most of it. 'Twon't be long before the long fall evenin's will be comin' on, and I kinder dread 'em. They're awful lonesome, Hepsey."

"Purl two, knit two, an inch and a half—" Mrs. Burke muttered to herself as she read the printed directions which lay in her lap, and then she added encouragingly:

"So you get lonesome, do you, Jonathan, durin' the long evenin's, when it gets dark early."

"Oh, awful lonesome," Jonathan responded. "Don't you ever get lonesome yourself, Hepsey?"

"I can't say as it kept me awake nights. 'Tisn't bein' alone that makes you lonesome. The most awful lonesomeness in the world is bein' in a crowd that's not your kind."

"That's so, Hepsey. But two isn't a crowd. Don't you think you'd like to get married if you had a right good chance, now?"

Hepsey gave her visitor a quick, sharp glance and inquired:

"What would you consider a right good chance, Jonathan?"

"Oh, suppose that some respectable widower with a tidy sum in the bank should ask you to marry him; what would you say, Hepsey?"

"Can't say until I'd seen the widower, to say nothin' of the bank book—one, two, three, four, five, six—"

Jonathan felt that the crisis was now approaching; so, moving his chair a little nearer, he resumed excitedly:

"You've seen him, Hepsey; you've seen him lots of times, and he don't live a thousand miles away, neither."

"Hm! Must be he lives in Martin's Junction. Is he good lookin', Jonathan?"

"Oh, fair to middlin'. That is—of course—I well—I—I should think he was: but tastes differ."

"Well, you know I'm right particular, Jonathan. Is he real smart and clever?"

"I don't know as—I ought to—to—say, Hepsey; but I rather guess he knows enough to go in when it rains."

"That's good as far as it goes. The next time you see him you tell him to call around and let me look him over. Maybe I could give him a job on the farm, even if I didn't want to marry him."

"But he doesn't want any job on the farm, Hepsey. He just wants you, that's all."

"How do you know he does? Did he ever tell you?"

"Hepsey Burke, don't you know who I'm alludin' at? Haven't you ever suspected nothin'?"

"Yes, I've suspected lots of things. Now there's Jack Dempsey. I've suspected him waterin' the milk for some time. Haven't you suspected anythin' yourself, Jonathan?"

"Well, I guess I'm suspectin' that you're tryin' to make a fool of me, all right."

"Oh no! Fools come ready-made, and there's a glut in the market just now; seven—eight—nine—ten; no use makin' more until the supply's exhausted. But what made you think you wanted to marry? This is so powerful sudden."

Now that the point was reached, Jonathan got a little nervous: "To—to tell you the truth, Hepsey," he stuttered, "I was in doubt about it myself for some time; but bein' as I am a Christian man I turned to the Bible for light on my path."

"Hm! And how did the light shine?"

"Well, I just shut my eyes and opened my Bible at random, and put my finger on a text. Then I opened my eyes and read what was written."

"Yes! What did you find?"

"I read somethin' about 'not a man of them escaped save six hundred that rode away on camels.'"

"Did that clear up all your difficulties?"

"No, can't say as it did. But those words about 'no man escapin'' seemed to point towards matrimony as far as they went. Then I tried a second time."

"Oh, did you? I should think that six hundred camels would be enough for one round-up. What luck did you have the second time?"

"Well, I read, 'Moab is my wash pot, over Edom will I cast my shoe.' You've seen 'em cast shoes at the carriages of brides and grooms, haven't you, Hepsey? Just for luck, you know. So it seemed to point towards matrimony again."

"Say, Jonathan, you certainly have a wonderful gift for interpretin' Scripture."

"Well, Scripture or no Scripture, I want you, Hepsey."

"Am I to understand that you're just fadin' and pinin' away for love of me? You don't look thin."

"Oh, we ain't neither of us as young as we once was, Hepsey. Of course, I can't be expected to pine real hard."

"I'm afraid it's not the real thing, Jonathan, unless you pine. Don't it keep you awake nights, or take away your appetite, or make you want to play the banjo, or nothin'?"

"No, Hepsey; to tell you the plain truth, it don't. But I feel awful lonesome, and I like you a whole lot, and I—I love you as much as anyone, I guess."

"So you are in love are you, Jonathan. Then let me give you some good advice. When you're in love don't believe all you think, or half you feel, or anything at all you are perfectly sure of. It's dangerous business. But I am afraid that you're askin' me because it makes you think that you are young and giddy, like the rest of the village boys, to be proposin' to a shy young thing like me."

"No, Hepsey; you aren't no shy young thing and you haven't been for nigh on forty years. I wouldn't be proposin' to you if you were."

"Jonathan, your manners need mendin' a whole lot. The idea of insinuatin' that I am not a shy young

thing. I'm ashamed of you, and I'm positive we could never get along together."

"But I can't tell a lie about you, even if I do want to marry you. You don't want to marry a liar, do you?"

"Well, the fact is, Jonathan, polite lyin's the real foundation of all good manners. What we'll ever do when we get to heaven where we have to tell the truth whether we want to or not I'm sure I don't know. It'll be awful uncomfortable until we get used to it."

"The law says you should tell the truth, the whole truth and nothin' but the truth," persisted the literal wooer.

"Now, see here, Jonathan. Would you say that a dog's tail was false and misleadin' just because it isn't the whole dog?"

This proposition was exceedingly confusing to Jonathan's intelligence, but after careful consideration he felt obliged to say "No."

"Of course you wouldn't," Mrs. Burke continued triumphantly, quickly following up her advantage. "You see a dog's tail couldn't be misleading, 'cause the dog leads the tail and not the tail the dog. Any fool could see that."

Jonathan felt that he had been tricked, although he could not see just how the thing had been accomplished; so he began again:

"Now, Hepsey, we're wanderin' from the point, and you're just talkin' to amuse yourself. Can't you come down to business? Here I am a widower and here you are a widowess, and we're both lonesome, and we——"

"Who told you I was lonesome, I'd like to know?"

"Well, of course, you didn't, 'cause you never tell anything to anyone. But I guessed you was sometimes from the looks of you."

Hepsey bent her head over her work and counted stitches a long time before she looked up. Then she remarked slowly:

"There's an awful lot of sick people in the world and I'm mighty sorry for 'em; but they'll die, or get well. I guess I'm more sorry for people who have to go on livin', and workin' hard, when they're just dyin' for somebody to love 'em, and somebody to love, until the pain of it hurts like a wisdom tooth. No, I can't afford to be lonesome much, and that's a fact. So I just keep busy, and if I get too lonesome I just go and jolly somebody that's lonesomer than I am, and we both feel better; and if I get lonely lyin' awake at night, I light a lamp and read Webster's Dictionary. Try it, Jonathan; it's a sure anti-doubt."

"There you go again, tryin' to change the subject, just when I thought you was goin' to say somethin'."

"But you don't really want to marry me. I'm not young and I'm not interestin'; one or the other you've just got to be."

"You're mighty interestin' to me, Hepsey, anyway; and—and you're mighty unselfish."

"Well, you needn't throw that in my face; I'm not to blame for bein' unselfish. I've just had to be, whether I wanted to be or not. It's my misfortune, not my fault. Lots of people are unselfish because they're too weak to stand up for their own rights." She paused—and then looked up at him, smiling whimsically, and added: "Well well, Jonathan; see here now—I'll think it over and perhaps some day before—go 'way, you horrid thing! L t go my hand, I tell you. There! You've made me drop a whole row of stitches. If you don't run over home right now, before you're tempted to do any more flirtin', I'll—I'll hold you for breach of promise."

(To be continued.)

Light seedings have given good results at the Northwest Demonstration Farm and Station at Duluth. M. J. Thompson, superintendent of the station, suggests two bushels of oats to an acre, six pecks of barley, and six pecks of rye. These, he says, should be sown with drills. In this cool climate the plants stool freely, making it possible to use a minimum amount of seed.

MONEY-SAVING CLUBS.

If none of the above combinations suit you, you can make up your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wis.

ROSES! Eight Beauties For 15c!

No Flowers So Fair as Roses: No Finer Roses than The Housewife's

Our 1916 offer is Better and Bigger than any previous group---Splendid and unusual types chosen in well balanced assortment comprising Eight Hardy Beauties in all.

Bigger, Better, Brighter Than Ever

Frau Karl Druschki—A pure paper-white, free-flowering, large-sized Hybrid Perpetual. It is a remarkably handsome plant with bright, heavy foliage and strong, upright growth. There is nothing in the line of perfectly hardy Roses that can compare with this one in form, color and general finish.

Robin Hood—This new Rose has a glorious rosy-scarlet color that is at once soft and bright and lasting; the bloom is full and of beautiful build. It is a grand grower, heavy caned and profuse in foliage; flowers very freely produced; we feel sure this will prove a delightful companion for Rhea Reid.

Rhea Reid—Considered by many experts to be the finest red Rose in existence; has no rival. Rhea Reid is an offspring of American Beauty, which fact alone would place it right in the front rank along with its hitherto unrivaled parent. Much darker and richer red than the American Beauty; fragrant and continuous.

Violet Blue (the Blue Rambler)—the most novel creation of the age. A perfectly hardy, rapid-growing Rambler, identical with Crimson Rambler, except the color of its flowers. The immense clusters of beautiful violet-blue flowers, reminding one at a distance of the Blue Clematis, is a sight never to be forgotten. It is entitled to a place in every garden. It will cover the porch or trellis where planted in a short time, and will succeed everywhere.

Climbing American Beauty—Climbing H. P. A seedling from American Beauty with Wichuraiana and Tea blood in its veins. The introducers say of it: "Same color, size and fragrance as American beauty, with the addition of the climbing habit. Good foliage, and better blooming qualities. One plant of this new Rose will produce twenty times as many flowers in June as the old American Beauty, besides blooming occasionally during the summer. Blooms three to four inches across; has proved perfectly hardy and stands heat and drought as well as any Rose in our collection." We feel sure this Rose has a great future.

White Dorothy. (New)—A pure white sort of well-known Dorothy Perkins, of same habit of growth and freedom of flowering; a splendid companion for the pink variety, as it flowers at the same time. A most valuable addition to this class. Awarded gold medal National Rose Society and Award of Merit, Temple Show, England.

Madame Caroline Testout—Clear bright satiny-pink; flowers very large and extremely showy; quite distinct. It is the Rose par excellence. It does well everywhere.

Marechal Niel Rose—The world-renowned Rose. A beautiful deep sulphur-yellow, very large and exceedingly fragrant. It is the finest yellow Rose in existence. It has a climbing habit.

THE HOUSEWIFE is showing wonderful improvement and the evidences of this are just beginning—the very best fiction, illustrated by work of famous artists are to appear in coming issues.

Look at a few of the many names of those now contributing to The Housewife's pages:

AUTHORS.

Holworthy Hall—Author of Henry of Navarre, Ohio; the "Pepper" stories, etc.

Ellis Parker Butler—Who wrote "Pigs is Pigs;" the Great American Pie Company, etc.

Jane W. Guthrie—Who can tell a love story as few can, which explains her fame.

Lilian Dynevor Rice—Whose special cookery and household columns will be welcomed and—

No end of other features, Mother Knows Hows, Childrens' Pages, Real Poetry, Short Stories, and many big features to be announced from time to time.

ARTISTS.

F. Early Christy, whose cover designs are their own best description; John R. Neill, of whom it has been said, "He more than illustrates a story—he illuminates it;" P. J. Monohan, whose pictures are always full of action and real people; W. B. King, he of the deep understanding and deft touch; the list could be made as long as wanted, both as to artists and authors.

No expense nor time nor trouble is being spared to make

THE HOUSEWIFE

the finest popular priced magazine for women in America.

At any price The Housewife would not be a luxury —at 50 cents a year it is a necessity!

OFFER ENDS POSITIVELY MAY TENTH

As an introductory offer—The eight famous roses described in detail above will be sent to any person who subscribes to The Housewife for one year at 50 cents a year, for but 15 cents additional. In other words for 65 cents, you get The Housewife for one year and the roses will be sent you postpaid. THIS OFFER APPLIES UPON ORDERS RECEIVED BEFORE MAY 10TH—IT WILL BE WITHDRAWN UPON THAT DATE AND ORDERS RECEIVED AFTER THAT DATE WILL NOT BE FILLED. Think of it!—Eight beautiful roses for 15 cents! Lose no time in sending in your order—take advantage of this sensational springtime offer at once. There is going to be a lively demand, so the sooner you get your request filed, the better.

THE HOUSEWIFE, 30 IRVING PLACE, NEW YORK.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Easy Housecleaning.

Housecleaning time is almost here and that means that more than one woman is dreading that annual upheaval. Of course, there is always a good deal of work connected with this process, but if it can be so arranged as to reduce the amount of labor required and avoid a state of confusion we have gone a long ways toward solving the housecleaning problem. The feeling of satisfaction one has in contemplating a fresh and shining house is just a little bit marred many times, we think, by the weariness that follows. Many of our readers, no doubt, have ideas of their own about the easiest way to do the housecleaning and we wish they would write and tell us about it.

Perhaps you know some method of cleaning the walls, windows, carpets, curtains, pillows, etc., that is better than someone else's method. Pass it along to other farm women who are just as rushed for time as you are. Tell them how you store your winter clothes in order to keep them safe from moths, how you care for your blankets, what you do with your old magazines or how you manage your housecleaning so that the regular routine work of the house goes on just the same and the family is not inconvenienced and harassed by a week or two of confused cleaning, while at the same time you yourself are not worn out by the time the ordeal is over. Here is a chance to help some other farm woman and to let some other farm woman help you.

Christianity Constructive.

To the Editor:—In a recent issue a question was asked, when to join church, and signed "Mabel." I know there are many more qualified to answer that than I, but I feel like I can't keep still.

I do not know their names or where they live or their surroundings, but want to say this much, anyone who puts off so important a question makes a great mistake. A man or woman should first be converted, then the question of when to join church and where will be solved. The longer

NADINE JANETT OVERMEYER.
A seventeen-months-old girl who fairly lives out of doors.

one puts it off the harder it is to break old habits and form new ones.

Has anyone a right to say I will do so and so when I am forty years of age? Do you know you will still be living, able bodied and able minded?

The young men spoken of in this young lady's letter as being unfaithful to the church probably never were really converted, but merely "jined the meetin' house."

It is perfectly right for young married people to be industrious and want a home of their own, but we are taught in the Bible to "Seek ye first the kingdom of God and all things will be added unto you." We may never be rich, but we can serve God and also work for an honest living. Remember not converted and become as a little child ye cannot enter into the kingdom of heaven. To get more light on this read St. John 3d chapter, also St. John 14th chapter, 12th to 30th verses.

It is all right to try to get a home and make money as long as we make it honestly. A Christian can make money just as well as a sinner. Everybody ought to be honest. God wants us to be industrious, for He gave some talents and he gave the one who made

LAWRENCE SCHIPULL AND HIS TWIN SISTERS, MARTHA AND MARIE.

this, that Christianity is constructive and infidelity is destructive. The first builds up and the second tears down. I hope and trust these young married people may accept Christ soon and become faithful workers in the church and community where they live.

Mrs. J. H. R.

Children Always Well.

To the Editor:—I have enjoyed the baby pictures so much that I am sending you a picture of our twins and little boy together. The twins, Martha and Marie, were fourteen months old at the time this picture was taken, and the boy, Lawrence, was three years old. The girls are now eighteen months old. One has light hair and the other dark. They weighed six and seven pounds when they were born and now weigh twenty-six and twenty-seven pounds. Lawrence weighs forty-seven pounds. They have always been well and happy.

I hope to see more baby pictures in the Home Department. I always enjoy reading about them.

Mrs. August Schipull.

Faith Most Essential.

To the Editor:—I noticed Mabel's letter asking if forty is the right age to join church. I say it is not, for it is too dangerous to put off such an important matter and one may not live to see forty. If he does the percentage of people who join church or are saved is much less at that age than those who are saved at the age of twenty-one. As a rule, as the age advances the heart becomes harder and one is harder to reach with the gospel message.

But joining the church is not the first step. The first thing is to get right with God. Christ says if ye are the most of his talents twice as much as the one with a few talents. Read Matt. 25.

But he says, "Seek ye first the kingdom of God and His Righteousness and all these things shall be added unto you"—Matt. 6:30. And to those seeking only riches on earth read James 5:1-6. There is danger in putting off such an important matter, for we might be cut down without a chance of getting right with God. What profit is it to gain the world and lose your own soul, or what would a man give in exchange for his soul?

If you have children they will follow in the footsteps of the father and they will need the training of Christian parents. You could not afford to let them go off in sin. God forbid, for they might be lost and take other associates with them.

Now joining the church is all right and all Christians should belong to some church and help to keep it up, but do not join a church or have anyone do so unless you are first saved. I want to say to Mabel that it is very important for her and her husband to attend Sunday school and church and read the Holy Bible. If you will do this and yield to the leading of the Spirit God will knock at your hearts, for He says, "Son, give me thine heart."

I trust there may be something in this answer or in the scriptures I have suggested that will induce Mabel and her husband to both be early seekers and sure finders of God's eternal joy.

C. H. Miles.

To Make Paper Stick.

To the Editor:—I think perhaps I can help the lady out who wanted to know how to treat her whitewashed walls so that paper would stick. If she will go to the trouble to try my way she will be rewarded for her labor. Make a thin paste with flour and cold water and add about half a cup of salt to each gallon. Then take a cloth and go over all the walls with this paste and put the paper on as you would any other wall. It is quite a job, but you will not regret it, as your paper will never come off. The walls I treated this way have been repapered many times and it has never come off.

Mrs. F. E. T.

Your Influence Needed.

To the Editor:—I wish to reply to an item in your paper of March 9th entitled "When to Join Church," a question of vital importance to every person who has not as yet made his or her personal application as heir to that mansion prepared for the faithful in the heavenly Canaan with the Christ.

First, do I want to spend eternity in hell? I believe every son and daughter of Adam would answer no.

Second, is heaven worth striving for? I believe all would answer yes.

Third, what is time? A human existence from birth until death. It is divided into three periods or divisions to all who have longevity, namely, infancy, youth and age. Each period is a representation, namely, innocence, accountability and responsibility. Christ never did nor never will punish innocence. Accountability begins when we can distinguish right from wrong yet under parental or other guardian influence molding or shaping our character. Should we join church at this period? We may if we so desire, but undue persuasion should not be used to this end. Responsibility comes to us when we are cast on our own resources and lasts until death.

This third period is one of the most importance, as it is the period when we take on ourselves social, moral, parental and governmental responsibilities. It was to those in this period of life that Christ said, "He that believeth and is baptized shall be saved." It is at the beginning of this period that our religious duties are forcibly enjoined upon us; it is at the beginning of this period that we should take up our religious duties, obey Peter's

WILLIAM JONES.
Two-year-old son of Mr. and Mrs. Geo. W. Jones. Note the white vest and kid gloves. How is that for a farmer boy?

command to the erring in Acts 2:38-39, and walk the new life spoken of by Paul in Romans 6:4. If we take up our religious duties at the beginning of this period we will have no lost time to answer for to God, but should one wait until forty years old he or

he would have several years of wasted time to answer for. Christ wants your influence. It is not so much what you do as when and where you do it that it may influence those with whom you come in contact so that they, too, may help hold high the banner of King Emanuel and His cause, the church.

Let us view the picture of the moral man for a moment. He does this or that because it is right. Does he stop to think that it was the religion of Jesus Christ and its influence which taught him thus? Does he give Christ the glory thereof? Do you think there is salvation in it? Christ says, "Verily, they shall have their reward.

G. E. Clark.

Food For Young Children.

Children between three and six years of age should be given special attention in the matter of diet. Their food should be chosen with reference to their bodily needs and should be carefully prepared and set before them in as attractive and inviting a form as possible. A child so fed should receive every day at least one food from each of the following groups:

1. Milk and dishes made chiefly of milk, which is most important of the group as regards children's diet; meat, fish, poultry, eggs and meat substitutes.
2. Bread and other cereal foods.
3. Butter and other wholesome fats.
4. Vegetables and fruits.
5. Simple sweets.

The diet need not be monotonous, for many foods come under each of these five classes.

This subject is taken up by Caroline L. Hunt in a recent farmers' bulletin and a number of menus are suggested for each of the three meals. These are simple, easy to prepare and are liked by most healthy children. The heaviest meal should be served in the middle of the day. It is not wise to think of any one meal apart from the other two. It is seldom convenient to provide at one meal all the materials needed by a growing body, and those which are omitted from one meal should be supplied at one of the other meals. The menus here given are arranged with this in view. In each case enough milk should be given to make up the required daily amount, which is about a quart.

BREAKFAST.

Orange (juice only for the youngest children), farina with milk, bread and butter.

Apple sauce, oatmeal with milk, toast and butter.

Baked pears (pulp only for the youngest children), milk toast, cocoa.

Stewed prunes (pulp only for the youngest children), cornmeal mush and milk, toast and butter.

Grapefruit (juice only for the youngest children), milk toast with grated yolk of hard-boiled egg.

Apple (scraped for very little children), toast, hot milk.

DINNER.

Meat soup, egg on toast, string beans, rice pudding.

Roast beef, baked potato, asparagus, bread and jelly.

Lamb stew with carrots and potatoes, twice-baked bread, tapioca custard.

Creamed potatoes, green peas, stewed plums with thin cereal milk pudding.

Baked halibut, boiled potatoes, stewed celery, boiled rice with honey or sirup.

Broiled meat, cakes, grits, creamed carrots, bread, butter and sugar sandwiches.

SUPPER.

Baked potatoes, served with cream and salt, or with milk gravy, cookies.

Bread and milk, apple sauce, sponge cake.

Potato-milk soup, twice-baked bread, marmalade sandwiches.

Graham crackers and milk, baked custard.

Milk toast, stewed peaches, cup cake.

Celery-milk soup, toast, floating island.

Cook Berries in Small Quantities.

To the Editor:—If Mrs. H. A. will try my recipe for canning strawberries she will not have any trouble with them being too strong. We think they are fine.

For every quart of firm, fresh berries allow one teacupful of granulated sugar. Add the sugar in layers alternately with berries and allow the fruit to stand covered for one hour. Put on stove and bring slowly to the boiling point, letting them simmer two minutes. Do not stir the fruit. When done dip carefully into sterilized jars and seal. I turn the jars upside down to be sure they are perfectly sealed, then wrap each jar in paper before putting away. Do not try to cook more than two or three quarts in one vessel at a time.

Will also send a recipe for nut bread which I think is fine, especially for lunches. One egg, one teaspoonful salt, one scant cupful sugar, one cupful milk, four cupfuls flour, four teaspoonfuls baking powder, one cupful nut meats ground. Egg should be well beaten and baking powder sifted with flour. Mix thoroughly and let rise thirty minutes and bake in rather slow oven. Mrs. E. N. S.

Takes First Prize on Canned Fruit.

To the Editor:—As I was looking over the Home Department I saw the request made by Mrs. H. A. for directions for canning strawberries. I take a great interest in canning fruits, especially small fruits such as berries, and I took first and second prizes on strawberries and other canned fruits at two county fairs last fall and the year before.

I select firm strawberries. Heat jars and fill them to the rim with berries. Make a sirup of equal parts sugar and water. Pour boiling sirup over fruit, filling the jars to overflowing, and snap on the covers. Place jars in a tub or other receptacle deep enough to hold water to cover them. Pour boiling hot water into the tub until jars are submerged and allow them to stand in the water until it is cold, when the fruit will be found perfectly cooked. Berries canned in this way retain their color, shape and fresh flavor.

I have used the above recipe a good many years and have not had a jar spoil. I think it is about the easiest and quickest way to can berries, as they do not have to be boiled on the stove.

I would like very much if someone would give a recipe for a good fruit cake. Mrs. R. A. F.

Put Sugar in Paste.

To the Editor:—If Mrs. M. A. G. will put sugar in the paste for papering I am sure she will have no trouble in getting paper to stick on any wall, whitewashed, painted or kalsomined. Make the paste real sweet on the wall that has been whitewashed.

R. G. L.

Household Notes.

Dry lemon peel, grated, is very nice for flavoring sauces and puddings.

To test nutmegs prick them with a pin and if they are good oil will instantly spread around the puncture.

Paint stains may be removed from woolen fabrics by rubbing with turpentine. If the stains are old and do not respond to this treatment add ammonia to the turpentine.

White felt hats may be cleaned beautifully with corn meal. Rub the felt well with the meal and then brush out with a whisk broom. If the corn meal is dampened with a little gasoline it will do the work even better.

If the baby is afraid of the water and cries and screams when taking his bath, buy several prettily colored cork "bobbers," such as fishermen use. Throw these in the bathtub and baby will get so busy trying to catch them that he will forget to be afraid of his morning bath and even learn to like it.

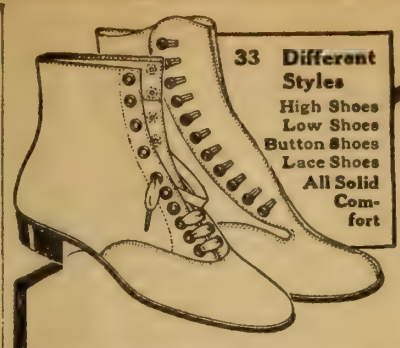
When running dates, figs or raisins through the food chopper add a few drops of lemon juice to prevent the fruit from clogging the chopper.

When potting plants put a piece of coarse muslin over the hole in the pot before putting in the bits of stone and sod, which keeps the drainage good. The muslin prevents the earth from washing away.

Milk is an absolute essential in the diet of a child and should never be wholly omitted. If it does not appear at one meal the child should by all means receive it at the next. Such dishes as milk toast, milk soups with vegetables, fish or vegetable chowders and cocoa are valuable foods and are excellent luncheon dishes. They are easily prepared and contain elements which are important to the child's proper development. Milk contains a large number of nourishing substances in forms easily assimilated, and, moreover, in some way not yet fully understood, it seems to promote growth and help the body of the child make good use of other foods. It is rich in most kinds of mineral matter, particularly lime, useful in the development of bone and tissue. The food value of skim milk should not be overlooked, for it contains a larger percentage of protein than full milk, though less fat.

A CHARMING TRIO.

At the time this picture was taken Rena, Roy and Ruth Rilea were eleven months old. They are now three years and healthier, happier little triplets you could not find.



Take No Substitutes

Don't let anyone persuade you to accept an imitation of the genuine Martha Washington Comfort Shoe. No other shoe will give you so much real comfort and lasting wear.

Mayer

Wear these great shoes and free yourself from the annoyance of tired, aching, burning feet. They fit like a glove.

It is easy. 36 Pkts. and 36 Flower Collections and a beautiful Watch or lovely Dress for $3 postpaid. Tell all your boy and girl friends. Address, A. D. COOK, Seedsman, Hyde Park, N. Y.—Adv.

Recipes.

Layer Sponge Cake.—Four eggs, two cupfuls of light sea sugar, a little salt, eight tablespoonfuls of water, two cupfuls of flour, two teaspoonfuls of baking powder. Flavor with vanilla. For icing beat the whites of two eggs to a stiff froth; boil one cupful of granulated sugar and one-half cupful of cold water together until it threads when dropped from the spoon; pour in a fine stream while boiling hot into beaten eggs, stirring briskly all the time.—Aunt Sarah.

Winter Cookies.—Six cupfuls of flour, three cupfuls of sugar (part sea sugar is best), one cupful of lard or butter, half teaspoonful of salt, three tablespoonfuls of sour cream, one egg and one cupful of buttermilk, one large teaspoonful of soda. Flavor to taste. Work it well with the hand and roll thin as you like. These cookies are best in cold water.—Aunt Sarah.

Lemon Pie.—One cup sugar, one-half cup water, one-half cup milk, juice and grated rind of one lemon, two tablespoons flour, piece of butter large as a walnut, two eggs, reserving whites for top. Cook all together and put in baked crust. Two lemons will make three pies.—E. F.

Apple and Raisin Salad.—Pare, quarter and core three choice apples; cut the prepared apple into small pieces and over them squeeze the juice of a lemon. Add one cup of large table raisins, soaked overnight in cold water and dried on a cloth, (or the raisins may be soaked in boiling water until well plumped, then dried), and about a cup of heart stalks of celery cut in one-fourth inch slices. Sprinkle on half a teaspoonful of salt and from four to six tablespoonfuls of cool olive oil. Mix all together thoroughly and serve on crisp lettuce leaves.

Cheese Muffins.—Sift together one cup, each, of rye meal and pastry flour, two slightly rounding teaspoonfuls of baking powder, half a teaspoonful of salt and one-fourth cupful of sugar. Beat one egg; add one cup of milk and stir into the dry ingredients with three or four tablespoonfuls of melted butter. Have ready an iron muffin pan, hot and well buttered; put a generous spoonful of the mixture in each compartment of the pan, lay a thin slice of cheese on each and cover with the rest of the mixture. Bake about twenty-five minutes.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

My Shadow.

I have a little shadow that goes in and
out with me,
And what can be the use of him is
more than I can see.
He is very, very like me from the heels
up to the head;
And I see him jump before me when I
jump into my bed.

The funniest thing about him is the
way he likes to grow—
Not at all like proper children, which
is always very slow;
For he sometimes shoots up taller, like
an India rubber ball,
And he sometimes gets so little that
there's none of him at all.

He hasn't got a notion of how children
ought to play;
And can only make a fool of me in
every sort of way.
He stays so close beside me, he's a
coward, you can see;
I'd think shame to stick to nursie as
that shadow sticks to me.

One morning, very early, before the sun
was up,
I rose and found the shining dew on
every buttercup;
But my lazy little shadow, like an
arrant sleepy head,
Had stayed at home behind me, and
was fast asleep in bed.
—Robert Louis Stevenson.

Gyp a Good Playmate.

Dear Young Folks:—I am a reader of the Young Folks' page and enjoy your letters very much. I am twelve years old and have one brother, Faye, older than I am. We live on a ninety-acre farm half a mile from a little trading point where there is nothing more than a grocery store, Lutheran church and gynmasium and a beautiful park. During the summer months we have some very nice times in the park. I am in the eighth grade and go to school very much.

Now I will tell you about my two pet dogs, Troubles and Gyp. Troubles is a rat dog. He will stand on his hind feet when he wants something to eat. Gyp is a Scotch collie. I drive her to my wagon and sled and she loves to be hitched up. I drive her to the store for groceries. She will just run and bark. The picture I am sending is of Gyp and myself when we were out for a drive.
—Merle.

Faithful Jippy.

Dear Young Folks:—I will tell you about a dog we used to have. One day when I was about four years old I went out in the pasture across the road to pick some strawberries for myself. My dog, Jippy, went with me and also her puppy. When I had picked all the berries I wanted I went home and Jippy followed me. Our house was a long distance from the road.

When I got home I started to play with Jippy, and after a while I noticed that the puppy was not with us. I started to look for him but could not find him anywhere. Jippy must have understood what I was looking for because she started to whine and look at me very funny. Then I saw her run down the road and into the pasture, and she soon came back, bringing the puppy with her. I was very glad that she had found the puppy. She has been on the farm ever since, but last summer we had to kill her because she was very old and she was sick besides. We had one of our neighbors do it. Jippy was yellow and white and she had white paws and yellow legs and a white collar and shirt, as we called it. She was a Shepherd dog and was a good watch dog. Perhaps I will tell you some more about faithful old Jippy some time.
—Edith.

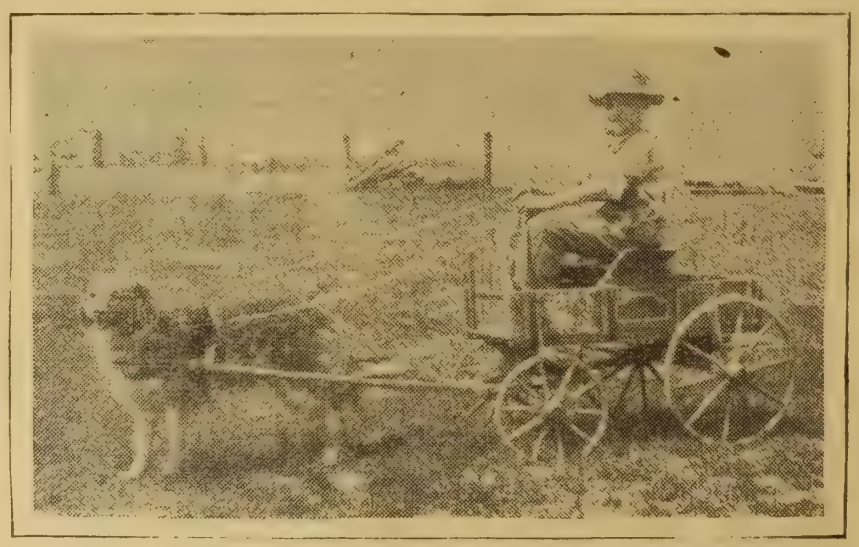
Catches Biscuits Off Nose.

Dear Young Folks:—I have been reading your letters and am greatly interested in them. I am thirteen years old and am in the seventh grade. We have sewing and domestic science in our school, and I like it very much.

I want to tell you about my pet dog. He is a brown dog. Every day I comb his hair, and after I do that I put a biscuit on his nose. Then I say, "Monday, Tuesday, Wednesday, Thursday, Friday." When I say "Friday" he shakes his head and catches the biscuit in his mouth and wants to get another one. —Ella.

Is Raising a Calf.

Dear Young Folks:—I am twelve years old and am in the sixth grade. I am going to tell you how I got my pet calf. I raised a sheep and sold it at Christmas time to my father. He gave me $3 for it. Then I bought a calf from my father for $1.50. Now it is two months old, and this summer I will raise corn and cow beets for it. Then I want to fatten her and sell her and get a Shetland pony.
—Theresa.



GYP AND MERLE GO FOR THE GROCERIES.

Combinations of vegetables are palatable, and sometimes using two or three together is an economy, since there may not be on hand enough of either to serve the family. Carrots and peas, either fresh or canned, make a good and well-known combination, and here color, as well as flavor, plays a part. Carrots cooked and cut into pieces not much larger than the peas may be combined with them in any convenient amount.

Who Wants a Pony?

I AM THE PONY KING OF AMERICA.

I have given away 364 Ponies to children. Now, I am going to give away more Ponies—some of the finest Shetland Ponies I could pick out. **I want every family that reads this paper** to stand an equal chance. If you are a Boy or Girl, send your name. **If you are the Father or Mother** of a Boy or Girl, send in your child's name. I will enter the name in my Big Free-for-All Pony Club—that starts right away. Remember, every child has the same good chance to get a Pony and Outfit if he will only send me his name right away. Mail the Coupon!

Pony Picture and Story Book

Pony Book Free

MY BIG, NEW PONY PICTURE AND STORY BOOK is free to every child who sells in his or her name. It is the most wonderful Book you ever read. It tells you all about how to handle and train Ponies. It tells you all about the hundreds of Ponies I have Given Away—gives the names of the boys and girls who got them, and what they are doing with their Ponies. It tells you how to get a real live Pony.

Parents Don't miss this one chance to get this Free Pony Book. Children love to read it. Besides, your child may be one of the lucky pony winners.

Children Write your name and address in the corner below to the left, cut it out, and mail it to me. I will send you the Free Pony Book, and maybe a pony.

International Sunday School Lesson.

Lesson for April 2, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

Conversion of Paul.

LESSON TEXT—Acts 9:1, 31 (See also Gal. 1:11, 17; I Tim. 1:12,17).
GOLDEN TEXT—Faithful is the saying and worthy of all acceptation, that Christ Jesus came into the world to save sinners: of whom I am chief.—I Tim. 1:15 R. V.

No other man, save our Lord, has made such an impress upon history as the "Jew of Tarsus." Read carefully and repeatedly Acts, chapters 9:22, 23 and 26.

I. Saul the Man. (1) Physically. We know but little of Saul (see Ramsey, Conybeare and others), but we know from his labors that he was a man of tremendous vitality. Distant Damascus knew of his work (v. 13) and he himself testifies as to his activities (22:3-26:11). (2) Religiously he belonged to the strictest of the strict, the Pharisees (26:5-9-11). His anger at Jesus and the disciples was a consuming passion; literally, he "breathed threatening and slaughter" (v. 1). In all his violence he was conscientious, but yet he was awfully and terribly wrong, and what is more, his actions were not alone against the disciples

FILET CROCHET
100 DESIGNS
In Book Form

This book contains over one hundred of the most beautiful, practical, prettiest, newest and oldest designs of Filet Crochet and Cross Stitch ever published.

This Splendid, Handsomely Illustrated Book includes everything from the simplest to the most intricate and exquisite designs.

Yokes and Towels

MEAD CYCLE CO., DEPT. M184 CHICAGO

t against Jesus (v. 5). (3) Politi-lly Saul was perfectly legal in keep-ig the law and in his executions in e name of the law. Doubtless a ember of the Sanhedrin (26:10), his tred knew no pity; it included all o believed in Jesus. (4) Mentally s man transcends all who have ever lowed Jesus. A man of intense con-tions, a slave to a misdirected con-lence, a titan of gigantic force and wer once in the right channel.

II. Saul Saved. (1) This man was st humbled (v. 4). God put forth s hand to save the elect at Damas-s, though he let Saul go a long way his mad career. When he did act was "suddenly" and by means of e glory of Christ's resurrection . 7, I. Cor. 15:8). Though it was bout noon," yet this glory outshone e brightness of the Syrian sun ts. 26:13). Many who speak bold sphemous words would also be st down did they but really see his ory. (2) Saul is not left thus icken, but it is called from above . 5). The question of Jesus (v. 4) s a most startling one and that, th the answer to his honest inquiry, nvicted him of what must have been lurking suspicion in his mind, viz: at he was wrong and Jesus was ly the Messiah.

II. Saul Sent. The first evidence the change wrought in Saul was: 1) Obedience (v. 8). His companions ard but did not understand. There no contradiction (v. 7, Acts 22:9), this is the translation used else-ere. Saul is given three days for editation (v. 9), and he made good Jerusalem. This period is similar to the "hidden years at Nazareth" which our Lord spent ere he began his ministry.

It was a time of rest, reflection, analysis, meditation and formulation of his "gospel" (Rom. 3:19-28).

(2) At Jerusalem. His testimony was distasteful at Damascus (v. 23-25) and so he sought Jerusalem, only there also to find distrust and rejection.

Then Barnabas did a great work for the Kingdom by showing his brotherly fellowship and trust and becoming sponsor for him to the early church.

It was not long ere he had to flee Jerusalem and finally return to his childhood home, Tarsus (v. 31).

Saul, the Pharisee, becomes a preacher of the Cross, the Master Empire-Builder.

Let this lesson be a trumpet call to the unconverted in your class and school. The same Jesus is calling today for other lives of service and testimony.

JOHN EDGAR COATSWORTH.

Son of Mr. and Mrs. Wm. Coatsworth. n was nine and one-half months old d weighed twenty-four pounds when s picture was taken.

e of the time. (2) Praying (v. 11). e result was (3) a vision (v. 12) t only one, as there are others re-ded) which resulted in changed in-iduals and nations. But his vision s (4) a thorough commission (v. . (a) to the Romans—"kings,") Greeks—"Gentiles," and (c) Jews "children of Israel." Along with his ion and commission there was given abling power, the enduement of the irit. The agent God chose for the stowing was Ananias, not an offi-l, merely "a certain disciple." The t of the Spirit for power and serv-is not necessarily by the "laying of hands." It came to Mr. Moody he walked the streets of New York thout earthly companions. But the her conditions were fulfilled, a re-tant, prayerful man and a ready d obedient servant who, though ed with fear and protest (v. 13, 14) t takes God at his word and goes once to his task. As we read verses and 18 we discover that this spe-l filling of the Spirit was very evi-ntly given to Saul before he re-ved Christian baptism—read the der of events carefully.

IV. Saul Serving (1) At Damascus. ul is given refreshment (he always s emphasis upon the body) and aightway began to testify to the azement of the people. From Gal. 15, 17 it is plain that he did not main all of the time in the city, nor d he at once return to his friends in

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Wisconsin Farmer, Madison, Wis.

7682 Ladies' Shirt Waist.—Cut in sizes 36, 38 and 40 inches bust measure. Taffeta, crepe de chine or linen can be used for this waist with the collar and band closing of a contrasting color. This waist may be made with or without the crepe and with long or short sleeves.

7645 Children's Rompers.—Cut in sizes 2, 4 and 6 years. Rompers have a place among the things made at home, for they not only protect, but dress the little tot. That there should be shape and fit to rompers, however simple the foundation, may be seen in the pattern illustrated.

7295 Ladies' Shirt Waist.—Cut in sizes 34 to 44 inches bust measure. In this pretty waist the fullness is held in by smocking in the new manner in front while the back is left plain. There is a handsome collar at the neck and scallops at the closing in front. The sleeves are either long or short.

7686 Girls' Dress.—Cut in sizes 6, 8, 10 and 12 years. In this practical design we have a frock which is suitable for either school or home wear. It has a plain guimpe with round collar and short or long sleeves. The skirt is joined to the long-waisted blouse.

7635 Ladies' Princess Slip.—Cut in sizes 34 to 42 inches bust measure. Semi-princess slips are daily growing in favor of women. The corset cover is in one piece and the petticoat is cut in three gores. These garments are made of cambric, batiste, crepe de chine and wash silk.

7665 Boys' Suit.—Cut in sizes 4, 6 and 8 years. "Manly" in its cut is the comment deserved by this little suit; the coat, in its abrupt outward line from the neck opens the fronts to the better display a smart vest that is made of the same contrasting goods trimming the cuffs of sleeves and forming the collar. The trousers have a straight lower edge.

7675 Ladies' Apron.—Cut in sizes 36, 40 and 44 inches bust measure. Chambray, gingham, linen and any of the pretty percales may be used for this apron with the edges finished with braid banding. The apron closes at the back and has a three-gored skirt.

7669 Ladies' Skirt.—Cut in sizes 24 to 32 inches waist measure. Fancy effects without much labor are always among the desired things and in the model herewith shown we have such a design. The skirt has three gores and may be made with or without the belt. Linen, serge or gabardine can be used for this skirt.

7288 Ladies' Skirt.—Cut in sizes 22 to 32 inches waist measure. This skirt is a two-gore model, plain to yoke depth, and with a box pleat turned under at each side seam from the yoke line to the hem. Either waistline may be used and the small pocket may be omitted.

7636 Ladies' House Dress.—Cut in sizes 34 to 42 inches bust measure. Linen, gingham or calico can be used to make this house dress with the collar and cuffs of plain or contrasting material. The dress closes at the front and has a three-gored skirt. The sleeves may be long or short.

Price of any of these patterns 10 cents each.

Ask your neighbor to subscribe for The Wisconsin Farmer.

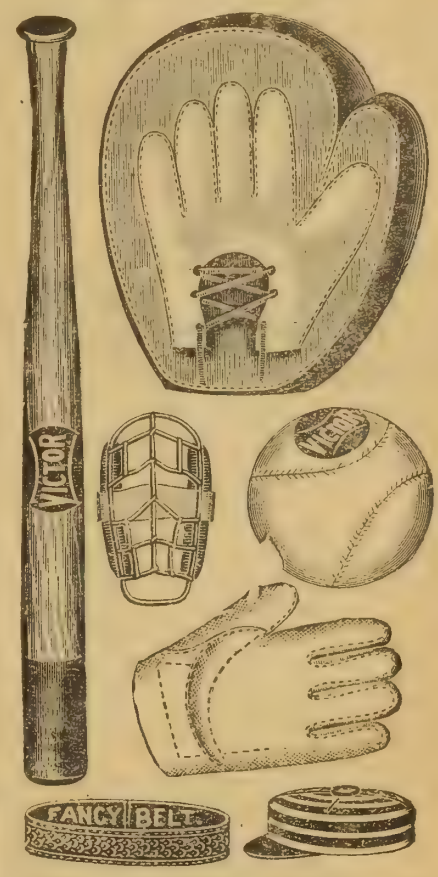
Baseball Outfit for You



There are seven splendid pieces in this great outfit. The ash bat is a good one. The mask is made of heavy wire, full size. The catcher's mitt is thickly padded, very heavy and has patented fastener. The glove is of tanned leather and has patent clasp. The ball is strongly stitched and will last. A neat, adjustable belt and a dandy cap complete this great outfit. Remember you get the whole outfit of seven pieces for a little easy work. Write me to-day and I will tell you just how to get it.

SANITATION

IS THE RELIABLE METHOD FOR PREVENTING

FOOT AND MOUTH DISEASE

HOG CHOLERA

AND ALL OTHER CONTAGIOUS DISEASES.

You can make all live-stock quarters sanitary by using

KRESO Dip No. 1

The Standardized, Reliable Dip and Disinfectant.

We will send you free a booklet on the treatment of mange, eczema or pitch mange, arthritis, sore mouth, etc.

We will send you free a booklet on how to build a hog wallow, which will keep hogs clean and healthy.

We will send you free a booklet on how to keep your hogs free from lice and parasites and disease.

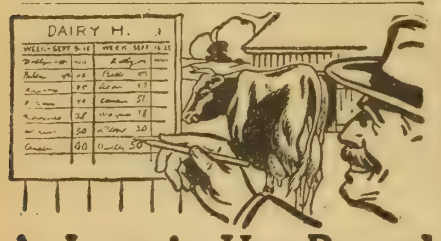
Write for them—they are free.

KRESO DIP No. 1 has been used at the large state fairs in the United States for the last ten years to prevent the spread of contagious disease. It has done it, and KRESO DIP No. 1 will do the same for you on the farm.

KRESO DIP No. 1 is Easy to Use—Reliable—For Sale by All Druggists—Effective—Not Expensive.

PARKE, DAVIS & CO.

Dep't Animal Industry. DETROIT, MICH.



A Jump in Her Record

Most every herd has one or more cows that seem sluggish and low in yield without any apparent reason. In many cases this may be due to some vital organ becoming overworked. Proper treatment is needed to build up the system and fortify the cow against serious disease.

If you have such a cow, buy a package of Kow-Kure from your feed dealer or druggist and use according to directions. You'll be surprised at the difference it makes in her general health and milk yield. Kow-Kure is especially recommended as a preventive and cure for Abortion, Barrenness, Milk Fever, Scouring, Lost Appetite, Bunches and other common ailments.

Write for free Treatise, "The Home Cow Doctor."

DAIRY ASSOCIATION CO.
Lyndonville, Vt.

Raised Without Milk!

Her name is "Daisy" and her owner, W. A. Riddle, of Chapin, Iowa, raised her on Blatchford's Calf Meal, which costs less than half as much as milk.

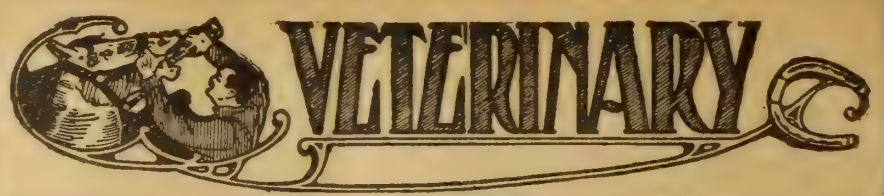
Blatchford's Calf Meal

A useful preventive of scouring. Calves raised "The Blatchford's Way" are heavier, bigger-boned and healthier. Known as the complete milk substitute since the year 1875. Sold by your dealer or direct from the manufacturer.

Blatchford's Pig Meal insures rapid, sturdy growth of young pigs at weaning time. Prevents setback.

See Actual Figures—based on results—that show you how to increase your calf profits. Write today.

Blatchford Calf Meal Factory, Dept. 63 Waukegan, Illinois



PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Unthriftiness in Horse.

I have a horse with something the matter with his right jaw. It seems to be kind of drying out. There is no more flesh on it, nothing but the skin which seems to be glued to the jaw. I can push on it with my hand and it does not seem to hurt him at all. He seems to eat as well as ever except that he chews a little slower. I feed him two gallons of oats and a quart of bran and still he can't work a week steady. He gets weak and won't go any more.

The case you mention is indeed a queer one, but from your few named symptoms one could hardly venture a diagnosis. Our advice to you would be to take this animal to a competent veterinarian and have him make a thorough examination to ascertain if possible the cause of the existing condition.

Gid (Coenurosis).

My sheep have grub of the head and I would like to know if there is any remedy for them or ought I use a preventive? I examined four of them and found that the grub was killing them.

In the first stage of this trouble cold applications to the head and purgatives are indicated to alleviate the symptoms produced by the inflammation. In the second stage only removal of the cyst by trepanning can lead to recovery. This should be done by a competent man. Prevention of the trouble is not so easy as one may be led to believe. All sheep dogs around where sheep are should be treated for tapeworm and during treatment be confined so as the feces can be destroyed. Care should be taken to destroy by burning the dead sheep. In this way the loss of sheep may be materially lessened.

Lame Horse.

Recently I bought a seven-year-old horse which has an enlarged hind ankle. The original owner tells me that this was caused by the horse having a very hard spell of distemper about a year ago. The distemper settled in this leg, causing a running sore, and his hogs gnawed quite a wound one night. This ankle is probably three inches larger than natural, has fever in it, and the horse is considerably lame, especially on frozen ground. The sore is entirely healed and there is no open wound.

The lameness and swelling in the ankle of your horse is of a chronic nature long ago. Probably some of the important structures have been involved, therefore leaving this trouble. It is very probable that to get results in a case like this would require a course of long drawn out and expensive treatment which would grow old to you and still small results be obtained.

Abortion in Mare and Cow.

I have a cow which lost her calf by abortion a little over a week ago. I also have a mare which lost her colt by abortion last Saturday. Last year I lost nearly all my calves that way and was advised to disinfect surroundings and drench cows twice a week with a teaspoonful of carbolic acid, which I did. This year all the cows saved their calves but this last one. The mare had been doing just ordinary work and was hitched to spreader with high load when this happened. Now what I would like to ask is this: Is abortion contagious from cattle to mares? What remedy would you advise in either case? Is there danger of injuring animals by using syringe if one has had no experience?

In infectious abortion the infection spreads, as a rule, only among animals of the same species. At times, however, animals of other species are attacked. Your second question has been answered a number of times in these columns, but will say that treatment and prevention would depend upon the cause of the trouble. If of contagious nature would separate infected from noninfected and destroy all dead young and coverings soon as found. Clean and disinfect premises and then begin a system of irrigation of the affected animal's vagina and womb with antiseptic solution, such as lysol, creolin, etc., used in 2 per cent solution. This should be carried on at first once or twice daily and gradually diminish in number until the discharge ceases. Do not breed affected animals for two months after abortion. The male should have his penis and sheath thoroughly cleansed with antiseptic solution used at times of use. There is not usually any danger of injury to animals from the use of the syringe if same is metal and used carefully.

Lack of Estral Period.

I have a number of Duroc Jersey gilts, nine months old, which I wish to breed. Can you suggest through the Veterinary Department any treatment, feed or care to cause them to come in heat, as there is no indication. They weigh around 225 and are not fat.

Lack of estrum may be brought about in so many ways, such as lack of feed, too much feed, lack of exercise, diseased condition of generative organs, etc. Would advise you to give fairly good amount of wholesome, nutritious food at regular intervals and also see that these animals get plenty of exercise in the open. Exercise is a very essential thing in cases of this kind. With the opening of spring and with good care your gilts should come along all right.

Sore Neck.

I have a horse that has a sore neck. I have been putting on some salve and healing powder, but it doesn't seem to heal. There are two little holes in her neck just where the collar lies. I clean her neck off twice a week with salt water. That seems to relieve her for a few days. She is getting ugly to put her collar on.

This trouble is of quite common occurrence in horses, especially those that are worked hard under the collar. In treating one must see that all dead tissue is removed before healing is attempted. After this is done it is best to rest the ho e for a few days and apply tincture of iodine once daily for three days, or the use of a wash composed of zinc sulphate, sugar of lead and powdered alum, each one-half ounce. Put this in a quart of water and shake thoroughly before using. Do not forget that all dead tissue must be removed before healing can be expected.

Infection in Cows.

Will you kindly advise me through your veterinary department a prevention or a cure for my troubles. This past year my neighbor brought cows to my bull for service that were what I think contagious. They have come in heat several times and they always come back again. They were bred to his bull last spring before he shipped him to market. Now I would like to know if this will take to my herd or not, as one of my cows has come into heat now five times with a bull with them at all times. If it is contagious, is there a cure or could it be prevented by some solution or dip, as I do not like to sell my cows or the bull either.

We would like to advise you in regard to treatment of your cows, but do not think it advisable without there being a thorough examination of the cattle and surroundings made. It is very probable the trouble is of an infectious nature, but just what is hard to say without a thorough examination. We would advise you to seek the advice of a competent veterinarian who can be on the premises and make an examination. This will probably mean dollars to you in the long run.

Hog Pastures.

Pigs make the cheapest gains on pasture. Trials at the North Dakota Experiment Station indicate that brood sows running on good pasture and nursing litters will do as well when receiving one to one and a half pounds of grain per each 100 pounds live weight of sow, as sows in dry lot receiving two and one-half pounds grain per day per each 100 pounds live weight. The pasture just about cuts the feed cost in two. The pasture alone does not furnish enough feed for either the brood sow with litter or for the weaned pigs. They should be fed some grain, so as to make a rapid growth. In this way the spring pig can be ready for market before real cold weather sets in.

Alfalfa, clover, bromus and winter rye make the earliest pastures. When these have not been provided early spring seeding of such grains as oats and barley or rape are the next best thing.

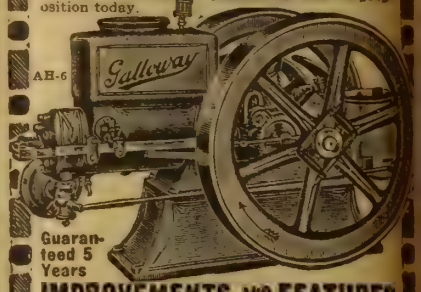
DON'T DO A THING

ABOUT BUYING AN ENGINE

Until you have seen this new 1916 250-p. book that tells all about Galloway engines and explains my new extra special advertising distribution offer. If you answered all the engine advertisements ever published you would not find an offer fairer, squarer or more in your favor. You owe it to your pocket-book and the satisfaction that you demand in the operation of the engine you buy to answer this advertisement and learn the particulars of this new 30-day offer to distribute 10,000 more Galloway Masterpiece Engines from 1 3-4 h. p. to 16 h. p.

The great Galloway chain of factories are running day and night. We are turning out more Masterpiece engines than ever and the reason is that we are building this engine so good from such a highly perfected design, of such good materials, and by such thoroughly skilled workmen, that every Galloway Masterpiece sells one or more wherever introduced. Ask for proposition today.



Guaranteed 5 Years

IMPROVEMENTS AND FEATURES include valves in the head; extra cooling surfaces, large water pot; frost-proof cylinder; adjustable bearings, economy carburetor; uses any fuel; large perfectly balanced fly wheels; built-in magneto; Hercules water-cooled cylinder head, cannot blow off; easy to start, no cranking; needs no batteries; independent of weather, hot or cold, wet or dry. A mechanical masterpiece! These features and many others make Masterpiece engines power kings in their field.

Ask today for this new book printed in four colors. It will solve your power problems. A postal gets it. Engines shipped from Waterloo, Council Bluffs, Kansas City, St. Paul, Chicago. Wm. Galloway, Pres.

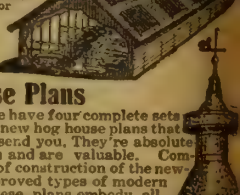
Modern Hog House Means Less Disease-More Profit

Hogs need sunshine—have to have it for the best and most healthy growth. Modern up-to-date hog houses with Chief Sunshine Windows insure direct sunshine in your pens every day that the sun shines. Chief Windows are made of heavy galvanized steel with wire netting to protect the glass. Strong, durable and easily installed in old or new hog houses. Leak-proof, rust-proof and rot-proof.

CHIEF Sunshine Hog House Window



4 Modern Hog House Plans FREE

We have four complete sets of new hog house plans that we want to send you. They're absolutely free to you and are valuable. Complete details of construction of the newest and most improved types of modern hog houses. These plans embody all the features wanted by the practical hog raiser in a hog house. Write for the plans today and for our booklet describing Sunshine Windows. Both are FREE. Ask for literature on Chief cupolas, the steel ventilating cupola that insures fresh air in your barns, and on Chief Steel Silo Roofs. Quality steel products that satisfy.

Pure Seed on Credit.

To the Editor:—Realizing the splendid development in dairying which has resulted in Marinette county since it was made possible for farmers to secure blooded dairy cattle on credit, a plan has just been put into operation whereby farmers may obtain pedigree grain and grass seed and pure-bred potato seed on credit. The new plan will be carried out under the auspices of the Marinette County Experiment Association and the funds will be advanced by the banks of Marinette county.

Practically the same plan as adopted for the sale of blooded dairy cattle on credit has been chosen for the pedigree seed plan, except that credit of five years is allowed, if desired, in the purchase of cattle and loans will become due on or before December 1st each year in the seed plan. This allows for payment after harvest.

The chief purpose of the new plan is to make it possible for new settlers to plant pedigree seed. By giving security—either a 6 per cent chattel mortgage or a note signed by a responsible party—they can buy pedigree seed during the winter through the Marinette County Experiment Association and pay for it the following fall after harvest. A charge of 4 per cent for administration of the plan will be made in each case. This can either be added to the face of the note or the purchaser can pay it at the time the transaction is made.

While the new plan will be a boon to new settlers, it will also be an advantage to the many farmers who have been devoting themselves to producing pedigree grains and grasses for a number of years, for it will provide them with a home market. The county as a whole will be greatly helped, for it will be the means of increasing the yield per acre of grains, grasses and potatoes and will also improve the quality. All applicants must agree to treat grain and potato seed with formaldehyde for the prevention of disease. This means that to a certain extent at least treatment of all seed to prevent disease will become compulsory in Marinette county and will each year raise the standard of pure-bred seed raised in the county.

Recently E. J. Delwiche, of the state experiment station at Ashland, in an address at Marinette said that it had been recognized at the state university for some time that through a combination of climate, due to the nearness to Green Bay and Lake Michigan, soil and topography in general, that Marinette county was destined to be the supply source for pedigree grain and grass seed for the entire upper part of the state, and the plan just put into operation is a step toward the realization of that prediction.

In a recent meeting at Wausaukee to discuss silo building it developed that not less than twenty silos will be built during the spring and summer in what is known as the "new country"—the locality where new settlers have been developing farms. While Marinette county now has over 400 silos, a gain of over 100 in 1915, there are comparatively few silos in the localities where new settlers are developing lands and the building of twenty this year means, it is expected, the rapid spread of silos throughout the newer parts of the country. Among those contemplating building silos in the Wausaukee district this year are Bernard DeGroot, Frank Stichart, Louis M. Edlbeck, Cornelius DeGroot, William Wartick, Charles Redeman, H. F. Steinbrecher, Robert Wolf, J. C. Williamson, Anton V. Edlbeck, Alex Colard, J. C. Macauley, A. L. Schofield, J. A. Capps, William W. Stewart and L. N. Ferguson.

Rapid progress continues to be made in the development of the cheese and creamery industry in Marinette county. Last year the county had seventeen cheese factories and creameries in operation, a gain of 200 per cent in three years, and already this year there are three new projects under way. Joseph Gosling, wholesale ice cream dealer of Marinette, has taken new quarters and will manufacture creamery butter during the winter and spring months as well as ice cream throughout the year. Benjamin Weidenhaft, of Abrams, who recently sold his cheese factory there, will start one in Grover township in this county, and a cheese factory will be opened in Middle Inlet during the summer. The farms in Middle Inlet are nearly all new ones which have been developed by settlers in the past ten years.

Prospects for the development of new lands never looked better in Marinette county than during the present spring. During the latter part of February and the present month over thirty families have arrived at Wausaukee to take up lands purchased last year. Nearly all of them brought a carload or more of household goods, farm machinery and stock.

Howard I. Wood.

Holstein Breeders Meet.

Langlade county Holstein enthusiasts gathered at the court house at Antigo on March 21st to discuss matters of interest to their breed and organization. Officers for the coming year were elected as follows:

President—Robt. Bonner.
Vice President—Wm. Wagner.
Secretary—F. G. Swoboda.
Treasurer—Adam Guenthner.

It was voted to hold a summer meeting at the farm of one of the members.

The Holstein is making rapid progress in Langlade county. At a conservative estimate there are 2,000 grades of this breed in the county. There are in excess of fifty pure-bred sires and about eighty pure-bred females. Present interest indicates a stronger feeling toward the pure-bred than has ever existed in the county before. A number of men who have a good start on grades are seriously contemplating the purchase of one or more pure-bred females.

A splendid illustration of what a herd of pure breds may mean to a community is seen in the town of Summit. Mr. S. Simon, one of the leading farmers in that locality, made a start on pure breds a few years ago. Since that time his neighbors have purchased sires from him. Today in that locality practically every farmer has a good start in Holsteins. In another thinly settled community about Kent in the eastern part of the county, J. W. Smith has kept a pure-bred Holstein for years, result, the black and whites predominate in that locality. Some of the best steers brought to the Antigo market last fall were Holstein grades two year olds, offsprings of Mr. Smith's sire. These steers were developed on wild pasture largely and showed what may be expected from a Holstein cross on common native cows.

While it may, no doubt, be years before the county will have Holsteins to offer for outside shipment at the present rate of increase Holsteins will predominate.

Chris Schroeder, secretary of the Wisconsin Holstein Breeders' Association, was one of the speakers at the meeting.

Collected by Representatives of The Wisconsin Farmer

Don't Forget the Richland County Holstein Sale.

IF YOU are interested in good Holstein cattle and don't attend the sale to be made by the Richland County Holstein Breeders' Association, at Richland Center, Wis., Friday, April 7th, you will have missed a grand opportunity to buy cattle. Of the fifty head cataloged, fifteen are in milk or will soon freshen. There will be no old, worn-out cows, but animals in the prime of life. Many of them have A. R. O. records. There will be ten coming two year olds that are safely in calf to some of the best bulls in the state. The dams of these and the open yearling heifers have A. R. O. records up to 24.75 pounds butter. Ten of the above heifers are sired by King Pontiac Portia, a son of King of the Pontiacs and Pontiac Portia (20.56 pounds butter as a three year old). This bull is considered by many as being the best son of his great sire, so buyers will have a chance to bid on the cream of the Fries herd at this sale. There will be cows and heifers bred to this bull. Anyone in need of a herd bull should attend this sale, for several good prospects are being consigned. One bull is out of a two-year-old dam that has a yearly record of 654 pounds butter. Two others have dams with records of 800 pounds butter in a year. Besides the young bulls, Johanna Rossella De Kol will be sold. He is a son of Johanna Pontiac De Kol out of a twenty-three-pound dam. He is a tried and proven sire and someone should buy him that has a high-class herd of cows. We failed to mention that several of the females are bred to Richland Pontiac Butter Boy. This is the junior herd bull in the Fries & Son herd. He is by Crown Pontiac Korndyke that has nine A. R. O. daughters. His dam, Aberdeen Shadeland Concordia has a seven-day record of 31.76 and a thirty-day record of 127.73. He is an excellent individual and one of the best bred bulls in the state and daughters of King Pontiac Portia bred to this grand young bull should be attractions. There are several consignors to this sale and each man is drawing from the tops of his herd for the association wishes to use this sale as an advertisement for the annual sales that they expect to hold in the future. Every animal is tuberculin tested. By all means get one of the catalogs, read it through carefully then arrange to attend this sale, the greatest ever held in southwestern Wisconsin. Address F. B. Fries, Richland Center, Wis., for a catalog and please mention The Wisconsin Farmer whe nwriting. See page 28.—Adv.

Lefebure's Belgians.

H. LEFEBURE & SONS, Fairfax, Iowa, are generally recognized as the largest breeders and dealers in registered Belgians in America. Their winnings at the St. Louis world's fair and at the San Francisco world's fair fully demonstrate the superior merit of the horses bred and imported by this firm. Premier championships were awarded to this firm at both of the world's fairs. Belgians are kept on the five farms owned by the Lefebures and only the best will be found in their pastures or barns. In the advertisement on page 46 will be found an illustration of twelve stallions, every one of which is for sale, that have an average weight of over 2,200 pounds. This firm can show twenty-one stallions that weigh over 2,100 pounds. The writer, a representative of this paper, recently visited the farm and was impressed with the weight, bone and character of the stallions that this firm have to offer. It is very doubtful if this firm ever offered better stallions for sale than at the present time. A few American-bred Belgian fillies will be priced worth the money. Among their recent sales are a ton bay to J. L. Minard, Bridgewater, S. D.; a 2,300-pound four-year-old Belgian to the Bollman Farm, Georgetown, Minn.; an imported ton Belgian stallion to Dr. W. A. Hamilton, Paullina, Iowa; an imported bay ton Belgian stallion to F. J. Schoenberger, Academy, S. D.; a span of large mares to Clinton Falls Nursery Co., Owatonna, Minn.; and a team of sorrel yearlings to Wm. Casey, Iowa City, Iowa. Among the twelve horses shown in the advertisement is Jules Remi 6166, the blue roan at the head of the Lefebure stud, and he is proving a wonderful sire. He weighs 2,400 pounds in good breeding condition and it is a pleasure to look over his roan colts weighing as two year olds a ton, as yearlings 1,800 pounds and as coming yearlings 1,200 pounds. Jules Remi was the second-prize and reserve champion stallion at San Francisco, first-prize and reserve champion of Iowa for two years in succession. This stallion is for sale and to the man who appreciates the value of a strictly high-class Belgian stallion we could strongly recommend this great horse. Write for any information you want, kindly mentioning this paper. See page 27.—Adv.

Ray Lewis' Guernseys.

RAY LEWIS, one of the good breeders of Guernsey cattle around West Salem, Wis., advises us that he is sold out of bulls and heifers. This shows that the demand for his good stuff comes faster than he can produce it. He recently sold to some New York buyers several May Rose females. He has several young bulls that will be old enough for service about the middle of the summer. They are sired by the good herd bull, Robert's Boy of West Salem he by the noted imported Robert's Boy. Mr. Lewis has one of the good herds of Guernseys in the state and while he hasn't anything to offer at this time, keep this herd in mind for future reference. See page 25.—Adv.

Chief Defender-Big Col.

IN visiting the various herds of swine one will often see one good boar at the head of a herd, but it is seldom that one breeder has two boars that can be considered outstanding. We recently called on a Duroc breeder that has two herd boars that are the equal to any we have seen for some time. This man is Geo. H. Willsie, of Prosper, Minn. If some breeders had his boars they would be known wherever Durocs are raised, but Mr. Willsie has never made much noise about his herd and no doubt there are but a few that know there are two such boars in eastern Minnesota. One is Big Col., a three-year-old (this spring) boar, that is in the 1,000-pound class. He is sired by that sire of big ones, King the Col., and is out of Pet by Golden Model 11th, one of the best brood sows O. S. Larson ever owned. This boar has a wonderful back, there is not a wrinkle on him, good on his feet, in fact we consider him an excellent boar. The other boar that took our eye is Chief Defender. In the first place he is by the immortal Defender, that denotes size, then comes his dam that gives more prestage—Lucy Wonder 112th by Chief's Col. the best of Browning's great Lucy Wonder family. Chief Defender is a litter brother to the grand champion, Disturber, and also to Wilson's Defender. This boar is now five years old, and even at this age he has no wrinkles, is spry on his feet and after you see the good sows Mr. Willsie has on his farm you will give it to this boar as being "some sire." There are several good things about this herd, but one thing we might mention is the sows sired by Crimson King. This boar is by King the Col. and is the only boar that ever won grand champion honors two years in succession at the Sioux City Interstate Fair, and they have a swine show at that fair second only to Iowa. This is the only litter that we know of in this territory by Crimson King and we only mention this to show that Mr. Willsie has purchased only the best. He has some big spring litters and the present plans are to make a fall boar sale, if he does you can expect to see one of the best boar offerings ever sold in the state of Minnesota. When you think of Durocs, don't forget Chief Defender and Big Col. See page 25.—Adv.

The Higgins' Duroc Herd.

A MAN that will be heard from in the future is J. W. Higgins, breeder of Duroc Jerseys at Gotham, Wis. He is just getting nicely started, but he is a hard worker, likes the pure-bred hog business, is a student of pedigrees and our prediction is that he will make a success of it. Heading ihs herd is a big yearling boar by the grand champion, Lee's Defender, out of a dam by Marion's Wonder. The sows by Marion's Wonder are the best in the Atwater herd and Mr. Higgins was fortunate in getting a boar with this good family back of him. There are also some gilts in the herd by Lee's Defender. Two good sows in this herd are by Cedarwood Chief, a boar that the writer has seen and one that headed a good herd in northern Iowa. The spring pigs are doing nicely and as Mr. Higgins has entered the Duroc futurity to be held this fall we feel that he will be able to make a creditable showing at Milwaukee when the time comes. We will have more to say about this herd at a later date. See page 25.—Adv.

Temptation in Incubator Building.

IN these days of keen competition there is every temptation to produce shoddy goods—something that appears good enough, but will not stand the test of time and use. It is met with in the incubator business—the most immediate profit is in making thin-walled machines with cheap, short-lived tanks and lamps. But J. S. Gilcrest, of the Des Moines Incubator Co., has not yielded to this temptation. For twenty-three years he has put the best material possible into his incubators, and his customers always get satisfaction. His best recommendations come from old customers. Anyone interested in the poultry business should have his catalog because it tells of a money-making machine that every poultry raiser should know about. This catalog is free if you will address J. S. Gilcrest, Des Moines Incubator Co., Des Moines, Iowa, and mention this paper.—Adv.

Laird's Famous Hampshires.

NO breed of hogs has made the advancement, the last few years as have the Hampshires. They have gained in popularity on individual merit, not by being "boomed." Statistics tell us that this is one of the oldest breeds in the world, yet it is only in the last few years that they have become so popular for both the feeder and the breeder. For the producer, the Hampshire raises large, healthy litters, and he is perhaps the best "rustler" of any breed of hogs. The packer likes him because of the delicacy in the texture of meat and the long, lean hams. One of the best herds of Hampshires in Wisconsin is owned by A. W. Laird, of Prairie du Chien. His herd is made up of big, roomy sows that raise large litters, and he has some of the best pedigrees known to the breed. Heading his herd is Kornfalfa King, a son of the noted Brook's Choice. He is an excellent two-year-old boar and was junior champion at the 1915 Wisconsin State Fair and Mr. Laird expects to have him at the head of his show herd again this year. His foundation sows came from the herd of C. A. Brooks. He has good daughters of Teddy B. he by Blythedale Duke 3d. One choice sow sired by Choice Compeer by Compeer. Birdie 4th is one of the best in the herd. She is by Signet Over 3d by the noted Signet and her dam is by Captain Aylor. One of the best gilts we have seen and which will be included in the show herd is out of the Teddy B. sow and sired by Laird's Rexall, a son of the Brook's boar, Joe. At the recent closing-out sale of Rob't Currie, Viola, Wis., and one of the pioneer breeders of the state, Mr. Laird secured the tops of this sale. Several of them are by Aristocrat, others by Orchard Hill Duke and he has some nice spring litters by Orchard Hill Duke Jr. There is a great demand at this time for bred sows and anyone wanting sows bred for May farrow can find them in Mr. Laird's herd. They are being priced reasonable, are nicely belted and as we have mentioned they possess some of the best blood lines known to the breed. If you are interested in Hampshires, write A. M. Laird. He will tell you about his hogs and will also send you a circular telling the history of the Hampshire breed wihch is very interesting. Notice his advertisement in this issue. In writing please mention this publication. See page 25.—Adv.

J. E. Kennedy Buys Choice Shorthorns.

J. E. KENNEDY, owner of Oak Lawn Farm, Janesville, Wis., has one of the few real choice Scotch Short-horn herds in the state of Wisconsin, and by adding some of the good cattle sold in the recent Illinois sale he places his herd another notch nearer the top. At the sale held by J. A. Kilgour, Sterling, Ill., without a doubt one of the best breeders in the United States, Mr. Kennedy purchased three of the good females of the sale. One sired by Fair Arces Sultan, without a doubt one of the greatest sons of Whitehall Sultan and out of Village Nell, she by Villager, one of the best bulls in service today, and many times champion. Besides carrying the best of blood lines she is well along in calf to Champion Goods, in Mr. Kilgour's estimation the best bull he ever owned. Another good bull was Silver Grace, also by Fair Acres Sultan out of Golden Grace by King Banff. Geo. E. Ward purchased King Banff at a long price to head his herd at Hawarden, Iowa. He is sired by imported Lord Banff, the bull that put Milton E. Jones on the map. Silver Grace belongs to the Cruickshank Victoria family and carrying a calf to the service of Champion Goods makes her a valuable asset in any herd. Mr. Kennedy made an excellent buy in Violet Cup with a heifer calf at foot. She comes from the Cruickshank Violet family, one of the best families of the breed. Her sire, Marshall Cup is by Whitehall Marshall the bull that was shown and used so successfully by Elmendorf Farm, Lexington, Ky. Besides buying the above heifers, Mr. Kennedy also purchased some top heifers in the sale of King, Hiett & Ludwig that they showed sucessfully the past season. The Oak Lawn Short-horn herd is rich in the blood of Whitehall Sultan, and no breeder could possess more desirable blood lines. A grandson of Whitehall Sultan heads this herd and he is an excellent individual. Keep this good herd in mind and when in need of good Short-horns write Mr. Kennedy your wants. See page 27.—Adv.

Frank Iams' Offering.

IT takes more than a war in Europe to put Frank Iams, of St. Paul, Neb., out of the draft horse business. He is indeed in it more enthusiastically than ever and concerning his offering writes: Mr. Ikey Boy! Cheer up, it's "10 to 1" that the "Gringoes" will get the "Mexicans" all righty. "Get busy," buy a real draft stallion or mare. "Iams' kind," a big-boned "ton horse" of quality. Open up your "money bags," be a "self starter" in the breeding of "big drafters," then you will not need a "preparedness bill" or to be "cranked up" daily, as you will be at "peace and on Easy street" and "coining money" fast. Frank Iams, the expert horseman and successful business man of thirty-four years. He has the best bunch of Percheron and Belgian horses in United States, two to six years old, weight 1,900 to 2,400 pounds, only four horses less than a ton. They are "big, up-to-the-minute kind." Seventy-five per cent of Iams' horses are winners of medals and prizes at Paris, Brussels and Iowa and Nebraska State Fairs. To make a "clean up" and close out my "big bunch" of horses I have reduced prices on each horse from $100 to $500 on "show and business horses." Iams sells only choice, big-boned horses of quality and finish. They are all in "show yard" condition and ready for a quick selling. They will do "their own talking" for business. Iams has the largest and best two, three and four-year-old stallions in United States, weight 2,100, 2,240 and 2,410 pounds. Worth going 2,000 miles to see. "Iams' daily horse show" is an "eye opener." Iams' "selling clothes" fit all buyers. Iams and the "pink lady" will sure sell you a horse if you visit Iams. All Iams horses have state certificates (marked sound) by Nebraska stallion board. "Mamma" Iams is a "hot advertiser," but he has the horses. He makes all competitors get their "hammers" out and "knock" Iams, but it is "dollars to doughnuts" that if you see Iams and his horses that you will buy of Iams. Iams sells top stallion at $800 and $1,400 (some little higher) guaranteed 60 per cent breeders and as represented. Write for Iams' 1916 catalog, the most "up-to-the-minute" horse book in the world, sweethearts, mothers and up-to-date business men, read it and "swear by it." It is "Iams' way" of sell horses. It is full of first-class horses. True to life. Go and see Iams, the "king horseman." He will sure save you $1,000 and sell you a better horse than you will see elsewhere. Iams is not in the stallion trust and does business on honor. See page 27.—Adv.

Angus (Pride) Bulls for Sale.

HAUK BROS., Cassville, Grant county, Wis., have for sale, several young Aberdeen Angus bulls. They range in age from seven to twelve months. This herd contains about fifty head of as good Angus cattle as we have seen in Wisconsin. Some of the very best and most fashionable families are represented, such as the Prides, Pride of Aberdeens, Ericas, Heatherblooms and one Duchess. The herd bull is Patna, a Pride bull, sired by imported Proteros, out of Pride McHenry 28th. He was bred by W. A. McHenry, Denison, Iowa, one of the most constructive breeders of the United States. Patna is now seven years old and he has proven himself an exceptional sire in this good herd, and if you could see the young stuff on the Hauk farm sired by him, you would agree with us in this assertion. Of the four bulls that are old enough for service there is one bull that is outstanding. He is a double Pride, has excellent lines, very smooth and ideal head and neck and if he is not sold within a short time the owners expect to show him this fall. Here is an opportunity for someone that wants a junior yearling show bull or a bull suitable to head a pure-bred herd. By featuring this bull, we do not mean that the others are inferior—they are good bulls in every respect, in fact some men might pick one of the others in preference to the one above mentioned. The prices asked for these bulls is far below their value and they will no doubt be sold within a short time, so if you are interested in Angus cattle get into communication with the owners at once. Cassville is on the C., B. & Q. railroad, thirty miles up the river from Dubuque. Good shipping facilities. Write at once and in so doing please mention The Wisconsin Farmer. See page 27.—Adv.

Smiths' Milking Short-horns.

THE writer recently had the pleasure of visiting one of Wisconsin's many good Short-horn herds in that of Geo. Smith & Son, Burnett, Wis. This herd has been established a great many years and has been developed along lines of high milk production. A milking machine is used and every convenience has been installed for the care and maintenance of the animals. Particular care is given to the raising of calves, as the Smiths feel that the production ability of a cow depends quite largely on her early development. The calves seen by the writer are an

Field Men for The Wisconsin Farmer.

H. S. Hoard, eastern half of Wisconsin. Address Room 201, Washington Building, Madison, Wis.

T. P. Shreve, western half Wisconsin and eastern Minnesota. Address Room 201, Washington Building, Madison, Wis.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

W. S. Steele, northwest Iowa, South Dakota, western Minnesota. Address Box 109, Sioux City, Iowa.

M. T. White, western Iowa and northeastern Nebraska. Address 4015 Izard St., Omaha, Neb.

A. T. Cole, Missouri. Address 3900 Holmes St., Kansas City, Mo.

evidence of the success which they have attained in the raising of good calves. They look bright, are very active and are well grown. The sire of these calves is milkman a richly bred Bates bull which traces to the noted cow, Profitable, one of the great foundation cows. The dam of milkman gave over sixty pounds of milk per day and tested 4.4 per cent butter fat. At the present time young bulls are being advertised for sale on page 27. Write to them for breeding and description.—Adv.

Two Choice Percheron Stallions Offered.

THOSE that desire to purchase Percheron stallions for the coming season should investigate some of the horses being advertised in The Wisconsin Farmer. Two outstanding Percheron stallions are being offered by L. P. Martiny, Chippewa Falls, Wis. One of these is a black four year old that weighs right at 1,900 pounds. This horse has been used and is a proven sire. The other one he has for sale is a black gray three year old and a colt that would make good in any locality. He weighs 1,900 or better, is the correct Percheron type and as a two year old won first at the Northern Wisconsin Fair. Mr. Martiny is known as one of the good Poland China hog men of the state and these stallions that he is offering are in keeping with his high-class herd of hogs—both good as can be found. These horses are being priced low in order to make a sale. Get in touch with him at once and in writing please mention The Wisconsin Farmer. See page 27.—Adv.

Atwater Offers Duroc Boars.

L. F. ATWATER, Bangor, Wis., one of the most popular breeders of Durocs in the state is now offering his fall boars for sale. He hasn't a great many to sell, but what he has are good ones and come from the line of breeding that has done so much for him at the fairs. In this bunch of boars you have the get of the grand champion, Lee's Defender, the grand champion, Prince Illustrator and Model King, a son of the noted champion and sire, High Model, out of a dam by King the Col. You can pick out any breeding you want, as the blood of four of the greatest recent-day sires is represented—Defender, Illustrator, Golden Model 2d and King the Col. Get busy at once if you want a boar for future use. Buy one in the rough and grow him out yourself, it is the cheapest way. First come first served. Write and mention The Wisconsin Farmer. See this page.—Adv.

Furnace Satisfaction.

THE heating system has a great deal to do with the healthfulness and comfort of a home and a reliable furnace is a source of much more satisfaction than its cost would indicate. The Lexington furnace is particularly efficient in distributing the heat throughout the house properly and in using fuel economically. This accounts largely for the satisfaction it gives. The material used in its construction is guaranteed for five years and will not cause expense for repairs. The new Lexington catalog explains this furnace in detail. If you are looking for a first-class furnace you should by all means have this catalog. See the advertisement on page 11 and write for information to the Cutler & Proctor Stove Co., Dept. 40, Peoria, Ill. Please mention this paper when you write.—Adv.

Getting in the Hay Crop.

TIME is an important factor in the haying season. Sometimes a few hours decides whether the crop will be saved or ruined. Therefore, get the hay under cover as soon as it is thoroughly dry is a good rule to follow. Louden hay tools will do the work in record time; they require no time for repairs because they are strong and trouble proof, and they handle big loads quickly. The Louden Senior fork carrier and balance grapple fork will handle half-ton loads of any kind of hay safely and easily. These tools will save time and expense and maybe an occasional hay crop. They are advertised on page 15 by the Louden Machinery Co., 1705 Court St., Fairfield, Iowa, who will send their illustrated catalog of barn equipment free if this paper is mentioned.—Adv.

Milking Machine Company is Growing Rapidly.

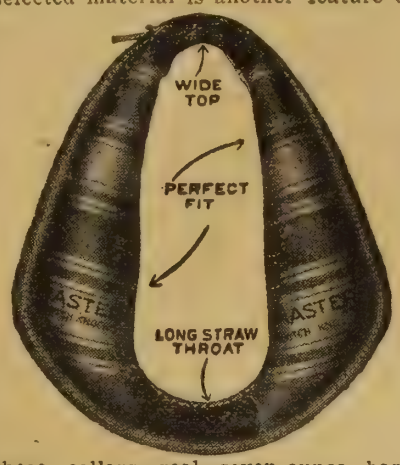
THE Hinman Milking Machine Co., 8292 Elizabeth St., Oneida, N. Y., have recently enlarged their plant and are now able to produce their machines at twice the former capacity. The Hinman milker is sold in every state in the Union and in several foreign countries and the aggressive policy of the company is opening up considerable new territory. With this large scale production, they are able to put a very high grade of material and workmanship into the machines. The valve-type milking machines, which the Hinman people make, have proven their worth wherever they have been tried and the successful expansion of the company's business will undoubtedly continue. Anyone interested in milking machines would do well to investigate the Hinman milker before buying.—Adv.

The Oliver Tractor Plow.

GOOD plowing demands that the weeds are turned under deep enough so that they will not be pulled out by the harrow to cause trouble. To do this effectively the Oliver No. 62 tractor plow is equipped with a combined rolling coulter and jointer. The weeds are cut up and turned under deeply where they decay in the soil. Many other features make the Oliver a highly desirable tractor plow. If your dealer cannot tell you about this plow, write directly to the Oliver Chilled Plow Works, South Bend, Ind. The advertisement is found on page 2.—Adv.

A Short Talk on Horse Collars.

THE collar is probably the most important part of a set of harness. At least it seems to affect the horse most. We once knew a horse that was cured of balking by changing his collar to one that fit his neck and shoulders. Many horses will not pull their best because their collar pains them and horsemen who try to give their horses the best care possible, sometimes neglect this point. Scotch Knocker collars are designed to do away with collar trouble; their perfect fit prevents galled necks, sore shoulders and strained muscles; and they conform to every bone and muscle that they bear upon. In the picture you will notice the wide top, the long straw throat and the well-shaped pads that throw the pressure on the horses' shoulders where it belongs. Carefully selected material is another feature of



these collars—real seven-ounce bark tanned leather is used, stuffed with hand-flailed, long rye straw with a facing of soft, sweat and rain proof buckwheat hulls. You can get a free book on Scotch Knocker leather collars by sending to the Minnesota Harness Factory, Inc., 106 Second St., Winona, Minn. This book will interest you—write for it today.—Adv.

Silo Requirements and How They Are Met.

THE first requirement of a silo is to keep the silage sweet, juicy and nutritious; the second is to resist storms and bad weather; and the third is to add rather than detract from the appearance of the farmstead. Perhaps there are other requirements, but the silo that meets these three will undoubtedly please the most particular buyer. Natco imperishable silos are built to meet them. The hollow, vitrified clay tile are impervious to air and moisture—no silage juices can escape

JOY BOY 29637, first under six months at La Crosse, now heading Adolph Nuttleman's Chester herd, West Salem, Wis. See advertisement on this page.

and no destructive bacterial action or oxidation can occur. Furthermore, dead air spaces in the walls keep out the frost. Thus the first requirement is met—the silage keeps palatable and nutritious. The second requirement is met with a sturdy construction, reenforced with continuous steel bands, laid in the mortar, and the third is met particularly by the handsome glazed tile contrasting with the white markings of the mortar, the smooth walls and the neatly shaped hip roof shown in the advertisement on page 13. Anyone interested in silos or in any other farm buildings can obtain valuable information on them by writing to The National Fire Proofing Company, 1123 Fulton Building, Pittsburgh, Pa., and mentioning The Wisconsin Farmer.—Adv.

Freehoff's Berkshires.

LARGER Berkshires is the aim of W. A. Freehoff, Waukesha, Wis. With this in mind he recently bought St. Elmo, a senior yearling boar, from the Farmer Farm, Farmington, Minn. St. Elmo is sired by Northern Light, a 1,000-pound son of Laurel Champion, that is sired by Rival's Champion's Best, at present at the head of the herd of Dean Curtiss, Ames, Iowa. St. Elmo promises to weigh 900 pounds when shown this fall and will eventually make 1,000 pounds. He is the real thing in big-type boars. Young sows will be bred to him for August farrow, and orders for the same will be booked now. See this page.—Adv.

Successful Milking by Machinery.

IF you want to be independent of a hired hand to do the milking or want to be relieved of the drudgery yourself, you should have an Empire mechanical milker. With this machine one man can take care of twenty to thirty cows per hour. Operating by natural air pressure, uniformly and quietly, the Empire gets all the milk and keeps up the cow's milk flow. In some cases, particularly with nervous cows, the milk flow is increased because there is nothing to excite or frighten the cow. The catalog No. 56M, advertised on page 13 will explain this milker fully with descriptions and pictures. Send for it to the Empire Cream Separator Co., Bloomfield, N. J. Please say you saw the advertisement in this paper.—Adv.

SALE DATES.

Hereford Cattle.

May 18, Birch & Thompson, Lake Geneva, Wis.

Short-horn Cattle.

Nov. 1, Anoka Farms, Waukesha, Wis.
Nov. 2, Herr Bros. & Reynolds, Lodi, Wis.

Langlade County Grain Show.

Splendid exhibits of grains were made at the Second Annual Grain Show of the Langlade County Experiment Association at Antigo on March 18th. Professor Wojta, who acted as judge, pronounced the quality equal to that of many of the large shows at which he had officiated this year. The year 1915 produced excellent yields of small grains in the county, and outside of a little discoloration, due to excessive moisture, quality was good.

The experiment association is the

This 116-page four color book describes all new 1916 varieties vegetable and grain crops. Hundreds of illustrations, beautiful grounds, flower and vegetable gardens, landscaping, shrubbery, orchards, farms. All about alfalfa, clover, vetch, modern varieties field corn. A dictionary of gardening; encyclopedia of field crops! A flower lover's delight! A berry grower's book! An orchardist's manual! Most wonderful gardening guide-catalog ever published. A postal brings it to your home. Don't miss this book!

only positive movement in the county working for systematic grain improvement, and the elimination of useless numbers of varieties. Officers for the coming year were elected as follows:

President—Geo. Wunderlich.
Vice President—Chas. Schotte.
Secretary-Treasurer—F. G. Swoboda.

To stimulate the introduction of the pedigreed grains these were offered as prizes in many of the classes instead of cash. To further stimulate competition four silver cups were given as sweepstakes prizes by the banks and by real estate men. These cups are to be won three years before becoming the permanent property of an exhibitor.

Sweepstakes prizes were won as follows: On oats, Chas. Schotte, Antigo, real estate men's cup; barley, John Schwartz, Fidelity Bank cup; winter grains, Chas. Parsons, First National Bank cup; legumes, Frank Pesl, Jos. Duchac & Son cup.

Short course students' prize for student winning most premiums, Anton Opichka, year's subscription to Antigo Daily Journal.

Women's clubs in Wisconsin started a movement through the conservation committee of which Mrs. Fred Luedke, of Milwaukee, is chairman, to have the observance of Arbor Day changed to make the day not so much one of tree planting as of instruction to children in conservation.

WITH OUR ADVERTISERS.

Daisy Cultivator Shields.

A GREAT deal of time and labor can be saved in cultivating by putting Daisy revolving shields on the cultivator. These shields keep clods from falling on the corn, but allow the fine dirt to sift through and cover the grass and weeds around the hills. The smallest corn can be plowed as rapidly as the biggest and the shields never get out of adjustment. A picture of them may be seen in the advertisement on page 2. Write for the descriptive folder to the Munson Mfg. Co., 118 E. Court, Winterset, Iowa, and kindly mention this paper.—Adv.

Wenzlemann's Farm Elevators.

THE farm elevators, both portable and stationary, manufactured by the Wenzlemann Manufacturing Co., Galesburg, Ill., have a reputation for efficiency and durabiliy that is exceeded by no other elevator. For fifteen years this firm has been manufacturing elevators, and they have been used with success and satisfaction in all parts of the grain belt. This concern also manufactures washing machines, gate fixtures, hayrack lifters and other farm specialties, and will send particulars upon request. See page 23.—Adv.

Shekleton's Stallions.

FRANK P. SHEKLETON & SONS, Lawler, Iowa, write as follows: "Business with us for the past week couldn't have been better. We are selling stallions every day and the outlook for the future of the business is fine. We have recently sold to Gilbert Olstad, Zumbrota, Minn.; a five-year-old black ton Percheron stallion to put on the stand. Index, a rising four-year-old Black Percheron, goes to O. C. Olson, Forest City. Mr. Olson is an old-time horseman and knows a good one when he sees him, and, as Index is the low-down, blocky kind and a good breeder he will do well by his new owner. Lincoln Knapp, of Centerville, Iowa, after a week's search for a good Percheron stallion came to our barns and selected the three-year-old dark gray Percheron stallion, Old Hickory.

HOUWTZE CALAMITY VALE, butter seven days, 26.96, milk 537.7. Owned by C. C. Fries & Son. They consign twenty head to the Richland county Holstein sale at Richland Center, Wis. April 7th. Write for catalog of this sale. See advertisement on page 28.

Mr. Knapp pronounced him the best colt he saw on his trip and is well satisfied with his purchase. To Lee E. Taplin, Miles, Iowa; goes the sorrel Belgian stallion, Bon Courage. This horse is four years old and will weigh 2,200 pounds. Mr. Taplin has some good grade mares and made a wise selection. Orson Chase, Mapleton, Minn., selected the two-year-old black Percheron, Tedd R. B. This is a growthy colt and will make a very large horse and is a fine taker with the people. Butler Bros., Estherville, Iowa, selected the brown Belgian stallion, Brin D'Or. These gentlemen wanted a horse to put on the stand and do heavy breeding. They will find all that could be asked for in this horse. To O. V. Cooper, Opheim, Mont., goes the three-year-old gray Percheron and the black imported Percheron stallion, Vigoreux. Mr. Cooper has a large herd of mares, and he was looking for something low down with plenty of bone. Three horses he will turn out on the range and use them on his own herd of mares exclusively. Jim Dunsmore, Floyd, Iowa, selected our large black jack to cross with grade Percheron mares. We are going to close out all of our stallions this spring and are offering great bargains in good young stallions." See page 27 and write for what you want mentioning this paper.—Adv.

JERSEY CATTLE.

Fewacres Farm's Jerseys

BULL, born Nov. 21, 1914, well grown, weighs over 800 lbs., is a grandson of **Nobles of Oakland** his dam, a granddaughter of **Golden Fern's Lad,** gave **57 lbs. of milk per day** in official test. Rollie Vandervort **Tomah, Wis.**

The Jackson Car Gives Comfort.

COMFORT is a conspicuous feature of the Jackson cars. It is evident in the smooth-running, high-duty motor, which causes no care or concern, in the four full elliptic springs, in the deep, luxurious upholstery, the roomy body and the complete equipment. All these features combine to make the Jackson an easy-riding free from trouble, service giving car. Three models are advertised on page 23 by the Jackson Automobile Co., Jackson, Mich. If you expect to buy a car, don't fail to investigate this company's product. —Adv.

Specialists in Threshing Machinery.

FOR nearly three-quarters of a century the Nichols & Shepard Co., Battle Creek, Mich., have been building threshing machinery. They are specialists in this line and by concentrating their energy and thought have perfected the Red River Special outfit which has an enviable reputation among threshermen. See the advertisement on page 10. The principle of beating out the grain used in Red River Special separators largely accounts for their rapid, cheap, clean separation. Full particulars on the Red River Special line may be obtained by writing the company named above and referring to The Wisconsin Farmer.—Adv.

Great Opportunity in North Dakota.

THE best development of a country depends on having the land divided into medium sized farms. For this reason the Great Northern railway is interested in having the large tracts of land along its road in North Dakota divided into 160 or 320-acre farms and occupied by thrifty farmers. They have no land to sell, but want to encourage farmers in the thickly settled regions to take hold of the unusual opportunities in the productive regions of North Dakota. Nearly all the farmers who have gone into this territory have done exceptionally well; comfortable homes, schools, churches and giant elevators are rapidly springing up and the bumper crops and profit-making live stock are making the farmers independent. Full information about this coming country may be obtained by sending the coupon in the advertisement on page 7 to the Great Northern representative named in the advertisement.—Adv.

Aladdin Homes.

WE wish to call the attention of our readers to the advertisement on page 21 of Aladdin homes. Those planning to build a home will be particularly interested. By dealing direct with the Aladdin Home Co., Bay City, Mich., four profits may be saved on lumber, millwork, hardware and labor. The material is cut to fit and shipped ready to set up. Get the big catalog as suggested in the advertisement if you expect to build a home, and please say you saw the advertisement in this paper.—Adv.

Low Prices on Rawleigh Engines.

THE very low prices on Rawleigh engines, advertised on page 9, are possible because the Rawleigh Manufacturing Company sells direct to the farmer. However, the Rawleigh engines are not made of cheap material, but are built for heavy use. Every part receives close attention—each cylinder is cast separately, the piston is carefully ground to size and the drop forged crank is ground to a mirror finish. A sixty days' free trial and special liberal terms are features of the Rawleigh selling plan. Send for the new catalog to Rawleigh Manufacturing Co., 104 Taylor Ave., Freeport, Ill., and kindly mention this paper.—Adv.

IAMS AND SOME DRAFTER MODELS.

Frank Iams, St. Paul, Neb., is offering Percherons and Belgians weighing from 1,900 to 2,400 pounds at greatly reduced prices. See advertisement on page 27

HORSES.

IMPORTERS AND BREEDERS OF

PERCHERON, BELGIAN AND CLYDESDALE STALLIONS AND MARES

WE now have in our barns more big-boned, rugged draft colts, from yearlings to 4 and 5 years, of the different breeds than ever before. We have two-year-olds that weigh over a ton—herd headers and show propositions.

Five farms over 1,000 acres devoted to the horse business. We do all our own buying and selling, grow all our own feed. Our economical way of handling stallions saves money for the purchaser. We guarantee all horses sold and can sell you a high-class stallion cheaper than any other firm in America.

We are located in North Central Iowa, 20 miles from the Minnesota line, on the C. M. & St. P. Ry., midway between Mason City and McGregor.

Send 20c in stamps for large Horse Hanger which shows our Main Farm and sales stables. Correspondence a pleasure. **We have a horse for every purse.**

Good railroad connections from either direction. Get a catalog containing a tabulated pedigree of each animal, and don't miss this opportunity to buy Holsteins. J. E. Mack, Auct. Write at once to

F. B. FRIES — **RICHLAND CENTER, WISCONSIN**

Purebred Registered

HOLSTEIN CATTLE

Dr. C. H. Eckles of the University of Missouri found Holsteins highly profitable, as do all who own them. He says, "Thirteen years ago I bought four Holstein cows. One was sold, so that all the cows we now have came from the other three. We have sold $5,600 worth of blooded stock from the herd. In addition to that we have thirty-eight head of females on hand, worth at an estimated value of $200 per head, $7,600." Similar stories of success with Holsteins are really commonplace, so uniformly profitable is the purebred registered Holstein-Friesian breed. Investigate the big "Black-and-Whites."

Send for **FREE** *Illustrated Descriptive Booklet.*

CURRENT EVENTS

THAT the United States navy be restored as soon as possible to second place among the world powers on the sea was recommended by Assistant Secretary Roosevelt to the house naval committee. Answering questions by members of the committee who were interested in comparing the German and American navies, he said the United States navy could outstrip Germany in a race for naval supremacy. In case of war, he said, the United States would need 225,000 men in its navy, judging from England's experience in trebling her naval forces since the war began. The administration's five-year program alone would entail doubling the present number of men and officers. The present navy, Mr. Roosevelt asserted, was not sufficient to cope with a first-class power, or a combination of lesser powers, if the government's policy was to protect both coasts, the Panama canal, its outlying possessions and maintain its international policy with respect to Latin-America. Cheaper labor and material, he said, enabled Germany to build and maintain her navy at less cost than this nation.

MORE American lives were sacrificed when the English steamer Sussex was sunk in the British channel, with the loss of 102 passengers, among them five American citizens. The Sussex had 436 passengers aboard, three-fourths of whom were picked up and saved. The loss of life was caused by the explosion, when the ship was struck by a torpedo from a submarine, and by drowning, when two lifeboats capsized and only a few of their occupants could be rescued. The Sussex is said to have been torpedoed without warning, many witnesses testifying that they saw the torpedo approaching when it was a distance of about ten yards, without time left to avoid it. The affair complicates the already delicate relations between the United States and the Teutonic powers, held responsible for this disaster, as well as the others of recent occurrence in which American lives have been lost or imperiled. Should Germany admit responsibility for any of the attacks and attempt to satisfy the United States by saying that a mistake had been made, offer to make reparation and to punish the submarine commander, the issue would not by any means be disposed of. It is regarded as certain that the United States would not accept such an explanation as satisfactory at least until time had shown what punishment actually was meted out to the offending submarine commander and whether any value could longer be attached to Germany's promises. The situation is considered serious in the extreme at Washington, with an open break possible almost any time.

GENERAL PERSHING and the American troops were still in pursuit of Villa, the Mexican bandit-murderer, at last reports. The American force was 250 miles below the international border and still pushing on. The troops had encountered all sorts of weather, from burning sun to biting snow and sleet, but were pushing ahead, uninterruptedly, making an average of thirty-five miles a day, with a flying squadron of cavalry constantly scouting for signs of Villa. The bandit was about fifty miles ahead of the Americans at last reports, making for the mountains, not seeking to try his luck in an open battle with his pursuers. The Americans were handicapped for a time by the refusal of General Carranza to allow them to use the railroads for their supplies. At last a grudging permission to do this was granted. War department officials were greatly relieved by the removal of the necessity for maintaining a motor truck supply line over desert roads for a distance of more than 200 miles. A cloudburst or great storm might render the roads impassable for a considerable space of time, cutting off the troops from their source of supply at the border. While the physical condition of the Mexico Northwestern is not good, many bridges have been destroyed during the years of revolution in Mexico, army engineers should have little difficulty in keeping it open. Army officials declare that it may be months before Villa is tracked down and disposed of, as he knows every one of the mountain trails and is among friends who will give him every assistance.

THE Germans were still pounding at Verdun at last reports, a few more of the outlying villages falling into their hands, after terrific artillery bombardments and costly infantry charges. The French fortress has been the scene of the fiercest fighting of the war for almost a month now and the defenders take heart in the fact that the first fierce onslaught of the Germans was repulsed and the gains have been small since and made at an immense cost in human lives. There have been no marked or decisive advances by either side for the past week or more.

THEODORE ROOSEVELT has returned from a rather extended vacation in the West Indies and has launched himself, with characteristic vigor, into the political campaign. He returned to find a very healthy boom for Justice Hughes for president prevailing. Whether he will oppose this boom or not has not developed, but there are many indications that his name will be presented at the Chicago convention and every effort made to land the nomination for him. Ex-President Taft is publicly quoted as being favorable to the Hughes nomination and as saying that Roosevelt stands little or no show. Justice Hughes has repeatedly stated that he is not a candidate. He is satisfied with his present position and intends to do what he can to keep politics out of the supreme court. In the meantime, the states which have thus far held presidential primaries have, for the most part, chosen uninstructed delegates, with Fairbanks, of Indiana, having the largest number of instructed delegates, Cummins, of Iowa, next and La Follette, of Wisconsin, third.

THE United States shipped 678,443 horses and mules, worth $131,914,000, to Europe for the allied armies the last year and a half, according to export figures assembled at the bureau of foreign and domestic commerce. In 1913 only a few more than 30,000 horses and mules went to Europe from the United States, but three months after hostilities began they were going at the rate of 30,000 a month, the steady flow reaching its height last October when 56,000 were shipped. Despite a diminished supply the price of farm animals has dropped considerably within the last few months, which is explained by the statement that officially the best horses left the country, lowering the general standard, and also by the increased use of gas engines and motor cars. The average price January 1, 1916, was $101.60, compared with $103.15 a year ago and $109.14 in 1914. The average price of animals supplied to the allies was upwards of $200.

Use Polarine

and Your Car Will Give the Maximum of Service for a Minimum Cost

Polarine adds power and life to your motor—makes hill climbing easy—insures freedom from carbon in the cylinders.

Polarine pays for itself many times by increasing the re-sale value of your car and by minimizing repairs. It reduces friction to a minimum.

The Standard Oil Company recommends Polarine for use in any type or make of standardized automobile engine in zero or summer weather.

Polarine maintains the correct lubricating body at any motor speed or temperature.

Order a half barrel today. It costs less that way than in smaller quantities.

May I send you that free Picture Book about Eastern farmers in winterless California?

Last fall I personally escorted two trainloads of Eastern farmers on a special rail and auto trip, inspecting first hand hundreds of California's farms and orchards.

What they saw and what they said has been put into a book—mostly pictures.

You will enjoy reading this book, which is written by real farmers for farmers.

It's free—write for a copy.

The Santa Fe has no land to sell. Its mission is to help populate the districts along its lines with thrifty farmers who grow things.

That's why we want you.

That's why we help California advertise herself.

California has no winter. Cattle and chickens can forage outdoors every month. The man in overalls can work outdoors every day, in comfort. You and your family will live longer there than back East, and make more money, too.

Let me help you plan your trip. Reduced excursion fares this Spring and Summer on the Santa Fe. And ask for the book.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

SWAT THE FLY.

I RATHER imagine that my annual warning in regard to the danger from house flies and mosquitoes falls on deaf or unheeding ears, for the most part, but I would be derelict to my duty were I not to sound it. There is too much at stake, in human life on the farm, to permit me letting the matter go by default.

With the spring rains upon us, I want to urge upon all my readers that they take precautions to prevent the breeding of mosquitoes, than which there is no more deadly distributor of disease. There is no worse thing to be found upon the farm, at this time of the year, than the old-fashioned rain barrel, left uncovered and uncleaned, a breeding place for the mosquitoes which will soon be carrying disease germs from the sick to the well and starting epidemics which it will cost many dollars and certainly some human lives to check. Tin cans left lying around the farmyard, to catch waste water, are also good breeding places for these pests. If we cannot be induced to clean up the place in order to make it more attractive to the eye, can we not be induced to clean it up so as to minimize disease? The mosquito may seem a small thing for us to be bothering about thus early, but a hurry-up call for the doctor many miles away, in the middle of the night, with a dread disease just setting in, is a very serious matter indeed. Let us guard against it while there is yet time.

But the mosquito is not our only deadly enemy at this time of the year. There remains the pestilential house fly. It has been conclusively proven by medical experts that the fly is responsible for much of the spread of such dread diseases as typhoid, malaria, dysentery, summer complaint, tuberculosis and so on. Should we not take every precaution in order to minimize the chances of the fly bringing these maladies to those we love? And this is the time of the year to begin the work. Flies cannot thrive in absolutely clean and sanitary surroundings. Screen the windows and doors, swat the fly as you would attack a burglar on the point of breaking into your home, clean out the cracks and crevices so that there will be no breeding places left to it, leave nothing undone to make the life and the lot of the very first fly so miserable it will seek a home more to its liking, where it will find a better welcome. I am not going to bore or scare you with figures, but when you realize that one fly, of the early spring, laying 120 eggs, multiplies, before the summer is over, into so many billions of flies that it would take a whole line of this article to hold the ciphers of the figure, perhaps you may be quickened into the "preparedness" I am urging of you.

After all, the little things are the ones we must look after, in every line of work and walk of life. The mosquito and the fly are little things, but the tombstone out in the graveyard yonder is a very big thing indeed, one which we cannot shut out from our eyes, even though we close them and try to forget the things we might have done.

THE TARIFF COMMISSION.

WITH another busy crop season upon us and the presidential campaign already well under way, in many of the states of the grain belt, let us not overlook the important matter of the proposed non-partisan tariff commission, concerning which I have written often and forcibly in these columns. I am in receipt of word from Washington that Congressman Rainey, of Illinois, has introduced a revised bill on the subject, which it is said has the full approval of President Wilson. I have not yet received a copy of this revised bill and am quite anxious to see it. The first bill introduced by Mr. Rainey did not provide for the representation of agriculture on the board. In my opinion, this is a serious mistake. Agriculture is too big and vital an industry not to have direct representation.

Those who do me the honor to read my page regularly will recall that the bill championed so ardently the past year by Mr. H. H. Gross, president of the Tariff Commission League, named agriculture as the very first industry to be represented on the board. Mr. Gross spent a day with me recently, here in my office, and we talked this matter over, pro and con. He informed me that there was much opposition to this representation of agriculture, but that he was insisting upon it, with such force that, nine cases out of ten, he converted the opposition to his way of thinking. Mr. Gross informed me that there was an agricultural editor right here in the grain belt, who said to him that it did not matter whether agriculture was represented or not, that "the farmer wasn't much of a business man, anyway," and it would be "hard work finding a man big enough among the farmers." I hoped Mr. Gross was mistaken in regard to this, but before he left I was convinced he was quoting the farm paper editor rightly. I am sincerely sorry that such a man should be taken as representing the farmers and as speaking the minds of millions of progressive Americans. In my opinion any board which attempts to solve as big a business problem as the tariff, without agriculture being represented, is doomed to failure, for no man can understand the complexities of farming until he has had personal experience. An industry which annually adds between ten and eleven billion dollars to our national wealth is certainly big and important enough to demand consideration.

This tariff question is no longer a partisan one, it rises far above that. We have had enough tariff tinkering, with an eye single to party advantage, rather than commercial needs and welfare. It is regrettable that the tariff should ever have been made a matter for politicians to decide, rather than the representatives of all the big commercial industries of the nation. But because we have gone along thus heedlessly for many years is no reason why we should indefinitely continue the old and obsolete system. A non-partisan tariff commission, with ample powers to make an investigation which shall be authoritative, and reporting directly to the president, the house ways and means committee and the senate finance committee, is demanded and should be given to the people without undue delay. Congress has many important matters before it at the present session. I sincerely hope, however, that it will not adjourn until it has given us relief in this bothersome tariff matter. It will do so if the farmers write to their congressmen, indorsing the commission idea as a whole, but insistently demanding that argiculture be represented thereon.

HOT LUNCHES AT SCHOOL.

I AM greatly interested in a report which comes to me from Kansas, where a particularly bright country school-teacher solved a vexatious problem by feeding her pupils hot rabbit practically every noon last winter. The boys of the school set traps, caught the rabbits and then dressed them, and at 11 o'clock the teacher put them on the big school stove and let them cook, with occasional attention from her, while she heard the classes recite. At noon the children were regaled with a hot meal and were kept in better spirits and health than is at all possible with the aid only of the cold lunch usually brought from home, in the early morning.

This problem of proper food for rural school children is a big and vital one. I am delighted that at least one of our grain-belt teachers should have solved it so successfully. I can imagine the glee with which the boys set about the work of trapping, while the girls received some good domestic science training in helping to prepare the dish palatably. There is much to commend in this work, indeed.

The United States Department of Agriculture realizes the importance of this problem, for it has recently issued a bulletin (known as Farmers' Bulletin No. 712) on this very subject, wherein are suggested the following economical and easily-prepared bills of fare for the school lunch:

1. Vegetable-milk soup, crackers, rolls, fruit, plain cake.
2. Meat and vegetable stew, bread and butter, sweet chocolate.
3. Boiled custard, lettuce sandwiches, fruit, cookies.
4. Dried codfish chowder, crackers, fruit, maple sugar sandwiches.
5. Bean soup, crackers, baked apples, sponge cake.

The question of equipment is a vexatious one, for there are few districts which have any school funds to waste and there are always those who hold back when some innovation like hot lunches is suggested. Yet I have it on the authority of a bright teacher that $25 will equip the average country school with all that is needed to give the pupils at least one hot dish every noon. Would it not be money well invested to provide such an equipment? I certainly believe so.

One of the chief objections to the consolidated school is that the busses too often call for the children before daylight, on winter mornings, and do not get them back until after nightfall. Children of school age demand warm, palatable and nourishing food and when they go without it from before daylight until after nightfall they are certainly not receiving proper attention. I hope that before another winter comes we will be prepared to give our young folks better attention in this particular way, for it is most important.

IN THE SPRING.

NOW that the dull browns of winter have given way to the vivid greens of spring and another season of vegetation is upon us, should we not rejoice that we of the farm, of all people, have the greatest opportunity to enjoy the beauties of Nature? Long before the first wild flower springs into blossom, even before the last bit of snow has vanished from the sun-protected crannies and crevices, there comes the grass, giving promise of another springtime of prosperity and plenty. Shall we not stop long enough, in the busy season that is upon us, to recall the words of the prose-poet of the grain belt, who wrote this tribute to grass:

Lying in the sunshine among the buttercups and dandelions of May, scarcely higher in intelligence than the minute tenants of that mimic wilderness, our earliest recollections are of grass; and when the fitful fever is ended and the foolish wrangle of the market and forum is closed, grass heals over the scar which our descent into the bosom of the earth has made, and the carpet of the infant becomes the blanket of the dead. Grass is the forgiveness of Nature—her constant benediction. Fields trampled with battle, saturated with blood, torn with the ruts of cannon, grow green again with grass, and carnage is forgotten. Streets abandoned by traffic become grass-grown, like rural lanes, and are obliterated. Forests decay, harvests perish, flowers vanish, but grass is immortal. Beleagured by the sullen hosts of winter, it withdraws into the impregnable fortress of its subterranean vitality and emerges upon the first solicitation of spring. Sown by the winds, by the wandering birds, propagated by the subtle agriculture of the elements which are its ministers and servants, it softens the rude outline of the world. It bears no blazonry of bloom to charm the senses with fragrance or splendor, but its homely hue is more enchanting than the lily or the rose. It yields no fruit in earth or air, and yet, should its harvest fail for a single year, famine would depopulate the world.

After all, there is much of joy in farm work, no matter how arduous it may seem at times; no other life presents such heaped-up abundance of philosophical satisfaction. I like, every little while, to give my readers a timely poetical offering here on this page of mine; I could not do better just now than to reprint the verses, "When the Cows Are in the Grass," which I found in a grain-belt newspaper today:

There's a lot of satisfaction
For a farmer in the spring,
When the snow melts from the medder,
And the birds begin to sing;
When the cottonwoods are hummin'
To the breezes as they pass,
And the green gits in the willer,
And the cows are in the grass.

In the long, sweet grasses growin'
By the windin' river's brink,
Where the lappin' ripples dimple
When the cattle come to drink;
Where the rushes fringe the margin,
And the gray snakefeeder sips
From the eddy where the willer
Dips its graceful finger tips.

In the springtime when the grass comes
In the medder plot again,
When the stanchion stalls are empty
And the cows go lazyin'
Down the long lane toward the river
Where the sweetest grasses hide,
Tell you what, it sets a feller
Feelin' mighty good inside.

For I allus love the springtime,
When the cows are in the grass,
And the winds go down the medder,
Singin' love songs as they pass;
When the daisy blooms are dottin'
Meadow reaches like the stars
Dot the heavens in the evenin'
When the cows are at the bars.

With the promise of another year of bumper crops such as we have enjoyed for several years past, with our beloved country at peace, with the green grass giving evidence of the beauties so shortly to be everywhere round about us, can we not all join in saying, with heartfelt unanimity:

There's a lot of satisfaction
For a farmer in the spring.

Predicts Great Growth in Wisconsin.

A RECENT issue of The Wisconsin Farmer presented some interesting facts regarding Oneida county. This is in line with our policy of giving publicity to the great advantages and wonderful opportunities of our state.

The mail brings us a letter from Mr. C. P. Crosby, of Rhinelander, Oneida county, dealer in wholesale lumber and Upper Wisconsin lands, which corroborates our bright hopes for that section. He writes:

That was a nice article on Oneida county, and I want to thank you for giving it space. These things all help to bring Upper Wisconsin to the attention of the farmers. This country is settling up rather slowly, but the growth is steady. As I go along the road in the country I meet Jones, who is from Kansas, Smith who has come to us from Missouri, Brown and Jackson, former residents of Indiana, and Wilson from Chicago, and so on. A few of the older farmers have sold out and I think the change is more toward opening up new farms, clearing lands, etc. The inquiries I am receiving this year show that the people are really in earnest in their desire to learn more about this Upper Wisconsin country. Many letters come from those who have been residents of Wisconsin and moved away. Almost all of these are anxious to return. It is my opinion that Upper Wisconsin is going to have quite a boom in lands in the coming year.

The Wisconsin Farmer sincerely believes that Mr. Crosby is right in his prediction of a busy season for Upper Wisconsin. The land business is closely related to the development of any new country. If it is good it means more settlers, and all that Upper Wisconsin lacks, to make it a garden spot, is more settlers. The questions of whether farming and dairying are a success in Upper Wisconsin are no longer debatable. The positive proof is shown on every hand in good-paying farms, big barns and profitable dairy herds.

The only problem now is to get the right kind of farmers to occupy the vast tillable acres awaiting improvement and cultivation there. The right kind of farmers will come as soon as they know the facts, and The Wisconsin Farmer intends to do its part to see that these facts are made known far and wide.

Getting Acquainted With Your Banker.

THE banker holds an intimate relationship with almost everyone in his community, but especially with the business men of his town. In many cases it is regrettable that this business intimacy does not exist in an equal degree with the farmer of the community, who is a business man on a considerably larger scale than the average storekeeper.

Consider the matter from the standpoint of investment. Land at $100 an acre in the grain belt is cheap land, provided it has good soil, reasonably good drainage and is in a proper state of cultivation. Even at this low figure a quarter section represents an investment of $16,000, and in most of our grain-belt states quarter sections worth much more than $16,000 are the rule rather than the exception.

Nor does his land represent all the farmer's investment. He must have stock and machinery and, like the business man in town, he must hire help with his work or "have the boys do it." So the average farm represents not only the big permanent land investment, but also a good-sized sum in machinery and labor cost, as well. All this calls for careful business management of a high order.

The Wisconsin Farmer is pleased to say that Wisconsin bankers have been among the first to recognize the importance of the farm plant and to grasp the close relationship of the farming business to the general business conditions of the community. Any banker who gives a little thought to the matter soon realizes that the prosperity of the town or village depends largely on increased profits from the farm. If cows make money then perhaps more cows can be raised on the same acreage and make the farmers bigger profits. Some cows pay better than others, so it is important that the farmer have the best animals if he is to realize maximum profits. It has been proven that diseases of grains and animals are costly, and it follows that the very best methods of controlling and eradicating these diseases are a good investment.

It is natural and right that the banker, seeing these things, should try to help develop the business end of farming. In other lines of business he lends money where the prospects of good returns are brightest and the larger and surer the probable return the more reasonable the terms. These same banking principles should be applied to the farm plant the same as to a manufacturing plant. The banker is justified in extending liberal credit to any farmer who has shown by years of hard work and good farming that he can earn big returns on his investment. The banker is justified in assisting a farmer who has the ambition to get better stock or more stock, because it has been proven over and over again that live stock, and especially the best grades of live stock, will pay rich returns on the money invested if handled by a competent farmer. Just a word to those who sometimes say that a banker hasn't any business to be connected with a movement "to teach the farmers how to farm." So far as we know, no Wisconsin banker has ever been connected with such a movement, but many of them are trying to gain a better knowledge of farming and agricultural conditions, and it is right and necessary that they should do this, just as they do it in regard to other lines of business. How can the banker be expected to understand and respond to the needs of the farming interests of his community unless he gets out among the farmers and sees things from their viewpoint? How can the banker know what farmers are deserving of the most liberal credit unless he goes into the fields when they are being cultivated and notices what farmers are careless and slovenly in their work and which ones are doing it in the best way? It will pay him to see on what farms the stock is being kept up well, where the fences are in the best condition and where the evidences of prosperity, labor and thrift most prevail, just as it pays him to watch closely the evidences of care and wisdom in the management of the stores and other business interests of the town.

So the farmer should welcome as a friend the banker who comes to him for a closer knowledge of agricultural conditions. If the banker makes a mistake and offers you wrong advice about running your farm, tell him so, frankly and graciously. Tell him in such a way that he will feel that you are glad to have him interested in you and your work. Don't reply in a way that means, "You run your bank and I'll tend to this farming myself." Such an attitude will tend to interfere with that intimate and harmonious relationship which is just as important to the farmer as it is to the banker. Get acquainted with your banker, and in most cases you will find him a loyal and helpful friend.

Clean Herds in Wisconsin.

ERADICATION of tuberculosis from the cattle herds of Wisconsin has occupied considerable attention of breeders the past winter because of the efforts of the department of agriculture to work out plans for establishing a state list of accredited tuberculin-tested herds. Wherever cattle breeders have met this matter has been discussed and elsewhere in this issue we are outlining the completed plans of the commissioner of agriculture, the state veterinarian and the state live stock sanitary board for the accredited tuberculin-tested list.

Wisconsin has no more tuberculosis in its herds than any other state, but the actions of some unscrupulous persons in the past have caused considerable grief to breeders who wish to ship out of the state, several states refusing to accept cattle that have been only state tested, these requiring a government test. Under the existing arrangement all cattle sold for interstate shipment must be tested prior to shipment. Some states accepted the state's test; others required the federal test.

The new plan of the state department will, when in good working order, eliminate much of this red tape, and by co-operating with other states make it possible to ship to other states without the test now required before shipment. Of course, this applies only to herds which have been admitted to the accredited list and which list will contain only those herds which have been tested by the state; which have been found clean and which meet all the requirements. If reactors are found the owner may dispose of them, and after further tests that show no reactors the herd may be admitted. Several of the states which now require a federal test have agreed to accept cattle from these accredited herds without further tests, and many that have demanded state tests have also fallen into line. The federal department has also been interested, and it is hoped to make this work national in its scope so that a free interchange of cattle may take place without the expense and delay of testing prior to shipment.

The plan has been worked out after months of study and conference with breeders. Most of the state breed associations have approved the plan and several herds have already been entered for the test. It must be borne in mind that this is entirely a voluntary matter. Breeders may elect to take advantage of this plan or they may remain out, just as they desire. The costs must be borne by the breeders and it is believed that they will be the beneficiaries. This cost has been placed at 75 cents per head or a minimum of $18 for a herd in order to make the work thorough; satisfactory and self-sustaining and the owner must comply with all the terms of the agreement set forth in another column.

The purpose of this movement is not to advertise the herds with tuberculosis. Its purpose is to advertise those herds that are free from it. Nothing will be said of the herds containing reactors. That information will be for the owner himself, and he can begin to clean up. But the breeder with a clean herd will be admitted to this list; his herd will be so advertised and with the privilege of shipping outside the state without further testing it should prove a satisfactory investment to pay for the test. Animals in such herds should command more money. Buyers from other states, when they learn of the plan, will undoubtedly feel more favorable toward the herds so listed, and in turn the farmers should reap the harvest in dollars and cents. It will also serve to place Wisconsin in growing and important trade in cattle on a firmer basis, and will serve to eliminate that annoyance now caused by the conflicting rulings of various states relative to the tuberculin test.

Interest in Farm Records.

THE winners in the various counties engaged in the Wisconsin farm management contest during 1915 are just now being announced, and with more farmers entered for the 1916 contest than ever before an increasing interest in farm records is indicated. The state contest will be held at Fort Atkinson in June, when the state winners will be announced—these awards being made upon the basis of the best-managed farms in the state contest. Barron, Douglas, Dunn, Eau Claire, Fond du Lac, Green, Jefferson, La Crosse, Oneida, Price, Polk, Langlade, Lincoln, Racine, Rock, Sauk, Taylor, Waukesha, Winnebago and Wood were the twenty counties entered in 1915, and it is thought each county will be represented at the state round-up in June. There were 640 farmers who kept records in this contest last year, and the 1916 contest which is already under way is interesting an increased number.

The winners in each of the counties thus far announced are as follows:

Dunn County—S. A. Ausman, Elk Mound; Roy McDonald, Menomonie; Val Wallenstein, Knapp.

Eau Claire County—Harvey Chrysler, Osseo; Clarence Campbell, Augusta; M. A. Pierce, Fall Creek.

Langlade County—A. Guenther, Antigo; Ralph Hedley, Antigo; Mrs. J. Knox, Antigo.

Waukesha County—Baird Brothers, S. A. Bain, John H. Williams, Waukesha.

Fond du Lac County—S. W. Bird, South Byron, H. P. West, Ripon; W. A. Lawson, C. A. Peterson, Rosendale.

La Crosse County—George Roeth, La Crosse; L. A. Jones, Bangor; C. F. Passo, La Crosse.

Green County—Arthur Callentine, Monroe; John Hiltbrand, Juda; W. N. Preston, Juda.

Barron County—R. J. Plenty, Rice Lake; C. R. Gotham, Chetek; P. L. Lehman, Barron; S. E. Severson, Cameron; W. H. Clark, Rice Lake.

Douglas County—Otto Schmidt, Foxboro; B. N. Stone, South Range; P. A. Peterson, Carl Lovett, Poplar.

Polk County—G. L. Anderson, Chas. Lumbers, Osceola; Henry Peterson, Centuria.

Prince County—Klein Brothers, A. Rehagen, E. A. Young, Phillips.

Racine County—P. G. Warmington, Honey Creek; S. F. Worthington, Corliss; J. J. Wynhoff, Kenosha; M. R. Zechar, Racine.

Sauk County—John Alexander, Glen Johnson, Riley Martiny, Baraboo; F. C. Kruse, Ladysmith.

Taylor County—A. J. Brandt, Frank Halopka, A. Reierson, Medford.

Winnebago County—N. A. Rasmussen, Oshkosh; C. D. Smith, F. Busse, Omro.

Prizes will be awarded to each of the county winners, and in addition all have an opportunity to win some of the state prizes which are separate from the county prizes. Every farmer should keep records just as the business man or the banker keeps records. Unless he does it is impossible to discover the leaks; impossible to learn whether operating capital, etc., is too high or too low. Much is being accomplished through the farm management contest in interesting Wisconsin farmers in better farming through keeping accurate and complete records. This applies not only to those in contest work but it reaches farther and induces many not in the contest to keep their own books so that they can learn for themselves where the income comes from and where the money is expended.

Another Wisconsin "Hired Man."

WITH the selection of Mr. Glenn M. Householder as agricultural representative for Rusk county, Wisconsin has fifteen such "hired men" as Mr. E. L. Luther, state supervisor of county agricultural representatives, often calls them. Mr. Householder has just been recommended by the Rusk county board, and upon approval of the board of regents of the college of agriculture he will begin his new duties. Mr. Householder is a native of Richland county, Wisconsin, and has spent several years in agricultural work in this state, South Dakota and Minnesota. During the past three years he has had charge of the agricultural departments of the Dawson and Spring Valley, Minnesota, high schools, in which position he has done much extension work along the lines of cow testing, grain breeding and farm

management. Having spent a year in seed inspection and grain breeding work he is familiar with the movement in Wisconsin to produce varieties of grains which are adapted to Wisconsin conditions.

The county representative has grown in favor in Wisconsin very rapidly during the past year and it is noteworthy and a testimonial to the progressive spirit of Upper Wisconsin that only one of the present fifteen representatives are in a southern Wisconsin county. When the counties which have called for these "hired men" are supplied Wisconsin will have provided all that the legislature has provided for, which is a total of seventeen. In 1917 two more may be employed under the law, making a total of nineteen, and after that the legislature must amend the existing law if any other counties are to employ these representatives. Walworth is the only county in the southern half of the state which has a representative which is shown by the following list of county agricultural representatives:

Ashland County—C. B. Post.
Barron County—R. L. Cuff.
Douglas County—John M. Walz.
Eau Claire County—G. R. Ingalls.
Forest County—John Swenehart, Jr.
Langlade County—F. G. Swoboda.
Lincoln County—A. H. Cole.
Oneida County—W. D. Juday.
Polk County—John Klinka.
Portage County—J. M. Coyner.
Price County—Griffith Richards.
Sawyer County—C. P. West.
Taylor County—R. A. Kolb.
Vilas County—Oscar Gunderson.
Walworth County—L. L. Oldham.

No doubt there will be more if the law did not prevent counties with county agricultural schools from having representatives. Each of the seven counties with these schools have field men who are doing similar work. Indications are that the next legislature will be asked to provide for additional representatives, as the counties which have employed them have found it a paying investment.

Grading Seed Corn Improves Stand.

NOT a kernel of good corn should be wasted this spring, and even the product of the butts and tips may be worth saving. This seed, however, should not be mixed with corn from the body of the ear unless a good grader can be used, which will carefully sort the seed later on.

We have always liked the plan of shelling corn intended for seed by hand, not but what seed put through the sheller will grow but, rather, that the taking of this amount of care will result in a more uniform product and, in turn, it will lead to a more even stand.

It might not be possible this year to do all the planting with one set of plates. There will be, in the first place, the seed from the deep kerneled ears which should be sorted out, the tip and butt kernels discarded and the seed from the middle part of the ear made to constitute one supply. In turn, there will be found in almost every supply of seed corn a considerable number of ears that tend to become flinty, and these kernels, of course, are shallow. Such corn should not be mixed with seed of an entirely different type, because the planter has no intelligence and must handle the grains just as they come.

The third grade would be the tips and butts, which may be used this year with ample justification. Of course, as a rule, it is wise to have on hand a sufficient supply of seed from the middle of the ears to do for the first planting and the grain from the tips and butts may come in handy later on if part of the crop is to be replanted.

We realize that there will be a great many instances where corn will not be classified as above suggested before being shelled, and in that case some sort of grader should be used. There are many types on the market. The main advantage in grading corn is to save seed in the first place because it is absolutely senseless to plant thicker than is required, while, secondly, graded seed will be dropped much more uniformly by the average planter than will seed that is not graded. The extra labor involved in sorting the ears before they are shelled and in grading the grain afterward is profitable always, but this year, when seed corn is high in price and exceedingly scarce, the profit on labor expended in this way may be increased many fold over what it is when the corn is in normal condition.

Father and Son Divide Returns From Farm.

IT IS not always a simple matter to formulate a farm lease for father and son when each has a share in the farm work. True it is that it is more or less simple when the son takes entire charge of affairs, because in that case a business-like lease may be drawn up just as would be the case if strangers were dealing with one another.

At this time one of our subscribers calls attention to a specific case. After spending a year or two away from home, an elder son asked permission to return home and help to operate a 240-acre farm. This was in the spring of 1915. The son, in this case, owned five work horses and three brood sows, while the father had three work horses and one brood sow. On the other hand, the son had no cattle, whereas the father had nine head. The son bought seed for thirty acres of oats but the feed for the horses and hogs came out of the 1914 crop and was supplied by the father. A thirty-acre field of wheat seeded in the fall of 1914 yielded 400 bushels. Considerable hay was produced last year, and the thirty acres of oats yielded 1,300 bushels. No arrangement whatever was made in the beginning, and everything is going along harmoniously, the intention being to handle the land this year in a co-operative way as was done last year. The question comes up: How should the products of this farm be divided so that each will get his just share of the returns? It is not stated, but we assume that the labor of each was equivalent to that of the other. Of course, the expenses of the home had to be carried, and there were younger children in the family. The advice of this paper and its readers is sought in this instance on the question of making a suitable division of the proceeds of this farm.

We can find the record of no lease in all available land renting literature that will cover a case of this kind, because of the mixed ownership of the live stock, the land and the grain fed to live stock. We encounter a complexity right in the beginning when we undertake to divide the returns on the wheat field, because the expense of preparing the soil and the cost of the seed all fell upon the father in this case in 1914. It would seem therefore, that the son's interest in this wheat crop could not be more than simply wages for the time spent in harvesting, threshing and marketing the crop. Of course, a good, faithful son should be compensated on a different basis than the individual who simply works to get in his time and who has no special concern about the ultimate outcome.

When it comes to the hogs we assume that not only the brood sows but the pigs were pastured and that they were fed from grain on hand produced the previous year. The only plan, therefore, that could be followed in determining the division of the returns would be to compute the value of grain consumed and credit this to the father's share. Make some allowance for the pasture, also, and the returns after that would largely accrue to the son, excepting only that each should be justly paid for the labor involved in caring for the hogs.

When we come to the horse power we again have an unequal interest, as one owns five head and the other three. If all the horses are fed out of the grain on hand grown in 1914 the father should be credited for the full value of this grain, and it is worth just what could be obtained for it on the market.

Then there is the question of interest on the investment in the land which must be taken into consideration. If the son is charged interest on say one-third the value of the land, it might be possible to decide upon an equitable division of the returns. However, there are so many irregular factors in the arrangement that we very much doubt if it can be scientifically worked out. It might be possible to have enough offsetting charges to practically wipe out the profits of the son in this case, and this will not be justice. Possibly the best solution that can be given would be to allow the son current wages and, in addition, possibly one-third of the gross returns from the hogs, and he will still retain his interest in the hogs and possibly a half interest in the number that are kept over for 1916. The son still owns the horses and so the matter will remain complex just as long as both parties to the transaction own part of the property. If this partnership is continued, some written agreement should be entered into concerning the interest that each will have in increasing the live stock. Otherwise it may be a little difficult later on to dissolve the partnership without working injustice to one or the other of the parties concerned. In a case of this kind, however, a father can always afford to be liberal with a son who is taking an interest in affairs and who is desirous of getting a start so that he cen eventually become the owner of farm land. This prospect ought to have a tangible value, and yet at the same time a practical program should be carried out so that each shall maintain to some extent their financial independence.

The Brood Mare in Harness.

BY TAKING a few sensible precautions in handling the brood mare before and after foaling she may be made almost as useful from the standpoint of labor performed as the gelding or as the mare that raises no colt. In spring work where brood mares have not been in the harness during winter a little special care should be taken the first few days. We have in mind an instance where a pair of mixed-bred mares (the standard blood predominating) were put to the task of raking stalks the first time they were in harness, and in a ten-hour day they covered thirty acres, but in two hours after quitting time in the evening one of these mares was dead. The day was cool and there was no overheating, but it was simply a case of overwork, and we cite this instance not because experienced horsemen are liable to make this mistake, but rather because young men and boys are likely to err in this direction and overwork the mares during the first few days in the spring.

In "The Horse Book" J. H. S. Johnstone gives a little wholesale advice on the care of the brood mare after foaling, when it is the intention to make her earn her keep at labor. On this point we beg to quote:

> After foaling the mare may have her ration gradually increased to its usual size. As a rule when a mare has been worked regularly almost up to her parturition a holiday of two weeks after it should see her in shape to go back to light work. About the third day, or even on the second, if the weather is fine, give her a chance to get out into some dry lot for exercise. At the end of two weeks she should have been gradually gotten back onto her usual feed and, of course, she should run out in the lot whenever she wants to. When it comes time to put her back in the harness leave the foal in the box stall when she is taken out to work. He will fret at first, but he will soon get accustomed to doing without his mammy. At first work the mare but half a day. She will be soft and worry greatly, probably heating herself up quite badly. A good plan in such cases is, on coming in at noon, to milk the mare almost dry and then put her in a stall in the work stable to eat a little hay and cool off. After she has cooled off so she may be watered she may be taken to the box stall, turned in with the foal and fed her grain. Beginning with half a day in this fashion, she may be gradually toughened back into doing her full share of the regular team work. Never let a foal suck milk from a warm mare. It sets up indigestion and starts scours. Keep a bucket of water in the boxstall so the foal may take a drink whenever he wants it.

The same principle, it will be noted, is emphasized by Mr. Johnstone, namely, that of getting the mare gradually seasoned to labor when she is suckling her colt. There is a temptation under certain conditions to put the mare into the collar too soon after foaling, but in the long run it does not pay. The holiday of two weeks, as above suggested, affords time for the mare to get in condition so that when she is put into service on the plows or harrows or cultivators she will stand the work well and at the same time take good care of the foal.

It goes without saying that some special attention should be given to the foal, and an ideal opportunity is afforded to do this when the little fellow is kept in a boxstall. He should have his private grain box and it is surprising how quickly he will take to eating if a little pains are taken to get him started. By putting grain in his mouth so that he gets the taste of it he will start eating earlier than if left alone, and a start is all that is needed. If one can succeed in getting a reasonable amount of colt flesh on during the first month there is no reason why it cannot be maintained by a system of grain feeding even though the mare is put to hard labor.

Long or Short Ears For Seed Purposes.

THOSE who have devoted special attention toward the improvement of any particular variety of corn soon reach the conclusion that it is advisable in selecting seed to choose ears that are uniform in appearance. If the conditions of a given locality are such that a ten-inch ear can be matured then it may be depended upon that there will be a strenuous effort made to maintain length. In doing this the first advantage is that seed grown on ears that are similar in appearance, even including length, is more apt to be uniform in size of kernels than will be the case if the ears are lacking in uniformity.

Of course, it is possible to find short, thick kernels on one ten-inch ear and narrow, deep kernels on another, but, taking all things into consideration, the seed that we put in the planter is apt to be dropped uniformly if attention is given to the matter before shelling.

There is one respect in which the results in the form of yield are somewhat disappointing, and what we have in mind has been studied with a good deal of care at the Ohio station. For a ten-year period experiments were conducted at that station, the object being to compare the yielding ability of long and short ears. In the one case seed was used from ears that averaged 9.21 inches in length, and the average yield from this corn for a ten-year period was 69.55 bushels per acre. On the other hand, when the seed ears were only 6.77 inches long the average yield for the ten-year period was 68.16 bushels per acre. Here was a difference in actual yield of only 1.39 bushels per acre, and in a bulletin describing the results of these experiments attention is called to the fact that this difference is no greater than it might have been if seed used in both series of experiments had been identical. Length of ear is apparently a matter of environment and it cannot be expected, according to these results, to influence materially succeeding generations.

In this connection, however, it is interesting to note that while the yield is not materially affected, yet there is, after all, a slight hereditary influence. It was found that when all the corn from the long ears was measured that the average length of the ear was 7.23, while the corn from short ears averaged 6.44 inches. Just why this difference in length should not show up more in the yield per acre is difficult to understand unless it be that the short ears tend to grow a little larger in circumference and therefore make up in weight to some extent what they lack in length.

We are calling attention to this matter at this time in order that those who are searching their cribs with great zeal for good corn may not overlook the solid ears even though they are much shorter than the type most admired. In the experiment referred to some of the ears were as short as six inches and such a type we would refer to naturally as a "nubbin" though, as a matter of fact, if the seed is sound there is reasonable justification for selecting even a six-inch ear. Unquestionably, it will be the kernel that we will have to study this spring, and if we can get vital corn that looks well when shelled, we will have every reason to congratulate ourselves even though ears of varying length have been selected in the first place.

Corn on Sandy Soil.

To the Editor:—My prize-winning corn was grown on a sandy soil. The seed was selected at husking time, special care being taken to obtain mature and uniform ears. Then it was

L. E. HUSTEN, EAGLE, WIS.

kiln dried and shelled just before planting time. The ground was well manured through the winter, the manure having been drawn directly from the stable. The rotation followed on this ground was oats, clover, potatoes and corn. As the ground was subject to erosion it was plowed in the early spring and was well harrowed with a peg-tooth harrow, then rolled, marked and planted with a hand planter in rows three feet and six inches apart each way. In the course of growth the corn was given four thorough cultivations. After cutting and being allowed to cure in the shock the seed was again selected and from this selection the prize-winning ten-ear sample was taken. This corn was grown on Burr Oaks Farm in the town of East Troy, Walworth county.

Like Begets Like in Grain Production.

To the Editor:—As it is of interest to many people to know how a first-prize peck of grain should be grown I will give a little outline of my methods. I had no intention of growing my Pedigree No. 1 for exhibition. My only object in view was the yield, which was quite satisfactory, being eighty-five bushels per acre. It received no extra attention whatever, as I have three other varieties and wanted to give all an equal chance so I could decide which were the best to keep. I have not had much experience as an exhibitor and have yet much to learn about preparing grain for exhibition. I have found that a good way to learn is by trying.

Like begets like, so we must first have good seed, thoroughly cleaned, then treated with formaldehyde to prevent smut, etc.

Next is the preparation of the seed bed. Fall plowing suits us the best and should be done as early in the fall as possible. We try to follow a four-year rotation of corn, oats or barley, then clover. If this system is followed a good seed bed can be had by the use of a disk or a good spring-tooth harrow if the work is done at the proper time. Our soil is a clay loam and we get good results from plowing at a good depth—say about eight or nine inches. Disking before plowing gives good results and if done early it will cause common weed seeds to sprout, which when turned under will cause no more trouble. As soon as the soil is dry enough in the spring to work up well we start with four good horses and a spring-tooth harrow to fit the soil for the seed, then it is sown with a seeder at the rate of ten to twelve pecks of oats per acre. Then the finishing touch is put on with a spike-tooth harrow.

Harvesting must be done at the proper time and other precautions taken to preserve the color if intended for exhibition.

We try to do a little better each year than we did the year before and feel better satisfied with the season's work when we have done this.

Of course, we cannot control weather conditions, but there are many things that lie in our power to

H. W. WHITEHEAD.

do whereby we may increase the quality of our crops. Then if the weather is favorable so much the better.

H. W. Whitehead.
La Crosse, Co., Wisconsin.

More About University.

To the Editor:—In your issue of March 16th you answer fully and fairly my question in regard to the amount of taxes we pay toward the state university. It is only in the latter part of the answer when you quote from the "friends of the university" that I begin to hesitate to give consent.

"Friends" of the university claim that "in most cases" the university costs the taxpayers "in many localities" nothing. Why? Because, they say, we get back more for local education than we contribute in direct taxes to the university. Now I would like to ask these "friends" of the university if the university ever pays back any of the more or less than $2,000,000 that it gets from the taxpayers of the state each year? No, the university does not pay back a cent; therefore, their claim that we get back more for local education than the amount of taxes we pay toward the university each year is not well taken.

If the university paid this money back then their claim would be true. But because we get some money from the indirect method of taxation or from corporation taxes that is not getting it from the university. The university is not the state.

The claim of the "friends" of the university that "in most cases in many localities" the university costs us nothing, sounds to me like sophistry. To me it appears specious; it looks like subterfuge.

This is not a question for or against the university. It is only a question to find out the burden of taxation we have to carry for its support. The university was established for the enlightenment of the people. And now, if its "friends" instead of enlightening us want to keep us in the dark, want to hoodwink the taxpayers, it is time the people knew it.

Lewis Ostenson.
Waukesha Co., Wisconsin.

Grant County Club.

To the Editor:—From time to time I see in your good paper, The Wisconsin Farmer, articles written by you for the welfare of the farmers. I enjoy reading these articles, as I am a farmer's son. I go to high school and I am taking the agricultural course. This year is the first year for the course in our school, but it is gaining favor and coming to the front.

This fall our agriculture teacher expressed a wish to get the farmers here interested in this course and get in touch with them. I talked it over with him and I suggested we form a farmers' club. He said if I would get the farmers of my neighborhood to meet in the district schoolhouse he would go out with me and talk to them on some agricultural topic and if we got the club he would go out every time and talk to us.

I got them to meet in the schoolhouse, with the result that we have a farmers' club with about twenty-five members. The farmers took up the idea and the more they know the more they want to know. We have met twice, but we have gotten a lot out of material. We meet every two weeks on Wednesday evening from 7:30 p. m. to 10 p. m. This is the only club I know of in Grant county.

Grant Co., Wis. Lavern Clark.

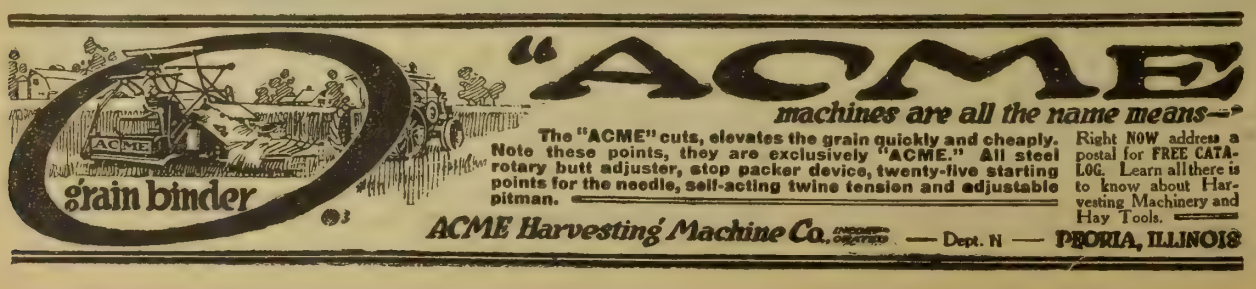
Short Course For Indians.

The Menomonie Indians have been learning the virtues of the "white man's medicine" when used to correct soil, crop and stock ills. Representatives of the college of agriculture, University of Wisconsin, have been cooperating with officials of the United States Indian Service in holding the first Indian farmers' course ever given in this state.

Never before in the history of this or any other Wisconsin reservation have the most approved agricultural practices been explained and demonstrated to the red men in a regular farmers' institute, and, as would be expected the seed is falling upon good ground. The Indians, young and old, gather eagerly about the instructors as they test seed corn, treat potato seed or judge live stock and give proof positive that the work is being appreciated.

The program includes most of the essential things with which the Indians of that region should become familiar if they care to succeed in farming as carried on in Wisconsin. All addresses are made in the simplest terms possible. The services of an interpreter are needed only for about 20 per cent of the audience, old men and women of the tribe, who are unable to grasp English words quickly. Nearly all of the 160 students in the government school, as well as the students of the St. Joseph Industrial School, nearly 300 in number, are in attendance at all of the sessions. Regular school work for the upper grades was dispensed with for the entire week, to give these students ample time for special study in agriculture.

The population of the reservation is about 1,750. One hundred and forty of the families live on farms ranging in size from five to fifty acres. Some of the farms in the South Branch division have large herds of good live stock, pure bred and grade, and these farmers sell quantities of farm products throughout the year. The government farm of 340 acres is used for experimental purpose.



Plan Accredited Tuberculin List.

Wisconsin Department of Agriculture Completes Plans to Eliminate Tuberculosis From Cattle in the State.

THE Wisconsin Department of Agriculture has finally completed its plans for establishing in Wisconsin an accredited list of tuberculin-tested herds of cattle, and as soon as sufficient entries are received state veterinarians will begin testing.

This plan, which has been submitted and approved by most of the cattle breeders' associations in Wisconsin during the past winter, has created considerable interest among breeders, and has been given considerable attention in recent issues of The Wisconsin Farmer. The commissioner of agriculture, working with the state veterinarian and the live stock sanitary board, have finally agreed upon the requirements and the cost, and when started it is believed many of the obstacles now facing Wisconsin breeders who wish to ship outside the state will be overcome.

The department believes that in establishing this "state accredited tuberculin-tested herd" list that much will be accomplished in eradicating tuberculosis from the state. Breeders who attended any of the winter meetings understand more or less fully the details which were presented at the various meetings. The rules adopted are the result of many conferences with breeders who are anxious to place the cattle business upon a better basis, and as the result of a conference of representatives from all the breed associations.

The United States Department of Agriculture has also given attention to this matter, and it is believed that that department will co-operate with this and other states in the establishment of "accredited tuberculin-tested herds," so that shipment may be made from these herds to any state in the Union without the necessity of testing immediately prior to shipment.

Moreover, the Wisconsin Department of Agriculture has already received assurance from many states in the Union that the live stock sanitary board of such states will accept cattle from the "accredited tuberculin-tested herds" without testing immediately prior to shipment.

The Wisconsin plan for the establishment of the "state accredited tuberculin-tested herds class" is therefore presented to the farmers of the state in final form.

The live stock sanitary board of the department of agriculture hereby invites the farmers of the state to make application to the state veterinarian of the department of agriculture to have their herds tested for entrance to the "accredited tuberculin-tested class."

A number of applications have already been received, and as soon as a sufficient number of applications are at hand from any one part of the state veterinarians, employes of the state department of agriculture, will be sent out on a schedule to test herds for admission to the list.

When the test and history of the herd indicate it to be safe, it will be entered into the "accredited tuberculin-tested herds class."

The following agreement will be entered into by farmers who make application:

DEPARTMENT OF AGRICULTURE
LIVE STOCK SANITARY BOARD
C. P. Norgord, Commissioner.
O. H. Eliason, State Veterinarian

I, the undersigned, ... of ..... county of ..... hereby agree to place my herd of ..... cattle in the care of the department of agriculture and Wisconsin Live Stock Sanitary Board for tuberculin testing by its employes for the purpose of placing such herd in the "accredited tuberculin tested herds class," when it is considered clean from tuberculosis by the said board.

I also agree to follow instructions as to removal of reactors and suspects, such as shall be issued by the said board through written orders as given by the state verterinarian and his assistants. I further agree to pay to the said board, seventy-five cents (75c) per head or a minimum of $18 for each test of my herd, said tests to be conducted annually or as often as the board deems necessary.

.....

The testing of these cattle will be done in a very painstaking manner by the most competent veterinarians obtainable.

The number of cattle to be tested at one time will be limited so as to give the veterinarian an opportunity to study each individual animal. If at any time reactors are found, they shall be removed and the premises shall be disinfected under the direction of and in a manner satisfactory to the board.

In order to prevent the infection of the herd, all milk from creameries or whey from cheese factories shall be pasteurized before it can be fed to calves. Adult animals introduced into the herd shall be tuberculin-tested, and calves introduced into the herd must either be tuberculin tested or segregated from the herd until such time as they can be tested. No animal introduced into the herd, except when coming from a herd on the accredited list can be sold as belonging to the class of tuberculin-tested herds until it has passed the next annual test after its introduction. Nurse cows or other cows introduced into herds must be on the same basis as above.

Much time and consideration has been given to the rates of testing. This work must be self-sustaining, and a fee sufficient to cover the expense must be remitted to the board and paid into the state treasury. For this year the fee will be 75 cents per animal with a minimum charge of $18 for any herd of less than twenty-four head. These rates will be raised of lowered according to the experience of this first year. Only sufficient fee will be charged to make the work self-sustaining.

The necessity for having the work done by a veterinarian in the employ of the state lies in the fact that the co-operation of other states to admit cattle from these herds cannot otherwise be secured. Moreover, it is necessary that the work be done by a person entirely disinterested, subject to no orders save those of the department of agriculture.

It is entirely necessary that pure-bred breeders especially, make strenuous effort to clean up their herd if they expect to keep the trade in cattle from other states, due to the fact that if the entire herds are not tested complaint often arises over cattle shipped out on a health certificate made on one or more animals of a herd, without knowing the condition of the balance of the herd. It has also resulted in a reflection on the integrity of the person who has made the test, when it was a condition over which he had no control.

The purpose of this movement is to advertise the herds that are free, or have been freed from tuberculosis, rather than to advertise the presence of re-actors discovered by the test.

Animals in such herds should be much more valuable and command a mich higher price than those in common herds. This, taken into consideration with the fact that animals can be shipped to other states without test and that buyers from other states will prefer animals from tuberculin-tested herds and pay greater prices for them, should give the farmers of the state an opportunity to reap the benefit in dollars and cents from the trouble and expenditures of testing.

LAW QUESTIONS.

Inheritance in Wisconsin.

A Subscriber, Viroqua, Wis.—(1) If a man should die without making a will in Wisconsin, leaving a widow, but no children or descendants, would his widow be the sole heir to his property? (2) If a man should die without making a will, leaving a widow and one child which has been lawfully adopted by another person, would such child inherit any part of his estate?

Answer.—(1) His widow would be the sole heir to his property in such a case. (2) In such case the widow would be entitled to dower in the real estate, being one-third of it for her lifetime, and subject to this right the child would inherit the land. The widow would get what is called the widow's allowance out of the personal property and the balance of it be equally divided between her and the child.

Sheep Killing Dogs.

A Subsriber, Dallas, Wis.—About a week ago dogs went into an open shed belonging to my brother and destroyed sheep of the value of $100, and some time before that dogs destroyed $100 worth of sheep for another man in the same neighborhood. Several other persons including myself have suffered loss from dogs killing sheep and other domestic animals. What remedy have we in such cases

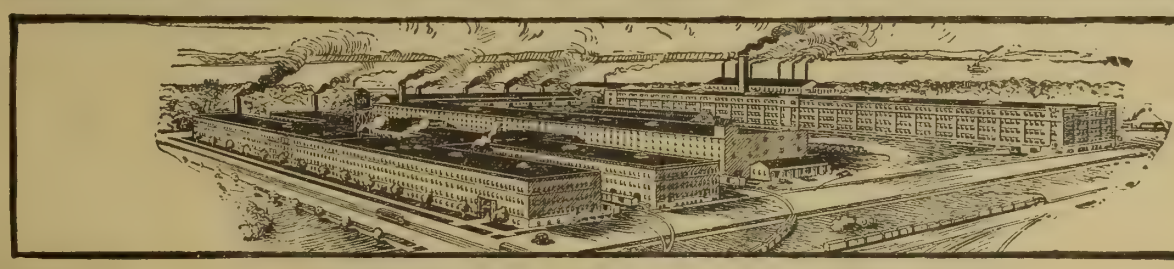
Answer.—The law provides that dogs found chasing, worrying or killing sheep or other domestic animals may be killed without liability when found in the act. Besides this the owners of such dogs are liable for damages to any person whose stock is injured or killed by the dogs and such damages may be recovered by suits at law.

A Question of Inheritance.

A Subscriber, St. James, Minn.—Ten years ago my father died without making a will, leaving my mother and four children including myself. My father owned at the time of his death, 160 acres of land in Minnesota, and the heirs decided to leave the farm undivided, and allow the mother to have the eight acres on which the buildings were situated. One of the boys has kept the whole farm rented continually and keeps the income from it, and occasionally places some money in the bank to mother's account, but the other heirs get nothing, and are allowed no voice in the matter. How shall I proceed to get my share of the land and also my share of the income from it for these last years?

Answer.—You will have to employ a lawyer and have him make application for you to the probate court to make a decree of distribution and assign to you your share of the land and also your share of the rentals and profits therefrom, which have been wrongfully appropriated by your brother.

Commissioner of Agriculture C. P. Norgord, accompanied by Architect A. C. Clas, of Milwaukee, is on a tour of the fair grounds of three states, Illinois, Iowa and Minnesota. The purpose of the trip is to investigate the sheep and swine exhibition sheds occupied by the three states.



Quality Has Made Necessary a Mile of Velie Factory

At This Low Price—With the Velie's Fuel Saving Records

the famous Model 22 is nineteen sixteen's *car of utmost economy* as well as Style, Roominess and Beauty. What better could you obtain at any price than the Velie Continental Unit power plant, full 40 h. p., silent, supple, adequate to any road and grade—deep tufted, genuine leather upholstery—two unit electric system push button starting—every feature of equipment and refinement—weight less than 2,500 pounds? Backed by the prestige of half a century of manufacturing experience, and the untarnished reputation of one of the most substantial organizations of America. Write for catalog.

Beautifying the Farm Home.

A Plea For Beauty For the Benefit of the Farm Families—By Clara T. Lund, of Winneconne, Wis.

HOW to keep the young people on the farm is today the most important problem in agriculture. The solution is simple: Make home life and surroundings on the farm so interesting to the young that they will desire to stay there. It will require earnest, honest, prayerful thought to succeed, but it can be done. It will require sacrifice of prejudices and willingness to learn on the part of parents. It will also require that less money be deposited in the bank and more spent on the home, but it will be the best investment that a farmer ever made in the end, for his family and himself. We need experienced farmers to remain on their farms and the children they have taught to farm to live on and till the same acres after them, if we are to receive the greatest benefits from and make the most progress in agriculture. The growing custom of tenant farmers is a mistake. It is bad for the farms and for the future of farmers' sons and daughters. The ordinary life of the neighboring village does not compare in advantages for education or discipline for success in life to that on the farm. The social problems of a small town are serious ones, and offer no recompense for the loss of the home training on the farm.

You mothers and fathers on the farm, if you wish to make your children happy and contented and good, surround them with beauty in every way you can. Satisfy their longing to express it. You can give them no nobler education. Its advantages will accrue to every member of the family. In no place in the world is it so possible to do this with so little cost in money as on the farm, yet if you stop to consider it, generally speaking, our farm homes are pitifully plain and unattractive. Is it not the common thought that one must go to the city to see beautiful and attractive homes? Too much the appearance and thought of the farm home express hard work, economy and even drudgery to the young, so that they seek the city for the things they think exist there more to their liking. We are so accustomed to think of values in terms of dollars and cents that we attempt to measure all things by that narrow rule. But beauty will not consent to that, you cannot measure it so.

The home and its surroundings have a great deal to do with our happiness and contentment in life. Let us begin with the home. Ask yourselves the question: "Is my home beautiful, comfortable and convenient inside and out?" Lighting, heating and water systems in these days of modern conveniences have become necessities, and nowhere are they more necessary than in the farm home. The lack of these things takes many a young girl or boy from the farm. Down deep in human nature there is the inherent desire to be like other folks, and to suffer a feeling of shame or inferiority if our conditions of living are very different; hence a desire for a change. The addition of these conveniences should be considered an investment, the same as the farm implements and made as soon as possible.

My special plea would be, first of all, a more beautiful setting for the farm home. With all out-of-doors for a landscape there is no limit for the possibilities for improvement. All that is needed is careful thought and effort and a small amount of money. If you will observe in passing through the country, many houses seem to be set in the wrong place. They seem to be just set down and left there. Now a real homelike place has an atmosphere of contentment and satisfaction. In other words it seems to belong there. The buildings cluster around, and the whole place, while not beautiful because undeveloped, is in harmony.

Wire fencing is cheap, requires no care and lasts indefinitely. It makes a splendid support for vines and high perennials in the hardy border that you will have some day when a beginning has been made. Allow sixty feet or less according to size of ground used from house to front line of fence. This will give plenty of scope for lawn and hardy border. I should prefer no trees at all in the yard unless grouped at the back of house on both sides, but not close to it. Do not hesitate to cut down all trees that exclude the sun from the house. Let the sun flood the house; it gives health and good cheer. Vines and awnings can be used to temper its rays where needed. The place for trees is around the outside of the yard just inside the wire fencing, and grouped at the back of the house on each side, to give the home the proper setting, like a picture in a frame.

The first thing to do is to set trees every twenty feet, around the house plot just inside the wire fence. In most localities splendid young trees can be got in the woods free of cost. The elm and hard maple are no doubt the best. Do not set any common, quick-growing trees. Set trees that will live for generations. Your children's children will rise up and call you blessed for a wise selection. Dig the holes wide and deep. Take care in digging to preserve as many of the fine, hairy roots as possible. Cut off all broken roots, and trim top and roots to balance in size. Study your tree. It has a front, back and sides. Set the front toward you. It requires two people to set a tree properly. One to hold it in place and one to shovel in the soft dirt. A pail of water should always be thrown in after the tree is in, and then the tree gently raised and lowered to cover the fine hair roots with mud. Now continue the filling with soft dirt, and tramp down hard. Repeat this process till hole is filled. Cover top of mound with loose dirt. Set your trees now. This is only the beginning of our

MAPLE LODGE FARM HOME AND GROUNDS.

frame for the home, as the hardy border will be of hardy shrubs and perennials set all around the house plot in front of these trees.

Now that the trees and fence are in

Don't pay too much
—nor too little

WHEN you buy a car apply those same prudent principles that guided you in other purchases that turned out well. Buy a KisselKar—the price is just right to give you the greatest value.

There is a reason for the cheaper car's cheapness. In a more expensive car there's a lot of construction cost put where it will do you no practical good. $1050 will buy a High Efficiency 32 KISSELKAR with the great High Efficiency motor and Kissel-built axles—a staunch, skillfully manufactured automobile. The car and price that will give you full value in practical utility, refinement and appearance and no extravagance in useless refinements.

KISSELKAR

Every Inch a Car

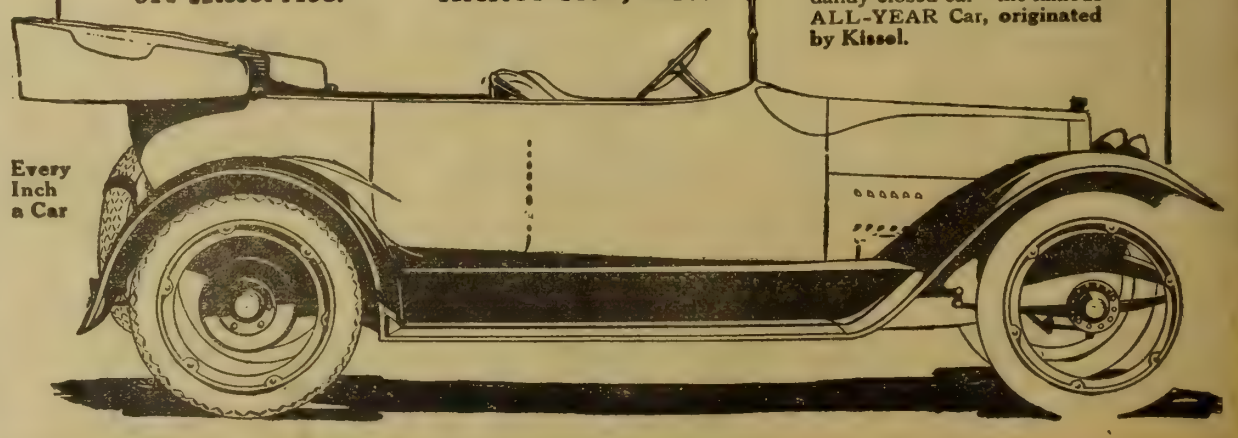
The High Efficiency 32 is not only worthy of Kissel standards of power, strength and long life, but is a very handsome car as well. Its price of $1050 is wonderfully low for such car.

Write for literature describing the great KisselKar models —the 32-four and the 42-six also name of nearest dealer.

Kissel Motor Car Company

312 *Kissel Ave.* *HARTFORD, WIS.*

Buy a Detachable Sedan Top, at small extra cost, and convert your touring car into a dandy closed car—the famous ALL-YEAR Car, originated by Kissel.



Every Inch a Car

place, let us do away with the barren appearance of the house. As soon as the ground can be worked in the spring, have a space three feet wide across the front of the house spaded up as deep as possible and the ground well mixed with old, well-rotted cow manure. Keep line of bed straight, and lay in six-inch boards to within three inches of the top of the ground. Fasten securely in place with strong stakes driven in the ground. This bed can in time extend around the sides of the house. Into this bed we will set hardy shrubs and perennials and thus cover entirely the unattractive stone foundation with a living

THE SAME PLACE AS SHOWN ON PAGE 8 AFTER FOUR YEARS' GROWTH OF SHRUBBERY.

growth of green and bloom. The home will then have the appearance of nestling on the bosom of the green lawn through a soft set of foliage.

One foot from the stone foundation of the house and six feet apart set the shrub, forsythia, or golden bell. It is a very early flowering shrub with profuse drooping golden yellow flowers. Between these shrubs set double shrubs, and eighteen inches apart in the row set the perennial north star chrysanthemum. Alternating with the last row and the same distance from it, set the perennial aquilegia or columbine. The north star chrysanthemum is a large, single white star that remains in full bloom for six weeks in summer. The columbine, a beautiful bright blue of early spring. Edge your bed with a sowing of Little Gem sweet alyssum seeds, and you will have a low, thick mat of sweet white flowers for a border that will bloom till snow comes.

Figuring eight shrubs at 35 cents each, thirty perennials at 15 cents, seed at 15 cents, we have an outlay of $7.45. But it is done for all time and will grow in beauty each year.

Examine the two illustrations given herewith. Both represent the same country home. If this were a medicine advertisement I should label them "before and after taking." The barren picture represents the home when purchased, and the other as it now appears after four years of time under a simple plan of home improvement. A little city girl walking for the first time in this garden exclaimed: "Oh, how I wish I lived here!"

Apart from its beauty, the abiding joy of a garden is found in its constant change and growth, thus giving freedom to the mind and scope to the imagination. The hard work and monotony of farm life makes a garden a necessity to all the family.

Send for the seed catalogs as advertised in papers and magazines and thus collect a little library on the subject free of cost. Write the author of this article in care of The Wisconsin Farmer and names of reliable dealers in shrubs and trees will be sent to you. Do not put off the beginning of this garden setting for your home. Begin now.

The man who displays kindness in handling his live stock is always ahead of the game. It is a fine thing to see an old cow peacefully chewing her cud and allowing her owner to pass around her without the thought entering her contented mind that she is in the way. That cow will give more milk than the cow that makes a dive for the gate every time anybody enters the yard. Kind treatment counts not only in handling cattle and horses but also in looking after hogs. You must give farm animals a "good time" if they are to return you good profits and the individual had better take up grain farming who has not the patience to fondle and caress the animals with which he comes in contact.

If every road officer does his duty the mud will fly this spring. Road drags have already been taken from under cover and thousands and tens of thousands of miles of road in the corn belt have been rounded up. Let the good work continue. It aids in moving produce to market and it adds wonderfully to the pleasure of those who travel by auto or horse vehicle. Men disagree on just how far we should go in surfacing our roads, but no two opinions exist concerning the necessity of making our earth roads just as smooth as possible.

What's Your Notion of GOOD Threshing?

THIS IS OURS!

The Red River Special
With

THE BIG CYLINDER
Power, weight and momentum. The strongest and largest design that is used.

THE MAN BEHIND THE GUN
Our patented device that separates most of the grain right at the Big Cylinder.

THE BEATING SHAKERS
That BEAT the straw from the under side and knock out every kernel of grain that is in it.

THE ADJUSTABLE CHAFFER
That cleans the grain as it should be cleaned, ready for market.

THE N. & S. WIND STACKER
That gets rid of *all* of the straw, but *none* of the grain. This is a special feature, peculiar to the make.

Many of your own neighbors have written to tell us their opinion of the Red River Special and the work that it has done for them. The Home Edition of our threshing paper contains their letters. Send for a copy. Ask for the Big Catalog as well when you write. We'll be glad to send you one.

Big Ben

Just As a *Clock*

If he didn't have an *alarm* in his make-up he'd be the best two-fifty *clock* that ever kept track of the day on any farm.

As it *is*, he's *two good clocks in one*—a reliable alarm to get up by, a punctual timekeeper to serve in parlor, dining room, or kitchen. He goes quietly about his work—you hear him only when he calls.

Handle him with reasonable care, — he'll last for years.

7 inches tall. Price $2.50 in the States, $3.00 in Canada. If your jeweler hasn't him, send a money order to his makers and he'll come direct by parcel post, all charges prepaid.

Don't Pot Your Trees

Spade-dug holes, like pots, confine and cramp the roots. Set your trees out in blasted holes. Stop the big percentage of early losses. Make them grow sturdy, hearty and fast. Cash in on your investment quicker by getting earlier yields.

Drawn from actual photo.—Note marked difference in growth between tree planted in blasted hole and tree planted in spade-dug hole.

Practical Proofs

E. J. BARKER, Beech Bluff, Tenn., says: "I would not set trees without first subsoiling with explosives, even if it cost four times the amount."

J. C. SAYLOR, Penna., says: "Blasted trees the finest in the orchard."

O. C. LANGFIELD, Calif., says: "Planted 14,000 trees with dynamite—advanced value of land from $15 to $200 per acre in less than a year."

DU PONT
Red Cross Farm Powder

lightens labor and increases profits. It loosens the earth, makes better rootage and provides increased nourishment for young trees. It rejuvenates old trees and makes them bear.

ATLAS EXPLOSIVES

Do You Pay Taxes On Idle Acres?

There are dollars under the stumps—crop money that belongs to you. Get it out. Remove the stumps yourself. Blow them into easily handled pieces with Farm Powder. You can do it quickly, easily and thoroughly in the most economical way. No experience or skill is needed if you use

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Just punch a hole, load it, light a fuse and the work is *done!* Your stump field is instantly transformed into fertile, virgin land. The profits from the first crop will more than pay the cost of clearing.

Dig ditches, make tree holes, shatter boulders and blast the subsoil with Atlas Farm Powder—made especially for farm work. It does the work better and costs less than labor. Ask the Atlas dealer for prices.

Equip your Ford *with* LYNITE ALUMINUM PISTONS

The wonderful light pistons that reduce the piston weight of your Ford by a full two-thirds.

This difference in weight means a great reduction in vibration and more power. By cutting down vibration you'll have greater riding comfort—less noise and rattle—more speed and flexibility and fewer repairs.

LYNITE Aluminum Pistons are acknowledged to be the greatest engineering improvement of 1916. Their use in the best of the season's high-priced cars proves this.

Put this improvement into your Ford and enjoy the same smooth, quick, powerful, snappy motor service that these cars give. And you'll find that these pistons lengthen the life of both motor and car.

The four LYNITE pistons are equipped with 12

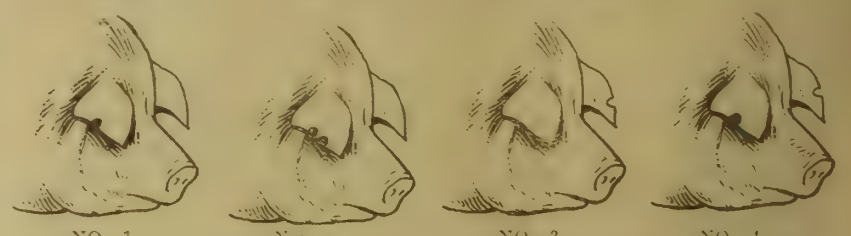
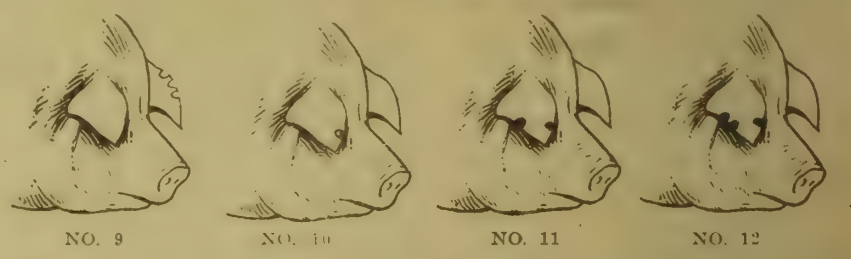
Marking Pure-Bred Hogs.

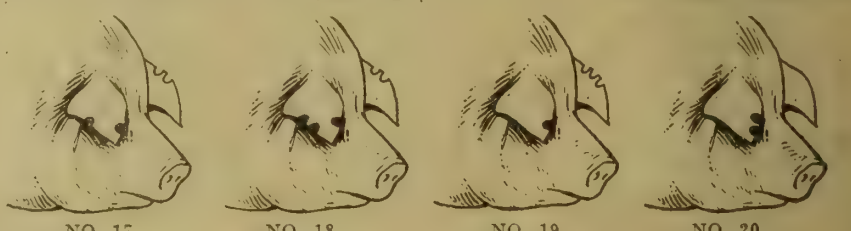
Simple System Makes It Possible to Identify Any Pig, Thereby Eliminating Error or Chance—Facilitates Keeping Records.

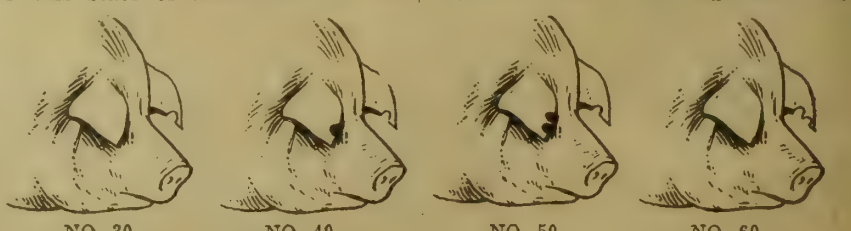
WHERE a number of pure-bred sows are kept for breeding purposes an ear-marking system becomes an absolute necessity. For a time a shrewd caretaker will be able to identify the pigs from the various sows, but it simplifies matters materially and absolutely eliminates all danger of making mistakes when the little pigs are marked early in life. There is the ear-tagging system by which the pigs can be numbered, but no confidence can be placed in this plan where the herd is large, as too many of the metal tags are apt to be torn out and when this occurs a mixup is inevitable.

Nearly all breeders who handle pure-bred hogs on anything like an extensive scale have the same system of marking and when one becomes accustomed to it it is just as simple a matter to read the number of a hog as it is to read the letters of the alphabet. Of course, in any marking system one must keep in mind that pigs from the various litters will be kept for breeding purposes year after year and it is not uncommon to find yearling, two-year-old, three-year-old and even older sows on the same farm, and for that reason in adopting a given marking system one must make allowance for this state of affairs and no two sows in the herd at any time should have the same ear mark, excepting they are litter mates. Special attention is called to this matter in a communication from one of our subscribers who asks for a system of marking that will not duplicate itself and thereby cause confusion. He states that he has one sow, for example, marked No. 10 and he is planning on keeping some gilts from this sow for breeding purposes. If these gilts are marked No. 10 there will be trouble later on, but as a matter of fact no such difficulty will occur if a good system of marking is adopted in the first place. By a study of the accompanying illustrations one may very soon comprehend the plan of markings we propose to describe at this time, so that when it is once put into use the herdsman or caretaker can tell instantly the number of an individual from the ear marks. Beginning in the spring with the first litter all the pigs in this litter should be marked with one notch on the lower side of the right ear. A special ear punch will have to be employed, although it is entirely practicable to cut a small three-cornered notch with a sharp pair of shears. The notch always should be made small, because if it is deep it will weaken the ear so that it is more apt to be torn later on. Litter No. 2 should be marked with two notches on the lower side of the right ear. By the simple process of addition, one and one added together make two. One notch on the lower side of the left ear signifies litter No. 3 and the pigs









in the third litter should be so marked. As one notch on the right ear means "one" and one notch on the left ear means "three," then it follows that litter No. 4 should be marked with one notch on the lower side of the right ear and one notch on the lower side of the left ear, because three and one added together make four. Continuing now the whole process is a matter of simple addition. Litter No. 5 will naturally be marked with two notches on the lower side of the right ear and one notch on the lower side of the left ear, because three and two added together make five. Two notches on the left ear would be the mark of the sixth litter, because three and three make six. Continuing, you find that two notches on the lower side of the left ear and one notch on the lower side of the right ear would be the mark for No. 7, while two notches on the lower side of the right ear and two on the lower side of the left ear would answer for litter No. 8. Three notches on the lower side of the left ear would be the mark of the ninth litter because three "threes" added together make nine. At this point we introduce a mark that has a different valuation. For example, one notch on the upper part of the right ear signifies "ten" and the tenth litter is so marked. All the litters marked between ten and twenty must have this notch on the upper part of the right ear and, in addition, use the same marks as were employed in the case of litters from one to nine. When the pigs are marked up to No. 19 then two notches on the upper part of the right ear will mean the twentieth litter. From twenty to twenty-nine repeat the markings that were used on litters from one to nine, and these, with the two notches on the upper part of the right ear, will indicate that the numbers are in the twenties.

And so the matter goes. The thirties are indicated by one notch on the upper part of the left ear, this being used in conjunction with the same marks as were employed on litters from one to nine. Mark the fortieth litter one notch on the upper part of the left and one notch on the upper part of the right ear and repeat the other markings from forty to forty-nine. When you come to the fiftieth litter the mark should be two notches on the upper part of the right ear and one on the upper part of the left ear, and between this number and fifty-nine use the same markings as were used on litters between one and nine. Litter No. 60 will be marked with two notches on the upper part of the left ear. Then use the markings from one to nine as given before and this will take you up to the sixty-ninth litter. By continuing a system of markings on the upper part of both ears it is possible to mark 100 litters without any confusion whatever and it is altogether likely, unless in the case of exceptionally large herds, that it will be practicable to start over again when this point is reached and begin with No. 1.

In connection with any ear-marking system there should be used a good-sized record book and a page of this book should be given over to every sow kept for breeding purposes. She will be designated by her ear number and we take it for granted that she will be recorded before or soon after she farrows her first litter so that her certificate number should also go on the same page, and so much the better if the name of her sire and dam can be given and their certificate numbers. At farrowing time make a record on this page of the number of pigs farrowed and also the number saved and the sex, and their ear marks should be indicated. If this plan is followed there will be no mix-up and it will absolutely eliminate guesswork, not only for the time being but for all time to come. This will make a permanent record and one that can be understood even by those who have had nothing to do with making it out.

Better Potatoes.

The yield of potatoes as commonly grown is small, discouragingly small. Comparatively few farmers exercise care in seed selection, and yet experiments in many places have proved conclusively that with no other crop will it pay better to exercise great and persistent care. It will not do to select good tubers for one year only, for while there will be a manifest gain by so doing it is in the following up all advance made that you get increased yield.

A system about like the following has been advocated and followed by some intelligent experimenters with surprisingly valuable results. Experiments are made on the principle that breeding to better types is always possible by selecting the best. Take any ordinary potato field where the yield is about 150 bushels per acre. At digging time select 500 of the best. If they are Early Ohio let them be of the right type, good typical shape. Then the following spring plant these selected tubers in a field by themselves. As they grow, watch them for signs of thrift and the contrary. Those which are manifestly weak and degenerate and also those which are first attacked by blight, destroy at once. Pull and burn immediately. When you come to dig in the fall, dig each hill by itself for purposes of comparison. Reject each hill that falls below a certain standard. Six or seven good potatoes of the right shape for the variety should be the standard. Suppose you have 1,000 hills and find only 100 which reach your standard. Well and good, you are after excellence. Save those 100 hills for the next effort.

Do not plant all of these selects. Pick out the best. If half of them are of the right size and shape you are fortunate. And for future results you must be exacting at this stage of the game.

The next season follow the same general plan. Destroy the weak and the blighting individuals. And in digging save only the best. About this time you will see a marked improvement, some of the hills being perhaps twice as good as in any previous year. Again select only the best hills for seed and the best tubers in those hills, even if you still have to reject half the crop.

Follow this system for five years and you will get crops with from eight to ten good potatoes per hill. You will then have spuds which will yield about 400 bushels per acre instead of 200 bushels or less. By continued care it is possible to push the yield even higher. Now this is no theory but the plan has been followed in practice by practical men who will vouch for the correctness of these statements. We can do better with our crops if we are willing to pay the price. It seems at first like puttering, unprofitable work, but at the last the gains come in abundantly.

Think a minute. What would you be willing to pay this spring for seed potatoes guaranteed to yield 400 bushels per acre? Why every acre planted with such seed means to you a surplus profit of from $150 to $200. There is a good field here for some enterprising farmer to go to raising pedigree seed potatoes and in time he can make a fortune selling to his neighbors who have no time for seed selection.

LUMBER
SHINGLES
PAINTS
HARDWARE } FOR THIS BARN SHIPPED ANYWHERE

$435 Size 32'x36' Price includes complete plans. Self-supporting roof. All lumber for walls, roof and hay-mow. Also all sash, hardware and paint. No extras. Generous measurements. 3 GREAT INVENTIONS AND MY EASY TO OWN SELLING PLANS

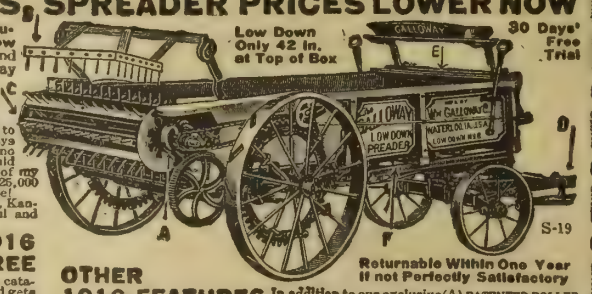
1. INVINCIBLE, PATENTED, POSITIVE ROLLER FEED. This great exclusive feature of the Galloway Spreader is what makes it superior to all others. It's a secret of our light draft. This perfect mechanical principle works the same as moving a house on rollers—a feature which alone adds $25 to the value of any spreader. Exclusive on the Galloway, but costs you nothing extra.
2. PATENTED AUTOMATIC STOP, UNIFORM CLEAN-OUT PUSH-BOARD. Worth $10 on any spreader. Exclusive, but costs you nothing extra on the Galloway.
3. NEW STEEL EVERLASTING BEATER WITH V RAKE. Gives wide spreading and tears the manure into shreds. This exclusive feature alone is worth $15. Costs nothing extra on the Galloway. Many other special 1916 features—read about them below.

AN EXTRA SPECIAL PROPOSITION ON 10,000 NEW GALLOWAY No 8 SPREADERS FROM *NOW* UNTIL SEEDING TIME

This extra offer is made with the idea of getting ten or more Genuine Galloway Spreaders in every township in the next few weeks! One Galloway No. 8 always sells from one to a dozen more! I make this new special offer to get 10,000 advertising spreaders distributed quickly, which will build up an enormous amount of summer and fall sales. I sell on terms to suit you. Six selling plans—cash or credit!

GALLOWAY'S SPREADER PRICES LOWER NOW

Get in on this special distribution advertising offer from now until seeding time. At the end of 12 months, if the Galloway Spreader has not paid for itself, if you have hauled out a hunded loads of manure or more, and it has not proven everything I say for it, I agree to take it back, pay freight both ways and RETURN YOUR MONEY, no matter on which plan you buy. Could I make this offer if I was not sure of my ground? Every sale backed by a $25,000 bank bond—an additional guarantee! Spreaders shipped from Waterloo, Kansas City, Council Bluffs, St. Paul and Chicago.



Returnable Within One Year if not Perfectly Satisfactory

NEW 1916 BOOK FREE
Get this big, new catalog. A postal card gets it. 250 pages. Printed in four colors. It tells how to handle manure with the least labor; how Galloway made spreaders famous; how a run-out, unproductive farm was turned into a "gold mine" crop producer. Ask for your free copy today.

OTHER 1916 FEATURES IMPROVEMENTS
In addition to our exclusive (A) PATENTED ROLLER FEED, (E) AUTOMATIC STOP, UNIFORM CLEAN-OUT PUSH BOARD; (C) EVERLASTING BEATER AND (B) V-RAKE, we have many other valuable features including (D) PRESSED STEEL TONGUE; DOUBLE CHAIN DIRECT DRIVE FROM REAR WHEELS; ENDLESS APRON; (F) FRAME WORK OF CHANNEL STEEL, trussed like a steel bridge; CUT UNDER FRONT WHEELS, short turning; EXTRA LIGHT DRAFT—two horses will do with this spreader what it takes three and four to do with other spreaders. Seat folds forward out of the way when loading. 60 to 70 bu. capacity, but so constructed that manure can be piled 18 to 20 inches above the top of the box and the spreader will successfully handle it.

In and Around Wisconsin

Walworth County Holstein Breeders Elect Officers—Potato Growers at Necedah Organize an Association.

Eau Claire county is pushing to the front as a potato county and a series of potato conferences have been arranged for that county the second week in April. The purpose is to interest the farmers more deeply in better potatoes and standard varieties and G. R. Ingalls, county agricultural representative, will be assisted by J. W. Hicks, president of the Wisconsin State Potato Growers' Association. The conferences will be held at Allen on April 12th, Fairchild on April 13th, Augusta on April 14th, Fall Creek on April 15th, Eau Claire on April 16th and Ludington on April 16th.

So well pleased were the Benson county (North Dakota) farmers with their first "traveling short course" through Wisconsin that they are planning to revisit the state in June. According to word just received from F. R. Crane, the agricultural extension agent who was in charge of the excursion from Benson county in February, the delegation will visit stock raising centers of Wisconsin and northern Illinois, paying particular attention to the methods used in fitting live stock for the Chicago market. On their former visit several days were spent visiting farmers in some of the leading districts of the state. A day was also spent at the university.

One hundred bushels of corn per acre was grown last year in the Washington county acre corn contest. This honor goes to Howard Schacht, of the town of Trenton, who carried off first honors in the acre contest. The winners in the contest have just been announced and Howard's corn under test germinated 100 per cent. The three silver cups for the best corn in the ear went to Everett Schubert, of Polk; Arthur Doll, of Addison, and Orrin Peters, of West Bend, in the order named. The town winners were: Town of Addison, first, Arthur Doll; town of Barton, first, Edwin Moldenhauer; second, Erwin Moldenhauer; third, Edwin Techtmann; town of Erin, first, Henry Simon; town of Polk, first, Everett Schubert; second, Walter Thiel; third, Raymond Storck; town of Richfield, first, Walter Lofy; second, Joseph Wiedmeyer; third, B. Mueller; town of West Bend, first, Orrin Peters.

The Walworth County Holstein Breeders' Association held its annual meeting recently at the court house at Elkhorn and elected E. B. Watrous, of Troy Center, president; D. E. LaBar, of Delavan, vice president; L. G. Rockwell, of Elkhorn, secretary, and M. E. Cusack, of Darien, treasurer. J. G. Voss, of Elkhorn, was named a director. About thirty breeders were present and it was decided to hold a summer meeting and picnic in June at the farm of Mr. LaBar, who extended an invitation. Members of the Elkhorn Booster Club will be invited in order to bring the business men and the farmers closer together. Dr. O. H. Eliason explained the plans for the accredited tuberculin-tested herds' list and the plan was approved. W. L. Baird, secretary of the Waukesha County Holstein Breeders' Association, told of the work of the Waukesha organization and L. L. Oldham, county agricultural representative, discussed the subject "Quality First."

Potato growers in the vicinity of Necedah, Juneau county, organized the Necedah Potato Growers' Association at the recent potato institute held in that city. Fred Rattunde was elected president and John A. Loescher was chosen secretary. The institute was held on March 20th by J. W. Hicks, president of the state association, and was very well attended. Mr. Hicks strongly advocated the growing of a few standard varieties, those best adapted to that locality. He suggested four early and four late varieties which have been found good for Wisconsin and the new association decided to secure certified seed for its members. Rural New Yorkers and Green Mountains will be given a trial this year by the members. The early varieties suggested by Mr. Hicks are the Early Ohio, Early Rose, Irish Cobbler and the Triumph. Late varieties suggested are the Burbanks, Green Mountain, Peerless and the Rural New Yorker. Potato diseases and remedies were also discussed and the association plans to carry on an active campaign this year for better potatoes.

The annual meeting of the Taylor County Fair association at Medford recently resulted in the election of the following officers for the coming year: J. H. Wheelock, president; John Gamper, vice president; Herman Koehler, treasurer; J. C. Hoffman, director; John Kraemer, director; Herman Leicht, director. R. A. Kolb was elected superintendent of stock.

Prosperity in Canada

$900,000,000

in New Wealth Added in 1915

ENORMOUS CROPS and LOW TAXATION Make Farmers Rich

CANADA, enjoying wonderful prosperity from the products of the farm, the orchard, and the centers of industry—Canada has come into her own. No country wrote a brighter page of history in agricultural and industrial development during 1915 than Canada. All industrial plants working overtime. Wheat average, 36.16 bushels per acre in Alberta; 28.75 bushels per acre in Saskatchewan; 28.50 bushels per acre in Manitoba. All other grains showed similar large yields per acre. Taxes average $24 and will not exceed $35 per quarter section. This includes all taxes. No taxes on improvements.

Come and Get Your Share of This Prosperity

—the greatest wealth-producing era the Dominion has ever known. Free schools and full religious liberty. Good climate. World-renowned livestock. Prizes won at International Fairs prove this. Here is your opportunity! What chance have you to provide a farm for your children in your present location, where land prices are so high?

Get Your Farm Home from the Canadian Pacific Ry.—20 Years to Pay

Good land from $11 to $30 per acre. Irrigated lands from $35, and the Government guarantees your land and water titles. Balance after first payment extended over nineteen years with interest at 6%. Privilege of paying in full at any time. Long before final payment becomes due your farm should have paid for itself.

$2000 Loan in Improvements. We will lend you up to $2000 in improvements in certain districts with no security other than the land itself. Particulars on request. Twenty years for repayment of loan with interest at 6%.

Ready-Made Farms for Sale. Farms which we have developed by providing house, barn, well and fencing and in some cases cultivation for sale. Special easy terms.

$1000 Loan for Livestock. In defined districts after one year's occupation under certain conditions we advance cattle, sheep and hogs to farmers up to a value of $1000.

We Want You, We Can Afford To Help You. We own the land. We want the land cultivated. Our interests are mutual. Buy direct and get your farm home from the Canadian Pacific Railway. Send for free book.

J. S. DENNIS, Assistant to the President
Canadian Pacific Ry.

DAIRY

Sanitary Utensil an Important Factor.

In the effort to produce sanitary milk, much attention is given to reducing the number of bacteria to a minimum. From the time the milk leaves the milk glands until it is placed in the final vessel in which it is sold, it is exposed to contamination through many sources.

With this fact in view, the investigation of the utensils as a source of bacteria in milk has been undertaken by the dairy department of the University of Illinois. The result of the investigation shows that when utensils are cleaned in just the ordinary manner, which is found in all too many instances, where the milk pails are washed in common with the supper dishes, and not sterilized with boiling water or steam, a very large number of bacteria are added to the milk.

The extent of the contamination of milk was brought out in one of the experiments in this investigation. In this experiment all of the vessels were steamed before each milking for fourteen days, and the samples of milk were taken as it was passed into the respective utensils.

During the following two weeks the samples were taken with the utensils being washed but not steamed. The results are summarized in the following table:

	Bacteria per cc
UTENSILS STERILE.	
Milk leaving barn	2,277
Same milk, one hour later, bottled	3,875
UTENSILS NOT STERILE.	
Increase due to three pails	57,077
Increase due to strainer	15,353
Increase due to clarifier	172,763
Increase due to cooler	19,841
Increase due to bottler	247,611
Total in bottled milk one hour old	515,200

Heretofore stable conditions have been considered responsible for contaminated milk. In this experiment only 2,277 bacteria were due to barn conditions, and more than a half million bacteria were introduced into the milk through the agency of washed, instead of steamed utensils.

We cannot dodge this experiment, neither give it a passing thought and drop it with the comfortable assurance, "It's all very well, for theory, but of no practical use in everyday life." In a lesser scale it will apply to anyone who keeps even one cow. Bitter milk, streaked butter, stringy milk, milk that curds before it becomes sour, cream only a few days old that becomes rancid—all this and much more could be traced directly to slipshod washing of the utensils.

Milker to Blame For Kicking.

To the Editor:—Most bad habits are detrimental to the individuals that possess them, but in the case of the kicking cow it is the milker who pays the price by the loss of his temper, his patience and sometimes his religion, to say nothing of the milk which is spilled. In nine cases out of ten, however, the milker is the direct cause of the trouble, for he has been careless during the first two weeks of the heifer's motherhood.

The reason that some cows learn to kick and others do not when milked by the same person is easily explained. Cows are like people, some are much more sensitive than others. The moment one finds that a heifer is inclined to kick she should be milked as carefully as possible. The teats should be squeezed firmly, but gently, for the opening through which the milk flows is frequently quite small at first. It should be remembered, also, that there is always more or less inflammation in a heifer's udder; in fact, many of them suffer with caked udder to some extent, hence very little pressure causes pain.

Another reason for the kicking habit is the long hairs which surround the teats of some heifers. In most heifers and cows these are short, but when they are long it is extremely difficult to keep from pulling them while milking. To realize how severe the pain is it is only necessary for one to catch a bunch of his own hair and pull it sharply. A fine sensitive cow cannot stand such pain, so she kicks in self-defense. These long hairs should be kept clipped from the udders of both young and old cows. If the milker fails to recognize these simple rules in handling a fine cow he should kick himself and not the cow.

In the case of an obstinate kicker that kicks from mere habit the following named device will enable one to quickly and surely fasten her to a complete standstill, and to the comfort and safety of the milker. It consists simply of a small, tough pole, just long enough to reach in front of the cow with the butt end fastened to the stanchion with a strap. The small end of the pole should reach out two or three feet behind the cow. Crowd the cow over against the end partition, swing the small end of the pole over against the cow and fasten it with a strap. There should be a buckle on the strap so that the fastening and the loosening can be quickly done. The pole should be just high enough on the side of the cow's flank so as not to interfere with the milking. With this arrangement any kicker can be milked with the minimum of trouble. W. H. U.

No Longer Two Acres Per Cow.

To the Editor:—Long before the commercial side of the cow had been well developed she was considered almost sacred. It mattered not how poverty stricken a family was, if there was a cow about the premises it meant that the babies were fed and fed with the one food that is perfect. Since the beginning of time man has depended on the cow as the mainstay of the family.

Time was when the cows were permitted to wander where they would. Who does not remember the tinkle of the bell in the distance—the peculiar tinkle that belonged to our herd alone? It may be that the herd was only a short distance from us, but there were trees then, and only by using the intermittent tinkle as a guide did we locate the perverse creatures, who fully understood that all there was for it was to turn towards home.

Later there were the prairie farms that boasted not of fences, lots or trees and the quiet pastoral scene was broken up. No longer was the kine permitted to "run at large." Instead, the cows were staked with a long rope attached to an iron stake driven into the ground. There were many waste places on all farms in those days and the cow converted what would have been waste into the indispensable products of life.

Another decade and people had started "tame pastures." It was easier work, too, and in some cases farmers had the hardihood to keep as many as four cows. To be sure, butter was only about 10 to 15 cents a pound, but then, you see, everything under the sun was on a similar basis, and so why should "we worry?"

The price of land mounted skyward and then it was that farmers "could not afford" to keep a couple of acres of pasture for a cow when the land put into corn would "cash in" many times the value of the products from the cow. It was a practically virgin soil. No thought was given to the future and many times farms could be found that grew corn and corn alone—oats, wheat and clover did not "pay out."

For the most part, the land that was rolling and dry had been improved first. All the drainage was very crude and the lower land would "drown out." After another decade of indifferent culture, in which the manure heap smoking behind the barn played no important part, it was discovered with some alarm that the fields were getting "thin." It was a long, toilsome, discouraging road from this stage to the present, and through it all the cow has played the all-important part.

No longer is it necessary to apportion a couple of acres for pasture and dry feed six months in the year besides. The writer was privileged to see this statement in black and white backed up by the speaker's own practical experience, where everything went "over the scales" and was recorded in a book, such as every farmer should keep.

The speaker first told the audience how he grew alfalfa, then some good, hard facts about the silo. Told us how two cows could and had been kept at their place on one acre of silage per cow each day and fifteen tons to be produced from each acre, which is a very conservative estimate: $40\times2\times365=29{,}200$ pounds required for two cows one year. $15\times2{,}000=30{,}000$ pounds per acre. $30{,}000-29{,}200=800$ pounds over the stipulated amount for a cow.

The speaker, who is authority, not from a theoretical basis but from practical experience, does not advise this for best results. Cottonseed meal or alfalfa are recommended to balance the ration.

Today the dairy cow is reclaiming our farms, putting up modern improvements, educating our boys and girls for their life job, making possible many luxuries that could not otherwise be afforded, and who is it that does not count on the weekly cream check from which to buy the necessities—"running expenses," as it were?

Given a silo, a cream separator,

JERSEYS IN WINNEBAGO COUNTY.
Three generations on the L. E. Brunson farm. Mr. Brunson is a member of the Winnebago County Cow-Testing Association.

Right Now
you need a
DE LAVAL
CREAM SEPARATOR

1st—If you are still using some gravity or setting process of creaming—

BECAUSE your cows have likely freshened now and your supply of milk is greater.

BECAUSE your spring work requires every minute of your time and a good cream separator will be a great time and labor saver.

BECAUSE your young calves will thrive best with warm, sweet separator skim-milk.

BECAUSE with your increased milk flow your greater waste of cream, without a good cream separator, must run into more money than you can afford to lose.

2nd—If you have a very old De Laval or an inferior separator whether new or old—

BECAUSE the losses of the poor separator from incomplete skimming, and the tainted product of the hard-to-clean and unsanitary separator mean most when your volume of milk is the greatest.

BECAUSE of the ample and "more than advertised" capacity of the De Laval, you can separate more quickly and save time when time means most to you.

BECAUSE an Improved De Laval Cream Separator is so much simpler and more easily handled and cared for than any other, and you can't afford to waste time these busy days fussing with an inferior or half worn-out machine.

BECAUSE the De Laval Separator of today is just as superior to other separators as other separators are to gravity setting.

Let the De Laval start saving cream for you right now. See the nearest De Laval agent at once, or if you do not know him, write us direct for any desired information.

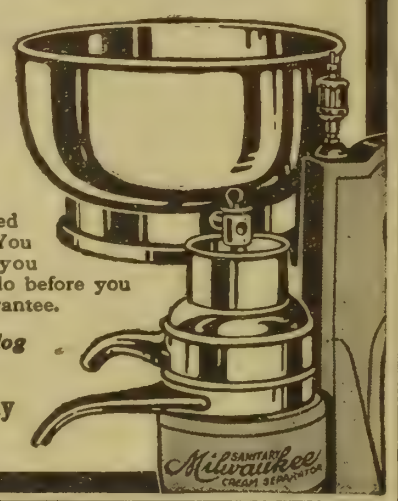
THE DE LAVAL SEPARATOR CO.
165 Broadway, New York 29 E. Madison Street, Chicago
50,000 BRANCHES AND LOCAL AGENCIES THE WORLD OVER

SANITARY Milwaukee CREAM SEPARATOR

WHEN your herd grows you don't need to buy a new separator, if you use a **Sanitary Milwaukee.** Simply get a larger capacity bowl. If you have only a few cows, the 500-lb. bowl will fill the bill—as your herd grows the 750-lb. or 900-lb. bowl will take care of your requirements. It's the only separator made that "Grows with the Herd."

Gets More Cream With Half as Many Discs

The skimming bowl in the **Sanitary Milwaukee** is a wonder for quick, easy, clean skimming. The discs are made of rust proof aluminum. Because of their tapered thickness and the proportional feed slides, the **Sanitary Milwaukee** does better work with only half as many discs as in other separators. The discs are ***not numbered.*** Put them on bowl core in any order. There are no holes or pockets to catch and hold impurities. The smooth aluminum discs are as easy to wash as a coffee cup, no trouble at all to thoroughly clean—not ***merely rinse*** them.



Certificate of Test With Every Outfit

Every Sanitary Milwaukee bowl is tested with whole milk before it is shipped. You get a sworn certificate of this test—you know exactly what ***your*** separator will do before you buy it. You also get an iron-clad guarantee.

Scandinavia Finishes Year of Testing.

To the Editor:—The Scandinavia Co-operative Cow-Testing Association, which comprises thirty-one herds in the vicinity of Glenwood City, St. Croix county, has just finished another successful year of testing and the following data shows the average for each individual herd and the average for each cow for the year. There were 405 cows which completed the year's work and the highest record was made by a grade Guernsey who produced 9,521 pounds of milk, testing 4.72 and making a total of 449.5 pounds of butter fat. A grade Short-horn was second with 9,963 pounds of milk testing 4.45 and making 443.5 pounds of butter fat. A native took third honors with 11,677 pounds of milk testing 3.74 and making 437.4 pounds of fat.

HERD RECORDS FOR THE YEAR.

Herd No.	Average lbs. milk	Average test	Average lbs. butter fat	Gross returns	Average cost of feed	Average profit	Return for $1 feed fed
1	6,849	3.37	230.90	$ 74.68	$52.36	$22.32	$1.43
2	7,591	3.54	268.48	86.63	54.47	32.16	1.52

31	7,398	3.41	252.66	83.40			
Total	194,902		7,965.07	2,679.33	1,237.74	1,358.19	2.02
Average per cow	6,287	4.09	256.94	86.43	41.26	45.27	

The highest record of any of the registered animals was 423.1 pounds of fat from a registered Guernsey in the herd of Harry Herbert and a registered Holstein with 359.8 pounds of fat and owned by H. A. Livetan took second among registered cows.

From the 405 cows which finished and completed a year's work six cows produced from 400 to 450 pounds of butter fat, nineteen cows produced from 350 to 400 pounds of butter fat, sixty-five cows produced from 300 to 350 pounds of butter fat, 131 cows produced from 250 to 300 pounds of butter fat, 111 cows produced from 200 to 250 pounds of butter fat, fifty-eight cows produced from 150 to 200 pounds of butter fat, twelve cows produced from 100 to 150 pounds of butter fat. There were three cows which did not reach 100 pounds of butter fat and four cows which did not pay for their feed. Some of these were sold at once, others will be as soon as they start weeding out cows. In most instances where a cow does not pay for the feed and a little more it is on account of improper care and feeding.

The above table shows the herd records for the year.

Farmers who are in a testing association feel more interested in dairying and take better care of their cows and keep the stables as clean as possible. They try to do all they can to make better dairy products. They get to know each individual cow and can weed out the poorest cows. Some farmers started in with registered stock and will soon be able to do official testing. Most of the farmers own or use pure-bred sires. A pure-bred sire should always be used.

There would be more testing associations if the farmers knew the work they are doing and what it could do for them. Some of the farmers of this association have tested three years and the majority of them have tested two years or more. They have full records of each cow of one lactation.

A grade Guernsey made the biggest returns bringing $3.29 for every $1 worth of feed. The biggest profit was $102.83 by a grade Guernsey. A registered Guernsey had a total profit of $98.53. C. G. Carlson, Tester.

O. H. Grenlie, Pres.

Good Waupaca Report.

To the Editor:—I am herewith enclosing my report for February for the Waupaca and Butternut Ridge Co-operative Cow-Testing Association. Fifty-five cows produced more than forty pounds of butter fat. Two did better than sixty pounds and fifteen produced above fifty pounds. Ira Harley had nine grade Holsteins that averaged 50.7 pounds and Herman Becker had eight grade Jerseys that averaged forty-five pounds. The best producer during the month was a registered Guernsey in the herd of C. A. Peterson and G. R. Miller. She gave 1,172 pounds of milk testing 5.9 and producing 69.1 pounds of fat.

I wish to thank you very much for the space you are giving these reports. Our February list of forty pounders follows:

Owner, name and breed	Age	When fresh	Lbs. milk	Per cent fat	Lbs. B. fat
C. C. Boyce					
Fannie, G. H.	10	1-25	1300	4.3	55.9
Roddie, G. H.	9	10-9	2151	3.4	42.5
Trixy, G. H.	5	11-25	1344	3.8	51.1
Crawler, G. H.	9	1-14	1182	4.6	54.4
F. T. Jorgenson

312 Endicott Bldg., St. Paul, Minn.

PRICES CHOPPED

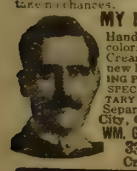
10,000 NEW 1916 GALLOWAY SANITARY CREAM SEPARATORS

SPECIAL PROPOSITION from NOW till GRASS—in addition to my new low prices. My way of opening new territory, as one separator sold in a neighborhood always sells from one to twenty-five more. EVERY GALLOWAY SEPARATOR is equal to if not better than other separators selling for $75 to $95. Users say "way ahead of others." I only ask one thing—before you buy a separator of any make, kind or any price, get my big book; look out the separator you want, try it 90 days, 180 times, at my expense. If you decide to keep it you don't have to. I'll give you the choice of 5 open, fair and square selling plans and guarantee my separator for 10 years against defective workmanship and material and a $25,000 bank bond backs every sale. You take no chances.

4 Good Sizes

4 New Prices

R-26



MY NEW 1916, 250-PAGE BOOK FREE

Handsomely printed, beautifully illustrated in 4 colors. Tells all about my new 1916 Sanitary Cream Separators, how I build them, gives my 4 new low prices on 4 new sizes, also 5 EASY SELLING PLANS, cash or terms, etc. I'll also send my SPECIAL PROPOSITION ON 10,000 GALLOWAY SANITARY CREAM SEPARATORS. Drop me a postal today. Separators are shipped from Waterloo, Kansas City, Council Bluffs, St. Paul or Chicago.

Geo. L. Moss, Official Tester.
Wm. Kneip, Secretary.

The Geneva Report.

The Wisconsin Farmer is indebted to Charles L. Turney, secretary of the Geneva (Walworth county) Cow-Testing Association, for the February report. Sixty-five cows during that month made the forty-pound list and nineteen two year olds produced thirty pounds or more of butter fat. Frank Drake is tester for the association, which is among the very best in the state. The report for the twenty-nine days ending February 29th of the cows which gave more than forty-five pounds of fat and the two year olds that produced more than thirty pounds follow:

Good-by, Guess Work

THE New Sharples "Suction-Feed" is the only cream separator which eliminates guess work from cream production. All other separators have to be turned at exactly the speed indicated on the crank or they will lose from 7 to 13 pounds of butterfat per cow per year. The Purdue Experiment Station and other scientific investigators have proven these figures (see Bulletin No. 116, Vol. 13.)

This "guess" speed is used by 19 operators out of 20, because it is impossible to turn the crank at exactly the right speed.—It is much easier to turn it slower—and, whenever you do, you lose cream. Even a speed indicator will help but very little, as you won't and can't watch it every minute.

So we say to you dairymen: Quit guessing about your separator speed and your separator profits. Use

THE NEW SHARPLES SUCTION-FEED

Separator and know that you get *all the cream all the time.*

Whether you turn faster or slower, the bowl of the Suction-Feed *drinks in just the right quantity of milk.* The feature is entirely automatic; if you are tired, you turn slower (which is easier) and, if in a hurry, you turn faster and finish so much sooner. No matter how you turn the New Sharples always skims clean.

The Sharples cream is always of *even thickness,* whether you turn fast or slow. The Supply can is but knee high so you can fill it without any back breaking effort. The three-piece Sharples bowl is lighter and simpler than any other—*no discs to wash.*

All these money-saving and trouble-preventing features are described in a handsome catalogue; ***"Velvet" for Dairymen.*** Send for a copy, now, while you think of it. Address Dept. 44.

WISCONSIN BANKER-FARMER

BANKERS AND FARMERS PRESENT AT MEETING AT COLLEGE OF AGRICULTURE LAST WEEK UNDER AUSPICES OF THE WIS

CO-OPERATION between bankers and farmers in Wisconsin was never better expressed than it was at the banker-farmer excursion to the college of agriculture at Madison last week. More than 500 bankers and farmers availed themselves of this opportunity to visit the college and the excursion was so successful that in all probability it will be repeated next spring and made an annual affair.

The excursion was under the direction of the Wisconsin Bankers' Association which during the past few years has done splendid work in spreading throughout the state the doctrine of better farming and better breeding. The registration lists showed an actual attendance of 468 visitors, but it is estimated that at least fifty, possibly 100, failed to register, which places the total attendance well above the 500 mark. The excursion was handled entirely by the bankers and great credit is due them for bringing together so large a body of farmers, at least 90 per cent of those present being farmers. Forty-one counties in the state were represented.

For several years the college of agriculture has been receiving and entertaining delegations of farmers, bankers and business men from other states who have traveled to Madison to learn what is being done for the Wisconsin farmer. So it occurred to Wisconsin bankers this winter that it would be a splendid movement if they could hold a similar excursion made up of Wisconsin farmers and bankers. The matter was quickly approved by the college and the excursion of last week was the result. "Know Wisconsin" would have been a splendid slogan. The bankers agreed that if delegations from other states found it valuable to visit the college it would be doubly valuable to Wisconsin bankers and farmers. This was the first excursion or meeting of its kind ever held in Wisconsin and the success was beyond expectations.

Honors for the largest delegation went to Marathon county, where A. W. Von Berg, banker at Mosinee and chairman of the agricultural commission of the state association, interested sixty-eight farmers in the excursion. Mosinee alone sent fifty-six farmers and, as Mosinee is a full day's ride from Madison, it is all the more noteworthy. This delegation came in three special sleepers which were sidetracked near the college and they lived in these sleepers during their stay in Madison. The La Crosse county delegation came in one special sleeper and part of the way to Madison the La Crosse and Mosinee sleepers made up a special train. Mosinee and Mr. Von Berg set a new precedent for excursions of this kind and Mr. Von Berg believes that next year he can bring on such a trip a trainload of farmers from his own district.

The purpose of the excursion was twofold—first to point out to the visiting farmers and bankers the new things in agriculture; the value of good breeding, not only in live stock, but also in grains; the value of good feeding, etc., and secondly, to bind closer together bankers and farmers in this co-operative movement that is gaining headway rapidly in this state. The Wisconsin spirit was manifest on every hand and this is the spirit that is making this a greater agricultural state every year. The bankers realize that in aiding the farmer they are contributing their share and at the same time helping themselves. The valuable man in any business or any community is the man who can and will co-operate with other men and men succeed only as they utilize the services and ideas of other men. The meetings at Madison were held in agricultural hall and the demonstrations in the university farm buildings. The entire facilities of the college were placed at the disposal of the visitors and the writer doubts if a better opportunity was ever afforded during an equal length of time to learn of the work of this institution. The two-day program was crowded with demonstrations and addresses of interest to the bankers and farmers and the live stock demonstrations on the forenoon of the second day were eye openers to many and no doubt scores of bankers went home with a better idea of how to loan money to a farmer and scores of farmers and breeders returned with new ideals and determined to breed better stock. Five sessions were held and at each session a banker presided as chairman. S. M. Smith, of Janesville, president of the Wisconsin Bankers' Association; J. R. Wheeler, of Columbus, vice president; C. R. Thomson, of Richland Center, chairman of the sub-committee of the association; George D. Bartlett, of Milwaukee, secretary, and H. J. Maxwell, of Princeton, member of the agricultural committee, presided.

H. J. MAXWELL, PRINCETON.

J. R. WHEELER, COLUMBUS.

S. M. SM

FIVE BANKERS WHO SERVED AS CHA

Dean H. L. Russell opened the program with an explanation of what the banker-farmer movement means to Wisconsin. He pointed out that all increase in knowledge is gained as a result of observation and experiment. The state has provided for the experimental work through the college, as it would be impracticable for every farmer to make his own experiments and the net cost of the college, he said, was a dime per $1,000 of assessed valuation of property. These experiments, he explained, are of little value if the results cannot be scattered broadcast and in this work the Wisconsin bankers have been co-operating with splendid results. Of the group which has assisted in carrying the results of experimental work to the farmers he paid the bankers' association the following tribute:

> Of this group, the largest and most important factor has been the Wisconsin State Bankers' Association. For the past six years this organization has carried on a series of corn and grain contests through the country banks. This work has been extended to live stock, introduction of better cattle, organization of cow-testing associations; in fact, all phases of agriculture and rural life. The influence exerted through the efforts of local bankers, backed by a strong state association has resulted in bringing the town and the country nearer together, ha... country, done much to intro... tions, and dignify the profess... distributed, at their own ex... bulletins a month, and now t... such co-operation it is no w... as in the vanguard of progres... campaigns of this type cann... constructive development of...

MEETING HELD AT MADISON.

BANKERS' ASSOCIATION. MORE THAN FIVE HUNDRED DELEGATES ATTENDED THE LECTURES AND DEMONSTRATIONS

bettering conditions in the ess methods in farm opera- ning. About 100 banks have e 30,000 specially prepared rganized this meeting. With onsi is regarded by many ltural movements. Energetic e a marked influence on the nt agriculture.

ation, discussed the value of aners and bankers that they etter breeding in live stock. he said, are worth $300,000,- herd, $18,000; if as well as the best herd, $22,000. The experience of one farmer was also cited. The first year he had ten cows under test which averaged 299 pounds of fat; made a gross return of $61 at a cost for feed of $34 and a net profit of $27. The second year this same farmer with seven cows averaged 379 pounds of fat, $119 gross returns, $45 for cost of feed and net profit of $77. This was the result of herd records, for it convinced the farmer he was not feeding heavily enough and that he had to do some weeding out. The value of such records to the banker is that they increase the farmer's profits and in turn the bank deposits. He cited one creamery in his territory as an example of how a bank might be benefited. Six hundred and thirty cows supply this creamery with 82,000 pounds of milk, but if these 630 cows were as good as the fifteen selected cows the creamery would handle just twice as much milk from the same number of cows. This would mean cream checks would be doubled, and the business of the creamery doubled at a very small additional expense.

How- as the fifteen selected cows as well as the best in each

Farm management was discussed by D. H. Otis, in which he outlined the work of the state contest and the value of farm records to a well-conducted farm. G. C. Humphrey discussed the management of the dairy herd, followed by a demonstration of feeding the university herd.

B. F. Harris, president of the First National Bank, of Champaign, Ill., and chairman of the agricultural commission of the American Bankers' Association, discussed the duties of the bankers to the farmers and diversified farming, which was reported in The Wisconsin Farmer last week. J. C. Fuller discussed swine management; Dr. A. S. Alexander gave his illustrated lecture on horse breeding, and J. C. Halpin explained the care of farm poultry. The farmer, he said, should strive for the egg-laying strains and not the show birds and also those breeds which develop easily for meat.

The first demonstration on the forenoon of the second day was making the hens lay which was held at the poultry plant. Mr. Humphrey at the dairy barn explained the selection of a dairy herd and gave bankers some splendid pointers on how to judge a good animal from looks. The sheep stables were next visited and Frank Kleinheinz, the shepherd of the university flock, paraded out his best rams and ewes for demonstration purposes. He also explained certain feeding experiments now under way and predicted that the wool and mutton industry in Wisconsin is destined to increase very rapidly in the future.

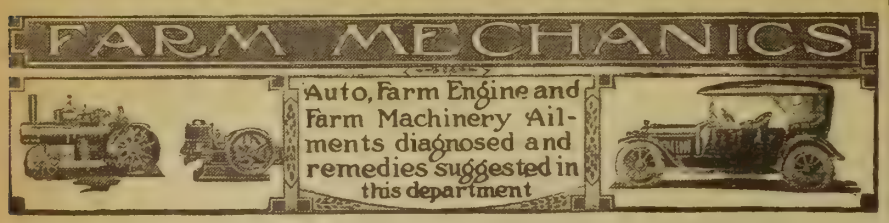
The swine barn was crowded to capacity when Mr. Fuller began his demonstration. The university at that time had twelve litters with a total of 106 pigs, so, as Mr. Fuller explained, those who looked for litters of fifteen were disappointed. The loss in these litters has been 14 per cent to date and Mr. Fuller urged very forcefully the importance of extra care of March pigs until weaning time. It is an unnatural time in Wisconsin for farrowing and improper care will send the losses very high. The day was cloudy and drizzly and he urged farmers not to let their spring pigs out on such days, although there is the attendant danger in keeping them up that they will overeat and from lack of exercise become slumpy and die. Therefore it is necessary to watch their feed very carefully. He used the brood sows to show how it is planned to put on from fifty to sixty pounds between breeding and farrowing time, as this is usually lost between farrowing and weaning and therefore urged good feeding of the sow right after she is bred. Dr. S. A. Beach discussed hog cholera, which, he says, causes 99 per cent of the losses in Wisconsin hogs after the weaning period.

Next the visitors filed into the stock pavilion for the beef cattle demonstration by J. L. Tormey and the horse demonstration by Mr. Fuller.

Mr. Tormey showed Hereford, Short-horn and Angus steers to emphasize contentions that the beef man should produce the types that the butchers demand and that to do this good breeding is very essential. He showed a yearling Angus weighing 950 pounds which had the breeding and had matured early in contrast to a cross-bred between an Angus and a Jersey. The difference was quickly noticeable and the difference, he said, was entirely in the breeding. He told of Wisconsin's standing at the Chicago yards and said that the farmer who is looking for the profits in the beef cattle business must look carefully to the breeding end.

Mr. Fuller trotted out the pure-bred draft horses belonging to the university and went fully into the question of breeding. Considerable interest was manifest in the draft foals shown and many questions were asked from the audience. Mr. Fuller said he had found it cheaper to produce the kind of horses he wished than to buy them and estimated the average cost of bringing a draft foal to 1,000 pounds at a year old at $64. He allows $20 for service, $35 for grain and $9 for timothy hay. Of the grain 20 per cent is bran and 80 per cent oats and is fed at the rate of twelve and one-half pounds per day after weaning. He gives all the timothy hay they can eat and for the seven and one-half months of feeding they average three-fourths of a ton. During the past year he has fed twice daily which he believes a little cheaper and just as satisfactory as feeding three times daily. Some crushed oats are fed and some whole oats, but Mr. Fuller said it made little difference. In summer the foals are turned out to pasture without grain. This feeding cost is based on seven and one-half months and is the average for producing the draft foal to 1,000 pounds with the mare working half time.

LOOKING OVER THE HORSES AFTER THE DEMONSTRATION.



QUESTIONS AND ANSWERS.

Storage Battery Capacity.

If I connect five six-volt, fifty-ampere hour auto storage batteries in series, what would be the voltage, amperage and wattage?

Answer.—The five batteries connected in series would give thirty volts, fifty ampere hours, 1,500 watt hours. Connected in multiple they would give six volts, 250 ampere hours, 1,500 watt hours.

Soldering Copper Wires.

Please tell me how to solder copper wires used in house wiring.

Answer.—Copper solders easily. Clean the wires by scraping with a knife or rubbing with sandpaper. Apply a little soldering fluid and rub the solder on the wire with a hot soldering iron. A good soldering fluid is made by dissolving zinc in muriatic acid. Sal ammoniac is often used as a flux to make solder stick to copper.

Wire for Magneto Winding.

Is enameled wire as good for magneto winding as cotton-covered wire? Can annunciator wire be used?

Answer.—Enameled wire is particularly suitable for winding spark coils, magneto coils, etc., where the coils do not have to be formed and where there is little danger of mechanical injury. It has the advantage that more wire may be wound in the same place than when cotton-covered wire is used. Annunciator wire may be used if a suitable size can be obtained.

A Friction Clutch.

Please tell me how to make a friction clutch that can be used on a six-horse-power marine engine. I do not need a reverse gear, but I would like to have a clutch.

Answer.—We advise you to write to the manufacturer of your engine, as they can probably furnish you a clutch. If not, some other engine manufacturer would do so. We would not advise you to attempt to make one unless you have most of the parts, as considerable machine work would be required and the cost would, therefore, be excessive.

Electric Light Bulbs.

Is there any difference between the construction of an electric light bulb that is to be used with a battery and a bulb that is to be supplied with current from a Ford magneto? How large a bulb can I use in a spot light that draws its current from a Ford magneto?

Answer.—There is no difference between the bulbs. A light bulb works equally well on direct or alternating current. Use a twenty-candle-power light. For a moderate engine speed use a sixteen-volt light. Increase the engine speed if the light does not burn bright enough. Too great a speed will burn out the light.

Grinding Ford Valves.

Please explain to me how to remove the valves from a Ford engine and how to grind them. Would also like to know if there are any especially particular points about taking a carburetor apart and cleaning it.

Answer.—You should send to the Ford Company for a "Ford Manual." This book is free to Ford owners and contains very clear instructions for removing the valves, grinding the valves and caring for the carburetor. The following general instructions apply to the grinding of any valve: By means of a pinch bar or other device compress the valve spring. The slotted collar or key at the end of the valve stem may then be removed, which leaves the valve free from the spring. Remove the valve and clean off the carbon. If a groove is worn in the valve seat file off the high places, taking care not to file the part of the seat that forms the joint. It is well to place a small spring between the valve head and the cylinder to lift the valve off its seat.

Having prepared the valve as above, obtain some valve grinding compound or mix a little emery flour and engine oil to form a thin paste. Apply a small amount of the compound or paste to the valve seat in the cylinder and on the valve. Be sure that none of the paste falls into the cylinder barrel. Using a very light pressure rotate the valve backward and forward on the seat about one-third of a revolution by means of a screwdriver or a brace. Lift the valve from its seat every eight or ten strokes. This allows the paste to work down and prevents ridges. Give the valve half a turn quite often so that the valve changes its position relative to the cylinder. This prevents low places in the valve seat. When the valve is perfectly ground a large number of very fine chalk marks on the valve seat will be rubbed off by giving the valve a very slight turn in the cylinder.

Making a Storage Battery.

Would it cost more to make a storage battery than to buy one? How is a twenty-volt battery made? How often would it have to be recharged to run a three-candle-power light?

Answer.—It would be more satisfactory and possibly cheaper for you to buy a storage battery. A twenty-volt battery has ten cells connected in series. A six-volt, forty-ampere battery would probably answer your purpose. This battery would run a three-candle-power light for about fifty hours without recharging.

Adjusting Rod Bearings.

I would like to inquire as to how tight connecting rod bearings should be adjusted. I put oil on my rod bearings and took them up quite snugly. After running the motor with the crank case cover off, the bearings were so hot that they could hardly be touched with the hand. My motor has a splash oiling system. Would you consider these bearings too tight?

Answer.—You probably have the bearings fitted a little too tight. New bearings should be fitted quite tight. When readjusting old bearings fit them just tight enough to produce a slight drag. They will heat a little at first, but will soon "run in."

Vulcanizers.

Is a steam vulcanizer better than one in which no steam is used? Is there any danger of the "Marvel" steam vulcanizer exploding? The water is sealed in it at the factory.

Answer.—The efficiency of a vulcanizer does not depend upon whether steam heat, gas or electric heat is used, but upon its ability to maintain an even heat at the required temperature. It is, as a rule, easier to regulate the heat with a steam vulcanizer, as there is a definite temperature for each steam gauge pressure. More depends upon the design of the vulcanizer than upon the method of heating. We are not familiar with the "Marvel."

A Tractor.

I am intending to make a small tractor from a single-cylinder, eighteen horse-power Cadillac. I intend to use thirty-six-inch binder wheels with eighteen-inch sprockets. Can this outfit be geared down enough to make three miles per hour on high gear? If so, how heavy a load would it pull? Would a six-horse-power stationary engine have more power than the auto engine at the same speed?

Answer.—For a speed of three miles per hour count on a speed of about thirty revolutions per minute for your drive wheels. Mount a jackshaft between your engine and drive wheels. Drive your eighteen-inch sprocket by a four-inch sprocket on the jackshaft. Drive the jackshaft by an eighteen-inch sprocket on the jackshaft and a four-inch on the engine. This gearing would give three miles per hour at an engine speed of 600 R. P. M. At this speed the engine should develop eight horse power, possibly more. It should pull a fourteen-inch plow. Your tractor would not pull much more than one-half of its own weight.

Reducing Voltage When Charging.

I note in your issue of January 27th you advise a party to use resistance when charging a six-volt battery from a fifty-volt generator. Why the resistance? I have a twenty-eight-volt storage battery light plant, using a thirty-ampere, forty-volt dynamo to charge with. I also have a six-volt auto battery, and have been charging it by cutting the light battery off and putting the six-volt battery on, only, of course, at a less amperage—about five to eight amperes, using no resistance. The voltmeter shows about forty volts when charging the light plant, and eight volts when charging the six-volt battery. Some parties say I should use resistance, while the man I bought it of says it is not necessary to use resistance. Kindly give me your opinion.

Answer.—From your letter we presume that you have a voltage regulator on your generator that will permit you to generate any voltage between eight and forty. In this case it would not be wise to use a resistance, but simply regulate the voltage to charge the battery at the proper rate. It would not do for you to charge your battery at forty volts, however, as such rapid charging would soon ruin the battery.

UPPER WISCONSIN

Wheat Growing in Upper Wisconsin.

Scores of questions such as the following have been received during the past winter by The Wisconsin Farmer and the college of agriculture at Madison: "We are considering the advisability of sowing a substantial acreage of wheat on our farm in Upper Wisconsin. Is this advisable? Do you consider the soil and climate favorable to the production of a profitable crop?"

This is only natural with the war-time advance in the price of foodstuffs, coupled with the urgent request of President Wilson that the American farmer be alert to do his share in shouldering the task of feeding the world.

Caution and prudence and a thorough study of the wheat situation should be the ruling factors in guiding Wisconsin farmers who contemplate going more extensively into the growing of the staff of life cereal. First, as a general statement, wheat can be sold for cash at all times, which is not the case with many other crops grown in the state. There are undoubtedly special instances, however, even where wheat can be grown well that, in order to supply local markets for seed and other purposes, other grains may be preferable.

RED CLAYS OF SUPERIOR REGIONS ARE WELL ADAPTED TO SMALL GRAINS.

The upper half of Wisconsin is in the "hard wheat belt." That is, the climate in normal times favors the production of hard wheat, either spring or winter varieties. Climate, the wheat men say, is to a great extent the determining factor so far as the quality of the grain is concerned. This is particularly true where wheat is grown in rotation with other crops in such a way that the soil fertility is kept high.

Wheat cannot be grown on all classes of soil. When grown in rotation wheat does well on heavy loams and red clays, but is not adapted to light soils. There is a belt of red clay south of Lake Superior, extending through parts of Douglas, Bayfield, Ashland and Iron counties which is well adapted to both spring and winter kinds. Another favorable area is in the east, along Lake Michigan. Still a third portion of the state, that lying in Polk, St. Croix and Barron counties, is pronounced good for wheat by such men as E. J. Delwiche and R. A. Moore. The southern and central sections of the state are in part adapted to wheat production, but the prevalence of dairy farming precludes grain growing to any extent, except in very limited areas.

Some of the clay soils in Upper Wisconsin lack nitrogen. The growing of clover in rotation with wheat will be necessary in order to supply that element. Hence this factor must also be taken into consideration.

Winter wheat is to be preferred to spring wheat in the Lake Superior country, providing enough help is available to get the ground in shape and the seed sown before September 10th. As a rule winter wheat has proved better than the spring varieties for Wisconsin in general under ordinary conditions, although in some parts of the southern counties there is danger of winter killing.

While spring wheat commands a higher price per bushel on the market, nevertheless winter wheat usually yields from five to ten bushels more an acre. Experiments with a certain new kind of spring wheat called the Marquis, which was bred in Canada and tested at the Wisconsin experiment stations at Madison and Ashland, have shown it to be far ahead of the common spring wheats in yield with the pedigree strains of wheat perfected by the station and so at the present no actual recommendations can be given in regard to the Marquis strain.

During the past six years, according to a statement by E. J. Delwiche, superintendent of the northern stations, extensive experiment work with wheat has been carried on at Ashland and Superior, and to a less degree at Conrath, in Rusk county. Co-operative tests on individual farms have also been tried. Yields of from twenty to thirty-five bushels have been obtained in trials at Ashland and Superior. Spring wheat has even given some higher averages than winter varieties there. Where winter wheat of the right variety was sown early fully as good results were obtained as with the spring wheat, however, in most cases.

As to varieties Mr. Delwiche says that only four of a possible eleven or twelve have made good under the rigid requirements. These are all hard winter varieties of the Turkey Red type. Kharkoff, Basca and Beloglina stand about in the order given in relative merit for this region. Padi, a beardless wheat from the land of the czar, gave good yields and showed wonderful vitality, but was quite subject to rust under conditions favorable to the development of rust fungi.

The Blue Stem proved to be best among the spring varieties. The Durum varieties were not found superior in point of yield to the flour wheats. Winter wheat of the Kharkoff variety was found best for the north-central sections and hence is the standard recommended by the station for this particular climate and soil type. At Conrath a yield of twenty bushels an acre was obtained two years ago.

Much has been done in the way of purifying the different strains and bringing them up to a standard uniformity in the matter of time of maturity as well as to improve the yielding power. Over 400 different pure line selections were tried, only a few of which have been saved for further work. Numerous crosses have been made with the object of creating new strains with unusual frost-resistant power and immunity from rust.

Wisconsin is twenty-sixth in the rank of wheat growing states. Probably it will never attain a high position in this field, save perhaps in point of local record yields per acre. Still wheat is something that is always in demand, and, while dairy farming may continue to push the great cereal out of the new regions to some extent, the late flurry in prices has caused many people to shift their gaze from the balanced ration sheet to the pit quotations and wonder if it means anything to them.

There is something about a neat letterhead that gives standing to a man who is obliged to do considerable corresponding in connection with his farm work. In the first place, the farm should be named and then if one is breeding pure-bred stock the name of the breed as well as the name of the farm should appear on the letterhead. It goes without saying that the name of the owner should also appear. Sometimes in our hurry we do not write very plainly and in that case a letterhead helps out immensely. Two or three dollars will buy enough paper to do a great deal of corresponding and it is always a good investment.

Between Today and Tomorrow—

AFTER a day's work in the blistering hot sun, when your muscles ache clear down to the tip of your toes, and the bed-room is so hot that you hate the very thought of "turning in"—imagine the effect of a five or ten mile trip on a

Harley-Davidson

Gliding over the road, up hill and down dale with the cool breeze fanning your cheeks, the troubles of yesterday and tasks of tomorrow are soon forgotten. Breathing in great draughts of dewladen air, you remember only the present and that it is good to be alive—that's ***Motorcycling***.

The Harley-Davidson, you know, is the motorcycle that smashes speed records, climbs "impossible" hills and gives "the longest run for the money". You'll probably want a sidecar, too. It will assure you of companionship on your pleasure trips when you want company—if you prefer to ride alone, it's detachable at a moment's notice. Don't let the cost of the Harley-Davidson worry you. Most dealers will make terms to suit your convenience.

If you do not know your local Harley-Davidson dealer, write for illustrated catalog.

HARLEY-DAVIDSON MOTOR COMPANY

Producers of High Grade Motorcycles for more than Fourteen Years

1183 A. Street, Milwaukee, Wisconsin

Easy for Your Horses

THE LIGHT RUNNING WEST BEND WAGON

In buying a wagon, there are three points you must look for—good materials, good workmanship, *right price*. Equally important, you want a *light running* wagon—one that will run so easily that horses do not waste energy pulling it. You get all these fine points—good materials, good workmanship, right price when you buy The Light Running West Bend Wagon

25% Lighter Draft Guaranteed

The West Bend is the lightest running farm wagon on the market. It is known for its exceptional qualities. Improved S. & S. skeins with large, smooth bearing surfaces insure complete lubrication and easy running. Easy on horses. Enables you to haul maximum load. *Ask Your Dealer* to show you the Light Running West Bend Wagon. Write us for catalog showing full line of wagons for every farm purpose. Mailed *free*—write today.

Brightening the Kitchen.

One of our Home page readers writes as follows:

I would like some advice about painting and cleaning a kitchen. The kitchen is on the north side of the house and has only two windows. It is painted a very dark gray and is so gloomy it is no pleasure to work there. The woodwork and all is gray. I would like a color for walls and woodwork that would be cheerful and would be suitable for a kitchen.

No matter what the walls of this kitchen are to be we would suggest

RAYMOND HENRY SMITS.

At the age of three months Raymond weighed sixteen pounds. He is the son of Mr. and Mrs. Peter Smits, and his mother says that fresh air and good, pure water have helped to keep him strong and well.

white enamel for the woodwork. It will probably take several coats to cover up the dark gray, but the result will be well worth the effort. White paint is no harder to keep clean than dark paint. The only difference is that soil and finger marks show up plainer on the white and we are apt to be more particular about keeping it spotless than is the case with dark paint. An excellent cleaner and polisher for white woodwork, or any other kind of woodwork for that matter, is made of equal parts of sweet oil, turpentine and vinegar. You can mix it yourself in any quantity. Always shake well before using and rub perfectly dry with a clean, soft cloth, otherwise a little of the oil may be left to catch the dust. This does not dull the finish as does soap and water. If you need to use soap, use the polish immediately afterward.

If the walls are to be painted they might be made a light buff or cream, with the ceiling a trifle lighter shade. This will give a little the effect of sunshine and is more cheerful for a north room than gray. Or if paper is to be used on the walls, why not get one of the small tile designs in blue? They are very pretty and the washable papers clean beautifully.

Linoleum is the best thing with which to cover the floor and it should be chosen in a color to correspond with the color selected for the walls. If the floor is to have no covering it should be laid with narrow boards and given an oil finish. This permits scrubbing and mopping and an occasional coat of oil keeps it in shape. An old floor may be planed smooth, the cracks filled and several coats of paint applied. This, however, is not nearly so satisfactory as either linoleum or oil finish. If there is no covering for the floor, rubber mats will add greatly to the comfort of the worker. Carpet should never be used in the kitchen except in the form of rag rugs that may be washed.

Now put at the windows sheer white curtains that hang from the top and are pushed back a bit from the center of the window, provide a rocking chair (painted white to correspond with the woodwork) and see if your kitchen will not be a little more pleasant to work in.

Woman's Fitness For the Ballot.

A remarkable illustration of woman's fitness for the ballot is carried in the educational directory issued recently by the bureau of education of the Department of the Interior at Washington. One cannot study this report long and remain in doubt as to whether women should have the right to vote, for nearly one-fourth of the administrative offices of prominence in the country are filled most capably by women. Today we have women college presidents, women serving as state superintendents of public instruction, county superintendents, department heads in colleges and schools, industrial training directors, librarians, in fact there is no branch or department in which women have not demonstrated their full capability of filling such positions.

Of the 12,000 more important positions in the administrative world, women are filling 2,500, and are making gains each year. There are twenty-four women serving as college presidents out of the 622 institutions of this character in the United States. More than 500 of the 3,000 county school superintendents of the country are women, and in Montana there is not a single man holding such a position. Wyoming has two men, while in Kentucky there are twenty-six women county school heads. Fifteen of the seventeen institutions for the blind have women executives, and women are at the head of ten schools for the deaf. Fourteen women are serving as executives of industrial training schools, and forty-eight art schools out of 200 have women executives. The office of librarian is almost monopolized by the women of the country, who are filling 1,075 of the 1,300 positions of this character, while in the bureau of education itself eleven of the thirty-three bureau officials are women.

EARNEST W. PRESTON.

Earnest is the son of Mr. and Mrs. S. W. Preston, and was two years old at the time this picture was taken. His mother says he has never needed a doctor in his life.

Women have been demonstrating their ability to become leaders in the educational world, and this subject is not a new one. A majority of the school-teachers are women, and the majority of librarians are women. If women can teach school, fill executive positions in the educational world and manage libraries, why should they be denied the right of the vote.

The school-teachers have gone on record as favoring suffrage, and there is no doubt but that they will use the ballot once it is accorded them.

Look After the Teeth.

Crooked, twisted, gnarled and deformed teeth are a source of danger to the child, family and state as well. Buck Teeth Ben soon gets too sensitive to be in touch with his playmates, and he stays in the background—getting further and further away from his fellows.

The child is in danger of being a recluse, a backward. Dentists are to be found all over the land. Call on them.

In every state, in almost every county, you will find people, societies calling the attention of mothers to the necessities of dental cleanliness. Clean the teeth. You will find that a clean tooth never decays—you will find dark spots on the teeth under which lurk small germs that eat holes in the teeth. Get a little orris root and a good brush and rub your teeth. Get a brush for the boy and one for the girl. When you find the teeth and gums sore, bleeding, the teeth falling into holes, the gums separate from the teeth, black spots on the teeth inside and outside of jaw, there is bacteria on the teeth. See a dentist before the teeth are in the last stages of decay.

Don't wait until you have lost your best teeth to look after your mouth. Watch the boy's and girl's mouth. Disease often comes from decayed teeth. Margaret Hudson.

Boiled Water For Colic.

To the Editor:—I am sending you a picture of our baby, Mary Jane, taken when she was five months old, at which time her weight was seventeen pounds.

She is a very healthy baby, sleeps in a well-ventilated room away from the fire and was able to sit alone when four months old. She has never taken any medicine except boiled water, which I think is the greatest colic remedy in the world and perfectly harmless. By filling the stomach with water the gas is driven out.

Mrs. G. E. Nichols.

MARY JANE NICHOLS.

Has Had Calla Lily Twenty-six Years.

To the Editor:—I have been much interested in the letters in the Home Department, so thought I could help a little. I want to tell the lady who asked about the care of a calla lily how I care for mine. I have had it for over twenty-six years and have never failed to have from four to six lilies each winter.

In the spring after it quits blooming I put it out on the porch or in the shade somewhere with a few other plants that I do not set out in the ground, and when I water them I always water the lily too. About the first week of August I take it up, take off all the old dirt and re-pot with very rich soil. Then I bring it in the house, put it in a sunny window and water with lukewarm water. It must be kept quite wet. Occasionally add a few drops of ammonia to the water. I generally have a lily by Thanksgiving. It must have a sunny window in the winter. So many have asked me what I do to make my lily bloom as it does, and this is all I do. I do not think it is wise to let it dry out in the summer, and find my way is a good one.

I also think that this lady's geraniums do not get sun enough or they would bloom. I love flowers and plants and always try to have some.

Mrs. Laura J. Swan.

Uses Sirup in Bread.

To the Editor:—I have had the same trouble as the lady signing her letter C. E. with the drying out of bread, and found that using syrup (Karo is what I used) for sweetening instead of sugar helped keep it moist.

Did the lady who complained of having strong strawberries ever can them this way? One teacup sugar to every quart by actual measurement of fruit. Make a thin sirup of one teacup water and half a cup of sugar. When it boils, skim and add fruit. Let it simmer gently five minutes, add the rest of the sugar, let come to a boil again, then can and seal at once. Press berries gently under sirup but do not crush or mash them.

I use this method for blackberries, raspberries, ground cherries and for blue berries with the addition of the juice of one lemon to every three quarts of blueberries. J. R.

More Trouble.

To the Editor:—Can some of the Home page readers help me? I am living in an old house which is infested with bed bugs. They are in the walls of all the sleeping rooms. I intend to paper this spring and I thought perhaps there was something one could put into the paste. I have found many useful hints in your paper and shall be grateful if someone can help me now. A Subscriber.

Today Is Day of Salvation.

To the Editor:—In reply to "Mabel" as to when to join the church I want to say that now is the time, today is the day of salvation. Why put it off and live away from God all those years? How can anyone become better able to serve God by rejecting him even if he be permitted to live? But life is so uncertain. What if the call should come for this man; what would his answer be? Could he meet his God whom he had refused to obey and love? God's Word reads something like this, "He that gathers not with me scattereth abroad" and "If you are not for me, you are against

me." Now, dear young man, what a work for the evil one all these twenty years would be and what a bad influence for others who may be guided by you.

In regard to those young folks you spoke of belonging to the church who swear and do many things they ought not to do, you should join the church and be an example to them and help them. The Bible says, "Wheat and chaff will remain together until the harvest." We must watch ourselves.

I pray this young man may decide to join the church, and while building his earthly home may lay up treasure in heaven where the people of God will dwell forever. This life is only a preparation for a better life, so let us all strive to be prepared and help others. A Christian.

Wooden Box Dries Bread.

To the Editor:—I notice in a recent issue that one of the readers has trouble with her bread drying out. She must be keeping it in a wooden box, as that will always dry it out. I keep my bread in a big lard can where I cover it up tightly, and it stays moist for a couple of weeks, or as long as it lasts. In the summer time you cannot keep it that long because it molds unless it is in a cold place. Try this and you will have no more bother with your bread drying out.

Another reader wants to know how to remove the whitewash in order to paper. I think if she will make a paste and give the walls a good sizing she will not have any trouble with the paper not sticking. I used to do that and it stuck fine. Mrs. H. N. C.

Enjoys Baby Pictures.

To the Editor:—I am sending you the pictures of our little girl, Cecelia M. Jacob, age six months, weight

CECELIA M. JACOB.

twenty pounds, and our little son, Harold R. Jacob, age six months, weight twenty-five pounds. Both children were raised on mother's milk and were healthy babies. They are now going to school, being seven and nine years of age.

Mrs. Harry Jacob.

Born in Virginia.

To the Editor:—John Edwin Smith, whose picture I am sending you, is the fifth child and the fourth son of James A. and Stella Wymore Smith. He was three months old at the time this picture was taken and weighed thirty-six pounds. He was born in Powhatan county, Virginia, January 28, 1903. The picture was taken in Richmond, Virginia. His parents moved from Mahaska county, Iowa, to Virginia in the fall of 1901, returning in the spring of 1906 and now residing on a farm here in the corn belt. John now has five more brothers younger than he, making a total of eight brothers and one sister.

John Edwin Smith

J. A. Smith.

Sonny Boy.

To the Editor:—I am sending you a picture of our sonny boy which you may put into your paper with the rest of the healthy babies.

This picture of our sonny boy was taken when he was five months old

JERALD ARMSTRONG JENSEN.

and he then weighed twenty-four pounds. His name is Jerald Armstrong Jensen. Jerald is another baby who eats and sleeps regularly. He nurses every two hours and goes to sleep every hour and a half from the time he wakens. He gets nothing but mother's milk and a little warm water every day. I never rock my baby to sleep, as many mothers do. I do not approve of it.

Jerald's father is very proud of him. He throws him up in the air and rolls him around on the bed and that gives him lots of exercise and makes his bowels move regularly, which is very important.

This is our first baby and we are very proud of him.

Mrs. H. G. Jensen.

Hot Water For Lily.

To the Editor:—I saw in a recent issue that one of your readers was having trouble with her calla lily. If she will place her lily in a flower pot with a hole in the bottom and place the pot in a deep pan or dish and each morning fill this pan or dish

HAROLD R. JACOB.

with boiling water from the teakettle I think her lily will bloom.

I enjoy the Home Department of your paper very much.

An Interested Reader.

Keeps Buds Picked Off.

To the Editor:—For the benefit of the reader who wants to know how to make geraniums bloom in the winter time I want to tell how I do it.

I generally slip my plants some time in June in good dirt and set them somewhere in a partly shaded place until they become well rooted. I think the main thing is to keep all buds picked off until about the 1st of September. Then I leave them on, so by the time I take them into the house they are starting to bloom and will keep it up all winter.

I also water them well with fresh liquid horse manure about once in the fall and a couple of times through the winter. And how they do bloom. At the present time I have eighteen different kinds in bloom and have had all winter. I water them about every other day with warm soft water. They also like lots of sunshine and not too warm a room.

Old plants will bloom just as well in winter if buds are kept picked off through the summer and the plants treated the same as slips.

I think if this reader will rest her calla lily through the summer and re-pot in the fall with good rich dirt and give plenty of good warm water it will surely bloom. They are great feeders. Mrs. M. Frederickson.

Care of Roses.

To the Editor:—Would some of the readers of the Home page please tell me about roses, when they should be planted, in what kind of soil, and how to care for them both in summer and in fall and winter? Would it be necessary to wrap the bushes the first year or just throw some coarse straw or manure over the roots? Any information would be much appreciated.

Mrs. Maude Clary.

White of Egg in Paste.

To the Editor:—M. A. G. writes for help concerning papering over whitewashed walls. We have tried the following method successfully on a ceiling and the paper has now been on for four years.

Beat stiff the whites of four eggs and add to a gallon of paste which has been cooled sufficiently so that it will not cook the eggs. If M. A. G. will do this I am sure she will have no trouble in making the paper stick.

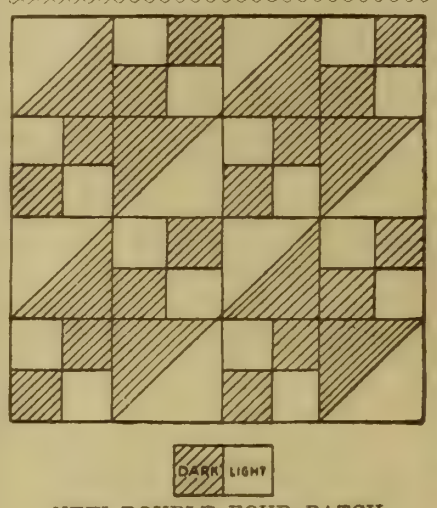
point and let boil until sirup will spin a thread when dropped from tip of spoon. Add soaked gelatine and let stand until partially cooled; then add salt and flavoring. Beat until mixture becomes white and thick. Pour into granite pans, thickly dusted with powdered sugar, having mixture one inch in depth. Let stand in a cool place until thoroughly chilled. Turn on a board, cut in cubes and roll in powdered sugar. This recipe makes about one hundred marshmallows.

Turkish Delight.—One and one-half envelopes gelatine, one-half cup boiling water, grated rind of one orange, juice of one orange, juice of one lemon, red fruit coloring. Soak gelatine in cold water ten minutes. Put sugar and boiling water in saucepan, bring to the boiling point, add soaked gelatine and let boil twenty minutes. Add flavoring and coloring, strain and turn into a bread pan (first dipped in cold water) to one inch in depth. Let stand until firm, remove to board, cut in cubes and roll in powdered sugar. Half a cup of chopped nut meats may be added if desired.

Jellied Prunes.—One envelope gelatine, one-third pound prunes, two and one-half cups cold water, one cup sugar, one-fourth cup lemon juice. Pick over, wash and soak prunes for several hours in two cups cold water, and cook in same water until soft. Remove prunes, stone, and cut in quarters. To prune water add enough boiling water to make two cups. Soak gelatine in half cup cold water, dissolve in hot liquid, add sugar and lemon juice, then strain, add prunes, mold and chill. Stir once or twice while cooling to prevent prunes from settling. Serve with sugar and cream.

Jellied Chicken.—Dress, clean and cut up a fowl. Put in a stewpan with two slices onion, cover with boiling water and cook slowly until meat falls from bones. When half cooked add one-half tablespoonful salt. Remove chicken, reduce stock to two cups, strain, skim off fat and add one tablespoonful of gelatine which has been soaked in four tablespoonfuls cold water. Decorate bottom of a mold with parsley and slices of hard-boiled eggs. Pack in meat, freed from skin and bone, and sprinkle with salt and pepper. Pour on stock and place mold under heavy weight. Keep in a cold place until firm.

Ham Mousse.—Soak half an envelope of gelatine in one-fourth cup cold water, dissolved in one-half cup hot water and add to it two cups chopped cold ham. When cool add one teaspoonful mixed mustard, a few grains cayenne and one-half cup heavy cream beaten until stiff. Turn into a mold, first dipped in cold water. Chill, remove from mold and garnish with parsley.



NEW DOUBLE FOUR PATCH.

One of our readers who signs her letter Aunt Laura sends us this pretty double four patch design which we think will interest many of our needlework friends.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Visits Institute.

Dear Young Folks:—I have been reading the letters in the Young Folks' department for so long and have enjoyed them so much that I thought I would write one, too. I will tell you about my trip to Fargo, N. D., where the boys and girls' institute was held. I was staying with a lady whose own little girl won a prize and so they took me with them. I had a lovely time and saw so many things I shall never forget it. I am going to try for a prize myself some time so I can go again.

We arrived in Fargo at night and the next day we went up to the college. A Mr. Kirk was our guide. There were 143 delegates.

The little boys and girls won prizes on different things, raising pigs, chickens, corn, making butter, canning, sewing, crocheting and many other things. Mr. Farrel gave a canning demonstration and told stories about little boys and girls' canning clubs while he worked. He has been all over the United States and lives in Washington, D. C.

Our guide took us around to the different buildings. The first place we went to was the greenhouse, where I saw a pear tree, a banana tree and an orange tree and beautiful flowers of all kinds. Then he took us to the animal room. I saw a badger and some alligators and pet jack rabbits and different kinds of snakes. I saw 320 guinea pigs and a little chipmunk in a cage.

Some days we walked eight miles and one day we walked eleven. One day we went down to some of the places in the city. The first place we visited was the fire department. The manager talked to us a little and then he rang the fire alarm and out came the horses. They went right under their harness and it was only four seconds and a half until they were harnessed. The firemen came down the posts dressed in their uniforms.

Next we went to the candy factory and watched them make candy. They made lots of it. After that we went to the cracker factory and watched them make crackers. They gave all the boys and girls a box of crackers. Then we went up to the printing office and saw them printing the Fargo Forum. We also visited the knitting mills and watched them spin sweaters and other things.

We went to the new schoolhouse and the professor of the school took us into a room and talked to us about air and ventilation. Then he showed us all over the school and when we were through there we had supper at the Copper Kettle Inn.

After supper we went to the Armory and played games until nine or ten o'clock.

The next day our guide took us to the dairy barns. There were a lot of cattle of all kinds. We got there just as they were ready to milk. They had all their names written on paper and nailed above their stanchions.

Next we went where the horses were and they had their names written above their stalls. We saw the pigs, too. The men who took care of them washed them and kept them clean. We saw lots of sheep and chickens. It seemed to me like they had every kind.

Our guide took us where there were twelve deer. I could tell you of many cunning things that they did, but it would take too much room.

In the power house we saw all the engines that gave light and heat all over the campus and buildings. In one big room they had boilers that furnished steam to run the engines. The furnace will burn seven tons of coal in three hours at 35 degrees below zero. The coal was lignite coal and was mined in North Dakota.

One day our guide and four other students and two doctors operated on a horse for a broken shoulder.

After spending an interesting week we came home well satisfied with our trip.

I am eleven years old and love to go to schcol. —Angeline.

Belongs to Bird Club.

Dear Young Folks:—I certainly enjoy reading the letters and stories on the Young Folks' page. I am eleven years old and in the sixth grade at school. I go to Sunday school every Sunday.

We have a Pullman automobile, a buggy and six horses, so we do not have to walk to Sunday school or to any of our relatives.

I have three pet kittens and one dog. The kittens' names are George, Snowball and Tabby, and the dog's name is Rover. I also have a horse, a cow and calf and a pig that grandpa gave me.

At school I belong to a bird club. We have already studied the chickadee, the tree sparrow, the robin and the screech owl. I do wish that all you young folks could read about them, especially the robins, just to see how they are killed in the North and how they are protected, also how much good they do the farmers and everyone in the United States. I think that every boy and girl should try to protect the birds.

We live on a farm one mile from town. I can tat, crochet and play on the piano. —Lorna.

Wants to Be a Farmer.

Dear Young Folks:—I am very much interested in your letters and I think it is my turn to write to you. I am a little boy; anyway, that's what they call me, but I think I am big.

I live in town with my father and mother. They are very good to me and we have a nice big home and a blacksmith shop. My father is making good money and he gives me nickels and dimes. I am saving all my money, because when I am a man I don't want to be a blacksmith. I would like better to be a big farmer like my grandfather. I like grandfather's farm. Every time I go down there I want to stay, because they let me drive the horses and I like that better than anything else.

I am seven years old and am in the second grade. I go to school every day. —Samuel.

International Sunday School Lesson.

Lesson for April 9, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

AENEAS AND DORCAS.

LESSON TEXT—Acts 9:32-43. (See also Prov. 31:10-31.)

GOLDEN TEXT—In all things showing thyself an ensample of good works. —Titus 2:7.

Step by step the Gospel can be traced, spreading itself, but "beginning at Jerusalem." Paul's conversion is one of the greatest evidences of Christianity. The two miracles of today's lesson are additional evidence that it is of God.

I. **At Lydda** (vs. 32-35). Caligula, emperor of Rome in A. D. 39, ordered his statue to be erected in Jerusalem that he might be worshipped as a god there as elsewhere. The excitement and conflict which arose in opposition to this sacrilege lasted for two years, during which time Christian persecutions ceased. Following Saul's visit at Jerusalem, and during this time of quiet, Peter made this tour of visitation. Lydda (modern Ludd) is about twenty-five miles northwest of Jerusalem. Here dwelt certain saints (v. 32) literally "holy ones," converted disciples of Christ, not ones of special honor, for all who are members of the body of Christ, are "saints" (Phil. 1:1). Here also dwelt Aeneas, "a certain man," possibly not a believer, but having great need (v. 26:3:2; 10:1, 14:8; 9:10), and of years standing (v. 33). Notice Luke, the physician's careful record. Peter must have seen many such, yet this man is one Peter "found"; he was evidently looking for him. Peter's pity was not sentimental but practical and his

Lewis' Lye Wins First Prize in "Wisconsin Farmer" Soap Contest for Mrs. G. W. May

Her soap was clear and firm and was high in cleansing qualities. No soap that could be purchased ready made could compare with this home-made product that was made with

Lewis' Lye

"The Standard for More than Half a Century"

Mrs. May's Prize Recipe

Empty a can of Lewis' Lye into a jug containing 2½ pints of cold water. By stirring, it will dissolve immediately and get hot; let it stand until cold. In a basin, melt 5½ pounds of any kind of fat or melted grease, *only it must not contain any salt.* Let it stand until it is just warm, and then pour the liquid Lye into the melted fat, in a continuous stream. This should take but a few minutes' time until the consistency of syrup is obtained. Pour the mixture into a square wooden box, lined with a damp piece of muslin, to prevent sticking to the sides and bottom. Cover up with a blanket and set in a corner of the kitchen until the next day. You will then have a block of pure soap, weighing about ten pounds, at a cost of simply the can of Lewis' Lye.

"I have never used any other recipe than this, nor any lye but Lewis'." —Mrs. May.
Send for Booklet "The Truth About a Lye" which contains two Prize Recipes.

words powerful, for back of them was the Living and Powerful Christ. He knew who could work a cure. The long weariness is to be relieved. Yet those days of illness gave time for meditation and probably prepared the man's heart to respond in faith to Peter's words. Peter does not attract attention to himself, but rather to Jesus. His was but to be the instrument of the cure. The healing was a means to an end, for when those who dwelt in Lydda and Sharon (v. 35) heard of the miracle, or saw this healed man, it was to them a demonstration of the power of the risen Christ, and they "turned to the Lord" (v. 35). There is no comparing Peter with modern "healers." Peter's words and actions were a living demonstration, not for profit, of the power of Jesus in his life and testimony.

II. **At Joppa** (vs. 36-43), Joppa was the only seaport the Jews ever possessed for themselves. It was and is still a rather insignificant town, and now marks the beginning of the railroad leading to Jerusalem, 35 miles distant. No name is recorded of any of its rich or prominent citizens, only that of an humble woman. The record of her life, however, is inspiring (v. 36), and her name is a common one adopted by organizations of women. Like her master her life was full of "good deeds"; like him she was not ministered unto, but ministered. This is real greatness and it is open to all of us. Her name "Tabitha" (Hebrew), Dorcas (Greek), means gazelle, which in the East is a favorite type of beauty. This "certain disciple" was beautiful in life as well, for she was first a believer, then a doer. We believe in order to do, not do in order to believe. This woman is an example of the wise and capable woman mentioned in Prov. 31:10-31, a picture well worth studying in these days of the "feminist movement." She is a good type to be followed by church women, and by us all in the fact that her reputation rested upon deeds "which she did" (v. 36), not ones she was about to do, nor did she wait for some great opportunity of service. The life of Dorcas reveals one of the causes of the triumph of Christianity in the Roman empire. It was a source of wonder that those early Christians should so love each other. The reason why Dorcas was allowed to die lies in the providence of God. He loved his work and this recorded incident has served to raise up multitudes of other Dorcases. Her death also reveals that being "full of good works and alms deeds" woes not exempt his servants from sickness and death, and that God evidently has other purposes in sickness than to chastise our sin or to humble our pride (John 9:3, II Kings 13:14). The friends of Dorcas were folks of faith, for as yet there was no case of apostolic power to raise the dead as far as we know, and it was now about ten years after the resurrection of Christ. Peter followed the example of his Lord (Luke 8:2, 54), dismissed all spectators and "prayed" (v. 40). The way to revive a dead pastor, church, school, personal experience, or person "dead in trespasses and sins," is by prayer. Peter also did as he had seen his Master do to his mother-in-law (Mark 1:30, 31), and gave Dorcas his hand to help her arise.

This gave an opportunity for fruitful work among the converts (v. 41) and the enlistment of many new believers (v. 42), so that Peter abode in Joppa for some time in the house of "Simon, a tanner."

Knight Joins Du Pont Organization.

THE agricultural division of E. I. Du Pont de Nemours & Company has secured the services of Thomas M. Knight to aid the company in promoting the use of dynamite in agriculture. Mr. Knight is a practical farmer, an expert on fertilizers and a popular lecturer on general agricultural topics. He will collaborate with the company's agronomist, Dr. J. H. Squires, in field tests and lectures at agricultural meetings. His former position was editor of the Practical Farmer, Philadelphia, Pa. See page 9.—Adv.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 100 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1501 Ladies' shirt waist with convertible collar. The fronts are full and gathered to square yoke portions. The pattern is cut in seven sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 2¾ yards of 40-inch material for a 36-inch size.

1537 Ladies' dressing sacque and underskirt, with or without flounce. The pattern comprising both styles illustrated, is cut in three sizes: Small, medium and large. It requires 2½ yards for the sacque, and 4¼ yards for the skirt, without flounce, of 36-inch material; with the flounce the skirt requires 6¼ yards.

1342 Ladies 'apron, with or without band trimming. The pattern is cut in three sizes: Small, medium and large. It requires 5⅛ yards of 36-inch material for a medium size.

1615 Ladies' camisole in kimono style. The pattern is cut in three sizes: Small, medium and large. It requires 1¼ yards of 36-inch material for a medium size.

1475 Ladies' house or home dress, with sleeve in either of two lengths. The pattern is cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 8 yards of 36-inch material for a 36-inch size.

1571 Girls' overblouse dress with guimpe, having sleeve in either of two lengths. This style is easy to develop. The pattern is cut in five sizes: 4, 6, 8, 10 and 12 years. It requires 2 yards of 27-inch material for the guimpe or underwaist, and 4 yards for the dress for a 10-year size.

1617 Junior dress in high or low neck, empire style, with or without bolero and with two styles of sleeves. The pattern is cut in three sizes: 12, 14 and 16 years. It requires 5½ yards of 30-inch material for the dress, and 2 yards for the bolero, for a 14-year size.

1556-1558 A jaunty trim middy suit.—Blouse pattern 1556 and skirt pattern 1558 are here combined. The blouse has the convertible collar and big, roomy pockets. The patterns are cut in four sizes: 14, 16, 18 and 20 years. It requires 3½ yards of 36-inch material without the cuff. The cuff requires 1¼ yards for a 16-year size. The blouse requires 2⅝ yards of 44-inch material. Two separate patterns 10 cents for each pattern.

1687 Boys' blouse suit, with straight side or diagonal closing. The broad collar is new and jaunty. The pattern is cut in four sizes: 3, 4, 5 and 6 years. It requires 2¾ yards of 44-inch material for a 4-year size.

1674 Ladies' house gown or negligee, with sleeve in either of two lengths. The yoke facings may be omitted, and the yoke effect simulated by beading or insertion. The pattern is cut in three sizes: Small, medium and large. It requires 5¾ yards of 44-inch material for a medium size.

1676 Girls dress with sleeve in either of two lengths. This pattern is cut in four sizes: 6, 8, 10 and 12 years. It requires 3 yards of 44-inch material for a 6-year size.

1648-1656 A splendid style for business or afternoon wear. Waist 1648 and skirt 1656. The waist pattern is cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 7⅞ yards of 36-inch material for a medium size. Two separate patterns 10 cents for each pattern.

HEPSEY BURKE--A Sister to David Harum

By G. N. Wescott, the Brother of the Author of "David Harum."

(Copyright 1915.)

CHAPTER XV.

Nickey's Social Ambitions.

TO NICKEY the Maxwells were in the nature of a revelation. At his impressionable stage of boyhood, and because of their freedom from airs and graces of any kind, he was quick to notice the difference in type--"some class to them; not snobs or dudes, but the real thing," as he expressed it. His ardent admiration of Donald and his adoration of Mrs. Betty gave him ambition to find the key to their secret and to partake of it.

He was too shy to speak of it—to his mother last of all, as is the nature of a boy—and had to rely on an observant and receptive mind for the earlier steps in his quest. When Maxwell boarded with them Nickey had discovered that he was wont to exercise with dumb bells each morning before breakfast. The very keenness of his desire to be initiated held him silent. A visit to the town library, on his mother's behalf, chanced to bring his eyes—generally oblivious of everything in the shape of a book—upon the title of a certain volume designed to instruct in various parlor feats of physical prowess.

The book was borrowed from the librarian—a little shamefacedly. The next morning Mrs. Burke was somewhat alarmed at the noise which came from Nickey's room and when there was a crash as if the chimney had fallen she could stand it no longer and hurried aloft. Nickey stood in the middle of the floor, clad in swimming trunks, gripping a large weight (purloined from the barn) in either hand, very red in the face and much out of breath.

As the door unexpectedly opened he dived for bed and pulled the clothes under his chin.

"Land sakes!" Hepsey breathed, aghast. "What's all this about? If there's a nail loose in the flooring I can lend you a hammer for the asking," and she examined several jagged dents in the boards.

"Say, ma," urged Nickey in moving tones. "If I'd a pair of dumb bells like Mr. Maxwell's, I c'd hold onto 'em. I've pretty near smashed my feet with them things—gosh darn it," he added ruefully, nursing the bruised member under the clothes.

"I guess you can get 'em, next time you go to Martin's Junction; but if it's exercise you want," his parent remarked unsympathetically, "there's plenty of kindlin' in the woodshed wants choppin'."

She retired chuckling to herself, as she caught a glimmer of what was working in her son's mind.

The "reading habit" having been inculcated by his lucky find at the library, it was not long before Nickey acquired from the same source a veritable collection of volumes on the polite arts and crafts—"The Ready Letter Writer;" "Manners Maketh Man;" "Seven Thousand Errors of Speech;" "Social Culture in the Smart Set," and the like.

Nickey laboriously studied from these authorities how to enter a ball room, how to respond to a toast at a dinner given in one's honor, how to propose the health of his hostess and how to apologize for treading on a lady's train.

In the secrecy of his chamber he put into practice the helpful suggestions of these invaluable manuals. He bowed to the washstand, begged the favor of the next dance from the towel rack, trod on the window shade and made the prescribed apology. Then he discussed the latest novel at dinner with a distinguished personage; and having smoked an invisible cigar, interspersed with such wit as accords with walnuts and wine, after the ladies had retired, he entered the drawing room, exchanged parting amenities with the guests, bade the hostess good night, and gracefully withdrew to the clothes press.

Several times Hepsey caught glimpses of him going through the dumb show of "Social Culture in the Smart Set," and her wondering soul was filled with astonishment at his amazing evolutions. She found it in her heart to speak of it to Mrs. Betty and Maxwell and ask for their interpretation of the matter.

So, one day, during this seizure of feverish enthusiasm for self-culture, Hepsey and Nickey received an invitation to take supper at the rectory. Nevertheless, Mrs. Burke thought it prudent to give her son some good advice in regard to his behavior. She realized, perhaps, that a book is good so far as it goes, but is apt to ignore elementals. So she called him aside before they started:

"Now, Nickey, remember to act like a gentleman, especially at the table; you must try to do credit to your bringin' up."

"Yes, I'll do my level best if it kills me," the boy replied.

"Well, what do you do with your napkin when you first sit down to the table?"

"Tie it 'round my neck, of course!"

"Oh, no, you musn't do anything of the sort; you must just tuck it in your collar, like any gentleman would. And when we come home what you goin' to say to Mrs. Maxwell?"

"Oh, I'll say, 'I'll see you later.'"

"Mercy, no! Say, 'I've had a very nice time.'"

"But suppose I didn't have a nice time—what'd I say?"

For a moment Hepsey struggled to reconcile her code of ethics with her idea of good manners and then replied:

"Why say, 'Mrs. Maxwell, it was awfully good of you to ask me,' and I don't believe she'll notice anything wrong about that."

"Hm!" Nickey retorted scornfully. "Seems pretty much like the same thing to me."

"Oh no! Not in the least. Now what will you wear when we go to the rectory?"

"My gray suit and tan shoes and the green tie with the purple spots on it."

"Who'll be the first to sit down to the table?"

"Search me—maybe I will, if there's good eats."

"Nonsense! You must wait for Mrs. Maxwell and the rector to be seated first."

"Well," Nickey exclaimed in exasperation, "I'm bound to make some horrible break anyway, so don't you worry, ma. It seems to me from what them books say that when you go visitin' you've got to tell lies like a sinner; and you can't tell the truth till you get home with the door shut. I never was good at lyin'; I always get caught."

"It isn't exactly lyin', Nickey; its just sayin' nice things and keepin' your mouth shut about the rest. Now suppose you dropped a fork under the table, what'd you say?"

"I'd say, 'scuse me, Mrs. Maxwell, but one of my forks has gone and you can go through my clothes if you want to before I go home."

"Hm!" Hepsey remarked dryly, "I guess the less you say the better."

Arrived at the rectory, Nickey felt under some restraint when they first sat down to the supper table; but under the genial manner of Mrs. Maxwell he soon felt at his ease, and not even his observant mother detected any dire breach of table etiquette. His conversation was somewhat spare, his attention being absorbed and equally divided between observation of his host and consumption of the feast set before him. With sure tact, Mrs. Betty—though regarding Nickey as the guest of honor—that evening—deferred testing the results of his conversational studies until after supper. One thing at once, she decided, was fair play.

After the meal was over they repaired together to the parlor and while Hepsey took out her wash rag knitting and Maxwell smoked his cigar, Mrs. Betty gave Nickey her undivided attention.

In order to interest the young people of the place in the missionary work of the parish Mrs. Betty had organized a guild of boys who were to earn what they could towards the support of a missionary in the West. The Guild had been placed under the fostering care and supervision of Nickey as its treasurer, and was known by the name of "The Juvenile Band of Gleaners." In the course of the evening Mrs. Maxwell took occasion to inquire what progress they were making, thereby unconsciously challenging a somewhat surprising recountal.

"Well," Nickey replied readily, "we've got forty-six cents in the treasury; that's just me, you know; I keep the cash in my pants pocket."

Then he smiled uneasily and fidgeted in his chair.

There was something in Nickey's tone and look that excited Mrs. Betty's curiosity and made his mother stop knitting and look at him anxiously over her glasses.

"That is very good for a start," Mrs. Betty commended. "How did you raise all that, Nickey?"

For a moment Nickey colored hotly, looked embarrassed, and made no reply. Then mustering up his courage, and laughing, he began:

"Well, Mrs. Maxwell, it was just like this. Maybe you won't like it, but I 'll tell you all the same. Bein' as I was the president of the Juv'nal Band of Gleaners, I thought I'd get the kids together, and start somethin'. Saturday it rained cats and dogs, so Billy Burns, Sam Cooley, Dimple Perkins and me, we went up into the hay loft, and I said to the kids, 'You fellows have got to cough up some dough for the church, and—'"

"Contribute money, Nickey. Don't be slangy," his mother interjected.

"Well I says, 'I'm runnin' the Juv'nals, and you've got to do just what I say. I've got a dandy scheme for raisin' money and we'll have some fun doin' it, or I miss my guess.' Then I asked Sam Cooley how much money he'd got, and Sam, he had 44 cents, Billy Burns had 52 cents, and Dimple had only 2. Dimp never did have much loose cash, any way. But I said to Dimp, 'Never mind, Dimp; you ain't to blame. Your dad's an old skinflint. I'll lend you 6 to start off with.' Then I made Billy Burns sweep the floor, while Sam went down to the chicken yard and caught my bantam rooster, Tooley. Then I sent Dimp after some chalk, and an empty peach basket, and a piece of cord. Then we was ready for business.

"I marked a big circle on the barn floor with the chalk, and divided it into four quarters with straight lines runnin' through the middle. Then I turned the peach basket upside down, and tied one end of the string on the bottom and threw the other end up over a beam overhead, so I could pull the basket off from the floor up to the beam by the string. You see," Nickey illlustrated with graphic gestures, "the basket hung just over the middle of the circle like a bell. Then I took the rooster and stuck his head under the basket. Tooley hollered and scratched like Sam Hill and —"

"For mercy sake, Nickey! What will you say next?"

"Say, ma, you just wait and see Well, Tooley kicked like everything,

The Zig Zag Tag Means Tested and Guaranteed Portland Cement

IT'S IN THE BAG

WITH THE ZIG ZAG TAG

Marquette
Portland Cement
As lasting as the pyramids

Portland Cement of the finest quality; easily worked by experts or by the inexperienced persons, bears two distinguishing marks; the name Marquette and the green **ZIG ZAG TAG**

but he had to go under just the same. Then I said to the kids to sit around the circle on the floor and each choose one of the four quarters for hisself—one for each of us. 'Now,' I said, 'you must each cough up—'"

"Nicholas!"

"Oh, ma, do let me tell it without callin' me down every time. 'You kids must hand a cent apiece and put it on the floor in your own quarter. Then, when I say ready, I'll pull the string and raise the basket and let Tooley out. Tooley'll get scared and run. If he runs off the circle through my quarter, then the 4 cents are mine; but if he runs through Dimp's quarter, then the 4 cents are Dimp's.'

"It was real excitin' when I pulled the string, and the basket went up. You'd ought to 've been there, Mrs. Maxwell. You'd have laughed fit to split—"

"Nicholas Burke, you must stop talkin' like that, or I'll send you home," reproved Mrs. Burke, looking severely at her son, and with deprecating side glances at his audience.

"Excuse me, ma. It will be all over in a minute. But really, you'd have laughed like sin—I mean you'd have laughed yourself sick. Tooley was awful nervous when the basket went up. For a minute he crouched and stood still, scared stiff at the three kids, all yellin' like mad; then h ducked his head and bolted off the circle through my quarter and flew up on a beam I thought the kids would bust."

Mrs. Burke sighed heavily.

"Well, burst, then. But while they were laughin' I raked in the cash. You see I just had to. I won it for fair. I'd kept quiet and that's why Tooley come across my quarter."

Mrs. Maxwell was sorting over her music, while Maxwell's face was hidden behind a paper. Mrs. Burke was silent through despair. Nickey glanced furtively at his hearers for a moment and then continued:

"Yes, the kids was tickled, but they got awful quiet when I told them to fork over another cent apiece for the jackpot."

"What in the name of conscience is a jackpot?" Hepsey asked.

Donald laughed and Nickey continued:

"A jackpot's a jackpot; there isn't no other name that I ever heard of. We caught Tooley and stuck him under the basket and made him do it all over again. You see, every time when Tooley got loose the kids all leant forward and yelled like mad; but I just kept my mouth shut and leaned back out of the way so that Tooley'd run out through my quarter. So I won most all the time."

There was a pause, while Nickey looked a bit apprehensively at his audience. But he went on gamely to the end of the chapter.

"Once Tooley made a bolt in a straight line through Dimp's quarter and hit Dimp in the mouth and bowled him over like a nine-pin. Dimp was scared to death and howled like murder till he found he'd scooped the pot; then he got quiet. After we made Tooley run ten times he struck and wouldn't run any more, so we just let him go; but I didn't care nothin' about that, 'cause you see I had the kids' cash in my pants pocket and that was what I was after. Well, sir, when it was all over, 'cause I'd busted the bank——"

"Nicholas Burke, I am ashamed of you."

"Never mind, ma; I'm most through now. When they found I'd busted the bank they looked kind of blue and Dimp Perkins said it was a skin game and I was a bunco steerer."

"What did you say to that?" Donald inquired.

"Oh, I just said it was all for religion, it was church money and it was all right. I was just gleanin' what few cents they had to pay the church debt to the missionary, and they ought to be ashamed to have a church debt hangin' over 'em, and they'd be more cheerful 'bout givin' a little somethin' toward raisin' of it."

When Nickey had finished there was an ominous silence for a moment or two and then his mother said sternly:

"What do you suppose Mrs. Perkins will say when she finds that you've tricked her son into a regular gambling scheme to get his money away from him?"

"Mrs. Perkins," retorted Nickey, thoroughly aroused by the soft impeachment. "I should worry! At the church fair, before Mr. Maxwell came, she ran a fancy table and tried to sell a baby blanket to an old bachelor; but he wouldn't take it. Then when he wasn't lookin', blessed if she didn't turn around and tie the four corners together with a bit of ribbon and sell it to him for a handkerchief case. She got two dollars for it and it wasn't worth seventy-five cents. She was as proud as a dog with two tails and went around tellin' everybody."

Silence reigned, ominous and genera', and Nickey braced himself for the storm. Even Mrs. Maxwell didn't look at him and that was pretty bad. He began to get hot all over and the matter was fast assuming a new aspect in his own mind which made him ashamed of himself. His spirits sank lower and lower. Finally his mother remarked quietly:

"Nickey, I thought you were goin' to be a gentleman."

"That's straight, all right, what I've told you," he murmured abashed.

There was another silent pause—presently broken by Nickey.

"I guess I hadn't thought about it just that way. I guess I'll give the kids their money back," he volunteered despondently—"only I'll have to make it up some way in the treasury." He felt in his pockets and jingled the coins.

Another pause—with only the ticking of his mother's knitting needle to relieve the oppressive silence. Suddenly the worried pucker disappeared from his brow and his face brightened like a sunburst.

"I've got it, Mrs. Maxwell," he cried. "I've got seventy-five cents comin' to me down at the Variety Store for birch-bark frames and I'll give that for the blamed old missionaries. That's square, ain't it now?"

Mrs. Betty's commendation and her smile were salve to the wounds of her young guest and Donald's hearty laughter soon dispelled the sense of social failure which was beginning to cloud Nickey's happy spirit.

"Say, Nickey," said Maxwell, throwing down his paper, "Mrs. Betty and I want to start a Boy Scout Corps in the parish and with your resourceful genius you could get the boys together and explain it to them and soon we should have the whole thing in shipshape order. Will you do it?"

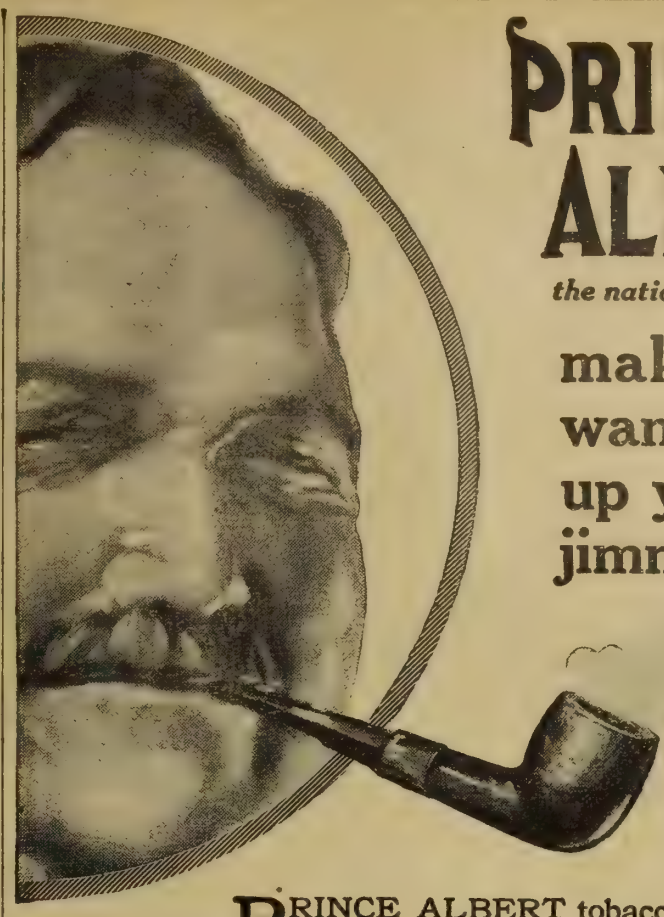
"Will I?" exclaimed the delighted recruit. "I guess so—but some of 'em ain't 'Piscopals, Mr. Maxwell; there's Sam Cooley, he's a Methodist, and—"

"That doesn't cut any ice, Nickey—excuse my slang, ladies," he apologized to his wife and Hepsey, at which the boy grinned with delight. "We're out to welcome all comers. I've got the books that we shall need upstairs. Let's go up to my den and talk it all over. We shall have to spend evenings getting thoroughly up in it ourselves—rules and knots and first-aid and the rest. Mrs. Burke will allay parental anxiety as to the bodily welfare of the recruits and the pacific object of the organization and Mrs. Maxwell will make the colors. Come on!"

With sparkling eyes Nickey followed Donald out of the room. As they disappeared Hepsey slowly shook her head in grateful deprecation at Betty.

"Bless him!" ejaculated Hepsey. "Mixin' up religion with a little wholesome fun is the only way you can serve it to boys like Nickey and get results. Boys that are ever goin' to amount to anything are too full of life to stand 'em up in a row, with a prayer book in one hand and a hymnal in the other, and expect 'em to sprout wings. It can't be done. Keep a boy outside enough and he'll turn out all right. Fresh air and open fields have a mighty helpful influence on 'em. The way I've got it figgered out all of us can absorb a lot of the right kind of religion if we'll only go out and watch old-Mother Nature now and then."

(To be continued.)



PRINCE ALBERT

the national joy smoke

makes you want to fire up your old jimmy pipe!

Copyright 1916 by R. J. Reynolds Tobacco Co.

PRINCE ALBERT tobacco throws open the gates to *every* man fond of a pipe or a makin's cigarette—*it's so friendly!* Just makes smoke joy possible for all degrees of tender tongues and tastes! The patented process cuts out bite and parch! And you can't get better proof than the fact that Prince Albert is today smoked not only throughout the United States, *but all over the world!*

First thing you do next, locate that old jimmy pipe or the makin's papers; invest 5c or 10c for a supply of P. A. And fall to like you are on the right track. For Prince Albert is better than the kindest word we ever have said about it. And you'll find that's a fact!

You can buy Prince Albert everywhere in the toppy red bag, 5c; or the tidy red tin, 10c; in pound or half-pound tin humidors or in the handsome crystal-glass pound humidor with sponge-moistener top that keeps P. A. fit-as-a-thoroughbred!

R. J. REYNOLDS TOBACCO CO., Winston-Salem, N. C.

On the reverse side of this tidy red tin you will read: "Process Patented July 30th, 1907," which has made *three* men smoke pipes where *one* smoked before!

X6=GALLOWAY FARM TRUCK

One horse multiplied by six equals three teams—they cannot do near as much on the road or at hauling as a Galloway truck! Try a truck!

FARM TRUCKS

Every farm needs a truck. Galloway's seven models (capacity 750 lbs. to three tons) with shaft drive, worm drive or chain drive in any style body meet every requirement. One truck and one man from three to six times as efficient as a team. Ask today for our truck literature and wholesale prices. Do not buy a truck of any make or kind at any price until you get it. Our trucks unequalled in design and construction for heavy farm and country road work. Write today!

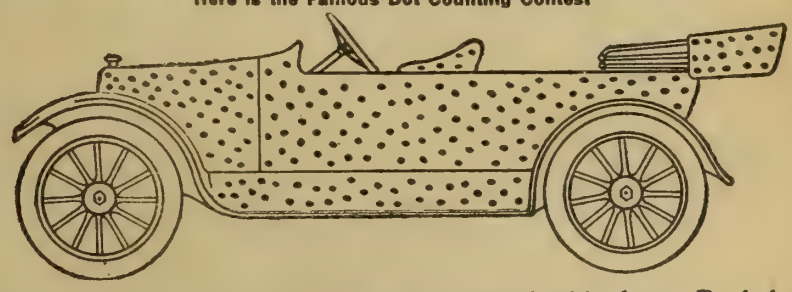
SUITS $3.75, Pants $1.00, made to measure. For even a better offer than this write and ask for free samples and styles. Knickerbocker Tailoring Co., Dept. 451, Chicago, Ill.

Count the Dots and Win a Prize

Here is the Famous Dot Counting Contest



You see in the picture, an Automobile covered with dots. By being careful and thinking you can count the number of dots on this Auto. If you can do this, we will send you as a prize, *a surprize package of beautiful season and greeting post cards,* lithographed in rich colors and also a certificate of entry in our grand contest for an Overland Automobile. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

OVERLAND AUTO GIVEN AWAY

Remember the Overland will absolutely be given away at the close of the grand contest. In case of a tie an Overland will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars by return mail.

THE AUTO MAN, Dept. 300 Des Moines, Iowa

HOME MADE Concrete Mixer PLANS FREE

Send me your name and I'll send you, absolutely free, blue-print plans and complete instructions for building a practical, thoroughly-proven home-made concrete mixer. Hundreds have used my plans successfully. So can you.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Hard-Milking Cows.

Will you please tell me if there is any cure for hard-milking cows and if there is any instrument or operation that will make them milk easier?

If your cows naturally milk hard it will pay you to just leave the teats alone and not run the risk of making matters worse. If the trouble is not natural and is brought about through some inflammatory condition of the udder the services of a veterinarian may be of some benefit to you.

Unthriftiness in Mare.

I have a five-year-old mare which fell off after the first of December and is poor now. She raised a colt last summer and is not in foal now. She just drags along. I feed her six ears of corn and half a gallon of oats twice a day. For roughness she gets clover hay and oat straw and can have plenty of both. Her appetite is good. Some say she has bots and others say not. Please give me some advice.

Your mare seems to be badly in need of a general tonic, since she is so badly run down in condition. These conditions are sometimes met with this time of year. Give your mare good quarters, wholesome food and water. Also give the following tonic mixture: Powdered cinchona, nine ounces; iron sulphate (dried), three ounces; powdered nux vomica, three ounces; powdered fennel, two ounces. Mix and make into twenty-four powders and give one powder three times daily in the feed. As to your mare being infected with bots, will say that bots very seldom do horses much damage.

Unnatural Discharge at Estral Period.

I have a Jersey heifer coming three years old that after she came fresh last spring began to discharge blood every time she came in heat and she still continues this way. She has been served three times and is not with calf yet. I am rather particular to get her in calf for she is an extra good milker. Is there any use to try again?

From your description we hardly know whether you mean that your cow has a discharge just at estral time or all the time and, therefore, it is hard to say just what the trouble is. It is possible she is troubled with a chronic inflammatory condition of the vagina or womb or both. An examination should be made to see if the womb is involved and if it is the passage way should be thoroughly flushed out with a solution of chlorid of zinc, one-half dram to a quart of water. A tonic given in the feed once daily is also advisable. Give three drams of sulphate of iron and one-half ounce ground ginger in feed once daily. Since this is a valuable animal it might mean dollars to you to have a competent veterinarian examine her.

Scouring in Horse.

I would like to know what to do for a seven-year-old horse that is inclined to run off at the bowels when in use. Has been that way for some three months and gets worse. I feed him prairie hay and corn.

Diarrhea is usually due to indigestion or internal catarrh or to irritation of the bowels from eating moldy or musty food, drinking stagnant water, diseased condition of teeth, eating irritating substances, exposure during cold nights, or low, damp stables. Some horses are predisposed to scour and are called "washy" by horsemen. Diarrhea may exist as complication of some other diseases. In treating, look well to food and water supply and see that they are all right. It often proves beneficial to change feed and give sparingly of good, easily digested foods. If it is thought some irritating substance has been causing the trouble an oleaginous purge of castor oil or raw linseed oil may be administered and sometimes with the cessation of the operation of the medicine the diarrhea will be overcome. With that peculiar build of horses which scour on the road but little can be done as a rule. Give them feed and water a considerable time before driving and this will help some. It is not advisable to resort to the astringents if it can be helped, but if it is necessary the use of powdered opium, two drams, and sub-nitrate of bismuth, one ounce, may be given three times daily.

Inflammation of Udder.

I have a cow that came in fresh about three weeks ago and she does not give over a quart of milk at a milking, but she has been milking all the time till fresh and the last three or four days before fresh her milk was thick and her udder seemed hard. I have changed her feed, but that does not seem to help her to milk more. I feed her clover hay, corn fodder, corn oats and bran. She is a good milk cow and is in good flesh. Is there anything I can do for her? Do you think she will be all right after she has another calf?

You should have had this cow attended to by your veterinarian as soon as the disturbance was noticed. The udder is a very delicate part and should be well cared for. Start treating your cow by giving her a purge of magnesium sulphate one to one and a half pounds. Then give the following internally. Fluid extract of phytolacca three ounces, potassium acetate one ounce, water enough to make eight ounces. Give two ounces in warm water three times daily. Massage the udder with hot water twice daily. Avoid rough usage of the udder. The above treatment may be of some benefit to the cow.

Paralysis.

Will you please tell me what to do for sheep that are getting lame in the back? They seem to lose the use of their backs entirely.

Your description is lacking in detail, but the trouble is probably paralysis brought about by some other existing trouble. It may be that your feed is at fault and that a change of feed would bring about relief in a few days.

Inflammation of Testicles.

I have a Red Polled bull that has been in the feed yard the last four or five months with other cattle and a bunch of hogs. Shortly after he was placed in the yard I noticed a small sore or scratch on the lower part of his scrotum and it had also swelled some, mostly on the one side. It continued to swell gradually till it was about three times its natural size and it has been that way for about three months. The swelling is quite hard and it seems to pain him some. The bull is in good flesh and is doing quite well. Any advice you could give me on this would be appreciated.
